The following letter is printed as we received it, not because there is any attractiveness to us in the idea of turning our office into a sort of Exchange and Mart in public securities, but because it well exhibits a popular misconception about Stock Exchange charges, and still more the widely prevalent feeling that in the great mass of Stock Exchange business the jobber is an unnecessary factor. As stated in a leader, we agree to no small extent in the view that many markets could spare the jobber, and that it would be better for investors and for the business of the Stock Exchange were securities of a non-speculative description to be bought and sold without intermediary; but while this may be true in reference to the investment and non-speculative classes of stocks, it is also true that a large number of securities of other descriptions are more handily and, on the average, less expensively dealt in by the public through the help of the jobber than they might be if brokers alone were engaged in carrying out the transactions. The jobber, as a rule, well earns his "turn" in all really active markets, and the writer of the appended letter is mistaken in the opinion he appears to entertain that it is an excessively costly matter to deal either as investor or speculator on the Stock Exchange. We should like to ask where he can point to any other description of property that can be transferred from one owner to another at anything like the small cost involved in the great majority of Stock Exchange transactions. The broker's commission is often fined away to an infinitesimal percentage, and in active markets the jobber has usually to content himself with a profit of a mere fraction of 1 per cent. Compare this with the charges involved in the transfer of a house, a mortgage, or a landed estate, and the unreasonableness of the charge our correspondent makes must become obvious. At the same time, it is perfectly true that where prices are wide by reason of the deadness of the market, or where distrust makes the jobber shy, the fine inflicted on both buyer and seller may often be outrageous under existing Stock Exchange usages.

The last portion of this letter is not printed with any view to the renewal of a discussion on what is or is not possible for us to do in the way of helping investors. We have no room for letters on this subject at present, and even if we had, their publication could serve no useful result because our position was conclusively dealt with in the end of 1906, and adopted without appeal after much correspondence. We, therefore, print this correspondent's suggestion in order to emphasise once more how impossible it is for the conductors of this journal to become in any way, whether as intermediaries or principals, concerned in purchases and sales of stocks. It would destroy the impartiality with which we can now treat all questions about public securities put before us. Ever since this Review started, let us once more state, this principle of absolute independence has been invariably adhered to. We have never dealt in any securities with a view to speculative advantage, and have consequently been throughout in the position to give impartial advice. Mistakes may have been made, but never mistakes the outcome of self-interest. We may have missed a fact, overlooked and perhaps misjudged symptoms, but we have never told any client to buy or sell any security because we had a chance of making money through his doing so. Now, supposing we were to start an "Exchange and Mart" in securities, as the writer of the appended letter suggests, what would happen? A single illustration will suffice to show. Suppose a client intimates that he has so many bonds of such-and-such a security that he wishes to sell at, say 95. The fact is duly advertised by us in The Investors' Review, and presently correspondents write to ask us whether the bonds are worth this price or not. What are we to do in a case of that kind? We may think the particular bonds named dear at 85. Are we to abstain from saying so, and allow the transaction to go through? It would be impossible to do that without at once giving

up the position of an uninterested adviser. Does not this illustration suffice to indicate that we can go no further in the way of giving help to those who ask it than we have already gone?

"I venture to make a suggestion which, if adopted, would, in my opinion, largely increase the usefulness of The Investors' Review.

"The less an investor has to do with the Stock Exchange the better. It somewhat resembles the Jewish Temple about A.D. 30. The charges for commission and the idler's 'turn' make a change of investments a ruinous matter. To a speculator these do not matter so much, as he expects to make large profits.

"The jobbers are said to justify their existence by the assertion that they make a market, but this is not so. A short time ago I wished to sell some brewery debentures, and was unable to do so. On Saturday I tried to buy some, and was unable to get them at any price.

"My suggestion is that you should open a list of stocks and shares which your readers may wish to buy or sell; and carry out the transfer, charging a fee which would amply remunerate you for your trouble. The list might be issued to subscribers to the key, and would act as an inducement to subscribe to it.

"If you think there is anything in the suggestion, you might invite expressions of opinion from your readers."

Those Tubes.

Sir George Gibb understands what setting "a stout heart to a stey brae" means, but for the sake of southerners it may be well to interpret. It means that a brave heart is needed to breast a steep ascent, and the ascent to profitableness in the case of the tube railways built and controlled by the Underground Electric Railways Company of London is steep indeed. Despair is not a word any brave man should use, else we might say that success with these undertakings is nearly impossible. The whole three systems are making progress, as our analysis of their separate reports for the second half of last year indicates, and except the Baker Street and Waterloo line they are all infants. Even that line is young enough for hope, and it makes excellent progress, but it will require to earn two and a-half times as much nett to give it enough to pay 4 per cent. on the whole of the capital already sunk, and it requires £358,000 further capital to complete the work. Ruling that off, is there a reasonable prospect that the present nett earnings will be doubled within the next five years? You can think out the problem for yourself, good reader. The earnings of the other two tubes, the Great Northern, Piccadilly and Brompton and the Charing Cross, Euston and Hampstead, have still further to climb before the capital already sunk in them can become modestly remunerative. Upon the Great Northern line no less than £6,768,442 has been already spent, and its nett earnings for the past half-year were at the rate of £97,000 per annum. It requires about £271,000 per annum to give 4 per cent. on the capital already buried in the enterprise, or three times the present income. Upon the Charing Cross and Hampstead property the capital spent to date has been £5,622,177 and 4 per cent. upon that would mean a nett income of about £225,000. It earned last half-year less than £13,000. Put the three together and leave out of sight a prospective aggregate capital expenditure of £941,000 and the result we reach may be summed up thus:—Total capital outlay to date £15,513,000; incomes required to pay 4 per cent. per annum on the whole of this £621,000; actual nett income on the basis of the December half-year's earnings just made public £174,000; leeway to be made up £447,000. Can it be done? We shall hope so, but the difficulties are great. It is not merely that surface competition persists and does not promise to grow less active. Modifications of fares may be brought about through the necessities of the omnibus companies, and even the old railways may be driven by stress of decay to join hands with the tubes and arrange for such a lowering and systemisation of their suburban fares as will help them and help the tubes against the omnibus and tramway competition, although hope is not strong in that direction as yet. In addition, however, to the difficulties raised by competition and low fares there is the obstructive influence of prejudice and prepossession. It is astonishing what numbers of people one meets still who declare that they have never travelled by a tube railway and never mean to if they can by any possibility reach their destination otherwise. Time and familiarity will blunt or conjure away this prejudice, but while it exists, and in proportion as it exists, the progress of these most valuable means of transit will be slower than it ought to be. That the tubes represent an incalculable benefit to the Londoner there can be no question at all, and in the matter of rapid, cheap and convenient means of getting about they beat all rivals.

Imperial Tobacco Co. (of Great Britain and Ireland).

Year by year the profits of this remarkable combination of businesses in the tobacco trade, no less than 17 of them, mount, and the increase for the twelve months ended October 31 last is £267,760, the total for the period having risen to £2,055,100, in addition to which £632 was received for transfer and other fees. Adding this in and comparing the like figures for the previous year, the increase for the company's sixth year, ended as stated, is £267,800. Out of this fine exhibit directors' and trustees' fees, management remuneration, interest on debenture stock and reserve for income-tax take only £219,842. Then £100,000 is again placed to the pension fund and £103,250 set aside as provision for the premium of 5 per cent. payable on the redemption of the debenture stock, while another £250,000 is added to the general reserve. All these charges take only £673,092, so that the balance left is £1,382,641, or with the £110,801 brought forward and added in £1,493,442. It is, therefore, easy to meet the preferred ordinary dividends and to pay 12 per cent. on the deferred ordinary shares, being 10 per cent. dividend and 2 per cent. bonus as against 10 per cent. a year ago, and still there is £203,298 left to be carried forward. Thus out of the increase of about £268,000 in the nett profits of the year only £105,509 more goes to the deferred shareholders. The balance forward includes the bonus to customers payable for the second half of the company's business year. For the first half of that year these customers received £68,705 and probably the amount to be paid out of the balance forward will be more than this, but even so the funds possessed by the company are ample. The balance-sheet shows expansion as well as the profits, and is in many ways of great strength. Its total is now £21,296,966, being an increase of £502,858, and amongst the assets is a general reserve of £1,250,000 besides the amount set aside for the premium on the redemption of the debenture stock and the balance forward. The assets show a slight increase of £15,538 in the valuation of land, buildings, machinery and plant after deducting depreciation, the total being now £2,105,930, but goodwill and patent rights remain at £9,446,005 and give the company quite an American air. Investments in and loans to associated companies are down £428,634 to £1,797,802, but, on the other hand, investments in Government, County Council and Corporation stocks, Railway debenture and preference stocks and debentures, taken at published prices, are no less than £897,041 up at £1,797,144. Thus money is being accumulated outside the business and the strength of the company thereby is increased to quite an unfamiliar degree. For in addition to these investments the company has £245,642 lent on securities for short periods. This is £19,196 less than at the corresponding date a year ago, but still a comfortable amount, especially when put alongside the £640,274 of cash at bankers and in hand, an item showing an increase of £92,565. Stock in trade at

£3,738,674 is up £219,118 and debtors owe it £140,071 more at £1,418,076. The amount paid out on account of tobacco leaf in transit, unexpired insurances, &c., is also higher by £24,882 at £104,434, but the increase is not at all out of proportion to the growth of the business. A small item of £2,985 is entered against bills receivable. Debts due by the company are £95,185 down at £852,535, including about £90,000 of bills payable and drafts in transit, and amongst the other liabilities not previously noticed there is £302,672 at credit of the pensions, &c., fund. How a business so great and flourishing affects tobacco manufacturers and traders still outside its control we have no means of knowing, but if they are not subjected to competition in an unreasonable way they may have little cause to complain. Are independent tobacconists boycotted?

Cannon Brewery Company.

There is no more saddening spectacle than the pitiful state of mind to which the average upholder of publicans' rights has been reduced by the misfortunes which have overtaken "the trade" during the past few years. Every brewery report that comes under our notice is a scathing indictment of the manner in which Parliament has allowed the drink business to cut itself free from all effective control; and the looseness of licensing legislation in the past shows how the public right and all moral considerations have been sacrificed to a great vested interest for purely political considerations, "Bung" being one of the pillars of the great Tory-Protectionist party. We hope to see the coming licensing-Bill a workmanlike measure which will not only ensure a curtailment of the present facilities for drinking and drunkenness, but also that the monopolist value of these highly prized licences will eventually find its way into the public purse. We are not going to apply the moral of all this in any particular direction, because the culpability for the existing state of affairs must be shared by all, but when we reflect on the causes that have produced the present brewery *débâcle*, rendering State action more than ever necessary, and then read the painfully flimsy excuses urged for the existing state of affairs, we begin to think that some brewery directors have lost all sense of self-respect. When the Cannon Brewery Company issued its dismal report twelve months ago it was bad trade and the ever-increasing burden of local and Imperial taxation that had caused the dip in profits, and now we find the directors relieving themselves of the following:—"The directors desire to impress upon all holders of debentures and shares the imperative necessity of using not only their own influence but that of their relations and friends to secure the election to Parliament and municipal bodies of members who will oppose all confiscatory legislation or taxation on our trade, which is being incessantly harassed and is already taxed to breaking point." We make allowance that the directors were obliged to give vent to some such lurid passage, because it is absolutely necessary to throw upon the Government the responsibility for the present state of the company's finances and business if it is not to recoil on the directors' own heads. But there is little to choose between the average brewery board, and whether the dividend be 15 per cent., as in the case of, say, the two Bristol companies dealt with elsewhere, or next to nothing, as in this instance, we get the same kind of outcry against the Government because of its known intention to set right an intolerable wrong.

Look at the balance-sheet of this Cannon Brewery, premising that the present Government has not added a single penny to the taxation on drink. Note in particular the two items freehold and leasehold houses and reversionary interests £1,908,302, and loans to publicans, book debts, &c., £1,837,577, because in these stupendous figures we shall find the root of all the company's troubles. What reasonable excuse can the directors offer for the existence of these overpowering totals? None whatever; and if the material were available for tracing their history we doubt not that it would prove a sad enough story of promoters' zeal and rapacity. A drop of £80,785 in the second item looks good until we note an increase in the first of £92,637. What does that mean? We cannot be absolutely sure, but it looks uncommonly like foreclosure. In other words, the company has probably been obliged to take into its own possession properties on which it had advanced money because the licence holders could not meet their liabilities. We hope it may not be so, but have grave fears because the policy of brewers' loans to publicans, some of them ignorant men scarcely able to write their own names, must inevitably breed trouble. What would be the result of an independent and thorough overhaul and revaluation of these two items? It has got to come, and soon.

Other items need not detain us long. Premises, plant and machinery are a mere £1,000 down at £300,257, goodwill is unchanged at £291,785, stocks £68,736, trade investments at cost £266,034 more trouble—investments £90,529, depreciated to the extent of £30,000, and cash £11,889 or £3,371 less, the balance-sheet footing up to £4,715,080. Capital all told is £4,160,665, loans from bankers remain at £99,000, and deposits and trade creditors are a little bigger at £184,976. Reserve and sinking funds add up to £189,664. The profit display is quite deplorable, but we only get one item, and cannot say where the chief shrinkage occurs. The nett revenue is returned at £187,700 after paying all expenses, allowing for bad and doubtful debts, depreciation, redemption of leaseholds, &c., a drop compared with last year of £25,665, say £40,000 in two years. Interest on debenture stocks and deposits and preference dividends absorb £147,067, and interim dividends of 3 per cent. and 1 per cent. have been paid on the preferred and deferred ordinary shares. It is now proposed to pay the final 3 per cent. on the preferred shares, but to do this £6,367 must be taken from the balance of £7,610 brought in, leaving £1,243 to be carried forward. Nothing more can be paid on the deferred shares, which, therefore, get 1 per cent. for the year against 3 per cent. for 1906, 6 per cent. for 1905, and 10 per cent. for 1904, while in the past, during the boom days, the dividends ranged up to 16 per cent. Comment is useless, and we recommend the directors to abandon hypocrisy and face the facts.

South African Gold Trust.

A couple of years ago the shareholders of this prominent enterprise were allowed to gaze on the names of the wonderful collection of undertakings in which their money was at the time invested. The holding in each company was also set forth, and any who cared to think about the matter were provided with an opportunity of sizing up the situation and gaining some idea of future prospects. And what dismal prospects they prove to have been. Since this list of investments was published the depreciation upon them and any others that might have been acquired has been just a little short of £700,000, and when we look at the list the only thing to marvel at is that the shrinkage has not been a great deal heavier. But even this figure does not cover the whole of the losses that the company has had to face. In the year 1905 there was a wastage of capital to the amount of £210,153, so that in three years the depreciation exceeded £900,000. It had been provided to the extent of £574,717 prior to the past year, the directors writing off as the losses occurred, using the premium account and a portion of the profits for the purpose. During 1907 the fall in prices was again colossal, and it is necessary to provide a sum of no less than £326,195 against investments and doubtful loans, an ugly looking amount, and it is divided as follows:—Profits £40,651, balance of premium account £35,544, and reserve £250,000. After the deduction the premium account will have completely disappeared, and the reserve will be £250,000 instead of £500,000. But following the details of these allocations we get the following remarkable explanation of the directors' policy. "The reserve and premium accounts were built up out of past profits, and, having regard for the depreciation in these accounts by

which the present shareholders have suffered, should, in the opinion of the board, be utilised for the greater part of the depreciation of the current year, leaving such part of the profit of the year as has mainly accrued from the investments of the company in dividend and interest bearing stocks available for a dividend." This is a most extraordinary statement. Passing by the suggestion that the investments representing the reserve and premiums have alone depreciated, and that nothing has happened to the original capital, we come to the definite statement that the premium account was built up out of past profits, meaning that shareholders who in 1900 subscribed for 100,000 new shares at 400 per cent. premium, thus bringing into existence this £400,000 premium account, were first given the money to do so. We are aware of no such agreeable episode, and suppose the directors intend to imply that the large dividends and bonuses distributed in the past provided the necessary resources for the payment of the extra price at which the shares were issued. Such an argument would not bear a moment's investigation, because all the money has been lost again, and those who paid £5 and upwards for their shares now find them quoted at little more than £2 each. Coming now to the year's results we find that the profit realised by sales of investments, dividends, interest on loans and underwriting commission, after providing the £40,651 above mentioned, was £109,806, excluding transfer fees £285. On the other hand, general expenses were £8,716, subscriptions and donations took 50 guineas and debenture interest £8,525, leaving £92,878. The balance brought in was £74,683, making £167,561, which meets the preference dividend, and the proposed 10 per cent. on the ordinary shares with £86,992 to next account. This is the first dividend ordinary shareholders have had since 1904, when 15 per cent. was distributed. A glance at the balance-sheet will next be useful. Including £50,000 worth of the National War Loan (patriotic subscribers), which is £75,000 less than last year, and £200,000 less than the year before, the investments, taken at or below the prices ruling on December 31, are entered at £1,346,257, a shrinkage on the twelve months of only £164,412, leaving £161,783 still to be accounted for, a very significant state of affairs. Sundry debtors, £54,465, are not much changed, but mortgages and advances are only £54,500 against £112,750, a drop of £58,250, and loans at short call have shrunk £25,776 to £77,620. The depreciation provided from revenue cannot, of course, be traced, but it looks as though some part of the losses were avoidable if care and judgment had been exercised. One good point is that, under the agreement come to last year, neither the Consolidated Gold Fields nor the directors are entitled to any percentage on the declared profits as the amount was exceeded by the year's depreciation. But they divided over £7,000 among them, so did pretty well.

Uruguayan Finance.

We gather from a recent issue of the *Montevideo Times* that the past financial year in Uruguay, closed on June 30, 1907, was in some respects unique in its prosperity. The Treasury surplus was $2,149,984 against a surplus of only $453,110 in the preceding year, and this surplus came in spite of an absence of any effort at economy. The revenue for the period was, in fact, $16,159,411 or nearly $6,000,000 more than that of the previous year, but only part of this increase came from taxes. Not a little of it, the newspaper quoted explains, is due to the conversion loan issued in 1906, which supplied the Government with money for expenditure that would otherwise have had to be met out of revenue or else not undertaken. Of the surplus thus gained $1,000,000 was applied to increasing the capital of the Bank of the republic, and the remainder spread over various more or less useful public works and services; but the whole debt service of the country was met with apparent ease, and in spite of this "revenue" supplied by the creation of debt the country is declared to be prosperous. Taking the calendar year, the Customs receipts are estimated at $13,200,000 or $400,000 more than the unprecedented figures of 1906, and if there had been no falling off in the final three or four months of the year the show would have been still more brilliant. No new debt was created during 1907, but $3,357,000 in bonds of the conversion loan created in 1906 were emitted, and the money applied to the port works, war indemnities, and other special purposes specified when the loan was created. During the year $2,581,025 of debt was redeemed by the ordinary process, and the nett increase shown in its total on December 31 last was only $861,419. This total is now $128,137,354 or £25,627,470. That, at least, is as far as the figures are now known. Owing to the fact that the Government did not assume office until March last, the Budget for the current year ending June 30 next did not make its appearance until the end of September. It showed an estimated outlay of $20,257,462 or an increase of $949,756 on the estimate for the year closed last June, but this estimate may not be realised if the depression now affecting Europe and North America should spread southwards. As yet there are few, if any, indications that this will happen. Meanwhile the estimated revenue from Customs, as the *Montevideo Times* says, has been deliberately put below probabilities for the purpose of being able to exhibit another fine surplus at the end of the fiscal year. This, however, is guessing, for the Budget is never really voted or finally shaped. It seems to be regarded as probable that this year's one will be withdrawn in order to make room for a new one for 1908-9. "The Budget is supposed to be annual, but its presentation and sanction," says the authority from which we quote, "are always matters of complete uncertainty and irregularity, so that it is little more than a tiresome formality. Even when in a manner arranged, the Budget is perpetually being added to or altered, and at no moment is it a complete and accurate expression of national revenue and expenditure." A remark like this makes us just a little doubtful about the alleged prosperity.

American Business Notes.

For the first time in their history banks outside the Clearing House in New York State, together with the trust companies, were compelled last week to make a summary exhibit of their assets and liabilities. In order to do this the State and non-clearing banks and trusts had to draw away cash from the clearing banks. In the vulgar slang of our market the "cake" had to be cut up into smaller morsels and distributed, instead of being handed round unbroken, or kept in safe custody by the chosen few. Accordingly the clearing banks show an increase of £1,194,000 in their loans alongside a decrease of £223,400 in their deposits, and a loss of £2,195,000 in their specie and greenback reserve, the greenbacks alone being down £1,383,200. These changes brought a reduction of £2,140,000 in the surplus reserve of the Associated Clearing House Banks, but it was still left at the handsome figure of £5,966,400, against less than £700,000 a year back.

And what sort of a display did the trusts and non-clearing banks make? Not a particularly brilliant one. In spite of drafts upon the cash and notes of the clearing banks, their total possessions in specie and greenbacks only amounted to £9,805,200, of which £7,654,200 was in specie and the balance in legal tender. This was less than 8 per cent. of their liability on deposits, which amounted to £122,700,000, and these deposits were £31,357,000 less than their commitments on loans, &c., which aggregated £154,056,600. One does not gather from these figures that the financial stability of the trusts is particularly well assured, but when the details come to hand we may be in a better position to estimate.

But money remains cheap enough in New York, and yet stock gambling does not seem to prosper. There was some bear closing after Wednesday's holi-

day, but that over, the market weakened in spite of loans at 2 per cent. or less, and an exchange on London so weak as to suggest the approach of further gold purchases here. There is no danger of that; the Exchange has gone down merely because New York bankers expect a big subscription here to their new City loan. They will be disappointed, for we have no enthusiasm that way, good though the bond looks. But a syndicate on the other side is said to have arranged to subscribe for the lot.

The New York *Journal of Commerce* calculates that between now and next July railroad and industrial companies in the United States will require £45,903,200 of new money to meet maturing bonds and notes, and altogether exclusive of new issues, some of which have already been thrust upon the market. The bonds falling due amount to about £14,508,000, and the notes falling due to about £16,000,000, while instalments are due on stocks issued to the amount of £15,421,000. No wonder that liquidations are still the fashion on the New York and other Stock Exchanges.

A certain interest attaches here to the affairs of the Consolidated Steamship Lines combination, with which Mr. Morse had much to do. There are six separate steamship lines involved in this combination, whose names are really of no interest to us here, for we do not suppose the Clyde Steamship Company, which stands first, trades much with this country, but there is something worth notice in the approximate consolidated balance-sheet of the trust as at November 30 last. No balance-sheet of any United States company —industrial, railroad, or other—is complete without a surplus, and the more bankrupt it is the surplus is sometimes all the more brilliant. In this case out of a balance-sheet total of £22,000,000 odd no less than £346,000 represents surplus. But, on the other hand, out of the total just given no less than £12,703,500 is represented by goodwill, franchises, leases, and contracts; that is to say, the great part of the property is made up of fancy values, and we have no means of knowing whether the surplus itself is anything more substantial; but the capital stock issued amounts to £12,400,000, and there is an outstanding nett debt in bonds of nearly £5,000,000; in fact, it is rather more than £5,000,000, if we include two mortgages on wharves aggregating £116,000. It is claimed, however, that the earnings of the six companies controlled by this trust amounted to about £473,000 last year, and for the current year they are estimated at £400,000, after making various deductions, whether adequate or not we have no means of knowing.

A great increase took place in the anthracite coal production of Pennsylvania last year—in fact it was no less than 11,410,798 tons compared with the preceding year—but the figures of that year were misleading because of the labour troubles at the beginning of it, which materially reduced the output for the whole year, and when we go back to 1906 the increase upon that year is only 5,699,192 tons. Even that is a very respectable expansion, and the output has been steadily going up year by year, except when the progress has been interrupted by struggles with the coal getters, who have never yet made very much by their effort to better their position. There are white slaves in all the mines of the United States, and not least in the anthracite coal industry, which ought to be the most beneficial to all concerned of any of that kind in the world; but in the current year it is probable that the workers may have to suffer considerable reduction in wages, for the output is not likely in the present state of American industries to again reach 67,109,393 tons as it did last year.

Railway managers met at Chicago the other day, and arrived at the conclusion that throughout the United States 350,000 railroad cars are now idle. This is rather a larger number than the published traffic receipts would have led us to look for, but then these receipts are probably still padded out in various ways. Even so, they are not pleasant, for in almost every instance decreases are exhibited alongside fully maintained or even increased working expenses. If this recoil lasts throughout the year the effect must be disastrous upon the campaigners for the rise upon the Stock Exchanges, and have considerable influence in increasing the financial embarrassment already pressing sorely upon the corporations that have lived on borrowed money and dashed ahead as if nothing like a setback could ever occur. Hopes, however, are still kept high in certain quarters by the prospect of advancing prices for such produce as the people have to dispose of. Efforts to corner raw cotton and force up its price have not yet been abandoned in the South, although the hope is rather a forlorn one, but in cereals the Chicago calculators are busy figuring out a world's crop shortage certain to redound to the advantage of those who have grain to sell, certainly a native crop shortage. They talk of $1¼ a bushel as the price likely to be held and assert that there will only be 45,000,000 bushels available in the West against a probable demand aggregating something like 80,000,000 bushels, but they seem to have left Argentina out of account, and still further to have forgotten the effects of unemployment within the United States. Tales about hunger in the cities and of increasing multitudes of workless people all over the Republic get printed here now and then, and suggest that the consumption of wheat may not reach the full figure of prosperity times or come anything near it.

Passing Events.

Last week's Exchequer receipts amounted to £5,309,000, including £79,000 received in repayment of advances for interest on Exchequer bonds. The income-tax is coming in so well that the past fortnight shows an increase of about £160,000 on the corresponding period of last year, and the total to date is only £61,000 less than a year ago. Whether this improvement will continue and obliterate the effects of the reduction made in the tax upon earned incomes must remain an unsolved problem for some weeks yet. It may be the result of earlier and more diligent collection, but the revenue as a whole promises well for a surplus at March 31, and its total will be assisted by the fact that, as the *Times* points out, there are three more working days between last Saturday and the end of the financial year than in 1907. Thanks to the larger revenue and the slower disbursements, the Exchequer balances were increased last week by £2,758,000 to £9,457,000, which is £1,673,000 more than the aggregate 12 months back. No wonder the open market is hard up for floating balances and compelled to lean on the Bank. Is Mr. Asquith making his "works" advances out of revenue for the time being? Naval works got £287,000 last week.

Much talk has been caused in City circles by the Baring balance-sheet, noticed amongst our company reports. People are startled at the great reductions shown in the items and total of that balance-sheet, and some critics shake their heads as if the change had some sinister meaning. No doubt when a large business like this shows a diminution within 12 months of more than one-third in the amount of its commitments it must affect the earnings and involve other unpleasant consequences, but a merchant banking business like that of Messrs. Baring Brothers and Co., Limited, must not be judged on the same lines as an ordinary bank. And what this reduced balance-sheet total no doubt signifies is that credits given to the customers of the company have been sharply curtailed in all directions. Less money has been advanced to correspondents, less paper accepted on their behalf, and surely this was prudent behaviour in view of recent circumstances. Obviously the managers of this large business saw that trouble was coming and took in sail promptly so as to avoid dangerous risks when the storm broke out. From this point of view the smaller balance-sheet is reassuring rather than the the reverse. It is expanding commitments that are to be dreaded in these times.

At the meeting of the Metropolitan District Railway Company Sir George Gibb made a very interesting speech, in which he went over again the grounds upon which an issue prior lien debenture stock had become neces-

sary, and explained how the creation of this new stock ahead of the company's existing debenture stocks was both imperative and expedient. The total amount of the stock for which powers are asked is £750,000, but only £550,000 is to be issued now, and its issue will not add anything to the already heavy prior charges borne by the revenue. In other words, the temporary loans by which the company has been kept going and enabled thus far to avoid default upon its debenture stock interest cost about £22,000 per annum, and the proposed immediate new issue of prior lien stock should not cost more. Out of that stock the temporary loans will be paid off, and about £100,000 of the balance devoted to the further developments of the company's surplus lands, by which a rental of about £38,000 per annum is expected to be created. The expedient is a desperate one no doubt, but then the condition of the company is desperate, and the only alternative would seem to be a receivership, which ought to be avoided at all costs. Sir George spoke hopefully about the expansion of the revenue, and we sincerely trust his anticipations will be confirmed in this respect.

Week by week now the numbers of those in receipt of public relief either as workers or gratuitously increase in India. The Viceroy's telegram gives the total for the past week at 738,034, and of this disquieting aggregate 424,917 are employed on relief works in the United Provinces, where also 191,308 are in receipt of gratuitous relief, besides 10,643 being charitably assisted in the Balrampur States. Elsewhere the numbers are also growing, and although light rains have fallen in Northern India and elsewhere, there is little improvement in crop prospects, so that we have still before us the dread of a far-spread and devastating famine, and prices are still high everywhere, notwithstanding a slight fall of rain in Northern India.

While the Prime Minister of New Zealand is exuberant, as usual, upon the wonderful prosperity of the colony and is able to boast of a surplus of ordinary revenue over ordinary expenditure for 1907 amounting to £1,500,000; to promise also not only the establishment of superannuation allowances for the employees of all local bodies, but an annuity system for the general public—on the "living by taking in each other's washing" system, we suppose, he is constrained, however, to admit that the population is short of requirements. While graciously pleased to intimate his opposition to indiscriminate immigration, he still recognises that the colony needs more people, and, in order to attract them, perhaps, he thinks that the "monopoly" of market gardening, now held by Chinese residents in the colony—just fancy that!—should be broken down by employing married prison labour on Government lands in the vicinity of the four principal cities, half of whose earnings should be devoted to the support of their wives and families and half to meet the charges the prisoners themselves impose. There is more light on the condition of the colony in that suggestion than in all the rest of Sir Joseph Ward's discourse, so far as we get an inkling of its contents through the telegraph. But is not the new loan about to make its appearance? And why not repatriate the Chinese? Are the whites in that colony too well pensioned and too much loan-dosed to condescend to dig their own gardens?

Ever prompt to tell us all that is "bullish" about Canada, Lord Strathcona, the High Commissioner, sent out the telegram received in the end of last week from the Minister of the Interior at Ottawa informing the mother country that 277,376 immigrants entered the Dominion in 1907, or 61,464 more than in the preceding year. That is interesting, but we should also like to know what has become of all this swarm of new inhabitants. Where have they been distributed, and how have they fared? Are they starving on lands in the North-West or huddled in towns, and sustained, in part at least, by charity? How much money did they take with them into the Dominion, and have they got any of it left by now? The information is sadly lacking in completeness, but the Customs revenue of the Dominion is all right, and between April, 1907, and January, 1908, inclusive, reached the fine figure of £9,880,000, which was an increase of nearly £140,000 over the receipts for the same period of the previous year. Will the increase continue? We have our doubts, but the truth is not allowed to come over the cables much or to appear in the Canadian newspapers. We have never yet been told what last year's harvest was worth.

Danish banking must be in rather a ticklish position when the Government had to intervene and join the five principal banks in preventing general panic. The failure of the Copenhagen Freeholders' Bank mentioned last week seems to have started a run upon the Detail-handler Bank, which was only stopped by the intervention of the other banks and the Government. A loan of £1,111,000 was arranged for, and the liabilities of both the Freeholders' and the Detailhandler Banks were guaranteed. Half the advance is to be provided out of the National Treasury and half by the five banks joining in the guarantee. The trouble seems to have been intensified by the stoppage last Saturday of the private banking and money-changing firm of Herman Meyer and Co., and it is to be feared that it will take Denmark some considerable time to surmount the difficulties thus disclosed. A panic, however, has been averted by the promptness of the action taken, and the country should be sound enough at the core. But how did the trouble originate?

It is always a matter for regret when old names disappear from the business world, and on this ground alone the withdrawal of Messrs. Hardy, Nathan and Sons from business deserves a passing mention. The house is an old one, and has stood in the highest repute for many years back, but its partners have no doubt made all the money they want and, as noticed in another column, the business has been bought by the German Bank of London with results already conspicuously beneficial to it. At the meeting of the shareholders of this bank held on Wenesday, Sir Felix Schuster, the chairman, mentioned that, thanks to this acquisition, the acceptances of the bank had risen by £600,000, compared with a year ago, to £1,980,000. No corresponding results have appeared in the profit and loss account, but then much money has been devoted to write down the value of the bank's investments, so that no wonder £10,000 less remained for distribution. Still the bank had £3,000 left to carry forward after paying its usual 6 per cent. dividend, and no doubt future results will be better.

An examination of the Pekin Syndicate's affairs must be delayed until next week, but a few points may be referred to briefly. As already announced, the Shansi Concession, by far the most valuable property possessed by the Syndicate, has been retransferred to the Shansi authorities; but there seems to have been a bit of a row over the business. The Syndicate demanded £1,500,000 for the surrender of the concession, the Chinese delegates offered 600,000 taels, and the matter was finally compromised for 2,750,000 taels, half to be paid on February 21 next and the other half in three equal yearly instalments, beginning May 19, 1909. While agreeing, however, to surrender the concession upon payment of the money stipulated for, the directors have not abandoned all prospect of yet doing work in Shansi. It is part of the agreement that if hereafter foreign capital is required for mining, iron smelting, or transport of materials, the Pekin Syndicate shall have the first option. A rearrangement of capital is under consideration. The work done during 1907 on the Honan Mines was, through force of circumstances, almost entirely of an exploratory character.

National Provincial Bank of England.—The statement for January 29 shows liabilities on notes or bills of £657,913, and on simple contracts of £55,295,432; against assets consisting of cash on hand and at Bank of England £8,885,014, money at call and short notice £2,728,564, British Government and other securities £14,780,858, and bills of exchange £34,908,909.

Coupons due March 1, of the Imperial Japanese Government five per cent. bonds of 1901-1902 for yen 50,000,000, will be paid by the Yokohama Specie Bank, Limited.

The Week in Mines.

The Settlement.

It has produced nothing of an interesting or satisfying character, and this is the one section of the House from which all signs of life have departed. So far as the Kaffir Circus is concerned, there is hardly a stroke of business going on, and the public gives not the least indication of ever taking a hand in the game again. It now sees perfectly well that it stands but the poorest chance against the underhand practices of the magnates; no effective control can be obtained over the policy of the directors, and they can exercise their own sweet will whether it is a case of amalgamation with another company, the disposal of any part of the property, the payment or withholding of dividends, going on with operations, or closing down; in fact, anything can be done that happens to suit the book or the state of the market at any particular moment. The public is sick of it, and no wonder. Monday was carry-over day, and the account proved to be a light one. Most of the contango business on South African gold and finance things was arranged at 6½-7½ per cent., Modders and Johnnies were done at 5½-6½ per cent., and Gold Fields, Rand Mines, and Randfonteins at 5-6 per cent.; but East Rands were clearly oversold, and were taken in at 1-3 per cent. In the Diamond list the rate on De Beers was only 2½-3½ per cent., Jagers were continued at 3-4 per cent., New Vaals at 4½-5½, and Premiers at 5½-6½. On Rhodesians the general rate was 6½-7½ per cent., Chartered being done at ¼d.-½d., and Tanganyikas at 4½-5½ per cent. West Africans were continued at 6-7 per cent., Siberians at 6-8 per cent., and West Australians at 6½-7½ per cent. Among Copper shares the rate of Tintos was 2-4 per cent., on Anacondas 3-5 per cent., and on Great Cobars 3 per cent. The Australian Copper shares were arranged at 5-7 per cent., and that charge also prevailed on Broken Hills. On Manicas, in which some excitement has broken out during the past week or so, the rate opened at 10 per cent., but large blocks of shares were subsequently taken in at 8 per cent. On the American shares the rate was again 6-8 per cent. Changes on the account were small, but mostly favourable. Among South Africans, Central Mining, De Beers, and Premier preference, and Tanganyika were all ⅜ higher, H. F., East Rand Extension, and Robinson rose ¼, and Village Deep and Walhuters each 3/16. Ferreiras, however, were ¼ lower, and Geldenhuis Estate were 3/16 worse. In the West Australian list Great Boulders and Ivanhoes were a trifle higher, and Broken Hills showed rises of 5/16 in Block 10 and Norths, and 7-32 in Proprietarys. Copper shares were irregular, the principal rise being one of a point in total, while Tintos fell 3, Anacondas ⅜, and Great Cobars ¼. Among Tin shares South Crofty were ¼ up, and in the Miscellaneous group Le Roi No. II. rose ⅜, Ooregums 2s. 3d., Mysores 11-32, and Waihis 9/16, but Esperanzas were 3s. lower.

Kaffir Shares.

After the contango business was out of the way the Kaffir Circus found itself with nothing to do. The output figures for January came along, and although satisfactory enough, did nothing to revive the drooping spirits of the punters. The figures showed a decline of 23,197 ozs., but it is estimated that the December total included reserve gold to the amount of 40,000 ozs. Moreover, some small additions were made to reserves in the past month. Bears took advantage of the total lack of support, and as the Continent was in a somewhat doleful mood it did not prove a difficult business to knock prices down. Nothing dropped much at a time, but the accumulative effects of a persistent dwindle are serious. Although there has been nothing in the nature of a quick slump Modders are a good 15s. below the top price touched this year, and other leading shares show proportionately large losses. The month's labour statistics were good. Many more coolies have vanished never to return, and the native labourers have increased 2,000.

Land, Diamonds and Rhodesians.

Land and Finance shares have gone the same way as Kaffirs. Central Minings reacted sharply and Welgedachts inevitably came back, and are no better than 1⅛ again. Geduldś were easier, but Hendersons hardened a trifle, and some liquidation in Bechuanalands having ceased the price picked up to about 4s. 6d. Rhodesians could hardly have been more miserable. Nobody wanted Chartered at 14s., and Tanganyikas, which were run up at the end of last week, collapsed to 2½, from which there was a small recovery. The Banket things were lower, and Willoughbys could be had at 3s. There was some excitement in Manica copper shares. These have been worked up by House speculators, and have moved between 22s. 6d. and 13s. The public does not appear to be interested and had better keep clear for a bit, although it is said the prospects of the company are fairly promising. Diamond shares flattened on Paris and inside selling, and the market is in a most wretched condition.

West African and Australasian.

In the West African assortment the Nigeria things firmed up and Taquahs, Abossos and Bibianis all hardened a little, but Abbontiakoons, Amalgamated, Gold Coast Agency, and Wassaus fell away. Broken Hills were a poor market, and steadily dwindled throughout the week. British were very flat on the issue of a circular stating that with the exception of important development work on the Thompson's shaft area all mining and milling work will be suspended until favourable terms can be arranged for the sale of the company's concentrates. Lead and silver were weak. Most of the trifling movements in the West Australian section were adverse, but New Zealands further improved, Waihis being particularly strong.

Copper, Tin and Miscellaneous.

A heavy fall in the metal caused a sharp setback in copper shares, and although the initial weakness was followed by a recovery, the market soon became flat once more. Paris sold Rio Tintos, which therefore fell rapidly. There was a difference of almost £2 in the extreme figures touched, and particular flatness was also shown by the American things, partly in consequence of the slump in Yankees. Great Cobars collapsed just on £1, and the rest of the group showed smaller losses. Tin fluctuated somewhat wildly, and the market for the shares also had an irregular tendency. In the Miscellaneous list Siberians showed dulness, and Mysore were a little lower, but a few of the American things, including Tomboys, Esperanzas, El Oros, and Le Roi and No. II. firmed up.

MINING NEWS.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Henderson's Transvaal Estates.—We are getting rather tired of this company's affairs, having been under the necessity of reading seven or eight columns of newspaper print in order to gain some idea of the past week's events. When we left the subject a fortnight ago the meeting to consider the reconstruction proposal had been adjourned until Friday, February 7, so as to give the committee of inquiry appointed at the gathering a chance to report. Their conclusions were not available to the shareholders before the adjourned meeting, but were presented then, and a more feeble effort we have rarely if ever encountered. The committee's report ran to great length, but the useful part of it might have been put into 20 lines. The brilliant conclusion arrived at was that reconstruction should take place in accordance with the board's desire, but that the assessment should be 2s. 6d. instead of 3s., and that no drastic cutting-down of capital was necessary. This led to another adjournment until last Thursday, and in the meantime a few shareholders wasted their time in holding an informal meeting, at which nothing was done of the slightest value to anybody. Then came the final gathering, and a nice old row resulted. Personalities and bickering took up the principal part of the time, and no one seemed to care anything about the company's affairs so long as he could tell the man on the other side what he thought of him. In the end every resolution and amendment seems to have been

defeated, and the usual polls demanded. The result is not declared yet, the scrutiny being a tremendous business, but there is said to be a majority of about half a million in favour of the committee's reconstruction proposal involving a 2s. 6d. assessment.

Transvaal Gold Returns.—During the first month of the year the gold output from the Witwatersrand and outside districts was 560,329 ozs. or a decrease of rather over 23,000 ozs. compared with the fine total returned for the last month of 1907. It must, however, be remembered that the figures for the month were estimated to contain about 40,000 ozs. of reserve gold and apart from this period the aggregate is the highest ever attained. It also appears that small contributions were made to the reserves during January, so that taken altogether the figures are by no means unsatisfactory. In the subjoined table we give the returns for 1908 and previous five years :—

—	1903.	1904.	1905.	1906.	1907.	1908.

* Includes £33,766 not declared previously.

Native and Coolie Labour.—The statistics show some important changes, and are exceptionally interesting. During January the Witwatersrand Native Labour Association distributed among the mines 11,455 "boys" against 9,121 lost by time expiration and other wastage, leaving a nett increase of 2,334. But actually the numbers returned as employed have increased 11,914 to 118,204 owing to the Murchison and the Robinson Group contingent rejoining the W. N. L. A. The coolies are leaving in large numbers. On the 8th January 35,676 Chinese were on the Rand, and of these 51 died, 7 were struck off the strength and 4,138 were repatriated, leaving the number in the country 31,480. In the subjoined table are shown the number of natives and Chinese employed on the Rand during the past year :—

Month.	Natives Joined.	Natives Left.	Nett Gain or Loss.	Natives Employed end of Month.	Chinese.
January, 1907	10,070	7,734	2,336	83,567	53,828
February.....	10,673	6,578	4,095	87,662	53,736

Diamond Exploration and Finance Syndicate.—No attempt seems to have been made by this venture to justify the first part of its title during the 21 months to September 30 last, the period covered by the report and accounts, unless black diamonds form the company's objective. There is a freehold farm called "Blinkwater," in Natal, of 8,276 acres in extent, which is a proved coal-bearing proposition and ready for sale or flotation as soon as a scheme can be fixed up. Part of the considerable holding in the Nigeria Bitumen Company has been realised at a profit, but the directors have great faith in the concern and hope to derive a good profit from the remaining substantial interest. Other interests remain practically the same, we are told, and owing to the great depression prevailing during the past two years no fresh business has been undertaken. There was an excess of revenue over expenditure for the period under review of £1,253, which suffices to reduce the debit at profit and loss from £2,272 to £1,019. Property and shares in other companies are entered in the balance-sheet at £32,116, but there was considerable depreciation upon the shares at the date of the balance-sheet and the auditors are unable to speak of their value.

British Central Africa Company.—People who put their money into this kind of enterprise must do so for the glory of the Empire on which the sun, etc., and not with the idea of seeing any return on it for an indefinite period, if ever. This company is a very big affair, almost on "Chartered" lines, and has an issued share capital of £650,007, in addition to loans and debentures to the amount of £950,000. Purchase of properties, including flotilla, monorail, buildings, plantations, etc., are entered at £855,280, stocks, debtors, cash, etc., in Africa are valued at £89,822, and £636,174 has been spent on the Shire Highlands Railway construction account. Profit and loss account for the year to June 30 shows a credit balance of £1,674, after writing off over £6,000 loss on the ocean and river traffic incurred in consequence of the necessity of maintaining a larger flotilla and staff for carrying railway material than was required for general traffic. The cost of maintaining the flotilla is now being largely reduced, and the cargo carried for the general public shows a satisfactory increase. Pretty good progress has apparently been made with the construction of the railway. Developments in cotton and coffee cultivation in the Colony have made further headway during the year, and the planting and curing of tobacco having proved successful, a larger acreage has this season been put under cultivation. Debenture interest charged to revenue for the year was £6,142 and interest on loan £10,000, while a debit of £17,482 was brought in, so that the above-named profit of £1,674 becomes a deficit of £31,950.

Central Chili Copper.—This concern cannot, unfortunately, be numbered among the successful copper producers of the world. We dealt with the report and accounts for the year to December 31, 1906, in our issue of October 5 last, and shareholders now have the report of the general manager, together with that of the mines superintendent, for a period of 18 months to June 30, 1907, which have only just been received. The company is still suffering severely from the shortage of labour, but considerable efforts are clearly being made to remedy such a serious drawback, and it looks as though these may be successful. The year 1906 is described as one of transition and change. The policy of mining every pound of ore in sight in the company's mines, without at the same time making any systematised effort to explore the properties for new sources of ore supply, and to develop these when discovered, has been gradually changed, and there has been commenced in the Panulcillo mine "the first beginnings of a campaign of exploration and development, which shall be pushed as rapidly as possible, and from which we have every right to expect the most favourable results." The Panulcillo mine is described as a most excellent prospect, and is now producing enough ore to pay a large proportion of the development expenses. The company has other mines—the Inagotable, the Nisniles, the Condesa and Asuncion—on which a certain amount of work is being done, but in the Concinera property all work is at present suspended. For the first two mines, at least, the prospects are considered encouraging, and the general manager declares that "you have within reach a substantial commercial success, which with a little more patience you will soon achieve, and which will continue to increase and be more fruitful with each succeeding year." That sounds well enough, but for some reason this cheering intelligence, although written a good four months ago, has been kept from the shareholders until now.

Mount Cattlin Copper.—For the period from August 1, 1906, to September 30 last this company produces a debit to profit and loss of £8,680, but among other charges may be noted £6,808 for formation expenses and £3,598 for depreciation, so that actual mining operations produced a small profit. Ore smelted was 7,524 tons, containing 453 tons of copper and 2,448 ozs. of gold, but in view of the early contemplated completion of the railway from the mine to the port and owing to the low price of copper, sales of ore have been discontinued and work is now confined to the development of the mine.

Tasmanian Smelting.—This company's position is not altogether a happy one. Tons smelted during the year to June 30 last were 47,165, producing 9,000 tons of lead, 1,400,000 ozs. of fine silver, and 4,200 ozs. of gold, but by far the greater portion of the total tonnage of ore smelted was low grade. Refractory material and its treatment presented no end of difficulties, entailing larger metal losses than had been anticipated. Happily a good deal of experience seems to have been gained which should be of use to the company in its future operations. One

thing seems to have been conclusively proved, and that is that the returning charges have hitherto been based on too low a scale to enable the company to profitably handle ores of so complicated a nature as those found in Tasmania. The furnace for preliminary roasting referred to in the last report was started in April last, in addition to which a new Rundofer of the latest type has been purchased, and is about to be erected. The second roasting plant of four kettles has been completed, and new electrical and ore conveying plants installed. Certain mining claims near Mount Read to the extent of 690 acres were acquired during the year, and diamond boring operations to test these areas are now in progress. The directors are anxious to assure the shareholders that the company would have no difficulty in successfully combating the competition of smelters on low-grade mines, the erection of which has been rumoured. Revenue on account of bullion and tributors for the year reached the large sum of £351,799, but the outlay took all but £6,160 of this, and after crediting sundry small items and providing London expenses and depreciation, there is a loss of £1,534, reduced to £1,175 by the balance brought forward. Happily the company is moderately capitalised, and a small change in fortune would set things on the right side again.

GOLDFIELDS OF DHARWAR (INDIA).—This company's activities on its own account during the year ended September 30 were not of the kind calculated to rouse the shareholders to a high pitch of enthusiasm, but the deals consummated with other companies should keep the mind well exercised. They were referred to in these columns a year ago, and the directors have now to report the successful flotation of the Hosur Gold Mines, incorporated February 27, 1907, for the purpose of purchasing the company's Hosur Blocks. Under this scheme the Hosur Gold Mines of Dharwar, to give it its full name, was provided with some £47,000 and became possessed of all the machinery and plant belonging to the Coromandel Gold Mining Company of India. The new company took over the property in April last, and from that time the development work, which has been conducted with vigour, has been attended with considerable success. The directors look with confidence to this mine proving successful, and to the shares held, 95,000 in number, and entered at the nominal figure of £2,235, becoming a valuable holding. We are sure we hope so. Options have been granted to the Gold Fields of Mysore and General Exploration, and the Champion Reef Company, but the details were set forth last year, and the directors think it unnecessary to again particularise them. Apart from the Hosur area sold the company holds some 1,251 acres, and is at present engaged in prospecting the Sankadak area of about 436 acres. Various modifications of the balance-sheet items have become necessary in consequence of the different schemes, but we note that the company possesses the considerable cash balance of £10,119.

SOUTH WALES COLLIERY.—This company's revenue for the twelve months ended December 31 was £10,733 and the nett profit £9,983, to which is added £1,355 brought in, making £11,338. From this the "B" and "new B" shares get 14 per cent. and the "A" and deferred "A" shares 4 per cent., with a balance of £1,347 carried forward. The collieries have been working satisfactorily as reported by the company's mineral agent. The payment of the annual sum of £3,000 on account of the guarantee fund, due July 21 last, has been satisfied by the presentation of 136 "A" shares, which have been cancelled, and a corresponding number of deferred "A" shares issued in exchange, and by the payment of the balance in cash.

BRILLIANT EXTENDED GOLD MINING.—Thanks mainly to reduced cost of handling and treating the ore this company's results for the six months to November 19 show considerable improvement. Ore values continue low, 2,345 tons crushed giving a mill return of £22,729 and concentrates worth £16,159. Cyanide operations gave a further amount of £6,097, making the revenue from all sources £44,985. This produced a profit of £5,032, of which £2,785 was allowed for depreciation, so that with £4,508 brought in the nett credit is £6,756, all invested in the undertaking in various ways. The rate of development will be maintained during the current half-year, the operations being spread over the western and eastern ground in about the same proportion as formerly. Ore reserves of 65,000 tons are much as before and the value is about in accordance with recent crushings. A sum of £4,622 was spent on new plant, but further outlay will be light.

KENT COAL CONCESSIONS.—We shall have more to say about this company's report next week, but cannot withhold one or two gems contained therein from a waiting world. For instance, the directors regret that for prudential reasons they are prohibited from announcing the full extent of the company's success; and, again, "momentous" as have been the operations and progress of this company during the past year, the prospect of 1908 bids fair to overshadow them in the strides towards converting agricultural Kent into a mining and manufacturing centre comparable with Lancashire, Glamorgan, or Northumberland. Of greater interest still is the statement that the financial position is very strong, for the outstanding debts (other than the balance in account with Sondage Syndicate for boring) are practically covered by liquid assets. Mr. Arthur Burr must be a happy man.

Mr. Arthur Daulby Wedgwood, late of the Dennystown Forge Co., has been appointed managing director of Cammell, Laird and Co., Limited, and Mr. Henry Edward Deadman, C.B., late of the Admiralty, and Major Arthur Handley, late R.A., have been elected directors.

Critical Index to New Investments.

NORTH BRITISH RAILWAY CO.

Subscriptions are invited for £1,450,000 North British 4 per cent. preference stock (1908) which has been created under the company's Acts of 1905 and 1907. It ranks for dividend immediately after the 4 per cent. convertible preference stock (1904), and is offered at the price of 101½, payable in instalments of 10 per cent. on application, 16½ per cent. on March 12, and three of 25 per cent. each on April 30, June 15, and July 31. Presumably the proceeds are required to pay off temporary loans, so the stock is a good enough investment, and as shareholders applying will receive preference in allotment, the ordinary investor will probably get little of it.

VICKERS, SONS AND MAXIM.

An issue of £1,000,000 in 5 per cent. third debentures of £100 each is announced by this company. Already £2,093,200 in first debenture stock and second debentures is outstanding, and the share capital paid up is £5,200,000. With this new issue, therefore, the total capital involved in this great business will be £8,293,200. The board, however, gives good reasons for wanting this additional money, for the company is going to establish branches in Japan and Italy, and has already invested in various other companies within the United Kingdom as well as in the Whitehead Torpedo Company. Since the beginning of 1903, when the second debentures were issued, about £1,340,000 has been expended by the company on land, buildings, machinery, &c., in its three chief factories, and of this sum about £800,000 has been provided by ordinary or special depreciation allowances out of the profits of the years 1903 to 1906. That is a satisfactory record, and the profits are equally so, for they have steadily risen from £541,434 in 1902 to £879,905 in 1906, the average for the five years having been £690,427. For the past year the directors expect the return to be about as good. In other words, that the dividend of 15 per cent. paid on the ordinary shares for 1905 and 1906 will again be forthcoming. As long, indeed, as a company of this kind does a large business for Governments engaged in the construction of great navies and in arming them, so long is it likely to continue to prosper. These new debentures, it may be added, are offered at par, the whole amount to be paid up by April 30 next, the final instalment of £40 being then payable; the previous payment, being also £40, is due on March 31. The bonds are to be redeemed at 104 by a sinking fund commencing in December next year, but the company reserves the right to redeem the whole amount outstanding at any time after December 31, 1915, on six months' notice, at 105. The debentures are to bearer, but may be registered at any time.

MONTREAL LIGHT, HEAT AND POWER COMPANY.

An issue of $400,000 4½ per cent. first mortgage bonds, forming part of an authorised total of $7,500,000, was offered this week through the Bank of Montreal, at the price of 96½ per cent., or £198 5s. 9d. per $1,000 bond. The company owns perpetual franchises in the City of Montreal and environs, and controls nine undertakings whose charter rights it can exercise in perpetuity. Its capital is $17,000,000 or about £3,493,000, and including the present issue the bonded debt is $5,940,000, apart from $3,401,000 sinking fund 5 per cent. bonds specially secured on the properties of three of the companies controlled, which rank after the 4½ per cent. on the other assets. Another $939,000 of the 4½ per cents. are held in reserve for exchange against bonds of subsidiary companies, and further issues can only be made for the purpose of such exchange or for payment of 75 per cent. of the cash cost of additions and extensions. The bonds are repayable on January 1, 1932, at £205 9s. 7d. per bond, but may be redeemed at £212 15s. and accrued interest on any interest date after January 1, 1912. Nett profits, after providing for interest have increased $1,128,789 in 1905 to $1,440,582 in the past year, and the company has paid quarterly dividends the rate of 4 pe cent. per annum from the commence-

ment of business, 5 per cent. since August, 1906, and 6 per cent. since August, 1907.

Provincial Motor Cab Company, Limited.

This company proposes to confer the benefits of the motor taxicab on a number of provincial cities, and for that purpose has taken over contracts for 450 vehicles, which it intends to distribute according to requirements. It starts with a capital of £303,000 divided into 300,000 preferred ordinary shares of £1 each, and 60,000 deferred shares of 1s. each, but only 260,000 of the former were offered for subscription. The United Investment Corporation, which is the vendor, transfers the benefit of the contracts to purchase the cabs for £188,000 in consideration of its being granted an option to take the deferred shares, and any or all of the 40,000 preferred ordinary shares within two years. In addition the corporation gets back its deposit of £13,000 under one of the contracts, £11,000 for preliminary expenses, and a 10 per cent. commission on any preferred shares it may elect to underwrite. As the deferred shares are entitled to half the nett profits after 7 per cent. has been paid on the preferred shares and 10 per cent of the balance has been put to reserve, the promoting profits may turn out to be considerable. The directors base their estimates of probable results on a nett profit of 16s. per cab per day for 300 working days in the year, making a total of £108,000. From this they deduct cost of taximeters and licences and depreciation at a rate calculated to write off the entire cost of the cabs in six years, bringing out a balance of £72,617. The preferential dividend of 7 per cent. will take £18,200 per annum, which means that the £3,000 of deferred shares would have about £24,500 to divide, a delightful arrangement—for the promoters who hold them all.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

Arch (Glasgow).—(1) We do not think the proposed issue will have much effect on the ordinary. Very little is known here of the company's doings; much depends on the coming report. (2) It ought to be able to do so, but we fear there is a slack time before the company. It is so overloaded with capital that the shares are not a tempting investment.

Greencliffs.—(1) On published results these shares seem high enough. It is calculated that there is still ten years' life on present output, so dividends must increase considerably to justify higher quotations. (2) Larger dividends must be paid on these shares also to justify any important rise. The property has a longer life than No. 1, and if it can keep up the average of output and further reduce working expenses dividends may grow when the balance of the debenture issue is paid off.

H. G. H.—We have heard a rumour that some such concern is contemplated, but we have not so far heard any particulars. If a public issue is to be made it will, no doubt, be announced in the daily papers. Your letter is really one question, so we hold 2s. to your credit.

C. P. C.—The bond is a good one, but at current price it does not yield much more than 4 per cent. There is no doubt a bonus in prospect on repayment at par, but when the date arrives holders will probably be offered a fresh security in lieu of cash on terms that may deprive them of part at least of the prospective bonus.

J.—They should be good enough, though we do not think there is much chance of any advance in price for some time to come. At the moment we are told none are on offer.

Z. Y. Z.—(1) As an investment there is ample security, but the continued success of the company depends on Government orders. (2) There are contradictory reports as to the result of the winter's business, but we are told that lately the profits have been better than expected. If this is so, there should be some recovery. At present the market seems a weak one. At best they are speculative.

Somerset and Dorset Railway.—Traffic receipts for the half-year ending October 31 show a total of £112,719; gain £5,368 on 1906. The additional rent for the whole year amounts to £8,905, or £825 more. The fixed minimum rent of £27,269 for the half-year makes with this amount, less tax, total receipts of £35,734 or £786 up. This enables the company to increase the contingent dividend on the Bath Extension ordinary stock to 16s. 5.9d. as compared with 14s. 11.56d. for the same period a year ago, and to apply £529 more at £3,259 in reduction of outstanding claims.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and February 8, 1908:—

Revenue and other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Feb. 8, 1908.	Total Receipts into the Exchequer from April 1, 1906, to Feb. 9, 1907.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,451,487
Revenue.			
Customs	31,923,000	28,255,000	29,157,380
Excise	35,965,000	30,886,000	31,020,689
Estate, &c., Duties	18,697,000	15,515,000	16,575,142
Stamps	8,000,000	6,851,000	6,859,000
Land Tax	700,000	1,540,000	1,520,000
House Duty	1,900,000		
Property and Income Tax	30,500,000	17,904 000	17,965,000
Post Office	17,600,000	14,420,000	13,940,000
Telegraph Service	4,400,000	3,890,000	3,770,000
Crown Lands	500,000	420,000	440,000
Receipts from Suez Canal Shares and Sundry Loans	1,100,000	1,145,995	1,075,756
Miscellaneous	1,550,000	1,884,777	1,629,170
Revenue	152,835,000	122,711,772	123,952,137
Total, including balance		129,644,195	134,403,624
Other Receipts.			
Repayment of Advances for Bullion		1,150,000	1,000,000
Repayment of Advances for Interest on Exchequer Bonds under the Capital Expenditure (Money) Act, 1904		180,000	180,000
For Treasury Bills (nett amount)		5,000,000	—
Under Telegraph Acts, 1892 to 1907		670,000	1,205,000
Under Naval Works Acts, 1895 to 1905		400,000	2,462,000
Under Military Works Acts, 1897 to 1901		150,000	300,000
Under Public Buildings Expenses Act, 1903		231,000	165,000
Under Public Offices Site (Dublin) Act, 1903		—	10,000
By issue of Exchequer Bonds under the Cunard Agreement (Money) Act, 1904		400,000	1,200,000
Suez Canal Drawn Shares		7,029	7,575
Temporary Advances, Deficiency		4,500,000	2,500,000
Temporary Advances, Ways and Means (including Treasury Bills, £500,000 in 1906-1907)		1,500,000	3,500,000
Total		143,832,224	146,933,199

Expenditure and Other Issues.

—	Estimate for the year 1907-1908 (including Supplementary Estimates).	Total Issues out of the Exchequer to meet payments from April 1, 1907, to Feb. 8, 1908.	Total Issues out of the Exchequer to meet payments from April 1, 1906, to Feb. 9, 1907.
Expenditure.	£	£	£
National Debt Services	29,500,000	20,850,595	24,688,744

Deficiency Advances repaid		4,500,000	2,500,000
Ways and Means Advances repaid		1,500,000	3,000,000
		134,375,397	139,148,852
	1908. Feb. 8.	1907. Feb. 9.	
Balances in Exchequer:—	£	£	
Bank of England	8,535,471	6,770,675	
Bank of Ireland	921,446	1,013,672	
		9,456,917	7,784,347
Total		143,832,224	146,933,199

Note.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

Mem.—Treasury Bills outstanding on February 8, 1908:—

Bills issued by Public Tender	£13,213,000
Bills otherwise issued	2,500,000
Total	£15,713,000

Treasury, February 11, 1908.

Lloyds Bank.—The balance-sheet for January shows liabilities consisting of current and deposit accounts £70,192,222, and bills accepted or endorsed £4,245,845, and assets of cash in hand and at Bank of England £11,896,736, cash at call and short notice £6,015,333, bills of exchange £6,790,995, Consols and other investments £12,337,691, and advances to customers and other securities £38,477,239.

Shanghai Electric Construction Company.—The construction and equipment of the electric tramway system in Shanghai are now complete, and the feeder cables are being connected with the municipal generating station. A supply of power sufficient to permit of traffic being opened is expected to be available on March 1.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the 10 days ended Jan. 31, $4,405, decrease $188; aggregate from July 1, $151,686, increase $43,305.

Argentine North Eastern. — Traffic receipts for week ended January 10, £2,937, increase £87; aggregate from July 1, £82,570, decrease £6,727.

Assam Bengal.—Traffic receipts for 11 days ended January 11, Rs. 1,23,019, decrease Rs. 50,052; aggregate from Jan. 1, Rs. 1,23,019, decrease Rs. 50,052.

Bilbao River and Cantabrian.—Traffic returns for January, £7,706, decrease £3,477; aggregate from January 1, £7,706, decrease £3,477.

Buenos Ayres Central.—Gross receipts for December £9,952, decrease £1,355; aggregate from Jan. 1, £132,935, increase £10,966.

Canadian Northern Railway.—Traffic receipts for 7 days ended Feb. 7, $110,200, increase $57,400; total from July 1, $5,996,300, increase $1,676,000.

Egyptian Delta.—Traffic receipts for week ended January 25, £5,452, increase £753; aggregate from January 1, £227,128, increase £18,683.

Lucknow Bareilly Railway.—Traffic receipts for 11 days ended January 11, Rs. 50,203, decrease Rs. 14,686; aggregate from January 1, Rs. 50,203, decrease Rs. 14,686.

Midland Uruguay.—Receipts for month of January, £5,010, decrease £2,362; aggregate from July 1, £42,157, increase £238.

North Western of Uruguay.—Traffic receipts for Jan., $18,500, decrease $6,777; aggregate from July 1, $138,364, decrease $6,752.

Quebec Central Railway.—Traffic receipts for the 1st week of February, $13,363, increase $1,254; aggregate from January 1, $82,144, increase $15,252.

Quebec and Lake St. John.—Traffic receipts for Dec. $58,375, increase $6,111, aggregate receipts $658,636, increase $60,714.

Rohilkund and Kumaon Railway.—Traffic receipts for 11 days ended January 11, Rs. 29,356, decrease Rs. 7,858; aggregate from Jan. 1, Rs. 29,356, decrease Rs. 7,858.

Uruguay Northern.—Gross receipts for month of Nov., £2,208, increase £166; aggregate from July 1, £9,710, increase £967.

White Pass and Yukon Railway.—Traffic receipts for week ended January 31 amounted to $1,700.

ENGLISH.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Reduced from 5 per cent. on January 23.)

Norfolk House, Friday Evening.

The law of compensation has been strikingly exemplified in the progress of our Money market towards internal comfort during the last few weeks. Were it not that the Treasury is denuding it of its balances it would have been impossible to keep either money or discount rates up as they have been this week. We warned the market that it would be pinched, but for a time it paid no attention and allowed the discount rate to drop back to little better than 3¼ per cent. on three months' remitted bills and to lower quotations still on longer usances of that class. Even by the end of last week, indeed, it was not often possible to get 3¾ per cent. upon three months' paper and six months' bills were little better than 3⅜ per cent., but the market has been in the hands of the Bank all the time, as successive Bank returns indicate, so that notwithstanding an increase of over £7,000,000 in the banking reserve since the beginning of the year, credit jobbers are much more dependent on help from the Bank than they were a month ago. The tension slackened a little to-day, thanks, it was said, to Government purchases of Exchequer bonds and the lending of Japanese balances, but although most of the loans due at the Bank were paid off it continued to do a good business in short discounts.

Last week the market lost £2,977,000 to the Treasury, and the Government balances are now up to £13,654,000 or £1,794,000 more than the total of a year ago. At the same time other deposits have dropped back £654,000 to £39,810,000, which is one may say a figure indicating severe impoverishment. This happened in spite of an increase of £763,000 in the total reserve, which is now £28,619,000 or £2,425,000 more than a year ago when the Bank rate was still 5 per cent., and in spite of the small increase in the reserve the market has been so harried by the tax collector that it has had to add £1,587,000 to its debt on other securities during the Bank week. So far as can be seen unless Mr. Asquith comes to its assistance more effectively than he has as yet shown any signs of doing by letting loose some of his hoarded millions in repaying Exchequer or Treasury bills or buying stock for the sinking fund, this hard-up condition will be with us, at any rate until the beginning of next month, and an approach to ease cannot be depended upon until the Government financial year is completed.

In every other respect the monetary position here has improved, and some good has even come from the Government induced distress of the market. But for that discount and money rates would have slipped down to a point that would have driven away foreign capital, and the Bank of France would have had no temptation to let any of the gold due to it lie here. Rates, however, have so firmed up, thanks to the discount and loan business done by the Bank of England, that full three months' paper is now quoted by some houses at 3⅞ per cent., and no house of standing quotes less than 3 13/16 per cent., while money has often been 4 and 4¼ per cent. on call and 3¾ to 4 per cent. on seven-day notice. What is the consequence? French banks have been renewing bills here, attracted by rates above those ruling in their own market, so freely this week as to cause our brokers to complain of a short supply, and to postpone the call for the balance of the gold required to repay the Bank of France for perhaps three months.

Already, however, the Bank of France has one way or another got back over £2,000,000 of the £3,500,000, there or thereabouts, our market was liable to repay, and this withdrawal has taken place so quietly that our market has never felt the slightest inconvenience either through it or through the heavy shipments that have gone to South America. One has to look back to see how the gold has been going, and it is astonishing to find that since the new year in these two directions alone nearly £4,000,000 has disappeared, including the amounts bought for Paris on the open market. This has occurred, and at the same time the banking reserve is up by more than £7,000,000. As the monetary tension is lessening on the Continent, even in Germany somewhat, as the latest return of the Reichsbank shows, the inference to be drawn from facts like these is that once the Government year is ended a period of reduced business and low rates appears inevitable. Nothing but extravagant emissions of new loans by governments and corporations or failures in unlooked for quarters can alter this prospect.

Bills were scarce to-day and rates inclined to weaken. Banks were buyers of bills from the brokers at 4 per cent. discount for March, 3 13/16 for April and 3¾ for May maturities. Because loan rates eased off some inferred that the market has over-borrowed, but the Bank return does not indicate that at all.

Silver.

The resumption of business after the holiday in the Far East brought a certain amount of speculative support to our market for bars, but the principal demand was again on account of the Indian bazaars. Bombay bought pretty freely at first, and prices promptly advanced to 26⅝d. per oz. for cash and 26 11/16d. per oz. for delivery two months forward, but those levels proved too high and dealings were few. China offered the metal pretty freely on Wednesday, causing a relapse to 26 3/16d. and 26¼d. per oz. A rally to 26½d. and 26⅝d. on Thursday on a little bear covering was short-lived, and quotations to-night are once more down at 26 5/16d. and 26⅜d. per oz. Tenders for the Rs. 40,00,000 of Council drafts on India offered this week amounted to Rs. 107,10,000 in bills and Rs. 80,00,000 in telegraphic transfers. The whole sum was allotted in bills, applications for which at 1s. 3 29-32d. per rupee received about 37 per cent. Another Rs. 40,00,000 will be offered next Wednesday.

The Stock Markets.

All the Stock Exchange is again complaining of want of business. The activity shown earlier in the year has completely died down and investment business has become scarce. This has naturally checked the ardour of the speculator and we fear many members of the Stock Exchange are now sitting upon securities they bought early in January in order to be ready for the outside buyer when he came along. To all appearance this stagnation will continue until April, and one reason why this is nearly always a slack time of the year is found in the collection of the taxes. There is no money to spare for speculation. January dividends have been invested, and the payments of interest and dividends that fall between January and April are never sufficient to provide a large amount of money in excess of what is taken away by the tax collectors.

Then new issues are absorbing the attention of the public more than old, partly because they mostly offer more tempting rates of interest and also because they give the buyer the impression that he is getting in near the bottom. He never really does so, because the market gets first of all its underwriting commission and then very often its premium, but the business looks tempting to the uninitiated outsider. Take Vickers, Sons and Maxim's new debenture issue as an example. We believe what may be called the "ground-floor" underwriters of this £1,000,000 get 4 per cent. commission, and what may be called the *entresol* party are granted half this commission or 2 per cent., but between the investor and the real price the company obtains for the stock there may be 5 or more per cent., thanks to the market premium, which is always easy of manufacture when the stock thus treated remains chiefly in the hands of intermediaries. Of new issues, however, the flow promises to be more than the market can cope with, and we shall not be surprised if many of the stocks now quoted, or to be quoted, at a more or less handsome premium will be on offer at considerably lower prices before six months have passed.

Contangoes.

Considerable weakness was developed in the Stock Exchange at the beginning of the week from no apparent cause. It was simply an indication of the size of the bull account. Inside operators who had bought for the rise hoping to be relieved by the public found themselves left with all, or the greater part, of what they had acquired, and they sold in the end of last week and beginning of this rather than carry over. Then when the contango rates were found to be light operators took heart of grace again and since the account have been once more trying to put quotations up. They were encouraged to pursue this course by the lightness of the rates charged. Bankers only got 4¼ per cent. for their money, generally speaking, and rates inside the Stock Exchange were seldom more than 6 per cent., even on Home Railway stocks, and often not 5 per cent. On American Railroad shares the rate was easy at 4 per cent., rarely more and sometimes less. On Foreign Government bonds it was difficult to re-lend at a profit inside the Exchange, even when money had been borrowed by the banks or private lenders at 4 per cent., and Foreign Railway stocks were easy to carry over at about 4 to 4½ per cent. The rate was also comparatively light on Canadian Railway securities, and every encouragement was thus given to the speculators for the rise to renew their play.

Trustee and Other Securities.

It is only spasmodic play, however, and markets have throughout been languid. No further advance has taken place in Consols. The stock has with difficulty held its price at 87, and other Government stocks have somewhat dipped as well as India stocks, although as regards these last nobody pays the slightest attention either to the sad news about the famine or to the fact that a fresh expedition is marching into the mountains to punish some restless tribesmen there. Municipal securities have taken the hue of Government issues and some of the County Council stocks are lower on the week, but, on the whole, that part of the market is fairly steady and Colonial bonds keep up, although few of them have moved since we wrote last.

Foreign Government Bonds.

Preparations are advancing fast for the issue of the new Russian loan, and it is said that it will be in the form of a 4½ per cent. bond, therefore the market in the English portion of the last 5 per cent. loan is kept active and the price steady. Very little has occurred

amongst other Foreign Government stocks during the week, and apart from some little improvement in Argentine bonds and a setback in some of the older Japanese loans there is nothing to dwell upon.

Home Railway Stocks.

Traffic receipts continue anything but encouraging here and the decrease shown for the past week is £50,639, therefore the tendency of prices has been adverse and speculators have to resort to such incidents as the visit of the King to Brighton in order to get up a little rally. Brighton stocks have been hoisted on this pretext, but generally speaking the changes have been the wrong way, and "heavy" stocks like Great Western, Midland deferred, North-Eastern and North-Western have been conspicuously flat showing decline of 1½ to 3 on the week. North-Western stock has fallen most of all, because the dividend was a disappointment. Until a few days before it was declared the market expected at least ½ per cent. and would not have been surprised at getting ½ per cent. more. When therefore the announcement was made at a 7¼ per cent. rate, the same as a year ago, it required great bravery to look cheerful. Most of the gain in gross income seems to have disappeared, and the company was able only to put an extra £20,000 at £50,000 to its buried reserve. North British stock was sent down by the company's new issue, although that is apparently going off well, and about the only stock of them all that has improved on the week is Metropolitan, for Caledonian went down with North British.

Yankee and Canadian Railways.

Severe relapses are shown in most Yankee Railroad shares of any consequence, and traffic receipts in that case also powerfully support the action of the bears. Here the tendency is to sell on every recovery. No doubt there is a large bear account on Wall Street, and perhaps also a considerable one here likewise, but events are too many for the bulls, and the fulminations of President Roosevelt, as well as the action of his Attorney-General, Mr. Bonaparte, in "going for" the Union Pacific combine keep alive the ferment of distrust; so this market is most uninviting, and ought not to be touched.

Can. Pac. shares only fell behind Baltimore and Illinois Central in the extent of their decline, tumbling 4 against the 5 these two lost. Grand Trunk stocks, however, were worked up yesterday in a jerky way on a tip that the dividend was going to be better than had been estimated.

Foreign Railways.

The only really active section all in favour of the bulls is that for Argentine Railway stocks, and the traffic receipts these properties are publishing are excellent and most stimulating. So is the news about the harvest which so far as wheat is concerned is secured and excellent. The promise of the maize crop is also the best seen for years, and were it not that much of the last wool crop has been held back and remains in warehouses unsold, there would be no single cloud on the horizon in that direction. So gains of 1 to 1½ have occurred in most of the leading Argentine stocks. Brazilian Railway stocks have not been so uniformly good, for the rise in San Paulo has been partly offset by the relapse in Leopoldina. Cuban Railway securities are also depressed, principally on the news that the tobacco and sugar crops in the island are both short and late. On the week United of Havana ordinary stock has fallen 6.

Banks, Breweries and Docks.

The shares of banks and discount companies have been steady throughout, and a good many of them are again up by a fraction or two on the week, while Chartered of India and Hongkong and Shanghai have respectively risen 1½ and 1. National of Egypt shares alone show weakness. Improvement continues also amongst Brewery securities with very few exceptions; in fact, Ind, Coope's "B" debenture stock is the only prominent exception until we come to Watney, Combe's stocks, which have gone down in a body from 2 to 5, the deferred falling most. Dock stocks are firm, and Surrey "A" preference has risen 5.

Commercial and Industrial.

Fractional changes have again been rather numerous amongst Industrial shares, and, on the whole, they have kept up rather well, although Fine Cotton Spinners ordinary continue weak and also all Calico Printers' issues. General Hydraulic stock has risen 6½, and was no doubt unduly depressed. Nobel Dynamite shares, too, have fallen, and the shares of Russian Petroleum companies continue most uninviting because of the continued disturbed state of the population in and around Baku. But the Nitrate group shows strength, and many bond issues have been advanced £1, even some of Spiers and Pond's debentures. With all that the market is the reverse of animated, and we need only note further improvements in India Rubber, Gutta Percha and Telegraph Works shares and in Henley's Telegraph Works shares. Nelson Bros. debentures and shares have also hardened on the report.

Electric, Financial, Land and Investment and Financial Trust Issues.

Nothing demands much notice in the Electric group, but weakness has again developed in Canadian Electric shares, and the stock of the Mexican Light and Power Company, partly because of the steady outpouring of new capital by one or other of this group of enterprises. Domestic Electric securities keep steady, but attract very little business. Hudson's Bay shares are weaker in spite of the enormous weight of the "bear" account open, but the struggle is a keen one, and apparently much endurance will be demanded of the "bears" if they are going to triumph soon, although the condition of the Canadian North-West is just now in their favour. Peruvian Corporation bonds have been put up to help the coming new issue, and a good many Financial Trust stocks are again higher, although the investment demand for them has slackened off, as for everything else.

Gas, Insurance, Iron, Coal and Steel and Miscellaneous Securities.

No important Gas stock has moved except the ordinary and preferred issues of the South Metropolitan Company, and these have gone down. Otherwise this part of the market is steady enough. Greater activity continues to be shown in the Insurance market, where prices have again gone up without a check, and London Assurance shares have risen 3 on the week. There is still talk of amalgamations with marine companies, but nothing definite has transpired. All is quiet enough amongst Iron, Coal, and Steel shares and bonds, but Vickers preferred stock has been knocked down 2½ on the new issue. Shipping shares are firm, and improvements have occurred here and there in the Tea, Coffee and Rubber group, where, however, the public is seldom much in evidence. Telegraph and Telephone securities have not altered much but keep steady on the whole, and Tramway and Omnibus securities have moved very little, but there is a slight recovery in the shares and a substantial one in the debenture stocks of the B.E.T. Company.

Friday Night.

Markets have not shown any disposition to move up to-day, but the contrary, and even Grand Trunk stocks fell away on realisations after the dividend declaration had taken place. The bulls have got all they played for. The "thirds" had been 56, and closed 53⅛. Yankee shares were heavy, especially before the close, and the Home Railway market was much in the same condition except for Brighton "A" stock, which bobbed up again. Elsewhere the tendency was rather disheartening, with nothing particular to dwell upon. Japanese bonds were dull on the reported rows in the Japanese House of Representatives, as we suppose we might call it, over the Budget, and selling came from Paris. Tintos were bought by the Bourse. Forced liquidation went on in Mexicans. Argentines held well. Kaffirs were flat, and the bottom has dropped out of the Manica Copper gamble. Price rattled down from 18s. to 12s. 6d.

Premium quotations for new issues are worth giving for reference, Canadian Pacific rights are quoted 7¼ to 7½, Copenhagen Scrip ⅜-½ premium for cash and ¾-1 premium for special settlement. New India scrip 3 premium and new Cape scrip ½ premium. Grand Trunk debenture stock is 1¼ premium, Montreal St. debentures 2 premium, and Vickers' new debentures are stated to be ½ to 1½ premium to-night.

The Grand Trunk dividends are always such an event for the gamblers that prominence must be given to them when announced. For the second half of 1907 the disposable balance is at £527,200, £3,735 up after allowing for £60,400 lost by the Canada Atlantic line compared with a deficit of £34,263 thereon a year back. At the same time the surplus on the Detroit line was only £5,800 against £15,610. How it is done we cannot yet tell, for while receipts rose by £178,000 expenses rose £150,000. The board, however, is able to pay the full dividend on the first and second preference stocks, and to again give the third preference a dividend of 3 per cent. for the year, with £6,700 left to go forward against £14,600 brought in and £13,231 carried out a year back. Those players, therefore, who bought yesterday so vigorously had the right tip.

THE WEEK'S PRICE MOVEMENTS.

Company Reports and Balance Sheets

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

MIDLAND RAILWAY.

In the second half of 1907 this company's gross income came to £6,775,768, including £293,881 of miscellaneous receipts, said receipts showing a reduction of £7,518 on those of the corresponding half-year. The increase from traffic alone was £320,380, but this reduction in miscellaneous receipts brought it down to £313,312. Most of the increase came from merchandise and minerals, one giving £185,898 and the other £166,966 more, coaching traffic yielding only £57,745 more. Working expenses rose by £294,432, so that most of the increase in gross earnings disappeared and very little more was left for distribution to the shareholders. The nett revenue brought down, in fact, was only £31,500 more at £2,469,265, but nearly £6,000 more was brought forward at £29,405. Fixed charges on debenture stock and rentals were almost identical in the two half-years compared, so that the balance available for dividends was £25,086 up and the directors are able to declare a dividend at the rate of 5¾ per cent. per annum on the old ordinary stock, 2½ per cent. per annum to the preferred and 3¾ per cent. per annum to the deferred, and still have £105,894 to carry forward or £24,270 more than twelve months back. It is not a very brilliant exhibit, but working expenses have increased in a startling fashion. Locomotive power, for instance, cost £218,382 more last half-year than twelve months back, and the cost of conducting the traffic rose by £69,535. Maintenance of way, however, was only £1,452 higher and the increase in carriage and wagon repairs was but £5,816, the total under that head being only £288,276, which seems a pinched allowance on an asset whose capital value in the books of the company stands at £17,286,000. Law and Parliamentary charges were down about £2,835, but there was an increase of £3,563 in the amount paid for compensation, which under all heads rose to £42,015, the amount paid to workmen alone having gone up from £7,605 twelve months ago to £12,169 in the past half-year. Rates and taxes, however, are down nearly £12,000 and the increase in the steamboat expenses is quite trivial. Nothing at all is revealed about steamboat income. Capital expenditure in the six months amounted to £295,584, which is quite moderate for this company, and of that only £28,272 went into new working stock. The balance-sheet is also fairly comfortable, as railway balance-sheets go, for although the capital account is overdrawn by £1,207,528, the trust funds in hand, including £1,176,167 of superannuation fund, amount to £1,733,766, so there is still a margin before a fresh capital issue is made.

NORTH-EASTERN RAILWAY.

In the December half-year this company's gross income amounted to £5,573,661, and the working expenses came to £3,439,698, so that the nett revenue left was £2,133,963. In the gross receipts there was an increase of £337,747 of which goods traffic contributed £99,220 and mineral traffic £177,183, passengers giving only £35,406 more, and parcels, mails, &c., £10,791 more, but working expenses went up by £204,998, so that the nett receipts were only £132,749 up, and the proportion of expenses to receipts was very little altered for the better at 61.71 per cent. against 61.78 per cent. On the expenditure side the largest increase was in cost of locomotive power, which rose by £98,603, and £48,102 more was laid out on maintenance of way, works, &c. Traffic expenses increased by £44,324, and compensation by £11,207. Law and Parliamentary charges, however, went down by £2,556 and rates and taxes by £3,627, while there was a slight decrease in the charges for carriage and wagon repairs. The larger nett revenue would not have been sufficient to give the ordinary shareholders more than another ¾ per cent. per annum on the £31,414,432 of ordinary stock, and the directors have wisely decided to keep the dividend down to the previous rate of 7 per cent. per annum. They are consequently able, in addition to placing the usual £20,000 to the ordinary reserve, to set aside £120,000 to a special reserve which may be used for emergencies, or as the directors say, "be available for expenditure on account of additional facilities where required to enable the traffic to be worked with economy and dispatch." They thus set excellent example which we trust the other railway boards will take note of and follow, because their capital accounts are all swollen to a dangerous extent. After setting aside these moneys there will be £121,638 left to carry forward against £101,017 brought in. Capital expenditure in the half-year came to £566,812, of which £156,515 went into new working stock and £273,580 into lines and works open for traffic, mostly into widenings, deviations, sidings, &c. The total amount of capital now sunk in working stock is £13,604,739 and this company has only received £5,837,473 on account of premiums on new capital issues. At the date of the balance-sheet the debit to capital account was no less than £2,815,430 and as the total of the trust funds, including £896,618 of savings and provident funds and £848,799 of superannuation and pensions funds, is only £2,129,000, it follows that there must be capital expenditure unprovided for by capital issues or trust moneys of any sort in the formidable total of £1,598,247 set against sundry outstanding accounts in the balance-sheet. A fresh issue of stock in some form will, therefore, have to be made at an early date, but there are ample capital powers existing. The dividends are payable on the 22nd inst.

GREAT WESTERN RAILWAY.

In the December half of 1907 this company's gross earnings amounted to £7,096,891, showing an increase of £346,852. Working expenses took £287,313 more at £4,315,915, so that the increase in nett revenue was only £59,539, and the proportion of expenses to receipts rose from 59.68 to 60.84 per cent. All important branches of outlay showed increases, the heaviest being, as usual, in locomotive expenses, which came to £144,417 more. A large increase of £36,444 is also shown in the outlay on carriage and wagon repairs, and traffic expenses went up by no less than £59,206, while maintenance of way, &c., took only £8,714 more. General charges went up by over £7,000, and law charges, including Parliamentary expenses, took fully £3,000 more. There was also an increase of £9,114 in compensation, which came to the heavy total of £43,142 in the half-year, and steamboat charges rose by £18,134. What the steamboat revenues came to is carefully hidden, as usual. The result, after crediting £52,703 for dividends and interest received, which is about £98 less than in the corresponding half-year, and adding in the balance of £80,068 brought forward, which was £38,065 up on the comparison, is a nett revenue balance left for dividend on the ordinary stock of £1,357,629 or £102,187 more than for the second half of 1906. No addition, however, is made to the dividend on this stock, which is again at the rate of 7½ per cent. per annum, with £103,020 left to carry forward against £85,779 at the corresponding date. It, however, took almost £85,000 more to pay this dividend than it did a year ago, because of the addition to the total in the interval, said total being now £35,845,976. And further additions must be made to this capital total, and to the prior charges also, for many years to come, for no English railway company of them all is pouring out money in the way the Great Western board is doing. It spent £1,045,026 on capital account in the past six months, of which no less than £185,335 was on account of new working stock. Then £487,557 gross went into lines open for traffic, but this

was reduced to £445,702 by some small amount of land sold and by the transfer of the Aylesbury branch to the Great Western and Great Central Joint Committee. On new lines and works in course of construction £664,291 was laid out, and in the current half-year the entire capital expenditure is put at £750,000, while the total estimated further outlay on capital in future years is entered at £6,263,000. Other projects, however, are in sight, so that unless something comes to check the lavishness the prospects for the ordinary shareholders of the company will soon begin to grow clouded. Altogether up to the end of the year £14,409,754 has been sunk by the board in perishable working stock, and in spite of the fact that the company has received from first to last £10,448,162 on account of premiums on capital issues, the balance-sheet shows a capital overdraft of £1,089,531. As the total of the trust funds in the hands of the board comes to only about £1,415,000, it follows that another issue of stock in one or in various forms will have to be made at no distant date, for the fact that the company has £47,388 invested in Consols and other Government securities will not help it along very far when the outlay on capital is at the rate of nearly £2,000,000 per annum. At the forthcoming meeting the shareholders are to be asked to vote £937,000 on capital account, of which £300,000 is to go into fresh rolling-stock. Dividend warrants will be posted on the 24th inst.

NORTH LONDON RAILWAY.

Progress backwards is still the distinguishing mark of this company's history and in the December half-year the gross receipts fell off by £16,020 to £242,249. In passenger revenue the shrinkage was no less than £18,186, but merchandise, minerals and live stock brought in together £1,638 more. Parcels, horses, carriages, &c., however, gave £348 less, hence the nett decrease named. At the same time expenses dropped by £6,209 to £147,967 or 61.08 per cent. of the receipts against 59.70. There was a decrease of 2,811,870 in the number of passengers carried, and of 996 in the number of season ticket-holders. What the position will be when the northern tramway system of the County Council is in full operation we fear to imagine, and cannot help thinking that with the outlook what it is, the directors would have been wiser to reduce the dividend declared on the common stock. It is at the rate of 5½ per cent. per annum, making 5 per cent. for the year, with £7,778 left to carry forward against £5,276 a year ago, but in order to make this payment £10,000 of a reserve fund has been utilised. It would have been better to have increased that reserve by reducing the dividend. Happily the company's capital account is closed, so that if it should be able by readjustment of fares or any other means to attract an increase of traffic again the shareholders will be protected from having any benefit of the kind taken from them by new capital charges. Working expenses, it may be added, were kept down in a quite remarkable way during the half-year compared with those of other railways. Traffic expenses are down no less than £2,678 and the increase in the cost of locomotive power was only £619, while maintenance of way, &c., fell off by £1,686. There was also much economy in law and Parliamentary charges and only a small increase in the cost of compensation, which was little more than £366 altogether. Rates and taxes, too, were down by £661. We hope that the next coal contract will be as advantageous as the last one. The dividend is payable on the 22nd inst.

FURNESS RAILWAY.

Gross traffic for the December half-year amounted to £302,930 or a decrease of £2,584 on the corresponding half of 1906. At the same time working expenses went up by £3,652 to £153,381, being at the rate of 50.63 per cent. as against 49 per cent. in the corresponding half-year. Various causes brought about this unpleasant result. For one thing, the bad weather hurt passenger traffic during the half-year, although passengers show an increase of 11,127 in number, but, worse still, the good mineral and merchandise traffic of the first four months of the half-year gave place to poor returns in November and December, owing to the depression in the iron and steel trades, while on the expenditure side cost of working was increased under nearly all heads. Maintenance of way, &c., rose by £1,212, locomotive power by £2,914, a slight saving in minor charges under this head having been more than offset by the coal outlay, which went up £2,749. Traffic expenses were also £2,325 higher, and had it not been that the £3,000 assigned a year ago to pay for dredging plant renewals is not required this time, so that the charges for the harbour and steam tugs, Fleetwood steamers, &c., which show a decrease of £3,428, the total expenditure of the half-year would have been still more unpleasant to contemplate. As it is, the half-year's profits are down £6,235 to £149,549, and the dividend is accordingly brought down to 3 per cent. per annum as compared with 3¾ per cent. for the second half of 1906, but £10,332 is carried forward now, against only £4,716 then, and the directors have placed £5,000 to the credit of steamers' depreciation fund against £4,000, while £1,000 has been charged to the fire insurance fund. Capital expenditure was £15,930 nett in the half-year, £9,921 having been received, principally from the Vickers, Sons, and Maxim Company, for land bought at the Barrow Dock. In the current half-year it is expected that another £39,946 will be laid out, nearly half of it on widening the Buccleuch Dock Bridge passage way. The capital account is overdrawn by £64,235 and the company owes £25,054 to its banker, while the amount due by it under the vague heading "sundry outstanding accounts" is £40,487.

CARDIFF RAILWAY COMPANY.

No less than £102,000 was spent on this company's new dock in the past year besides £38,021 on new railways and £3,752 on existing works, making the entire capital expenditure for the six months £144,553. We put these facts first because the capital account is overdrawn by £1,673,513 and at the end of the year the company owed its bankers £449,500, besides £1,051,000 classed as temporary advances due to creditors unpaid. Sundry outstanding accounts, furthermore, came to £225,524. Beside figures like these mere matters of current revenue and expenditure are of small importance. The gross income of the six months, however, was £252,478, including £218,178 of dock dues and other receipts, while expenditure came to £171,255, leaving £81,222 as nett income. Altogether the distributable balance was £148,132 since £50,713 was brought forward from the previous half-year, and £101,906 credited as interest on works in course of construction paid out of capital. Debenture stock interest took £23,000 of this and bankers and general interest £23,625, but even so £101,507 was left to pay dividends, and accordingly the first and second preference shares, together with the preferred ordinary stock, all receive a dividend at the rate of 4 per cent. per annum for the year, while a 3 per cent. rate is paid on both the preferred shares of 1901 and the ordinary shares, and £25,500 is carried to contingency account, as against only £5,000 in the corresponding half-year. These distributions made, £43,007 will remain to be carried forward.

GREAT NORTHERN, PICCADILLY AND BROMPTON RAILWAY.

In the December half-year this company's gross receipts rose to £119,271 and the expenses came to £70,753, leaving £48,518 as nett revenue, out of which the interest on the debenture stock and other borrowed moneys has been met, together with the rents and wayleaves due, which took away £12,614, leaving £7,114 for the shareholders. Out of this a dividend at the rate of 4 per cent. per annum has been paid upon the 35,704 shares (250 of them only £2 paid), held by the public, the shares held by the Underground Electric Railways Company in this instance also going without a farthing. After paying this dividend £13 11s. will remain to be carried forward. The directors, however, speak quite hopefully of the future and point out that the receipts during the four weeks of January this year show an increase of 55½ per cent. on the receipts for the corresponding weeks in 1907, and the number of passengers, including estimated journeys by season ticket-holders rose to 13,914,779 in the December half-year just passed. The shareholders will be asked at the meeting to sanction certain arrangements whereby the Underground Electric Railways Company will be released from its contract to lease this tube in perpetuity at a rent equal to 4 per cent. per annum on its debenture and share capital. At £6,768,442 this compact would involve, even assuming no further capital is to be spent, an annual charge of about £261,000 on the Underground Electric Railways Company, and that is more than it could possibly face, so an arrangement has been come to in virtue of which the shares held by the Underground Company or their nominees will be put away in the background, and made in no sense competitive for earnings with the shares already sold to the public. The conditions are that the 33,546 held by outside shareholders unconnected with the Underground Company will be converted into preference shares bearing a fixed preferential dividend at the rate of 4 per cent. per annum, payable out of the profits of the company in each half-year, the Underground Company guaranteeing the interest on these shares and also on the debenture stock. If there is any revenue over after meeting this charge the Underground Company will no doubt get the benefit of it, but no further shares are to be placed with the public beyond a number not exceeding 86,460, which may be converted into preference shares to rank along with the above-mentioned 33,540, but without the guarantee of the Underground Company. It looks rather a complicated arrangement, but appears to offer an honourable and straightforward way of ending a bad business without hurt to the outside investor, and as such will no doubt have a good effect in many ways. Capital expenditure in the past half-year was only £20,727, but there is an estimated future capital outlay of £437,557, of which £88,307 falls upon the current half-year, and the debt on capital account is £[illegible], the company owing £301,284 to the Underground Electric Railways and £205,000 to contractors under what is called the "contractors' retention fund."

BAKER STREET AND WATERLOO RAILWAY.

Gross receipts came to £[illegible] in the December half-year, being an increase of £[illegible] or [illegible] per cent. on the income for the corresponding half-year. As working expenses amounted to £43,926 it followed that the nett revenue reached £25,324 and the directors find themselves in a position to pay dividends at the rate of 4 per cent. on the preference shares and 3 per cent. on such ordinary shares as are held by the public, those held by the Underground Electric Railways Company being left out. It only takes £13,200 to pay the 2 per cent. for the half-year on the preference shares and £4,470 to pay the 3 per cent. given to the ordinary shareholders amongst the public, since only £298,030 worth of such shares are held by the public. Great progress has been made in the proximity of the line, and the number of passengers carried in the December half-year, including estimated journeys by season tickets, was [illegible], and further extensions have been effected in through booking facilities, so that the growth of the traffic ought to be steady and continuous for some time to come. It will have to be before the £3,122,000 laid out on the undertaking becomes fruitful. Capital expenditure, however, should come to an end before very long as a property on this kind, although last half-year £101,045 was spent on this account. The balance at the debit of capital account, however, appears small at £[illegible],

but the company owes £146,747 to the Underground Electric Railways Company and £40,000 to contractors.

CHARING CROSS, EUSTON AND HAMPSTEAD RAILWAY.

This company's gross income was only £74,328 in the December half-year, and working expenses, including rates and taxes, took £61,354, so that the nett revenue was only £12,975, and as the debenture stock interest took £15,910, that and general interest together £16,000, while £2,728 had to be paid as rents and wayleaves, it followed that the Underground Electric Company had to advance £5,627 in order to meet these charges. Thus no money at all was available for dividend on the share capital of £4,076,000. The capital account is overdrawn £750,677, of which £650,349 is due to the Underground Electric Railways Company and £100,000 to the contractors. Further capital expenditure is put at £145,822, but nothing is to be laid out on that account in the current half-year, although £82,731 was spent in the six months just closed. Great development of traffic will therefore have to take place before it becomes possible to test this company's prospects, and we are disposed to fear it may prove to be the weakest of the three.

BELFAST AND COUNTY DOWN RAILWAY CO.

Except in the case of minerals, where there was an increase of £1,000, the receipts in all branches of traffic for the past half-year showed a falling off, and the gross income was £880 down at £82,306. Working expenses at the same time were reduced by £2,888 to £46,448, the saving being entirely in maintenance of way, which cost £4,741 less, and the nett revenue therefore amounted to £35,859 or £2,008 more. A year ago a profit of £1,893 was obtained from the Slieve Donard Hotel, but this time outgoings exceeded revenue by £354, so that in spite of a larger balance brought in, the disposable total was only £215 up at £38,893. After providing for rent charges and interest, £30,329 was left against £30,470, but the dividend on the ordinary stock is repeated at the rate of 6½ per cent., leaving £141 less at £5,716 to be carried forward. Capital outlay was £1,223, increasing the debit balance to £55,701, and the various reserves aggregating £59,422 have had to be utilised to help the company along.

DUBLIN AND SOUTH EASTERN RAILWAY COMPANY.

Gross receipts were up by £1,930 in the December half-year to £145,243, and expenses fell off by £5,615 to £87,537, so that the nett revenue balance was substantially higher at £20,316. Out of this the directors pay away £9,271 as dividend on the preference stock at the rate of 4 per cent. per annum, and the balance of £11,044 they propose to carry forward "in view of the importance of strengthening the company's finances." This course they think in the best interests of stockholders, instead of using the money to pay a dividend on the ordinary stock. Of that stock there is about £967,000 outstanding, so that £11,000 would not have meant much if scattered over it. Little or no money was spent on capital account in the past half-year, but the capital account is overdrawn by £74,837, and no doubt the company wants a little money on various grounds.

EMU BAY AND MOUNT BISCHOFF RAILWAY CO., LIMITED.

The traffic returns of the Emu Bay Railway, including the traffic of this company's railway, for 1907 showed a further increase of £5,621 at £65,504, an improvement which the directors trust will be "a source of much satisfaction to the shareholders." They need something to cheer them up a little, as the revenue drawn from the repayment of debentures issued in respect of arrears of rent for 1905 has been cut in half at £2,500, and the total income of this company is £2,254 smaller at £13,110 in consequence. Expenses, including £238 for arrears of directors' fees, took £1,468 and debenture interest £5,890, leaving £5,752. After deducting the interim dividend of 6s. per share paid in July the surplus was only £2,152 compared with £3,928, so the final distribution for the year must be reduced from 6s. to 2s. 6d., making 8½ per cent. against 12 per cent., which leaves £652 or £324 more to be carried forward.

ROBARTS, LUBBOCK AND COMPANY.

Slowly, but, we are sorry to say, without pause, the business of this old bank appears to shrink. Its liabilities on current and deposit accounts, for instance, are down £285,054 compared with the corresponding return of the same date in 1907—viz., January 31—to a total of £3,232,193. Acceptances, however, have risen by £40,724 to £100,608, and on the two years the increase in this direction is upwards of £60,000. Deposit and current account liabilities, however, were down nearly £59,000 twelve months back compared with January 31, 1906. Corresponding declines are shown in the assets. Cash in hand and at the Bank of England, for instance, is £130,661 less at £691,203, and money lent at call and short notice is £228,900 down at £689,700. The investment of the bank in Consols is still entered at £425,000, the same as a year ago, so that the stock is taken at 85, and the £50,000 nominal of Metropolitan Water Board "B" stock continues to figure at the reduced total of £46,000, but there is a decrease of £3,174 in the other investments—British, Indian and Colonial Government securities, Corporation stocks, Railway debentures, &c., the total of which is now £258,434. Bills discounted, loans and advances, &c., show an increase of £77,681 at £1,492,109, and freehold premises remain at £129,746, but the total of the balance-sheet is none the less down by £244,310 to £3,832,801. On comparison with two years ago the decline is over £282,000.

BARING BROTHERS AND CO, LIMITED.

So great are the changes shown in the few figures issued by this old firm of merchant bankers compared with those of December 31, 1906, that we had to look back to the actual balance-sheet for the earlier year to make sure no mistake had been made in the account given of them in The Investors' Review. There was no mistake. Altogether the total of the balance-sheet is down no less than £8,825,037 to £11,991,359. There is a decrease of £6,840,330 in the liability on current and other accounts, now down to £5,463,709. Simultaneously acceptances at £5,391,253 are less by £1,985,193. Capital and reserve remain as before, capital at £1,025,000 and reserve at £100,000, but the balance carried forward is £11,397 compared with £10,911. When we come to the assets, the decline in the current account liabilities is found to be distributed over various items. Cash in hand, at call and short notice is £960,526 less at £2,394,203. Bills receivable are down by no less than £2,778,613 to £1,976,697, but this is against an increase of £2,478,487 a year ago. Investments in British Government and other securities are also less by £861,609 at £1,584,498. A year ago this item was about £398,000 up. House property in Bishopsgate Street remains at £127,000. What the explanation of these changes may be we can only surmise. Probably enough, however, Russian loan operations had most to do with them, but, anyhow, the fluctuations are sufficiently remarkable to be worth special notice.

ANGLO-FOREIGN BANKING CO., LIMITED.

A considerable decrease of £10,361 at £51,435 is shown in the gross profits of this bank for the year ended December 31, only £660 of which can be accounted for by the increase in the amount set aside for rebate on bills. Expenses at the same time were heavier at £20,613 and nett profits, including £5,817 or £329 more brought forward, were consequently £11,669 down at £36,639. The dividend and bonus, however, are maintained at 10s. per share or a little over 7 per cent., although this means that nothing is added to the reserve against £10,000 a year ago, and even with a reduction of £600 in income-tax the sum carried out is £1,069 lower at £4,748. Liabilities on deposits, loans, &c., have shrunk by no less than £426,054 to £719,769, probably through the repayment of loans, as the total of securities pledged given in a note appended to the balance-sheet is £463,600 smaller at £674,501. Current accounts are £73,997 down at £298,870, but bills negotiated appearing on both sides of the accounts have risen by £233,730 to £4,648,108, and acceptances, which also have a per contra entry, are £48,656 up at £833,892. The decrease in resources is reflected in reductions of £262,045 to £305,924 in cash and short loans, £63,164 to £635,080 in bills receivable and foreign bills, and £167,628 to £374,885 in advances partly covered by securities. Investments, however, are only £8,524 down at £297,758 and bank premises have been increased by £2,640 to £39,118.

THE INDIAN SPECIE BANK, LIMITED.

This is a purely native Indian institution, whose head office is in Bombay, but it possesses branches not only in London, but in Calcutta, Poona, Karachi, Surat and other places in India. For the half-year ended December 31 last its nett profit came to Rs. 209,794, and after paying interest at the rate of 5 per cent. to the shareholders and adding Rs. 75,000 to the reserve fund, the directors were able to write off Rs. 2,294 on account of preliminary expenses. The average paid-up capital for the December half-year, the bank being a new one, was only about Rs. 5,300,000, and the actual paid-up capital is now Rs. 7,131,820. The nett profit was therefore at the rate of 8 per cent. per annum on the average capital paid in. With the addition now made, the reserve fund will amount to Rs. 100,000 and the bank owes Rs. 9,361,959 on deposits, the total of the balance-sheet being Rs. 18,159,597.

MANCHESTER SHIP CANAL.

In the second half of 1907 the sea-borne traffic passing over the canal amounted to 2,656,201 tons, an increase of 327,773 tons compared with the corresponding period and the barge traffic increased by 27,406 tons to 150,766, making the total 2,806,967 against 2,457,788, a first rate increase. For the full year the tonnage was 5,210,759 or a good half-million tons in excess of the 1906 business. The weight of the imports and exports of sea-borne merchandise which paid toll for the use of the canal was 486,543 tons larger than in the previous year, but 379,117 tons of the increase consisted of exports of coal, upon which a low rate has to be charged. Half-year's revenue of the ship canal was £287,252 or £21,592 more and the expenditure rose by £10,802, so that the nett revenue was not quite £10,800 larger. The chief increases came from merchandise and minerals, but rents were also substantially larger, while ships dues, &c., declined. Apart from Parliamentary expenses, which happily appear as nil against £978, all expenditure items were on a heavier scale, and we note a sharp increase in compensation charges for accidents and losses of £1,051 to £3,465. In the Bridgwater department the revenue was £152,175 or £5,843 more, but expenditure advanced almost as much to £136,619, so that the nett credit was little altered at £15,556. Add it to that of the ship canal, and the total is £161,701 distributed as follows:—Interest on first and second mortgage debentures, £44,742, on debenture stock and mortgage of surplus lands £4,500, rents £15,630, and payment to the Manchester Corporation for interest on debentures held £93,975, leaving £468 to be carried forward. The total amount paid to the Manchester Corporation was £160,000 for the past year, being the full amount of the interest due. The reserve fund account has been closed, the amount standing to its credit having been appropriated in settlement of the Warrington litigation.

MILLWALL DOCK COMPANY.

Some falling off occurred in this company's business for the half-year to December 31 last, the ships entering the dock declining by 90 in number and 35,047 in tonnage to 688 and 608,919 respectively. The decline arises principally from

vessels trading with Baltic ports, but the total for the whole year shows a decrease of 4,099 tons only. Revenue naturally shows a sharp set-back, the shrinkage amounting to £15,408 at £112,387, and against this the saving in expenses was only £5,741 at £92,939. Most of the drop was in wages, but rates and taxes were also down. After providing £12,286 for debenture interest the balance of profit is £7,162 against £16,829, and the directors can only pay a dividend of £1 8s. per cent. against £2 5s. on the perpetual 5 per cent. preference stock, absorbing £6,800, and leaving £6,875 (including £6,573 brought in) to be carried forward and distributed as funds permit. The diminished profits are attributable to the small quantity of grain imported from North Russia and to the low timber rates ruling during the year. Revised rates on a higher scale have been arranged with the timber trade, and came into operation on January 1, 1908. The directors briefly refer to the Government's intention to bring in a Bill dealing with the Port of London.

NATIONAL TELEPHONE COMPANY.

Its business grows steadily and for the six months ended December 31 last the gross revenue amounted to £1,387,190 or an increase of £145,347 on the corresponding half of 1906. Expenses rose by only £69,840 to £780,333, so that after deducting £132,621 paid as post office royalties, the nett profit of £474,236 was £61,385 up. In addition the rentals carried forward for unexpired terms amount to £110,583 more at £1,168,389. Out of the available balance of £369,888 the directors not only meet all the preference charges but increase the dividend on the deferred stock to 6 per cent. per annum as against 5½ per cent. a year ago, and transfer £145,000 to the reserve fund, still leaving a balance of £10,439 to carry forward or £597 more. The amount carried to the reserve is £10,000 up. Capital expenditure during the half-year was £24,485 more at £545,752, and the capital account is now overdrawn by no less than £3,084,898 which is £617,191 more than the total of the reserve fund. The company, however, has large sums in the shape of unexpired subscriptions in hand, so that there may not be any immediate necessity to come upon the market for more capital.

IMPERIAL TRAMWAYS CO., LIMITED.

This is a combination of tramway undertakings, the company being interested in the Middlesbrough, Stockton, and Thornaby Electric Tramways, the Corris Railway Company, and the London United Tramways. Revenue of the first-named was a trifle lower, despite a small increase in the number of passengers carried, and after placing £2,500 or £900 less to the reserve fund for renewals the nett profit is larger by £173 at £16,884. As to the Corris Railway the directors regret that the trade of the districts served by the lines has not improved, and while expenses have been reduced by £306, the payment of debenture interest leaves an adverse balance of £64. The holding in the London United Tramways preference shares being the same, namely, 44,446 5 per cent. preference shares of £10 each the revenue of £21,112 is also unaltered. Income from every source was £42,079, and after meeting general expenses £796 and adding £292 brought in the disposable sum is £41,574. Debenture interest requires £12,825 and preference dividend £11,400, leaving the directors in a position to again give the ordinary shareholders 9 per cent., with £249 to next account. It must be noted, however, that revenue was aided by another contribution of £3,750 from the ordinary shares dividend fund reducing it £29,000, and the reserve funds have been increased by only £2,500, making them £128,772.

BRISTOL TRAMWAYS AND CARRIAGE CO., LIMITED.

There was a small falling off to 46,585,050 in the number of passengers carried by this enterprising company during 1907 compared with the previous year, which was probably accounted for by the bad weather. Tramway receipts were very little lower at £210,691, but the carriage department gave only £48,360 or about £2,000 less and sundry receipts were some hundreds down at £4,639, so that altogether the revenue was £263,690 compared with £266,768. Total working and general expenses were £178,342, or not quite £2,000 larger, and the balance of nett revenue shrinks by £4,960 to £85,347. Debenture interest, preference dividend and interim payment at 8½ per cent. per annum on the ordinary shares required £54,077, and it is now proposed to bring the total distribution up to 9 per cent. for the full year by a final payment at 9½ per cent. per annum, carrying £8,708 or £7,258 less to reserve fund for contingencies and renewals. A year ago this fund stood at £190,328 and during the period under review £10,195 was spent for permanent way renewals, while £7,090 was written off to adjust to market values the investments held on account of the fund. Interest on the investments, however, gave £6,783, and with £8,708 from profits the reserve is rebuilt to £188,534. Capital outlay in the year was £34,846, raising the total to £1,404,016, and a good deal of outlay has still to be incurred on certain important extensions. To provide the necessary funds and repay £75,526 due to bankers, the directors recently offered £250,000 additional debenture stock, and got the money without difficulty.

HASTINGS AND DISTRICT ELECTRIC TRAMWAYS CO., LIMITED.

The Hastings Tramways Company, through which this undertaking works, opened the "Front line" on January 12, 1907, and has therefore had its complete system in operation throughout practically the whole of the past year. During the twelve months 9,530,345 passengers were carried and the gross receipts from all sources amounted to £54,908, of which expenses absorbed £30,835 and £24,073 was handed over to this company as dividend on the shares. That was an increase of £9,239 over the previous year, and as miscellaneous receipts were also better, the total income was £9,361 up at £24,400. London expenses took £1,894, and with £733 brought forward the nett amount available after providing debenture interest was £13,767 compared with £5,733, and the directors are therefore able to pay the preference dividend in full, and to carry forward the larger balance of £1,767. Expenditure on construction took £20,74[illegible] making a total, including the shares in the Hastings Tramways Company, of £453,439, while other assets include such [illegible] things as underwriters' commission, paid in cash, £100,000, Parliamentary deposits £2,852, and preliminary expenses £6,213, this last item being £900 up. Liabilities to sundry creditors have risen by £706 to £3,226, but against this cash is no less than £6,860 better at £7,930.

LANARKSHIRE TRAMWAYS COMPANY.

In the December half-year this company's earnings were £34,927, the expenses being £20,732. Interest and other charges and £2,590 written off reduced this balance to £10,070, but as £5,182 was brought forward the disposable balance is £15,252, out of which a dividend at the rate of 6 per cent per annum is distributed on the ordinary shares, £5,500 is placed to reserve for depreciation, and £241, being 10 per cent. of the nett profits after payment of a 5 per cent. dividend, goes to the directors, leaving £895 to be carried forward. The company wants more capital and that is principally why we mention its revenue account in this detail. Sundry extensions are to be proceeded with, and shareholders are to be asked to authorise the directors to raise £108,000 in 10,800 new shares of £10 each, which will make a total authorised capital of £416,000, of which £287,230 has already been issued and paid up. It is not, however, proposed to put out the whole of this fresh capital at once for only 2,077 new £10 shares are to be immediately offered for subscription, £2 per share being payable on application and the balance in four instalments of £2 each, to be called up between now and June 30 next. The balance-sheet is a fully detailed one, and the revenue account is also satisfactorily drawn up. £5,000 was paid off the loan of £12,500 due by the company to its bankers, reducing that to £7,500, but there is a debt of £30,400 on 4 per cent. debentures and the company owes £12,172 to sundry creditors. The depreciation reserve now amounts to £15,500, but the whole of these moneys is absorbed, naturally enough, in the business.

WOOLCOMBERS, LIMITED.

Gross profit for the year ended December 31 came to £78,796, after paying for repairs and maintenance. This was reduced to £69,862 by the £8,935 paid to guarantors as per clause 7 of the prospectus, but brought up again to £71,659 by interest and transfer fee receipts. After paying debenture interest and adding in £2,296 brought forward the free balance is £30,464, and the directors are able to give the ordinary shareholders 10 per cent. for the year, with £2,764 left to carry forward. The amount set aside to depreciation fund out of the year's profit is £18,424 raising the fund to £36,471, administrative expenses absorbed £8,232, and directors' fees came to £2,000. In the balance-sheet the company appears as owing sundry creditors £49,452, but sundry debtors owe it £95,884. Stock of stores and work in progress comes to £43,474, and there is still £28,000 outstanding on account of underwriting charges, no further writing down having taken place for the past year. The company possesses investments and a mortgage valued at £25,140, and has £13,925 in cash besides the £6,520 in the hands of trustees for the debenture-holders. Altogether as good a display as was to be expected.

COTTON MACHINERY TRUST, LIMITED.

We referred last year to the curious composition of this company's balance-sheet, and there is nothing fresh to be said about it. Capital £29,062 and open contract suspense account £7,483 remain the same, while sundry creditors appear at £304 against £20,500, balance of ordinary profit and loss is £751, credit to deferred ordinary account is £527, and profit for the year to December 31 £2,861. Thanks to the drop in floating liabilities the cash and bills have been reduced to £16,124, a decline of £8,710, and sundry debtors are only £24,865 compared with £36,322. Profits are less by £605, so that after paying 7½ per cent. on the ordinary shares, the balance permits the distribution of another 7d. on the ordinary capital and 3s. on each deferred share.

ROSARIO NITRATE COMPANY.

In its year ended September 30 last this company's gross profit came to £186,393, including the profit on part of the stock of nitrate sold to that date, the balance of the stocks on the coast being taken at cost. London expenses, income-tax, directors' and auditors' fees, took £5,883. £1,288 was written off for depreciation of furniture, for debenture stamps, and estimated loss by fire at Iquique, and £1,289 off the value of investments, while loss by exchange involved the heavy charge of £21,737, and income-tax £8,605. Add the nett charge of £6,834 imposed by the debentures—£8,386 interest payable, less £1,556 interest received—and the total deductions reach £31,634. There remains £154,759, or with the balance of £5,051 brought forward a total of £159,810 for disposal. Of this £50,000 has been carried to reserve, raising it to £95,000, and £51,400 altogether assigned to various debenture sinking funds. An interim dividend of 3 per cent. and a final of 5 per cent., making 8 per cent. for the year, is provided on the shares at a cost of £48,800, and £10,410 is left to carry forward, or more than twice the amount brought in. The debenture debt is now down to £147,600, bills payable stand at £70,543, and sundry debtors owe the company £48,524, stock on hand and stores come to £90,588, investments to

£33,409, and cash and bills receivable to £133,067—surely a fine position.

UNITED STATES TRUST AND GUARANTEE CORPORATION, LIMITED.

Revenue was up again on the twelve months to December 31 last, the accounts setting forth a gross income of £17,203 or a good £3,000 more than in the preceding year. Against this must be deducted debits of £7,285, including general expenses in London and New York £2,488, income-tax £546, interest on loans £2,771, and transfer to reserve £1,287, leaving £9,919 nett, sum brought in was £3,533, giving a disposable balance of £13,452, and after providing the preferred dividend of 5 per cent. a distribution of 3½ per cent. is again proposed on the deferred stock, carrying forward £3,060. A year ago nothing was credited to the reserve fund and the sum now added, together with £3,987 realised on the sale of investments has been used to write down the cost of the securities, leaving the fund at £20,000. Investments at cost with interest accrued have a balance-sheet value of £356,566 against an issued capital of £248,800, and we note that £76,417 has been raised by way of loan.

BRITISH ASSETS TRUST, LIMITED.

The revenue from interest and dividends received for the year ended January 15 amounted to £22,536, and with £5,091 from profit in securities realised and £16 from transfer fees, the income was £813 up at £27,642. Adding £4,551 or £1,313 more brought forward, the disposable total was £32,193 against £30,067, but expenses and debenture interest required considerably more, and the nett surplus showed a decrease of £768 at £25,324. Only £419, however, had to be written off for expenses of debenture issue, compared with £1,651, and after repeating last year's dividend of 8 per cent. on the ordinary shares £5,000 is written off investments against a similar amount placed to reserve, and the sum carried out is raised by £438 to £5,892. A further £35,364 of the debenture stock was issued during the year and this enabled the company to pay off £31,900 of its loans and to meet a withdrawals of £5,169 of the deposits, leaving these items at £60,700 and £4,857 respectively. Investments are £606 lower at £530,022, and the directors admit that this figure is in excess of the market value, but they omit to state whether the depreciation is fully covered by the appropriation from revenue. Sundry creditors are £704 up at £3,062, while debtors are unaltered at £541, and cash seems miserably small at £393, considering that nearly £7,500 has to be found for the final dividends declared.

RAILWAY DEBENTURE AND GENERAL TRUST CO., LIMITED.

This company's gross profits for the year to January 15 were £109,361, a decrease of rather over £2,000 compared with the preceding twelve months and £4,469 was brought forward, making £113,820. Debenture interest takes the tidy sum of £64,992 and after meeting sundry charges £37,034 remains. Reserve fund gets £7,000, the dividend for the full year is 5 per cent., and £5,024 is carried forward. The company's investments have a book value of £2,133,804, and on January 15 there was a depreciation upon them of £116,825 or about 5½ per cent., but the reserve fund of £217,000 makes the loss good, and the directors opine that the wastage is merely temporary. We hope so. Discount on issue of debentures and debenture stock still to be written off is £57,716, having been reduced to this figure by an appropriation of £2,268 from last year's profits. Temporary loans and advances come to £41,870, and the cash balance is £39,913.

RAILWAY SHARE TRUST AND AGENCY CO., LIMITED.

Hitherto the directors of this company have adopted the policy of writing off from the reserve any depreciation on the investments held, and this course is adopted for the period to January 15, but in future they propose to conform to the practice of the railway debenture and other trust companies, and to enter the investments in the balance-sheet at what may be "justly taken to be their values in normal times," and only to write off so much as may be considered to represent permanent depreciation. It is idle to pretend that the new policy can compare with the old for prudence and soundness, but the fact is the company has been hit by the depreciation in American securities, of which it holds a large number, and wants to shirk the consequences just like the Yankee insurance companies. At present the balance-sheet is clean and healthy, and the investments entered at £791,064 represent a true valuation. It is, of course, unfortunate that the shrinkage in the year has amounted to £108,415, and that the reserve fund of £110,000, including £10,000 now added, has practically all disappeared, but the shareholders have the advantage of knowing where they are. Gross profits for the twelve months to January 15 were £61,331, an increase of a good £6,000, and £15,969 was brought in, making £77,299. After providing the dividend on the "B" stock, meeting administration charges, and adding £10,000 to reserve, the balance remaining is £33,740, and from it the directors pay 5 per cent. for the year on the "A" shares, the same as before, carrying forward £13,740.

GUARDIAN INVESTMENT TRUST CO., LIMITED.

This is one of the trust companies which publishes a list of securities, but the auditors unfortunately have to tell us that the investments stand in the books in most cases at cost prices, and from a valuation made by the trustees and brokers upon approved principles there is a depreciation in the amount at which they are stated in the balance-sheet, in addition to the amount of "losses on investments not yet provided for" standing at £9,000. Altogether the investments have a book value of £1,072,461, or as near as may be the amount of the issued share and debenture capital. Revenue from every source in the twelve months to January 20 was £52,366, from which management expenses required £3,120, debenture interest £17,100 and other items £280. Balance left was £31,866, and after paying the preferred dividend, 4½ per cent is paid on the deferred stock and £5,361 appropriated to writing down securities, leaving £300 to be carried forward, the same as was brought in. Profit on change of investments during the half-year was £11,731, making with the above-named £5,361 a total of £17,091, the whole of which is written off securities.

NATIONAL MORTGAGE AND AGENCY COMPANY OF NEW ZEALAND, LIMITED.

There seems to be no question that this company's business is conducted with prudence and foresight, and we read in the report that while the financial year ended on September 30 last was satisfactory, and the prospects for the current year are promising, prices of produce, and especially of land, continue to be somewhat inflated. In the circumstances the directors have again thought it well to enjoin caution on the colonial staff in regard to advances. All told, the amounts loaned or advanced by the company were £977,541 at the date of the accounts, and judged by the amount of profit earned these should be in a pretty healthy state. Other assets are premises, plant, goods, &c., £117,299, and cash, investments and bills receivable £181,154. Creditors and bills payable are heavy at £496,242, usual in a business of the sort, but the reserve fund is at the very fair sum of £105,000. Gross profits are now returned at £80,038, a decline of £4,796, and the nett income is £42,747, the deductions consisting of general charges, £25,596, land and income-tax £2,611, and interest on debentures £16,618. Dividend for the year will again be 10 per cent., £15,000 is placed to reserve, making the £105,000 named, and £7,747 is carried to next account. A new branch has been opened at Ashburton, the centre of a large and prosperous farming district in the Province of Canterbury.

NATIONAL GAS ENGINE CO., LIMITED.

This first-rate business again issues a highly satisfactory statement of accounts and reports a nett profit for the year ended December 31 of £61,558. This is after providing for depreciation of buildings, plant, machinery, &c., and shows an increase compared with the preceding twelve months of £15,416. Interim dividends already paid absorbed £18,169 and £684 has been appropriated to writing down the holding of Consols to market price, leaving £52,680 still to be dealt with, which takes into account the sum of £9,975 brought forward. So after meeting the balance of the preferred dividend the directors propose a final payment at 20 per cent. per annum on the ordinary shares, making 20 per cent. for the year, together with a bonus of 1s. per share or 5 per cent. An addition of £10,000 is next made to reserve and a big increase of £17,011 takes place in the carry forward. The balance-sheet is everything that can be desired. Nett capital expenditure in the twelve months was £19,144, making the total property valuation £197,307, a very modest sum considering the fine profits earned, and there is a reserve now reaching £80,000. This is largely invested in Consols held at 85 and standing at £59,500. Only £21,938 is due to trade creditors against book debts £99,158, stock-in-trade and work in progress are entered at £54,400, and cash and bills appear at £28,583. Patents account stands at the trifle of £1,748, and the position all round is of the best.

ALBION STEAM COAL CO., LIMITED.

The trade boom of last year brought this company the large increase of £27,060 in nett profits at £53,485. With £1,240 or £4,876 less brought in the amount available is £54,724, so that after paying the 6 per cent. dividend on the preference the ordinary shares get a dividend, and that the substantial one of 10 per cent., £17,185 or £2,815 less is applied to writing down expenditure on No. 2 pit, and £4,100 or £2,860 goes forward. Colliery wagons, &c., including No. 2 pit, now stand at the round sum of £445,000. Cash is £4,085 up at £6,920, and debtors at £41,623 owe £11,633 more, while creditors are £14,259 less at £37,702, including banker's loan, which is reduced from £31,000 to £15,000. The position is therefore more satisfactory all round.

RIVERSIDE ORANGE COMPANY.

A very satisfactory year has been experienced by this Californian orange and lemon growing company, and gross proceeds have risen £11,880 to £52,493. After all outgoings are paid, including £2,188 interest on debentures and adding £600 sundry receipts, a nett profit is disclosed of £30,414, which with £4,668 brought in leaves £35,082 available. With the interim dividend paid of 6 per cent. the final now recommended of 14 per cent. makes 20 per cent. for the year on the paid-up capital £53,745, absorbing £10,749, and £2 of the liability per share is written off, absorbing £21,498, and £2,835 is carried forward. Concurrently with this operation the debenture debt has been reduced by £11,300 during the year, and since September 30 a further £8,150 has been redeemed. The debentures are still, therefore, covered by uncalled capital. Cultivation required £11,486 and Californian expenses £4,751. London expenses include on general account £1,542 and miscellaneous £210. Land remains at £111,101. Arlington Heights Fruit Company figures as an asset of £18,155, representing 4,000 shares of $5 £4,124, assets in land department £6,186, and current accounts £7,845. A part investment of reserve in North-Western 3½ debenture shows a depreciation of £500 below cost £4,912. Cash is generous at £23,607. Debtors and creditors are unusual, the former being but £36 against debts of £6,773, and

of this California wants £1,100 more than London. Reserve remains at £25,000, having received £11,100 from last year's accounts, but, as already mentioned, the debenture debt which figures at £38,345 has been reduced since the striking of the balance-sheet by £8,150 to £30,195 out of the total issue of £53,195.

BRITISH OIL AND CAKE MILLS, LIMITED.

Nett trading profit for the year shows a still larger increase, having improved by no less than £62,802 to £200,392, the largest in the company's history. With small additions the total credit is £201,493. Salaries, rent, &c., took £6,803, directors' fees £375 less at £3,975, interest on mortgages and debentures £27,193, depreciation is allowed £5,801 more at £26,757, but still seems meagre for the figures in property account; £50,000 is apportioned to reserve account, or to be more accurate and as admitted by the directors to extra working capital. These deductions leave £82,200 available, including £6,179 brought forward. Preference dividends absorb £33,000, and the ordinary shares get 6 per cent. against 4 per cent. last year, and the carry forward is increased by £7,021 to £13,200. Property account, including goodwill, with £2,675 added during the year, and depreciation allowed for stands at £1,607,680, and £13,779 represents investments at cost. Bills receivable £52,505, less bills discounted £51,041, and cash are £7,699 down at £22,875. Trading accounts are favourable and large, debtors totalling £327,932 or £43,221 up against creditors for £184,776, an increase of £23,690. Stocks at market prices have risen £88,923 to £412,530. Liabilities include loans and deposits amounting to £184,186 up £11,221, and bills payable £2,390. With this year's addition the so-called reserve amounts to £100,000.

WALKER AND WALLSEND UNION GAS COMPANY.

The higher cost of coal by 3s. 1¾d. per ton to 13s. 3d. neutralised to some extent the advance in the sales of gas and in number of consumers. Receipts in the past year increased by £2,820 to £44,133, but expenditure was £2,451 higher at £32,645, so that the balance of profit for the year was £11,488, which gives, with £4,493 brought in, £15,981 to be dealt with. The distributions are on the 5 per cent. ordinary at the rate of £6 7s. 6d., and on the 3½ per cent. ordinary £4 17s. 6d. Depreciation fund is credited £1,575, and £4,555 is carried forward. Notice is given to the consumers by ordinary meters that from the commencement of the year the prices will be raised from 2s. 3d. to 2s. 6d. again, and the dividends on the ordinary stocks will be reduced by 7s. 6d. per cent. Capital account has been increased by the issue of preference stock and mortgages to meet expenditure of £27,639, mostly on account of new works at Howdon Lane. With the year's appropriation of £1,575 and the usual allowance of £500 depreciation fund will amount to £13,000, and will be sufficient to clear off the loss of assets at the expiration of leases at Willington Quay and Walker. The only other noticeable change in the balance-sheet is the addition out of profits of £1,000 to insurance fund, making it £1,449.

PAWSONS AND LEAFS, LIMITED.

No working statement is published, but nett profits, after payment of interest, directors' fees, and all outgoings are declared at £15,388 for the year ended January 23, being an increase of £2,832. With £48,017 brought in, £63,405 is to be dealt with. The profits this year cover the dividend of 5 per cent., which is paid again, the hardly sufficient sum of £500 is allowed for sinking fund for redemption of leasehold property in St. Paul's Churchyard, and depreciation of machinery, &c., which in all are valued at £136,134, and a slightly increased sum of £49,105 is carried forward. Stocks are still very heavy, although they show a slight decrease at £179,188 after allowing discount at 2½ per cent. Debtors are further increased by £4,308 to £218,477, while floating liabilities are decreased by £5,342 to £84,708. This includes cash creditors down £5,326 at £25,047, creditors on open accounts £4,188 down at £44,201, and bills payable up £4,172 at £15,460. Bills receivable, however, are down £4,522 at £21,507, and cash has shrunk by £4,428 to £7,823.

WM. MCLAREN, SONS AND CO., LIMITED.

Profits of this Glasgow business of warehousemen for the year ended December 20, after providing for all charges and depreciation, are brought out at £10,448 or a trifle of £97 more. The balance from the previous account, however, was £528 up at £736, giving £11,184 to be dealt with against £10,559, out of which the dividend of 7½ per cent. is repeated and the sum carried out is increased to £1,434. Depreciation is said to have been provided for, but there is no indication in the balance-sheet of anything having been written off, and property, warehouse furniture, fittings and goodwill are still valued at £93,563 or the same as a year ago, while the reserve is also unaltered at £8,000. Sundry creditors and depositors have increased by £6,389 to £150,209, against which stocks come to £73,036 or £1,707 more, sundry debtors are £4,463 up at £148,741 and bills receivable are £1,201 higher at £14,923, but cash is slightly less at £1,211.

JOHNSTON, MOONEY AND O'BRIEN, LIMITED.

Trading profits of this Dublin business of millers and bakers for the year ended December 28 improved by the substantial sum of £5,582 to £23,006, but we are left to guess whether or not any part of the increase was due to that Exhibition, which had proved so beneficial in other directions. Interest and transfer fees gave a few pounds more at £242, but the balance brought in was £270 smaller at £9,517, making the disposable total £32,764 against £27,434. The company's debenture debt, happily, is very light, and interest on it requires no more than £1,000, so that after paying preference dividend and repeating the dividend and bonus of 10 per cent. on the ordinary shares there is still a substantial surplus to be dealt with. Of this an extra £1,000 at £3,000 is put to reserve, and £2,000 or £500 more is transferred to improvements account, in addition to £573 written off before the nett balance was arrived at. The cost of the Cork bakery is then wiped out with £4,200, and £1,092 or £475 more is carried forward. After making these appropriations the property and goodwill account will stand at £163,000 and the reserve at £25,000, all of the latter, however, except £4,142, being employed in the business. Sundry creditors have been reduced by £1,033, and are decidedly moderate at £9,850, while debtors owe £12,905 or £1,095 more, and stocks and cash have risen by £4,907 to £37,366.

LIVERPOOL MORTGAGE INSURANCE CO., LIMITED.

No explanation is given by the directors of the falling off in premium income for the year ended December 31, although a drop of £2,884 to £13,428 seems fairly substantial. Other receipts were £377 lower at £3,034, but £3,684 or £704 more was brought forward, making the total income £22,446 compared with £24,913. Against this claims paid and estimated took £102 less at £7,487, and the sum transferred to suspense account is reduced by £500 to £4,000. The most important point, however, appears to be a considerable saving in expenses, which leaves the nett revenue only £904 lower at £7,579, and the directors are therefore able to repeat the dividend of 5 per cent. by cutting down the sum carried out to £5,079. In order to provide for the depreciation in securities held, £12,500 has been taken from reserve and added to suspense account, making the totals of these two items £40,000 and £18,267 respectively. Liabilities for loans have been increased by £6,207 to £56,787, and on the other hand bank deposits are £8,332 lower at £6,683; but debentures held come to £52,012 or £3,646 more, securities written down show an increase of £2,031 at £40,805, and other securities and advances have risen by £6,544 to £63,690. Sundry creditors are £478 up at £2,741 and sundry debtors £231 down at £4,902, but cash is £541 better at £5,089, and £750 is due to the company for property sold.

WORLD MARINE INSURANCE CO., LIMITED.

The balance of the 1906 underwriting account brought forward was £119,751, but against this claims, returns, &c., amounted to £133,114, so that the account closed with a deficit of £13,363 compared with a surplus of £8,977 in the previous year. A sum of £41,944 or £9,658 more was brought in, interest and transfer fees gave a few pounds more at £6,914, and there was a small gain of £45 on securities sold against a loss of £294, so that altogether there was a surplus on profit and loss account of £35,052 against £46,453. Out of this the directors pay the customary dividend of 5 per cent., but they are unable to repeat last year's bonus of 2½ per cent., and as they put £5,000 to a special investment reserve the balance carried forward is reduced by £14,898 to £27,046. Investments, after deducting the special reserve of £20,000, amount to £218,140, which is still £7,602 above their market value on December 31, but the company has an ordinary reserve of £40,000. During the past twelve months £189,698 was received in premiums and claims settled took £46,300, leaving, after deducting expenses, a balance of £128,350.

UNION MARINE INSURANCE CO., LIMITED.

The year 1906 was a disastrous one for this company, as out of an underwriting balance of £254,761 brought forward no less than £240,279 was paid away for claims, &c., during the past twelve months and it has been considered necessary to transfer a further £49,000 to suspense account. That meant a loss of £34,518, but interest and transfer fees gave £26,465 and £30,450 was brought forward, and after deducting the dividend paid in February last, and providing for income-tax the nett surplus was £5,046. In order, however, to "strengthen the profit and loss account," £100,000 has been taken from reserve, giving a total of £105,046, and out of this two dividends aggregating 6s. 6d. per share or 13 per cent. have been paid, absorbing £21,255. The reserve fund, after making this transfer, still amounts to £300,000, against the paid-up capital of £163,500, so that the position is, after all, sound enough. Investments at £781,538 are taken at their book value, but the directors admit that after crediting the special reserve of £19,989 the figure shown is about £16,500 above the market value of the securities. The nett premium income for 1907 amounted to £431,041, covering insurances of £97,802,663, of which £90,304,582 had run off, leaving £7,588,081 outstanding on December 31.

MINOR NOTICES OF COMPANY REPORTS.

BRECON AND MERTHYR TYDFIL JUNCTION RAILWAY.—Nett revenue for the December half-year was £1,323 up at £25,029, and after meeting fixed charges, £1,146 more at £2,085 was left, out of which the first preference stock gets its full dividend and the second preference a dividend at the rate of 3 per cent. per annum. This leaves £473 to be carried forward. Capital expenditure in the half-year £1,678.

BURLINGTON HOTELS COMPANY.—Gross receipts for year 1907 £50,109; profit after deducting £350 for lease depreciation, £12,700; free balance, after meeting debenture stock interest and paying 5 per cent. on the preference shares £1,825, including £208 brought forward. Final dividend at rate of 7 per cent. on the ordinary shares, making with the interim at 5 per cent. 6 per cent. on the year. Balance forward £495.

CANADA LANDED AND NATIONAL INVESTMENT COMPANY.—Last year we got this company's figures in sterling, this year they are

in dollars. Nett profit, including $4,121 balance brought forward, $131,155. Dividends paid equal 7 per cent. on capital. Transferred to reserve $50,000, carried forward $10,875. Reserve fund now $555,000.

Colne Valley Water Company.—Gross revenue for half-year ended December 31 £21,800; increase of £1,041; outgoings £469 more at £7,597; profit of £14,204, £573 better. The two classes of shares get full statutory dividends at rate of 10 per cent. and 7 per cent. as compared with 9½ per cent. and 7 per cent., and after transferring £500 to contingency fund the carry forward at £2,835 is £1,174 higher than was brought in. On capital account £9,355 expended and debit balance now £5,040.

Crowe, Wilson and Co., Limited.—Nett profit for 1907 £10,927, including £3,365 brought forward, an increase of £195. Out of this £1,000 is placed to reserve and £1,000 to debt reserve, the final dividend being 5s. per share.

Derby Gas Light and Coke Company.—Profit for 1907, including £14,574 brought forward, £49,727. Of this £11,500 devoted to meet exceptional expenditure and out of the balance the consolidated stock dividend is raised by ½ per cent. to 5½ per cent. for the year. The company has agreed to buy the Belper Gas and the Milford Gas undertakings.

Dublin Artizans' Dwellings Company.—Gross rentals for 1907 £46,839 against £43,564. Expenses up £783 to £17,788. Nett revenue £2,493 up at £29,064, to which is added £64 from dividends on investments. Interim and final dividends of 2½ per cent. absorb £12,920, and the balance of £11,019 goes to depreciation fund, being £1,295 more than last year, raising it to £117,389. During the year £28,000 was borrowed from the Board of Works and £7,825 paid off, raising the total indebtedness to £163,921. Premiums of £855 were realised on the issue of 428 shares, and added to reserve fund, raising the amount produced from that source to £129,444. The overdraft from bankers is £8,020 and fire insurance fund £2,008.

Eastbourne Gas Company.—Revenue for the half-year ended December 31 £8,158, total credit to profit and loss £23,412, dividend declared for the December half-year at the rate of 15 per cent. per annum on the original capital and the "C" shares, and at the rate of 12 per cent. per annum on the "B" shares. After meeting these £15,454 is left to carry forward.

East Worcestershire Water Works.—In the December half-year nett profits were £2,617 and the disposable balance was £3,615. A dividend at the rate of 5 per cent. per annum is paid, £100 set aside for depreciation on buildings, and £600 for depreciation on machinery and mains, leaving £1,084 to be carried forward. The business is slowly increasing.

Emmotts and Wallshaw, Limited.—Profits for 1907, including £2,054 brought forward, £22,621. Dividend on ordinary shares made up to 6 per cent. for the year, £10,000 transferred to reserve fund, leaving £4,068 to carry forward. Considerable changes of property occurred during the year, including the sale of the Albion Mill Weaving Sheds. All the money received has been written off capital account and handed to the trustees for the debenture stockholders. In addition £3,918 was invested during the year in good securities.

German Bank of London.—Available profit £27,104 for 1907, including £8,823 brought forward. Dividend made up to 12s. per share or 6 per cent. for the year, balance forward £3,104. Messrs. Hardy, Nathan and Sons having decided to retire from business, the senior partner has joined the board of this bank, thus enabling it to secure a large and valuable accession of new business. Paid-up capital £400,000, reserve fund £115,000.

Girls' Public Day School Trust.—Profit on schools for the year 1907 £16,043, and total nett income £16,416. After meeting all charges, including £1,300 representing losses on schools, the nett profit was £4,183 transferred to profit and loss account. Interest on share capital for the year took £5,971, so that the balance left was reduced from £10,431 to £8,072, £603 having been handed to the teachers' provident fund.

Grand Canal Company.—Dublin.—Nett revenue for the December half-year after providing debenture interest £17,091. Dividend on ordinary shares at the rate of 4 per cent., balance carried forward £6,020 against £6,789 brought down. Receipts from freights and tolls went down by £911 and the total revenue by £900. Expenses rose £663.

Maryport and Carlisle Railway.—Gross receipts for the second half of 1907 £64,510, working expenses £34,837. Nett revenue £32,063, including £2,390 brought down from June. Dividend at the rate of 7½ per cent. or the same as a year ago, with £1,260 left to carry forward against £1,582. Working expenses 54.83 per cent. of receipts.

Tottenham and Edmonton Gas Light and Coke Company.—Nett revenue for December half-year £15,106, after crediting £1,000 to insurance fund, made up to £34,849 by £19,743 brought forward. Statutory dividends of 6¾ per cent. on the "A" and 5¼ per cent. on the "B" stock leave £21,053 to be carried forward. Sales of gas increased 8.24 per cent. Capital spent in the half-year £17,466.

MINING RETURNS.

Abbontiakoon Block 1.—Crushed 5,854 tons; fully treated 5,994 tons, 2,120·5 ozs. from plates, and 992 5 ozs. from sands and slimes; total, 3,113 ozs.

Abosso.—Crushed 2,532 tons, 1,306 ozs.; 2,039 tons of tailings, 375 ozs.; 1,038 tons old tailings, 187 ozs.; total, 1,868 ozs. gold.

African Gold Dredging.—214 ozs.

Akrokerri (Ashanti).—Crushed 3,200 tons, 1,440 ozs.; 1,780 tons tailings, 223 ozs.; total, 1,663 ozs.

Battlefields (Rhodesia).—Crushed 1,720 tons, 966 ozs.; cyanide 1,220 tons, 422 ozs.; slimes 500 tons, 116 ozs.

Bibiani Gold Fields.—Crushed 3,230 tons, 1,585 ozs.; treated by cyanide 2,400 tons for £1,625; total, 1,967 ozs.

Briseis Tin.—Black tin cleaned up from Briseis, 85 tons; from New Brothers Home No. 1 Company, 33 tons. Briseis Company's proportion of total output, 105 tons.

Loddon Valley Goldfields.—97 fathoms of wash from development treated, 56 ozs.

Broken Hill South Blocks.—Treated 7,817 tons, assaying 16·1 per cent. lead, 2·7 ozs. silver, 10·9 per cent. zinc per ton; produced 1,396 tons concentrates, containing 859 tons lead and 11,726 ozs. silver.

Burbank's Main Lode (1904).—Crushed 1,200 tons, 570 ozs.; by cyanide 1,052 tons, 121 ozs.; total, 691 ozs.

Burma Ruby.—187,000 loads washed, producing rubies, value Rs.1,05,000; royalties, Rs.15,000.

Cape Copper.—Ookiep—1,061 nett tons of 14 per cent. equal 148 tons fine copper. Nababeep—4,575 nett tons of 4 per cent. equal 183 tons fine copper. Total, 331 tons fine copper.

Duff Development.—683 ozs. gold.

City and Suburban.—crushed 26,400 tons, 7,947 ozs.; profit, £10,851.

Consolidated Gold Fields of New Zealand.—Progress of New Zealand—crushed 3,541 tons; value, £5,022; Wealth of Nations—crushed 1,070 tons; value, £2,377.

Consolidated Langlaagte.—Treated 23,110 tons, 8,210 ozs.; profit, £10,426.

Consolidated Main Reef.—Crushed 19,038 tons, 8,628 ozs.; sands and concentrates 19,638 tons, 2,611 ozs.; total, 6,238 ozs.; profit, £6,916.

Crown Deep.—Crushed 38,690 tons, 10,810 ozs.; treated by cyanide 38,873 tons, 5,611 ozs.; total, 16,421 ozs.; profit, £37,500; gold in reserve, 6,799 ozs.

Crown Reef.—Crushed 23,773 tons, 6,213 ozs.; treated by cyanide, 26,580 tons, 3,604 ozs.; total, 9,916 ozs.; profit, £21,006; gold in reserve, 7,040 ozs.

Day Dawn Block and Wyndham.—Treated 1,170 tons, value (including concentrates) £3,100.

Day Dawn P.C.—Concentrates and residues from the recent crushing realised £1,040, making total yield from 315 tons crushed £2,145.

Durban Roodepoort.—Milled 12,520 tons, 2,768 ozs.; tailings, 8,665 tons, 1,016 ozs.; slimes, 3,765 tons, 202 ozs.; total, 3,986 ozs.

Durban Roodepoort Deep.—Crushed 12,260 tons, 3,290 ozs.; treated by cyanide, 12,709 tons, 1,435 ozs.; total 4,725 ozs.; profit, £4,500; gold in reserve, 2,148 ozs.

East Gwanda.—Crushed 7,463 tons, 2,530 ozs.; concentrates, 227 tons, containing 866 ozs.; cyanide 3,200 tons, 557 ozs.; total, 3,953 ozs.

Empress (Rhodesia).—Riverlea Mine: Tributors report 3,300 tons crushed, 348 ozs.

Ferreira.—Crushed 23,590 tons, 8,836 ozs.; treated by cyanide 25,670 tons, 4,032 ozs.; total, 12,868 ozs.; profit, £30,518; gold in reserve, 5,790 ozs.

French Rand.—Crushed 18,100 tons, 3,011 ozs.; treated by cyanide 21,048 tons, 2,005 ozs.; total, 5,016 ozs.; profit, £3,004; gold in reserve, 187 ozs.

Frontino and Bolivia.—£3,300.

Geldenhuis Estate (Elandsfontein No. 1).—Crushed 19,150 tons, 3,832 ozs.; from tailings, 1,896 ozs.; from slimes, 454 ozs.; total, 6,182 ozs.; profit, £12,155.

Ginsberg.—3,904 ozs. from 11,364 tons treated; profit, £4,274.

Glencairn Main Reef.—4,503 ozs. from 20,400 tons treated; profit, £3,761.

Glen Deep.—Crushed 21,735 tons, 4,782 ozs.; 21,735 tons treated by cyanide, 2,884 ozs.; total, 7,666 ozs.; profit, £9,600; gold in reserve, 1,470 ozs.

Globe and Phœnix.—Crushed 5,938 tons, 2,749 ozs.; cyanide 4,216 tons, 292 ozs.; slimes 1,322 tons, 92 ozs.; total, 3,133 ozs.

Golden Horseshoe Estates.—Ore treated 22,423 tons, 11,968 ozs.; profit, £23,934.

Great Boulder Perseverance.—Treated 17,897 tons, 6,362 ozs. gold and 532 ozs. silver.

Great Boulder Proprietary.—Crushed 13,240 tons, 12,478 ozs.; tailings (old) 9,922 tons, 1,330 ozs.; total, 13,808 ozs.

Great Cobar.—Treated 14,519 tons; output of matte, 1,039 tons; estimated contents, 354 tons copper, 926 ozs. gold, 6,425 ozs. silver; ingot copper made at Lithgow Works, 382 tons, despatched 413 tons.

Gwalia Consolidated.—Crushed 5,646 tons, sands 2,220 tons, slimes 1,620 tons, 1,209 ozs.

Hainault.—Crushed 6,001 tons, 1,784 ozs.

Hannan's Reward.—Crushed 2,600 tons, yielding 348 ozs.; royalties from tributors, £202.

Ida H. Gold.—Crushed 850 tons, 633 ozs.; nett profit, £120.

Ivanhoe.—Crushed 19,730 tons, 3,634 ozs.; sands 8,900 tons, 1,664 ozs.; slimes 9,520 tons, 2,910 ozs.; concentrates 1,310 tons, 1,731 ozs.; total 19,730 tons, 9,939 ozs.; profit, £21,310.

Jubilee.—Mill 1,220 ozs., crushed 4,875 tons; cyanide 521 ozs., 3,495 tons.

Jumpers.—Crushed 9,650 tons, 3,127 ozs.; from tailings 1,369 ozs.; from current slimes 273 ozs.; from accumulated slimes 344 ozs.; total 5,113 ozs.; profit £5,001.

Killarney Hibernia.—Crushed 1,202 tons, 261 ozs.

Knight's Deep.—42,460 tons, 12,541 ozs.; profit £18,022.

Lake View Consols.—Treated 11,575 tons, 3,210 ozs.; profit £1,143.

Lancaster.—Crushed 15,900 tons, 1,759 ozs.; cyanide 10,682 tons, 1,004 ozs.; total 2,763 ozs.; value £11,706. Loss on working £2,352, plus cost of shaft sinking £543, making £2,895.

Lancefield Gold.—Treated 6,787 tons, 2,298 ozs.

Langlaagte Estate.—Crushed 46,134 tons, 9,892 ozs.; concentrates nil; tailings 26,250 tons, 3,258 ozs.; slimes 23,104 tons, 1,857 ozs.; total, 15,007 ozs.; profit, £23,500.

Le Roi.—Shipped to Northport 6,564 tons, containing 2,289 ozs. gold, 4,830 ozs. silver, and 195,500 lbs. copper.

Luipaard's Vlei Estate.—4,925 ozs.; crushed 15,740 tons, 2,545 ozs.; tube mills 966 ozs., cyanide 1,138 ozs., slimes 284 ozs.; total profit, £6,360.

Matabele Reefs.—Blanket mine: crushed 2,256 tons, 696 ozs.

May Consolidated.—Crushed 15,700 tons, 3,271 ozs.; cyanide 10,650 tons, 1,970 ozs.; slimes 4,781 tons, 337 ozs.; total, 5,578 ozs.; profit, £11,343.

Mill's Day Dawn United.—2,020 tons of quartz, value £6,600.

Montana.—Drumlummon Mine: shipping ore estimated to realise $2,400. Lucky Girl: crushed 2,000 tons, estimated to realise $6,400.

Mount Morgan (Queensland).—Treated 24,526 tons ore, produced 6,358 ozs. Copper reduction works treated 10,539 tons ore and metalliferous flux produced 354 tons blister copper, containing 350 tons copper and 4,248 ozs. gold.

Mount Zeehan.—Ontput 425 tons silver-lead ore, containing about 212 tons lead and 23,400 ozs. silver.

New Kleinfontein.—Milled 32,750 tons, 8,443 ozs.; sands 22,252 tons, 2,939 ozs.; slimes 10,463 tons, 724 ozs.; total, 12,106 ozs.; profit, £18,004.

New Modderfontein.—Crushed 24,466 tons, 6,907 ozs.; treated by cyanide 27,584 tons, 3,712 ozs.; total, 10,619 ozs.; profit, £18,064; gold in reserve, 6,500 ozs.

New Primrose.—Treated 20,020 tons, 7,706 ozs.; profit, £14,187.

New Rietfontein.—Treated 16,840 tons, 9,042 ozs.; profit, £16,216.

New Unified Main Reef.—Treated 10,021 tons, 3,291 ozs.; profit, £3,347.

New Zealand Crown.—Crushed 1,646 tons, value £2,669.

Nigel Deep.—3,350 tons, 1,481 ozs.; profit, £366.

North Broken Hill.—Treated 2,500 tons crude ore containing 16·1 per cent. lead and 6·5 ozs. silver per ton, producing 420 tons concentrates containing 293 tons 7 cwts. lead and 8,652 ozs. silver.

North Randfontein.—Crushed 17,709 tons, 3,935 ozs.; tailings 11,040 tons, 2,012 ozs.; slimes 6,500 tons, 660 ozs.; total, 6,607 ozs.; profit, £9,300.

North White Feather.—Crushed 1,700 tons, 884 ozs.

No. 2 South Great Eastern.—Crushed 845 tons, 261 ozs.

"O.K." Copper.—Treated 632 tons crude ore for 55 tons fine copper.

Oriental Consolidated.—Gross receipts, $128,907.

Oroville Dredging.—Gross returns, $18,740.

Oroya Black Range.—Crushed 4,133 tons, 2,461 ozs.

Orsk Goldfields.—Milled 1,188 tons, 368 ozs.

Penhalonga Proprietary.—Crushed 7,700 tons, 1,583 ozs.; profit, £2,758.

Porges Randfontein.—Crushed 15,841 tons, 3,827 ozs.; concentrates 1,464 tons, 530 ozs.; tailings 10,332 tons, 1,571 ozs.; slimes 4,534 tons, 506 ozs.; total, 6,434 ozs.; profit, £9,200.

Princess Estate.—Crushed 8,641 tons, 2,763 ozs.; cyanide, 5,966 tons, 1,214 ozs.; total, 3,977 ozs.; profit, £5,160.

Rezende.—Crushed 2,600 tons, 815 ozs.; profit, £415.

Rhodesia Consolidated.—Nelly Mine.—Crushed 1,765 tons, 866 ozs.; cyanided, 788 tons, 233 ozs.; total, 1,099 ozs.

Rhodesia (Limited).—Colleen Bawn Mine.—Crushed 900 tons, 216 ozs.; 572 tons by cyanide, 618 ozs.; 649 tons slimes, 522 ozs.

Robinson.—Crushed 40,300 tons, 17,072 ozs.; treated by cyanide 41,873 tons, 8,232 ozs; total, 25,304 ozs.; profit, £77,539; gold in reserve, 11,479 ozs.

Robinson Central Deep.—Crushed 22,465 tons, 8,420 ozs.; treated by cyanide 22,195 tons, 3,632 ozs.; total, 12,052 ozs.; profit, £33,060; gold in reserve, 8,581 ozs.

Robinson Deep.—49,562 tons, 20,592 ozs.; profit, £41,305.

Robinson Randfontein.—Crushed 15,400 tons, 2,947 ozs.; concentrates 1,450 tons, 360 ozs.; tailings 9,900 tons, 1,620 ozs.; slimes 4,515 tons, 500 ozs.; total, 5,427 ozs.; profit, £4,400.

Roodepoort Central Deep.—Crushed 8,755 tons, 2,105 ozs.; cyanide, 6,470 tons, 1,129 ozs.; total, 3,234 ozs.; profit, £2,814.

St. John Del Rey.—Gold produce first division of February, £7,600; yield per ton, ·62 of an ounce troy.

Simmer and Jack East.—35,720 tons, 8,491 ozs.; profit, £3,663.

Simmer and Jack Proprietary.—65,500 tons, 25,382 ozs.; profit, £54,655.

South Kalgurli.—Crushed 8,766 tons, 2,943 ozs.

South Randfontein.—Crushed 15,572 tons, 2,828 ozs.; concentrates, 1,800 tons, 455 ozs.; tailings, 8,750 tons, 1,352 ozs.; slimes, 4,671 tons, 512 ozs.; total, 5,147 ozs.; profit, £3,200.

Sulphide Corporation.—Milled 12,934 tons at Central mine, producing 2,318 tons lead concentrates, which assayed 32 ozs. silver and 60 per cent. lead per ton, together with 3,980 tons of zinc concentrates, assaying 17 ozs. silver, 13 per cent. lead, and 40 per cent. zinc per ton. In addition, 6,952 tons dump tailings treated by flotation process, producing 2,549 tons zinc concentrates, assaying 14 ozs. silver, 9 per cent. lead, 45 per cent. zinc per ton; and 2,384 tons of tailings treated by magnetic process, producing 762 tons of zinc concentrates, assaying 11 ozs. silver, 8 per cent. lead, and 39 per cent. zinc per ton, together with 55 tons of leady concentrates, assaying 30 ozs. silver and 57 per cent. lead per ton. At Cockle Creek, 2,527 tons leady concentrates and 1,455 tons purchased ores smelted, producing 1,617 tons lead bullion, containing 126,126 ozs. silver and 5,255 ozs. gold, also treated 179 tons zinc concentrates, producing 49 tons spelter.

Surprise.—Crushed 2,499 tons, 710 ozs.; cyanide 2,570 tons, 223 ozs.; slimes 1,288 tons, 184 ozs. gold and 657 ozs. silver; total —gold 1,117 ozs. and 657 ozs. silver. Office note.—The returns of gold this month are, and in future will be, given in fine gold instead of bullion.

Talisman Consolidated.—Treated 3,350 tons, value £18,216, profit, £11,342.

Tingha Consolidated.—Production of tin, 21 tons 9 cwt.

Tomboy Gold.—Crushed 9,300 tons, value $60,000; concentrates shipped 443 tons, value $25,500; profit, $40,000.

Treasury.—Crushed 9,500 tons, 1,623 ozs.; sands and concentrates 11,084 tons, 1,284 ozs.; total yield, 2,907 ozs.; profit, £1,202.

Village Deep.—Crushed 27,300 tons, 5,608 ozs.; cyanide 27,514 tons, 3,927 ozs.; total, 9,535 ozs.; profit, £10,000; gold in reserve, 2,556 ozs.

Village Main Reef.—Crushed 41,000 tons, 9,641 ozs.; sands and concentrates, 30,591 tons, 4,347 ozs.; slimes 13,488 tons, 1,000 ozs.; total, 14,988 ozs.; profit, £27,488; gold in reserve, 4,742 ozs.

Vivien.—Milled 3,141 tons; 732 ozs.; tailings, 2,100 tons, 192 ozs.; concentrates 26 tons, 23 ozs.; slimes 1,032 tons, 118 ozs.; total value, £4,511.

Waihi Gold.—25,133 tons, £60,241 gold and silver produced.

Wanderer (Selukwe).—Treated by cyanide 12,648 tons, 1,765 ozs.

Weardale Lead.—Ore raised 314 tons; pig lead smelted 276 tons; average price obtained for pig lead sold £14 8s. per ton net.

West Rand Central.—Crushed 2,518 tons, 425 ozs.; cyanided 2,000 tons, 390 ozs.; slimes 1,138 tons, 184 ozs.; total 999 ozs.

Whim Well Copper.—Shipped 61 tons copper ore, 25 per cent.

Windsor.—Crushed 5,084 tons, 951 ozs.; cyanide 3,696 tons, 834 ozs.; total 1,785 ozs.

Witbank Colliery.—Output, 45,530 tons.

Witwatersrand Deep.—Crushed 34,420 tons, 10,017 ozs.; sands and concentrates 35,658 tons, 5,115 ozs.; total yield, 15,132 ozs.; profit, £29,831.

Witwatersrand Gold.—Treated 35,000 tons, 10,845 ozs.; profit, £16,007.

Wolhuter.—Crushed 20,900 tons; sands and slimes 20,900 tons; from mill, 3,786 ozs.; from sands, 2,619 ozs.; total, 6,405 ozs.; profit, £6,252.

Zeehan-Montana.—Output 325 tons silver-lead ore, containing about 162 tons lead and 17,900 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Furness Railway.—At the rate of 3 per cent. per annum on the ordinary stock for the half-year ended December 31, carrying forward £10,332.

London and North-Western Railway.—For the past half-year on the ordinary stock at the rate of 7¼ per cent. per annum, with £50,000 to general reserve and about £125,000 carried forward.

Midland Railway.—For the half-year ended December 31, at the rate of 2½ per cent. per annum on the preferred converted ordinary stock and at the rate of 3¼ per cent. per annum on the deferred converted ordinary stock, being equal to 5¾ per cent. per annum on the former ordinary stock. The balance carried forward is £105,000.

Ottoman Railway from Smyrna to Aidin.—16s. per share for the half-year to December 31, making 6 per cent. for 1907, with about £43,000 carried forward.

Temiscouata Railway.—The Railway Bondholders' Committee have been advised that the board of the Temiscouata Railway Company have declared a dividend of 1½ per cent. on their consolidated mortgage income bonds in respect of the three years ended June 30, 1907, payable on May 1. So soon as that dividend is received the committee will be in a position to make a corresponding distribution among its certificate holders.

Barnsley Brewery.—At the rate of 6 per cent. for the half-year ended January 31.

Baxter's Leather.—For the half-year ended December 31 of 6 per cent., making 9 per cent. for the year.

Buenos Ayres Grand National Tramways.—Interim of 2s. 6d. per share on the preference shares.

Carreras.—Interim on the ordinary shares at the rate of 5 per cent. per annum for the past half-year.

Arthur Guinness, Son and Co.—Interim at the rate of 20 per cent. per annum on the ordinary stock for the six months ended December 31.

Harrod's Stores.—15 per cent. and bonus of 4 per cent. on the ordinary shares, making a total for the year ended January 31 of 20 per cent., plus 4 per cent. bonus, with £1[illegible] to reserve and £27,051 carried forward.

Harrod's Stores Founders' Shares.—35 per cent., making 40 per cent. for the year ended January 31.

Holborn and Frascati.—On the ordinary shares at the rate of 3 per cent. per annum, and in addition a bonus of 2 per cent. for the year ended December 31, with £15,000 to reserve (working capital account), and over £6,000 carried forward.

Merchants' Trust.—4 per cent. on the ordinary stock, making 6 per cent. for the year ended January 31.

John Oakey and Sons.—Final of 5 per cent. on the ordinary shares, making 10 per cent. for the year, and in addition a bonus of 5 per cent., with £3,000 to the general reserve and £8,311 carried forward.

Telegraph Construction and Maintenance.—Of 10 per cent. (£1 4s. per share), together with a bonus of 2½ per cent. (5s. per share), making 17½ per cent. for 1907.

TRADE AND PRODUCE.

Wheat.—A decidedly weaker tone has been noticeable in the markets. Holders have lowered quotations for spot parcels, but very little business has been done even at the cheaper rates, and futures have declined with very little fluctuations throughout the week, closing about 3⅜d. lower for March and May wheat than at the end of last week. The liberal shipments from abroad have encouraged this downward tendency for this week. Imports are again nearly as high as last at 406,303 qrs. against 213,943 a year ago. While the estimated quantities of wheat and flour on passage are higher than ever, 3,850,000 qrs. are said to be coming to the United Kingdom against 3,570,000 last week, and 1,680,000 qrs. to the Continent against 1,420,000. Farmers' deliveries were 67,049 qrs. averaging 34s. 3d., against 77,659 qrs. averaging 26s. 6d. a year ago, the total average for five and a-half completed months of the cereal year being 34s. 2¾d. against 26s. 1¼d. for the same period of the preceding year. American markets were also weak and depressed, bearish advices from Argentine and India and the weakness of Liverpool all helping to a downward tendency. Visible supply was 46,276,000 bushels against 46,711,000 bushels last week.

Wool.—Bradford market has pulled itself together a little since the close of last week, and there are fewer offers of very cheap lots coming to the fore, but all the same no new business is being done. Crossbreds, medium, and coarse are quite neglected, and but for deliveries on old contracts merinos may be said to be nearly as bad. Fine crossbred tops alone seem to be keeping anything like firm, and English wools are well held, for dealers in them will not accept colonial prices at all. Spinners are still kept well employed, but with them also new orders are scarce, and the condition of things on the Continent is beginning to cause some anxiety among export houses. Manufacturers of cheap goods are doing a moderate foreign and colonial business, but South American and Australian demand is not satisfactory, the adverse tariff of the latter doing no good to certain classes of woollen materials. Home trade, especially in the North of England, where industrial depression is greatest, is not expanding.

Cotton (from our Manchester correspondent).—The week under review has not brought any increase in business of moment to producers of yarn and cloth, and on the whole sellers have had a discouraging experience. Buyers all round seem to be in a waiting attitude. This can only be expected at a time when values are drooping. Orders are being held back owing to the anticipation of better terms. A spurt in demand would no doubt stimulate greater activity all round the market, but scarcely anyone seems to think we have reached the bottom in values. The sales on the spot in Liverpool have been of quite small dimensions. The changes in the price of American cotton have been unimportant. In piece goods for export odd sales are reported for China, chiefly in shirtings. The demand is not spreading to heavy goods, such makers rather pressing for fresh orders. The Shanghai market on the whole is looked upon as one of the most prominent at the present time. The all-round demand from India gives very little cause for satisfaction, and the total sales this week have been disappointing. On the whole, rather better advices are coming through from the Levant, and some fair lines have been placed in a miscellaneous class of goods. Egypt still lags behind, and very little has been done in any style of cloth. Not much is heard at the moment of the South American markets. T-cloths and Mexicans have again dragged in demand. Printing cloths, as made in Burnley, are badly situated. Some very low rates have been taken this week in order to get machinery running. Glossop goods are still slow, but makers are not so badly situated as in poorer qualities of printing cloths. In the home trade houses a little more activity has shown itself. A rather increased trade has transpired in light fancy materials suitable for summer wear. Manufacturers of home trade cloths are variously situated. American yarns for home consumption have moved off in retail lots. Users have plenty of stuff coming round; in fact, in some cases deliveries are not being taken against old contracts. There is not much difficulty experienced in getting hold of both twist and weft as required. Margins continue to be narrowed. Stocks are showing themselves in first hands. Shipping yarns have again been quiet. Certain markets seem to have over-bought and opportunities are seized for cancelling orders. Bolton yarns have weakened in price, and quotations are very irregular. The business offering has been quite small. Sir Jacob Behrens and Sons, in their market report, say that the American cotton market has been fairly steady during the past week, but continual fluctuations, although kept within narrow limits, destroy confidence. Judging from the prospective supply, prices should advance, but it often happens that events go contrary to expectations. Messrs. Neill's circular of the 10th inst. reads very bullish. They cannot find any cause to alter their estimate of 11,600,000 bales, and taking into account the prospects of supply from Egypt and India, they consider that Europe and America may have something like 2,500,000 bales less of all kinds to deal with this season than last. The estimate of the season's consumption is allowed to stand, and it is suggested that mill stocks in America are dangerously low. Egyptian cotton has lost 3⅛d. per lb. during the week.

Coal.—With one or two exceptions, where house coals are concerned, and one or two collieries that have good orders on hand for steams, the trade is much quieter, and prices are going down. Best steam coal prices in Wales are between 16s. 9d. and 17s., and though house coals so far keep firm and a reduction is not generally looked for till the end of March, there are those in the trade, says the *Engineer*, who say that something like a slump may be expected as the spring advances. All ports, with the exception of Newport, show a decline in exports for the week, and foreign and coastwise shipments for January have decreased 115,323 tons compared with January last year, the principal decrease being in the foreign trade. Steams in the Sheffield district are in good request for home uses, the railway companies taking heavy deliveries.

Copper.—Prices have dropped day by day throughout the week. Reports from America have all been pessimistic, and this, together with the large amount of selling orders, especially for forward metal, and poor consumptive orders increased the bearish tone. Warrant prices at yesterday's close were down to £59 cash and £59 10s. three months, and to-night they were again lower at cash £58 17s. 6d.; three months, £59 10s.

Tin.—Prices here have been very irregular. On Monday cash metal fell to £127 15s., and three months to £128 5s. under the adverse influence of heavy shipments. An attempt to restrict supplies, and the bullish support of prominent operators against heavy selling orders induced wide fluctuations, but yesterday prices closed higher on the week at £130 5s. cash and £129 7s. 6d. three months. To-night the final quotations are cash, £128 17s. 6d.; three months, £127 15s.

Iron and Steel.—Barrow hematite trade for the week is as depressed as ever and prices have again fallen. Makers have few orders, and are getting no profit out of those they have. East Coast business has had a spurt this week, Sheffield buyers taking large quantities and prices for the first time since last summer have gone up on the week instead of down. It is probably only a temporary improvement, as the shipbuilding outlook is still very unsatisfactory, and should yards be closed hematites will be worse off than ever. Cleveland pig-iron business has been slow, and what there was of it mostly for early delivery, the uncertainty of futures not allowing of any speculation. Connals stores, however, again show a decrease of 1,845 tons for the month, and as far as pig-iron exports are concerned this month promises to be much better than February, 1907. Heavy deliveries have gone to the Continent and Scotland. Prices up North have shown some improvement, and rather more has been done in the warrant market. Finished iron and steel has also been dull, with little buying in any department, and that only for present requirements.

Tea.—Last month's Board of Trade returns show an improvement of over 230,000 lbs. in home consumption in the corresponding period of last year, but exports have declined by 623,000 lbs. when compared with the same month of 1907. According to Messrs. Gow, Wilson, and Stanton, Limited, the surtax imposed on Indian and Ceylon teas imported into Russia by the Black Sea and European frontier weighs very unjustly on exporters from this side. The quantity of Indian catalogued this week was 41,801 packages, and was again rather more than trade required, with quality here and there showing a falling off. Teas up to 8d. declined ¼d. on last week's prices. Over this price, however, demand and price remained steady. 37,057 packages were sold on garden account, and averaged 8.07d. against 8.33d. for 36,131 packages in 1907. Ceylon offerings were very moderate, only 18,915 packages, but the market was easier all the same, and teas up to 8d. declined ⅛d. to ¼d. per lb. Better sorts maintained their level, and where quality showed any marked improvement prices occasionally advanced, the average for the week coming to 7.93d. against 8.28d. 1907. Java sales comprised only 2,460 packages, and these went at rather easier rates.

Sugar.—The market has been about 1½d. easier this week, advices from Cuba and America not being considered stimulating. Cuban receipts are up to expectations, but the estimate there of 1,100,000 tons continues to be seriously questioned, says Mr. Czarnikow, and leading planters still speak of 1,000,000 tons only. This is also the preliminary estimate for Java, and if we should want more from that island than last year (subject to Cuban production and American meltings), it remains to be seen whether Eastern buyers would be satisfied with considerably less, notwithstanding a short crop in India and Mauritius. But if the grain market is easier, factories, it seems, find it difficult to contract at higher prices, even last year's area. Whether this will change much during the next two months remains to be seen. If there is no increase we need not be much afraid of Russian sugars, but if they arrive early in September we shall not require to hold over so much of old stocks at a premium for September-October consumption, unless France is willing to keep them and America helps to reduce them. The renewal of the Brussels Convention was voted in the German Parliament on the understanding that the German excise will be reduced from 14 to 10 marks per 100 kilos on April 1, 1909, provided further taxes are voted yielding at least 35 million marks per annum. The American market has not been animated, but dulness must be expected during the Cuban production. Spot quotation for Centrifugals has receded from 3.75 to 3.73 cents. Landings in the three ports for the week were 49,000 tons, meltings were 28,000 tons, leaving stocks at 114,000 tons.

London and County Banking.—Liabilities on January 31 amounted to £45,839,511 on current, deposit and other accounts, and £4,328,609 on acceptances, against which the assets were £9,300,217 in investments, £10,098,360 in bills of exchange, £19,969,597 in loans and advances to customers, £6,698,023 in cash at the Bank of England and on hand, and £3,017,109 in money at call and notice. The daily average for the month of cash in hand and at the Bank was £6,690,659.

COMPANY MEETINGS.

GERMAN BANK OF LONDON.

The 29th ordinary general meeting of the German Bank of London, Limited, was held on February 12 at the offices of the bank, 34, Old Broad Street, E.C., Sir Felix Schuster, Bart. (chairman), presiding.

The Chairman said: When I had the pleasure of addressing you a year ago I alluded to what I considered the principal characteristics of the conditions then prevailing in commercial and financial affairs—namely, greatly commercial activity in most parts of the world, accompanied by high prices of commodities and considerable stringency in the Money market. These conditions developed during the year 1907, and, as usual, great commercial activity led to speculation and over-trading in certain quarters, to restriction of credit, and consequent reaction. This took place especially in the United States, where a severe financial disturbance dislocated business to a very large extent, and in European countries also considerable reaction has taken place, so that the year 1907 may probably prove to have been the turning-point, and the tendencies now prevailing point to diminished activity in commerce, lower prices of commodities, and cheaper money. The circumstances referred to have, as you are aware, led to further very severe depreciation in all investment securities, and we, like other institutions, have had to write down the bank's investments to a considerable extent. For this reason the profit and loss account shows some falling off in the amount of profit realised, which is especially disappointing, as otherwise the increase in the volume of our business justified the hope of far better results. It is satisfactory, however, to be able state that all our investments are written down well below the market values of December 31, since which date considerable appreciation has already taken place. Having dealt with this, the least satisfactory part of our report, I now turn to its more pleasing features, and particularly to the accession your board has had through the election as one of its members of Mr. Adolf Coustol, the senior member of the old-established firm of Messrs. Hardy, Nathan and Sons, which firm decided to retire from business during the early part of the year, and the majority of whose correspondents transferred their accounts to this bank. We have thus been able to obtain a very valuable accession of new business, and this is obvious from our figures, which show that acceptances have increased from £1,380,000 a year ago to £1,980,000 at the end of 1907. I may add that in the year just concluded we have not as yet benefited as regards profit, but all the preliminary expenses incidental to such a transaction have been paid, so that we shall now be in a position to reap the full advantage of the arrangement, and I need hardly say that the new accounts thus obtained are all of a very high class, and we hope to find in Mr. Coustol a very able and valuable colleague. In other respects the report does not call for much comment.

I have already alluded to the increase in the amount of our acceptances. On the other side of the account you will see that money at call and short notice has increased from £310,000 to £346,000, cash in hand and at bankers from £50,000 to £52,000, bills receivable, bills discounted, and current accounts from £1,693,000 to £2,227,000. The nett profit for the year shows a diminution of £10,000, due to the causes of which I have already spoken, but we are able to maintain the dividend at the same rate as for some years past—namely, 6 per cent. per annum—and to carry forward the sum of £3,000, a result which, for a year in many respects so disappointing as 1907, is not unsatisfactory. With the beginning of the new year the general financial aspect is becoming much better. There has been a rapid succession of reductions in the bank rates of most European centres, and easier monetary conditions should contribute to an increase of business generally. There has also been a fall in the prices of commodities, which again ought to stimulate trade in certain directions. The general impression, however, is that some setback in trade all over the world is to be expected, which is not unnatural after several years of such phenomenal growth as we have witnessed. Yet, with financial conditions on a sounder footing, with the knowledge that the monetary pressure of last year has—certainly as far as this country is concerned—not been attended by any breakdown in credit, with the practical certainty that speculation generally has to a great degree been eliminated or very much reduced, the outlook for business appears to me not unpromising. If in certain quarters there is reaction, in others there are signs of increasing activity and returning prosperity. Moreover, it may be borne in mind that the international political aspect appears much brighter than for many years past. As far as our bank is concerned, we hope that the new business we have acquired will more than make up for any falling off in turnover, which the reaction in general activity might otherwise possibly lead us to expect, and I think we have every cause to be satisfied with the outlook, with the general character of our business, with the high standing of our customers, and with the liquid condition of our assets. I have once more much pleasure in alluding to the great services rendered to our bank by our manager, Mr. List, and our sub-manager, Mr. Fleischmann, who have been ably assisted in their duties by Mr. Wertheim, the son of a late partner in Messrs. Hardy, Nathan and Sons, whom we have appointed as a sub-manager. I have now much pleasure in moving: "That the directors' report and accounts to December 31, 1907, be received and adopted, and that, as recommended by the board, a dividend of 7s. per share, free of income-tax, in addition to the interim dividend of 5s. per share already paid, be and the same is hereby declared upon all the shares of the company for the year ending December 31, 1907, and that the same be payable forthwith."

Mr. Leo Bonn seconded the resolution, and it was carried unanimously.

ENGLISH VELVET AND CORD DYERS.

RESULT OF THE PAST YEAR'S OPERATIONS—THE RESERVE FUND

The annual meeting of the English Velvet and Cord Dyers' Association, Limited, was held at Manchester on Tuesday, Mr. Henry Worrall (the Chairman of the company) presiding.

The Secretary (Mr. Charles C. Thorpe) having read the notice convening the meeting, and Mr. Garnett [illegible] Messrs. Dodd, Smith, Garnett, and Co., the auditors to the company, having read their certificate, dated January 22, 1908,

The Chairman said: The directors have pleasure in submitting the accounts for the year ended December 31, 1907. It will be seen from them that the volume of the business has been larger, and notwithstanding the difficulties arising from dear coal and high-priced drugs, the profits shown are substantially larger than for the preceding year. The directors are satisfied with the result, and they hope the shareholders will be satisfied also. At the last general meeting it was suggested that the balance-sheet should show the total expenditure on capital account and also the total amount written off for depreciation. The form of the balance-sheet has been altered accordingly, and it will be seen that the total outlay (less sales) since April 30, 1901, when the revaluation and reduction of capital was made, has been £32,291, and the amount written off for depreciation during the same period has been £94,930. As the report indicates, the directors recommend a dividend at the stipulated rate on the preference shares, and a dividend at the rate of 10 per cent. per annum on the ordinary shares for the past half-year, making, with the interim dividend at the rate of 6 per cent. per annum, a total of 8 per cent. for the year. Although the profits of the past year would have warranted the declaration of a larger dividend than 8 per cent., the directors feel strongly that they are best serving the permanent interests of the company in recommending a moderate dividend and in strengthening the company's reserve. (Applause.) The Chairman continued: "Assuming that the recommendation of the directors is adopted, the total dividends for the year will absorb £33,800, which is about £14,000 more than the nett profit of £47,640. The directors have carefully considered the best way of dealing with the undivided profit, and they recommend that £20,000 be passed to the credit of a reserve fund, and that the balance of £17,659 be carried forward to next year. In respect of the company's financial position, it will be observed from the balance-sheet that the cash in hand and in the bank amounted to £65,208. To provide the dividends recommended will absorb £19,801, so that after payment of the dividends there will still be funds available amounting to £45,407. You will also notice that the first large item of assets—land, water rights, &c.—stands at £653,863. It may be of interest to the shareholders to know that the directors thought it expedient to have the whole of the property of the association valued by Messrs. E. Rushton, Son, and Kenyon during the past year. The result of such revaluation gives figures which are in excess of the amount at which they now stand in the books. On the other side of the account, under liabilities, you will notice that the item in our last balance-sheet of £40,000 4 per cent. first mortgage debenture stock, deposited with bankers as collateral security is not in the balance-sheet for the past year, as your directors consider this is no longer necessary, seeing the strong financial position of the association. After due consideration your directors have thought it expedient to have the whole of the property of the [illegible] mend to be passed to a reserve fund in securities outside the association, and they have taken a favourable opportunity, as they consider, of investing it in 'gilt-edged' securities, which will at all times be available in case the money is required.

OUTLOOK FOR THE CURRENT YEAR.

"Regarding the future, I may say that the current year's business has opened out fairly well, and there is every indication that good trade may be expected, so that the intention of the directors to again pay interim dividends for the June half-year appears probable of fulfilment. The branches of the association are well equipped and capable of dealing with a largely increased amount of cloth if required. Praise for the regularity and excellent quality of work, and for quickness in delivery, has been universally given during the past year. The directors will continue to merit this recommendation, and to maintain the goodwill and support of all customers and merchants for the mutual benefit of themselves and the association." (Hear, hear.) The Chairman then moved that the directors' report and accounts as presented to the meeting be adopted.

Mr. Empsall Dyson seconded the motion.

Mr. Smale pointed out with respect to the reserve fund that the Chairman had remarked that that fund was available at all times in case it was required. One of the Manchester newspapers had recently given a very flattering account of the position of the association. Was the writer of the article correct in saying that the reserve fund was available for future dividend-payments along with the amount carried forward?

The Chairman replied that this was so, and cited article [illegible] of the articles of association, which stipulated that the reserve fund should be available to meet contingencies in the maintaining dividends, repairing, improving, and maintaining any plan-

perty of the company, and for such other purposes as the directors should in their absolute discretion think conducive to the interests of the company.

Mr. J. H. Cooke said that he would like to make one or two remarks on the Chairman's speech. As a matter of fact the commencement of the 10 per cent. dividends stage disarmed any hostility, and if the directors could continue the practice the proceedings at the annual meeting would be very formal. But he thought there were one or two points which might be of some interest to the general public and to the good of the velvet trade as a whole. Perhaps the public generally were not aware what excellent fabrics were now produced in velvets, though the appreciation of the fabric in the past year had been more in evidence than in many previous years. He might remark that velvet was a fabric of extreme antiquity, and he understood that there were specimens preserved in Manchester which were produced 2,000 years ago. The Chairman's family had been connected with the dyeing branch of the trade for over a century, but the most interesting improvements in the fabric had been effected during recent times. He believed that the chairman was quite correct in saying that the work turned out by the association during the past year had been better than in any recent year in the history of the velvet trade. He thought that if they could get the attention of the public drawn to the fact that for a modest price they could get a fast-dyed fabric—one of the productions of which the association justly prided themselves—it would be to the good of the company, and there were a large number of shareholders in the association. Sweet were the uses of advertisement, and in every shareholder there was, or ought to be, a prospective purchaser of velvets. He urged the shareholders to interest their friends in the fast dyed fabrics produced by the association. In that case they would get an increase even on their present good dividend. They wanted to see the fabric have a renewal of popularity which should last for many years. Time was when the merchants had to wait for the goods to come from the dyers, but they have not had that complaint to make recently. Mr. Cooke added that they wanted to keep up quality; they must not drop behind the Germans. Of late they had managed to keep abreast of them, and they must maintain their present position, especially as the association had such friendly arrangements with their customers. (Applause.)

The motion for the adoption of the report was then passed unanimously.

Mr. Joel Wainwright next moved that a dividend at the rate of 5 per cent. per annum for the half-year ended December 31, 1907, be paid on the £211,886 of preference shares, and a dividend at the rate of 10 per cent. per annum for the half-year ended December 31, 1907, on the £290,083 of ordinary shares be now declared, and that the same be paid forthwith. Mr. Wainwright added that he was perfectly certain they would be absolutely unanimous in passing that resolution. (Applause.)

Mr. Crossley Head seconded the resolution, which was carried *nem. con.*

The Chairman then said that the next business was the re-election of the retiring directors, who were described in the report as Messrs. Empsall Dyson, R. N. Michaelis, and James Wharton. He regretted to say that since the report was made up Mr. Wharton had died suddenly. Though for some time prior to his decease Mr. Wharton held no practical appointment with the association, he had been for many years connected with that portion of the dyeing trade. He was formerly with the now extinct firm of Messrs. Whyatt and Son, of Openshaw, and then with the Worrall branch of the old Garratt Dyeing Company. He could say that Mr. Wharton was always a valuable servant to the business. (Hear, hear.) Regarding Messrs. Dyson and Michaelis, they were eligible and offered themselves for re-election.

Mr. Dan Baxter proposed the motion, and said that while it afforded him very great pleasure to do so, he desired to commend the wisdom of the directors in the establishment of a reserve fund. It would be the height of folly for that association or any other to divide their profits up to the hilt. He himself had had a close connection with the velvet business for something like forty years, and his experience was this—however unfortunate it might be—that the velvet trade was very liable to periods of depression. He did not desire to curb the optimism of the meeting, but he merely wished them to make due provision for the future and for periods of depression, which were bound to come. Hence he commended strongly the wisdom of the directors in putting aside a fund that would be available to meet those periods of depression.

Mr. Samuel Cooke seconded the motion, which was passed unanimously.

Mr. A. Whyte then moved that the retiring auditors (Messrs. David Smith, Garnett, and Co.), be reappointed auditors to the company for the ensuing year, at the same remuneration as before—namely, 300 guineas.

Mr. Whyte added that that firm of auditors did not need any recommendation from him, their name was so well known; they were at the top of the tree in their profession, and the shareholders could rest assured that any accounts to which this firm put their name were absolutely correct.

Mr. Greenwood seconded the motion, which was carried unanimously.

The Chairman then said that the board recommended that the sum of £100 be voted to the directors other than the managing directors as their remuneration for the past year, the said sum to be divided between them in such proportion and in such manner as they should agree in accordance with article 95 of the articles of association.

Mr. J. H. Cooke then moved, and Mr. Robert Heatley seconded, the motion accordingly.

In response to a question, the Chairman replied that the amount in question would be divided between three directors only. That was the only remuneration of these three directors for services rendered to the association, but all the other nine directors held positions in the association.

The Chairman then put the resolution, which was carried unanimously.

The Chairman said that that concluded the formal business of the meeting. He was much obliged to the shareholders for their presence, and he hoped that their prognostications as to the future might be fulfilled.

Mr. Ridings suggested that they should express sympathy with the family of the deceased director, and the Chairman replied that such an expression of sympathy would be sent to the family.

Mr. Joel Wainwright then moved a vote of thanks to the Chairman for his graceful and admirable conduct in the chair. The Chairman had told them a very good story, they were going to have a very good dividend, and he had delivered his remarks with the extreme modesty which was characteristic of him, and he had held out to them very bright hopes for the future. He believed that those hopes would be borne out. They were told in the fashion papers that the belles of London had begun to support the velvets which were produced by that association. He did not see why the gentlemen of Piccadilly did not sport velvet jackets. (Hear, hear, and laughter.) Personally, there was no garment in which he so much delighted as a velvet coat, and with such old representatives of the business as the gentlemen he observed on the other side of the table—namely, Messrs. Worrall, Brooks, Kenyon, and Crabtree—he had confidence in the trade, and he asked them to pass with acclamation a cordial vote of thanks to the chairman. (Applause.)

The motion was duly seconded and passed with cordiality.

The Chairman thanked the meeting for that vote, and particularly for the kind remark with reference to his colleagues, who were all members of the velvet dyeing trade, and he was glad to hear Mr. J. H. Cooke's remarks with respect to the cordiality of their relations with the merchants, and as to the much greater promptitude of delivery nowadays than was sometimes usual in the old times. He was sure all the branches of the association would do their best in the future in both these regards. (Applause.)

BEYER, PEACOCK AND CO.

The annual general meeting of the shareholders of Beyer, Peacock and Co., Limited, was held on Thursday at the Westminster Palace Hotel, Victoria Street, S.W., Sir Vincent Caillard (chairman) presiding.

The London Secretary (Mr. Alan S. King) having read the notice convening the meeting and the report of the auditors,

The Chairman said: We always endeavour to set out our accounts so as to make them fairly understood by every shareholder. All the figures, I think, will be regarded by you with satisfaction, for they indicate quite clearly the prosperous condition in which your works are. It will probably interest you to know that, after allowing for all dismantlements and other charges and for some £12,000 which was written off goodwill, the general assets show an increase of about £58,000 since the company was formed. In the early spring of last year representations were made to us from competent and authoritative quarters in Canada that the aggregate capacity of the existing locomotive works in that country was not sufficient even now to keep the Canadian railway systems adequately equipped with haulage power, and far from sufficient to keep up with the growing development and requirements of the Dominion. It was, therefore, suggested that there was an unusually good field for the development of the locomotive industry, which would afford a fine opportunity to such a firm as Beyer, Peacock and Co. Having studied the matter as well as possible with such information as we could procure in this country—and the result of our study being prima facie satisfactory—we determined to send out a thoroughly competent man to study the question on the spot and make a report to us. The gentleman selected for this duty was Mr. Jameson, and the report he made to us on his return from Canada bore out in all particulars what had previously been represented to us. Moreover, he ascertained that if we decided to erect locomotive works in Canada we should receive direct and satisfactory encouragement from the principal Canadian railway companies in that country. (Hear, hear.) In order to get this encouragement put into a tangible form it was deemed essential that Mr. Hoy and myself should go to Montreal and confer with those railway companies. This we did. Matters assumed such shape while we were in Montreal that we considered it desirable to avail ourselves of an exceptional opportunity of purchasing a site close to Montreal singularly well suited for the contemplated works. It is the price of that site, together with the various legal and other expenses attaching thereto, which make up the item "capital expenditure in suspense." Supposing the project was not carried out and the site not required by us, there is, in our opinion, no risk of loss to be feared. If and when the time comes for carrying out this project, it will, if financial responsibility is to be assumed by this company requiring your approval, be duly submitted for

your consideration and approval. I will now take you to the debtor side of the balance-sheet, and I think that all shareholders with a properly constituted mind will strongly approve of our forming a big reserve for depreciation. It is absolutely necessary, and particularly in regard to big industrial works of the sort which this company directs, that we should keep our works in a state of perfect modern efficiency; in other words, that we should keep them absolutely up-to-date. The general result is that we have a balance of £63,502 to dispose of, and I will now come to the recommendations of the directors as to the manner in which we propose to apply this not disagreeable balance. We commenced forming the reserve fund last year, and we now propose to apply the sum of £30,000, which will raise that fund to £40,000. I am very well aware that some of the shareholders would prefer to receive a higher dividend and see a smaller reserve, but I must confess that, so long as I am in this chair, one of my greatest ambitions will be to see that the company is placed in such a prosperous state that we shall be able within a reasonable time to make additions to the reserve fund, until it reaches at least the amount at which the goodwill figures on the opposite side of the balance-sheet. As I have said, a substantial reserve fund is a pillar of strength to any great industrial company such as Beyer, Peacock and Co. It is a matter of very great importance that the credit of the company should be maintained, which can only be done by building up a large and substantial reserve fund, rather than by distributing large dividends in one year and smaller dividends in another year. It is not advisable that we should divide profits right up to the hilt. As to the prospects of the company, I make it a formula never to prophesy; but, judging from the state of our order book, I think I am justified in saying that the current year, so far as human foresight can see, should prove to be a satisfactory one.

Mr. Thomas Craven, D.L., seconded the motion. Some discussion followed, and the directors were urged by several speakers to increase the dividend to 10 per cent., and to reduce the amount added to reserve. The chairman strongly dissented from this view, and said he was sure that the vast majority of the shareholders were in favour of the course recommended by the directors. The motion was eventually declared carried with three dissentients.

BOVRIL.

The eleventh annual general meeting of Bovril, Limited, was held on Tuesday, at River Plate House, Finsbury Circus, E.C., the Earl of Arran (chairman of the company) presiding.

The Secretary (Mr. W. A. Harris) having read the notice convening the meeting and the report of the auditors,

The Chairman stated that Lord Bessborough had felt obliged to retire from the position of chairman owing to his appointment as chairman of the London, Brighton, and South Coast Railway Company. It was a matter for congratulation that the sales had been so well maintained in the past year when it was remembered that a very high Bank of England rate was ruling during the company's busiest season. The gross profit did not show quite so well, but in addition to the increased cost of beef, there had also been an advance in the prices of bottles, tins, capsules, wooden cases, coal, and other things. The combined effect of these increases had tended to reduce the figures of both the gross and the nett profit. After deducting the debenture interest and interim dividends paid on the preference shares and ordinary shares, amounting to £62,500, and including the sum of £19,389 brought forward, there was a surplus available for distribution of £76,854. Out of this amount the directors proposed a dividend of £13,750 to complete the 5½ per cent. per annum to the preference shareholders and a dividend of £26,250 to complete the 7 per cent. per annum to the ordinary shareholders, while a dividend of 2 per cent. for the past year on the deferred shares would absorb £15,000. Last year nothing was transferred to reserve, but this year it was proposed to add £10,000 to it, making it £175,000 in all. The balance carried forward would then be £11,854. The board regretted the cutting-down of the company's business with Australia and South Africa in consequence of the increased import duties in those colonies. In Australia the duty had been raised on Bovril, and a new duty had been placed upon glass bottles, while in South Africa the duty had been increased from 7½ per cent. to 22 per cent. The increased tariff had resulted in their business in South Africa dropping 33 per cent. as compared with 1906. Every step had been taken to secure a reduction in the duties at present in force, and the matter now rested in the hands of a special committee appointed by the authorities, who were considering the question of tariff revision. In Canada they had entered afresh on the upward grade under a manager sent out from the head office. The company had been appointed purveyors of Bovril to the King of Spain. The business of Virol continued to develop, and there was a further extension of its general use in the hospitals throughout the country. He concluded by moving the adoption of the report and the payment of the dividends recommended. Mr. G. Lawson Johnston, in seconding the resolution, said that for nearly 20 years Australia had been the favourite source for the supply of their raw material, and it was the last place where they had expected to find duties raised against them. About three months ago he wrote to the Agent-General of New South Wales suggesting that an article which was in part a product of Australia should receive special treatment, and he had been advised that his letter had been communicated to the Prime Minister of the Commonwealth. In the discussion which followed, some dissatisfaction was expressed at the reduced dividend on the deferred shares, but certain shareholders said they thought, in view of all the circumstances, that the profit was satisfactory. Mr. F. Smith criticised the management in several respects, and suggested that the new directors ought to have been men with commercial experience. He also asked the holdings of Lord Arran and Sir J. Crichton-Browne. The Chairman replied that he held 1,050 deferred shares and that Sir J. Crichton-Browne held 1,200 deferred shares. The report was adopted.

NEXT WEEK'S MEETINGS.

MONDAY, FEBRUARY 17.

Baker Street and Waterloo Railway.—Hamilton House, E.C., 3.30 p.m.
Bristol Tramways and Carriage.—Bristol, noon.
Cowie Harbour Coal.—Winchester House, E.C., 2.30 p.m.
Hastings and District Electric Tramways.—1, Queen Victoria Street, E.C., noon.
Imperial Tramways.—Bristol, 1 p.m.
Morrison and Fleet's Dairies.—Winchester House, E.C., noon.
Pawsons and Leafs.—St. Paul's Churchyard, E.C., noon.
Rhodesian Mining and Finance.—Salisbury House, E.C., 12.30 p.m.
South African Gold Trust.—C. S. Hotel, E.C., noon.
Wm. Wallace and Co.—155, Curtain Road, noon.

TUESDAY, FEBRUARY 18.

Australian Agricultural.—Winchester House, 1 p.m.
Charing Cross, Euston, and Hampstead Railway.—Hamilton House, E.C., 4.15 p.m.
Edmundson's Electricity Corp.—Salisbury House, E.C., noon.
Great Northern, Piccadilly, and Brompton Railway.—Hamilton House, E.C., 3 p.m.
London and Middlesex Freehold Estates.—Winchester House, noon.
Nelson Bros.—Cannon Street Hotel, 2.30 p.m.
St. James' and Pall Mall Electric Light.—Golden Square, W., 3 p.m.

WEDNESDAY, FEBRUARY 19.

Brecon and Merthyr Tydfil Junction Railway.—Palmerston House, E.C., 12.30 p.m.
Furness Railway.—14, Great George Street, Westminster, noon.
Maryport and Carlisle Railway.—Maryport, noon.
Merry and Cunninghame.—Glasgow, noon.
National Mortgage and Agency of New Zealand.—Winchester House, 3 p.m.
Rosario Nitrate.—Winchester House, E.C., noon.
Sheffield District Railway.—Hamilton House, E.C., 3 p.m.

THURSDAY, FEBRUARY 20.

Anglo-Foreign Banking.—2, Bishopsgate Street Within, E.C., noon.
Atlantic and Leased Lines Rental Trust.—Winchester House, E.C., 2.30 p.m.
Buenos Ayres and Belgrano Trams.—Winchester House, E.C., noon.
English Association of American Bond and Share Holders.—5, Great Winchester Street, E.C., noon.
Lion Brewery.—Winchester House, 2.15 p.m.
Milford Docks.—63, Cornhill, E.C., 2 p.m.
Mount Cattlin Copper.—Salisbury House, E.C., noon.
National Telephone.—Hamilton House, E.C., noon.
North London Railway.—Euston Station, W., 1 p.m.
Read Bros.—Holborn Restaurant, 12.30 p.m.

FRIDAY, FEBRUARY 21.

Mercantile Investment and General Trust.—Winchester House, 2 p.m.
Midland Railway.—Derby, 1.30 p.m.
Millwall Dock Equipment.—1, Railway Place, Fenchurch Street, E.C., 2.30 p.m.
New Egyptian Company.—C. S. Hotel, E.C., 12.30 p.m.
Nobel Dynamite Trust.—Winchester House, E.C., 12.30 p.m.
South Suburban Gas.—De Keyser's Royal Hotel, 3 p.m.

In its latest annuity scheme the Royal Exchange Assurance, although it was incorporated nearly two centuries ago, displays enterprise quite in keeping with the spirit of modern times. The new feature is, that it will grant specially advantageous annuities to applicants who are in bad health. The benefit of this is incalculable. A person who through ill-health is unable to continue earning his livelihood, and is forced, it may be, to rely upon his small capital for the rest of his days, finds that a safe investment of the money brings in a very meagre return. The knowledge that he may not live to an advanced age deters him from buying an annuity on the same terms as would be granted to an applicant in perfect health. But under the new scheme he would have the advantage of special terms, because, as the prospectus puts it, his prospect of longevity is below the average. It is no exaggeration to say that the new scheme may put comfort and comparative affluence within the reach of many who have hitherto lived in comparative poverty.

Letters of allotment and regret in connection with the R. and J. Dick, Limited, issue of preference shares were posted on Thursday.

Mr. Paul Otto Barendt, who has been in the service of the Liverpool and London and Globe Insurance Company at the head office for the past sixteen years, has been appointed foreign fire superintendent at the head office of the Central Insurance Company, Limited.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 529. SATURDAY, FEBRUARY 22, 1908. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

German Views on Banks and Banking.

(BY THE LONDON CORRESPONDENT OF THE *Frankfurter Zeitung.*)

III.

The following summary of the balance-sheets of the leading Continental banks shows that only few of them have acceptance engagements outstanding up to the amount of their share capital proper, and none of them in excess of their share capital and reserves:—

In thousands.

Nevertheless, bills on the London offices of these banks are not treated equally with those of London banks and merchant bankers, for the Bank of England will not take such acceptances, and this on the ground that these agencies, in the event of any serious situation arising, for instance in the case of war, would simply be closed. This is a point of view which is scarcely justified, as the London offices are endowed with their own capital, and the majority of them have been established for many years—have taken root here and "have come to stay." According to the new Companies Act, passed August 28, 1907, every company incorporated outside the United Kingdom, which has a place of business in the United Kingdom, must file with the registrar:—

(*a*) A certified copy of the charter, statutes, or memorandum and articles of association, of the company, or other instrument constituting or defining the constitution of the company, and, if the instrument is not written in the English language, a certified translation thereof contains:—

(*b*) A list of the directors of the company;

(*c*) The names and addresses of some one or more persons resident in the United Kingdom authorised to accept on behalf of the company service of process and any notices required to be served on the company.

And further stipulates that:—

(1) Any process or notice required to be served on the company shall be sufficiently served if addressed to

any person whose name has been so filed as aforesaid and left at or sent by post to the address which has been so filed.

(2) Every company to which this section applies shall in every year file with the registrar such a statement of its affairs as would, if it were a company incorporated in the United Kingdom, and having a capital divided into shares, be required under this Act to be included in the annual summary.

Thus is will be seen that there now seems very little difference, in some respects, between English banks and the London offices of foreign banks. There would certainly be no objection raised by any of the banks to state also in an official way the capital with which these offices are endowed.

It seems, therefore, hardly logical that such a distinction should still be made between London institutions and foreign agencies, and that the latter should be discriminated against, as has hitherto been the case. On the other hand, it is regrettable that domiciled acceptances, viz., acceptances of Continental banks in sterling, made payable in London, find ready reception in the open market, for to these the attitude taken by the Bank of England would apply with much more force. Even out of fairness only, such domiciled acceptances ought to be discounted here only at higher rates, considering that the foreign agencies are, as a matter of course, subject to English taxes, and keep up large establishments, have a numerous staff, and thus contribute to the local and Imperial revenue of the country, whilst they create and attract business which otherwise might be lost to the English market. The institutions which domicile their acceptances here enter into unfair competition, inasmuch as they accept bills at a comparatively lower rate of commission, and thereby manage also to proportionately reduce the amount of their own acceptances circulating in the home market. It should be the earnest endeavour of London banks and discount houses to do away altogether with this flagrant abuse of the advantages offered by the London Money market.

The fact that England has been able so far to maintain its position as the predominant money market of the world, and as the largest centre for credit operations, does not prove that there is no need for essential reforms. On the contrary, it is important for the world's commerce that the mechanism of the London Money market be equal to its task. The breakdown of one little wheel would cause a disturbance in the entire economic fabric of the world. Confidence is the mainstay of the entire mechanism. The different interests must therefore co-operate in order to prevent confidence being shaken. The division between the deposit banks and the credit banks has certainly proved effective, and is apt to preclude crises such as that reigning at present in America, which has been caused principally by the locking up of deposits in industrial and more or less doubtful securities.

The constitution of the English clearing banks and the precautions taken in regard to the transfer of shares render it practically impossible or useless to obtain control, and therefore the use of deposits by large shareholders in their own interests is made absolutely impossible. Indirectly, part of the deposits is at any rate available for commerce and industry and the Stock Exchange by the banks' discounting bills, granting advances, &c.; with this difference, however, that the security for the deposit banks is much stronger than in giving credits direct to the trade, inasmuch as the intermediate elements (acceptors, drawers, endorsers, &c.) are liable in this way also with their whole capital, so that in the event of a crisis the position of the deposit banks can hardly be directly endangered; consequently, the public will not be so easily alarmed. The sphere of activity of credit institutions which are in close connection with trade and industry is, as a matter of course, not hedged in to such a degree. Their operations embrace a wider scope, but they also must be guided by sound and safe principles. Such principles prevail upon the whole on the Continent, and therefore, even in times of anxiety and distress, depositors as a rule are not alarmed to such an extent as to withdraw their deposits.

The final impression left on the mind by a closer examination of the organisation and working of the London Money market is that amongst the inherent defects are a lack of contact and co-operation amongst its constitutent elements, which in times of storm and stress may seriously impede, if not temporarily paralyse, the free exercise of its numerous and most important functions, for it will be freely conceded that the true test of efficiency of our Money market lies in the degree of facility with which not only instruments of credit having a short maturity (bills, &c.), but also all other current forms of indebtedness (securities), can at a given moment be turned into cash.

Southern Pacific Company.

Such prominence is now given to the affairs of the Harriman lines in which the great system held in dependence by this company is embraced that more than the usual summary notice of its report is demanded. It is a belated report, because the fiscal year dealt with ended on June 30 last, but recent legislative enactments have obliged the board to make important alterations in its accounts, and that took many weeks. In any other country but the United States a system of railway lines of the extent controlled by the Standard Oil group under the name of the Southern Pacific Company would be deemed worthy of an independent existence, but this combination of 9,694 miles of line is a dependent of the Union Pacific Railway Company, the control being exercised through one of that company's bond slaves. In its turn the Southern Pacific Company controls the Central Pacific, the Oregon and California, the Southern Pacific Railroad and the Southern Pacific Coast Railroad, while these lines in their turn are also masters of the destinies of quite a host of other companies grasped by the same master hands. Amongst them they undoubtedly do a magnificent business, and last year the gross revenue of the Southern Pacific aggregation of roads amounted to $124,942,798. Four years before the income was only $92,933,230. Working expenses took $80,220,800 of the receipts or 64.21 per cent. as against 67.98 per cent. in the earlier year, but this is exclusive of taxes, which, however, have not increased on anything like a corresponding scale, for the amount paid last year under this head on both rail and water lines was only about $544,000 more than in 1903-4 at $2,896,501. Altogether, including the miscellaneous income, the free revenue was the largest ever exhibited at $46,783,103, and after meeting all charges, including some tiny amounts transferred to reserve or assigned for betterments, there was still $27,698,594 left out of which to pay dividends on the company's stock. A few years ago the complaint was universal that the earnings of the Southern Pacific Railroad were being utilised to improve the property instead of getting distributed to the shareholders. Now the complaint is likely to be much the same, only people will say that the dividend paid by the mothering Southern Pacific Company ought to be double what it actually is. The directors pay 5¼ per cent., and might have paid 10½ or even 11 per cent. on the common stock, still with money in hand according to the exhibit.

How comes it that the system controlled by this Southern Pacific Company in the interests of the Union Pacific or Standard Oil combination is so marvellously prosperous? Unquestionably, some of the prosperity arises from the development of the country; in all probability the greater portion of it does so. Conspicuous, however, although the developments may have been, it is impossible to believe that within a period of six years—that is to say, since June 30, 1901—the revenue should have risen from $79,345,000 to over $129,900,000 all told, and we fear the ground for the hostility shown to the Harriman combination, of which this Southern Pacific

system is the most vital link, a hostility emphasised by the action of Attorney-General Bonaparte in instituting suits to break up the monopoly, has been inspired by the ruthless manner in which that monopoly has been exercised. Accompanying the elaborate report, one of the fullest and most informing issued by any American railroad—indeed a more complete report in some respects than any other company in the world issues—is a really splendid map of the system and its connections. A brief study of this shows that the whole of the South-West transcontinental business of the North American continent may be said to lie in the hollow of that man's hand who controls these railroad lines. The Southern Pacific Company's system itself goes eastward from San Francisco and other places on the Pacific coast to Galveston and New Orleans, and runs up into various districts of Texas. It goes south also to sundry ports on the Gulf of Mexico, and penetrates into the Republic of Mexico itself with a line almost skirting the coast of the Gulf of California. All the railway business of California is in the hands of the combination, which comes as far east as Ogden, where it is linked with the Union Pacific, whose eastern termini are Omaha and Kansas City, and which is part of the same "combine." The Southern Pacific network goes as far north as Portland in Oregon, and through the Oregon Short Line and Oregon Railroad and Navigation Companies may be said to have complete mastery of the entire traffic of the Pacific coast between the Mexican border and the boundary of Washington State, running up also as it does into the Nevada mining region. In addition to all this, the Southern Pacific Company owns or controls three important steamship lines, from which it receives a large business, and which cover among them 4,895 miles of ocean navigation, so that it is in a position to treat the traveller and trader exactly as it pleases over at least one-fourth of the territory of the Republic. Obviously, it has not treated the people well, else the indignation against the Harriman-Standard Oil control would not have been at that white heat implied by the intervention of the Washington Government with a view to break the combination and give the inhabitants relief. We therefore infer that the whole of this enormous combination controlling altogether some 15,000 or more miles of railway—nearly all, by the way, single line and much of it, we fear, rather poorly equipped—has been increasing earnings by screwing up passenger fares and freight rates. That this is so cannot well be deduced from the statistics of the report for any single year, but we notice that the charges appear to have tended upwards during that time. The earnings per passenger last year came to $1.81, which was 10 cents. higher than in the preceding year, and the average freight receipts per ton per mile were also 0.080 cent up. The increase in the receipts per passenger is concurrent with a decrease of 6.13 miles in the average distance travelled; that is to say, the local traffic has been larger and has paid the higher charges. Local business has also given more of the freight traffic, since the average distance goods were carried was also per ton 2.27 miles less. Add in the iniquities of rebating, whereby certain favoured traders, friends or dependents of the controllers of the railroads get abatements on the through traffic to the detriment of those not thus favoured, and between such favouritism and enhanced local charges both on passenger tickets and for the carriage of goods, there is no difficulty in comprehending why there should be at the present time such a hot wave of indignation against enormous combinations, such as that of which this Southern Pacific Company's aggregation of lines forms the most important portion.

This Southern Pacific Company is essentially what is called a holding company, and in that capacity it owns large amounts of stock and bonds, but especially of stock, because through share capital control is exercised. In other words, control has been obtained on a fictitious basis, because much of the share capital in all American railroads was originally mere bonus, a right to reversionary profits. It could, therefore, be picked up at low prices, very often for nothing at all, by those who entered into the monopolising enterprise at the beginning. For many years the Southern Pacific Railroad Company's own stock, now held by a subsidiary of the Union Pacific, was kicking about in markets at a low price, and no dividend was ever paid upon it until the masters in combination had gathered up all they wanted of it at their own figure. Then the manœuvre was completed, "economies" were introduced, freight charges of all kinds increased, and monopoly began to punish a supine people.

At the end of June last the total of the Southern Pacific holding company's own balance-sheet amounted to $429,725,462, an increase of $50,132,393 on the year, and this increase involved a large addition to the floating debt, the company owing on June 30 last no less than $24,409,775 on loans and bills payable against nothing the year before, and this was after having received $16,142,000 as subscription on new preferred stock issued early in the year. The directors appear to prefer to issue stock rather than bonds, and in that are perhaps to be commended. Fortunes are easier to make by dealings in shares if you can make your own market. In all, $36,000,000 par value of preferred stock was put out, and when the whole of this amount is paid up the floating debt just mentioned may be considerably reduced, if not for the hour entirely obliterated. All the same, a combination of this kind cannot be maintained without continually pouring out fresh capital, and this is an operation that will have to be watched, because it has an insidious effect, and after a few years holders wake to find their property depreciated by reason of the enormous additions made to its burdens. Last year's outlay of capital by the subsidiaries is put at but $9,661,000, most of which the South Pacific Company advanced, but additional outlays on betterments and additions took $7,643,000, most, if not all, of which will no doubt be in due time capitalised. With its share capital and some small issues of bonds, this Southern Pacific Company has obtained possession of the whole share capital of 16 of the dependent companies, including the Central Pacific, the Direct Navigation, the Houston and Texas, the Morgan's Lousiana and Texas Railroad and Steamship Company, the Oregon and California, and the Southern Pacific Railroad, not to mention smaller ones. It also owns the whole, or a controlling portion, of the share capital of 33 other corporations, including some portions of its own common and preferred stock, most of which, however, has passed into the hands of Harriman and his associates or of the public. Seventeen of these proprietary companies, as they are called, have issued bonded debt to the amount of about $146,000,000, and the Southern Pacific Company owns $20,481,000 of this debt. There is also a number of other investments partly in industrial companies, partly in public debts and in the bonds of minor railroads, of which the Southern Pacific Company possesses over $13,480,000, its total possessions in stocks and bonds footing up to $449,422,755. Much of the company's possessions, however, in bonds and stock has been pledged for advances, and out of the whole sum named only $114,809,542 seems to be free, much of that, we take it, unmarketable, the pure outcome of financial expedients resorted to so that the oppressive combination of interests now being kicked against by the people might be clinched and made impregnable. The Southern Pacific Company also controls an enormous amount of land through its subsidiaries. Of this land it on June 30 last held no less than 14,528,687 acres unsold. A considerable kingdom, in fact, in this way remains to be disposed of, and the nett revenue from land sales last year came to about $1,706,000, all of which is assigned to the redemption of the Central Pacific Company's 3½ per cent. land grant debt. The combined balance-sheet of the whole system adds up to $787,215,455 or £157,443,091. It has grown with the swiftness almost of Jonah's gourd.

Pay Up, Chartered Shareholders!

We beg to present most humble apologies to our good friends the Yankees. Many are the jibes we have perpetrated at their expense over the brass-band and star-spangled banner style of their business rhetoric and that "we-are-top-dog-of-the-world" air with which they come and cozen or jostle us out of our cash. And now we are sorry for it, because after all these brilliant, bouncing Yankees are mere idle apprentices at the money-raking job when compared with the majestic sublimities of the Chartered Company; your Harrimans and Morgans and Ryans and Lawsons—not to mention lesser men—are no better than so many "Teddy Watkins" beside them. Year after year those first-class financial comedians, the Duke of Abercorn and his troop, go through the ceremonial of great functionaries of State with a full-blooded Imperial potentate sort of air, don't you know, imposing enough to mystify the Great Mogul himself—if the world still had one. As we read the voluminous reports his Grace portentously fathers, and note the sayings of the administrators, the lucubrations of the "Visiting Commission" sent out by the board, read the great State document issued by it called the "Declaration of Policy," dated Bulawayo, October 19 last, and pore over the reports upon resources, progress in agriculture, railway development, projects for immigration, "recommendations" as to expenditure, the great things in colonisation to be done by the Salvation Army, and burn in imagination "Wankie" coal; count up, likewise, our mine share profits after gazing at the ascending array of yellow columns to illustrate the development in gold production, we are stupefied in admiration and wonder. Nothing like so dignified a "fake" or stage show has ever before been perpetrated in the whole course of Imperial British history. It is all so portentously harmonious that the mind surrenders to the well-appointed hoax, or would do were there no facts to bother about. These will obtrude here and there in spite of the drapery.

But the very facts themselves enhance the mock-statesmanlike rhetorical glitter with which the whole sordid imposture has from first to last been surrounded. Any ordinary body of men would have given up the game long ago, so deadly has been the experience. Not so the great, generous, ever-aspiring guides and parasites of the embryo "Empire" of Rhodesia. The more they came to grief in all their schemes and anticipations the more they pomped and peacocked through reams upon reams of inflated sentiment and "expansion" balderdash. And hitherto the noblemen and gentlemen most concerned have found the simulation pay. They had but to wave the flag of Empire, great and ever glorious, to tickle the ears of their generation with fine phrases, and the money always came pouring in upon them in millions to provide the fat salaries of directors, managers, administrators, military commanders, lawyers, "visiting commissioners," and heaven knows who or what besides. In the year ended March 31, 1907, the latest whose figures are before us—so leisurely are these expensive footlight potentates—the board alone absorbed £7,609 7s. 4d., including pay for "special services" and travelling expenses, and the awfully hard-worked trustees sucked up another £595 9s. 7d., while other current expenses in this country took over £29,000, and last year and this year and all the years that went before they have been doing this, and never a farthing of revenue has ever come in to provide the needful. Steadily as fate deficit has followed deficit, until on March 31, 1907, the aggregate "shortfall," to use the favourite ducal word, came to the really Imperial figure of £4,818,612, it having been increased during that year by an admitted £105,212. We say admitted both because the accounts do not seem to us to be complete and because it is really all deficit that the company has spent. We should not like to see £1,000,000 given for the whole £12,033,000 to which its balance-sheet foots up, for not only has it lost the amount just mentioned on the "administration," Press and peer subsidising and feeing, and in legal, travelling, literary and other trifling charges, but £2,707,000 vanished on its wars of possession and £1,329,000 on "concessions," worth to-day as much, perhaps, as the mine dividends—which is nothing. The company has also sunk over £1,000,000 in railways and telegraphs beyond the amounts of railway and other capital it has more or less guaranteed—some £12,000,000—the same bits of line being in at least one instance bonded twice over under different disguises and no doubt by mistake. Who would give 2s. 6d. in the £ for that asset? And could its £560,389 lent against securities in London be called in without loss, or at all, and are its shareholdings really worth £730,000, and could the advances aggregating £197,575 nett be recovered, and is its expenditure on "public works" worth the £343,851 set against it, or its "movable assets" worth £248,000?

Pay no heed, good, blind, imperial fetishist. Behold the flag waving once more, hear the Rhodesian tom-toms. Listen to the voice of the charmer and plank down another £1,000,000 on demand. Are you not offered "options" to subscribe for yet £2,000,000 above and beyond that mouthful at future dates, and likewise at par if you provide this little refresher now? "Existing shares can be had at 6s. or 7s. discount," the sharp, matter-of-fact investor observes, "why should I buy the new at 20s.?" Would the Empire ever have been heaped together in its bewildering heterogeneity if the language of cold prudence had been listened to? Never; so "down with the ready," and save the directors, their hangers-on, lawyers, governors, clerks, typists, soldiers, managers and "magistrates" whose hard labour it is to mete forth justice to 15,000 whites and a remnant of blacks.

Are there 15,000 whites already dwelling within the bounds of this noble new Empire? The board is careful not to say, but it does tell wondering mankind that in Southern Rhodesia the European population has increased within the short period of about 2½ years by 1,422 to a grand total of 14,018. Is there another 1,000 in the other two provinces of North-East and North-West Rhodesia now to be clamped into one at a cost of £15,000 for removal? We doubt if there is much more than half that number there, but the Salvation Army, you see, is at the rescue work even here, and may yet save the Empire of Rhodesia from utter wreck and the directors from loss of fees, not to speak of the managers, secretaries, registrars, governors, judges, and military and police officers who flourish on the remains of previous issues of capital—alas, there was only £97,521 of it left last March. Good immigrants, good crops—Rhodesia, you know, was the original paradise, or next door thereto—lots of geese and goats, tobacco *ad lib.*, and minerals of all sorts capable of being mined in pure philanthropy; there is wealth all around you; give but population and the officials may eat in peace yet a few years. "But the money cannot be had on the terms offered." Ah, we have said that before now, and been made to look like fools for our pains, in thus trying to measure the height and depth of human credulity. deftly handled. All the bought Press will chant in chorus the glories of this unsurpassable province of our great, ever mounting and growing Empire, and with a rub-a-dub-dub in will roll the cash. No? Then pity the poor duke and the marquis and the mere lord and their "tail" of common men, for the Chartered Company will get comfortably into the nirvana condition of insolvency at last, and we shall be at peace once more, free to occupy these columns with the serious and substantial affairs of the sane.

Let us see; there was a deficit in the last year's figures shown, was there not? and a deficit is to be in the year now ending? Yes, yes; but never mind these, a mere trifle not worth looking to when a million is about to come rolling in. Besides, as we have said, the accounts do not tally, and the real deficit was

greater than the larger of the two visible ones we are allowed to snort over.

Economic and Financial Notes.

The Stock Exchange Wrangle.

It seems to wax hotter and hotter, and there is really no solution possible on the lines suggested. We can hardly imagine anything more useless than a perpetual squabble over "double commissions" and the interference of the jobber with business that the broker says should be exclusively his. The troubles from which the Stock Exchange now suffers lie deeper far than any questions such as these reach, interesting though they be; they arise to no small extent from the heedlessness with which money was spent when business seemed to be expanding without limit, when everybody in the "House" was busy and fortunes being made at the rate of so many dozens a month. Whether a better original constitution would have prevented some of the corrosive effects now resulting from past extravagance is more than we can now discuss, but there cannot be a doubt that the recklessness with which speculation was engaged in and frauds allowed to be perpetrated under the protection of the market has brought a degree of discredit upon the Stock Exchange which it will not surmount in this generation. Members always say when a remark of this kind is made to them: "We were not responsible for the frauds and impositions perpetrated by this or the other outside adventurer or knot of adventurers. We only did the business that was brought to us." That is but a half truth, and not a straightforward way of meeting the charge, for if Stock Exchange rules and regulations had been drawn up with a careful and judicious reference to public interests, and not merely to provide facilities for dealing in any kind of paper—in rubbish as readily as in the best securities existing—so that members might have unrestrained facility to make money and make it quick, it should have been comparatively easy for the managers and committee to put a bridle on every outburst of demented gambling at an early stage and to squelch individual frauds at their very start. But they never really thought of doing this, and as the Stock Exchange is now constituted its legislation is purely selfish. As we have dinned into the minds of readers again and again, this great market is owned by a few proprietors, who appropriate the whole of the revenues drawn from subscriptions and entrance fees, less the amount required to keep property up and to pay the interest upon the prodigious debt with which the institution is now saddled by them. All the balance goes to pay stupendous and kill-the-goose dividends on the small capital originally provided by these proprietors. No money is put aside either to form a guarantee fund, so that the market as a body should protect the outside public from losses arising through the frauds or defalcations of individual members, or as provision for promptly bringing the law to bear upon defaulting members. The Stock Exchange, in short, is administered like the rack-rented estate of a spendthrift and debt-loaded landed proprietor. Accordingly, when bad times come there are no resources to fall back upon, and an immediate outcry arises, and everybody is uncomfortable and eager to put the blame for the reaction on any cause except the real ones. If the wild dementia of 1895 to 1899 had still been going on, or if it had revived during the last two or three years, we should have had never a thought given to the "double commission" or the broker *v.* jobber wrangle. Eager members would have been raking in money by all the means known to them, and the proprietors would doubtless have been increasing their dividends, thanks to the augmented annual subscriptions and entrance fees of which there would have been an increasingly plentiful supply. If any radical improvement is to be made of a kind likely to create confidence once more in the leading stock market of the world, the reforms will have to go much further and much deeper than any of the merely incidental and domestic changes now the subject of so much heated debate.

The Sad Lot of the "Times."

Wednesday's *Daily Chronicle* contained another interesting and obviously well-grounded communication relative to the sale of the *Times* newspaper properties. We gather from it that the various proposals made by the Pearson syndicate have not found favour. These seem to have embodied a sort of linking up of the various newspaper enterprises controlled by that gentleman, and that alone would have been enough to condemn them. The proposed new company was designed to control the *Times* and its satellites, the *Morning* and *Evening Standard* and the *Daily Express*. Neither this project nor the modifications of it found favour with the Court of Chancery, which seems to have vetoed it in obedience to the opposition; rightly, were it for no other good reason than that none of the other newspaper enterprises of Mr. Pearson would appear to be in a very flourishing condition, since their balance-sheets are carefully kept out of the hands of the Press, his action in this respect being suggestively different from that of the Harmsworth family, the balance-sheets of whose newspapers are always freely distributed. And be that as it may, a mix-up of the kind would have meant utter disaster for the *Times*. What would appear to be a modified proposal was that Mr. Pearson should be appointed manager for 20 years with an income whose maximum was to be £10,000 a year, including salary, director's fee, and percentage on the profits. The proposed capital of the new *Times* company was £850,000, or just about twice what we should judge the property to be worth altogether on a most liberal estimate. This inflated capital was to be made up of £200,000 in 6 per cent. first preference shares to be allotted to those who found the new money, £350,000 in 5 per cent. preference shares to be allotted, £90,000 to the Walters for the purchase of Printinghouse Square with the printing machinery, &c.—this seems the cheapest item in the catalogue—and £260,000 to the mere proprietors of the *Times* newspaper, to recompense or console them we presume for having received no dividends to speak of in recent years. The remaining £300,000 was to consist of ordinary shares, of which £120,000 nominal was to be allotted to the proprietors of the *Standard* and the *Daily Express*. A more fantastic concoction in fancy finance it would be difficult to light upon, and it was rounded off by the further proposal that the *Standard* company should pay £4,000 a year and the *Express* company £2,000 a year for the use of the *Times* printing machinery. This might have opened the way for a large business in scrapping useless plant, and perhaps in leasing or selling off useless premises, but no other good could have come of it. But this promoters' dream has faded into limbo. Whether a better plan is to emerge may well be doubted, unless wiser heads than the *Times* seems to be able to command are set to the elaboration of it. Our own feeling, as already intimated, is that in a little while the Walter family and the unfortunate shareholders in the *Times* may be driven by force of circumstances to part with the entire property outright. Assuredly the public would not have confidence in any company presided over by Mr. Arthur Walter after witnessing the lamentable consequences of his past administration now so distressingly evident, and the feebleness of judgment revealed in his readiness to entertain proposals so destructive of the independence of the *Times* as those now stated by the *Daily Chronicle* to have been abandoned.

All conjectures, however, are set at rest by the letter of Messrs. Willis and Willis, solicitors to Mr. Sibley and his co-descendants of the first John Walter, shareholders in the *Times* newspapers. In that letter it is stated that the judge in the action Sibley *v.* Walter has made an order for the sale of the partnership assets, but has not yet given his directions as to the mode in which the sale is to be carried out. Various

proposals have been made to buy the paper, but all have been objected to by some of the proprietors, and they accordingly intend to ask the judge for permission to offer the property for sale by means of some form of public competition. In harmony with this intention, which seems to us a wise one, the intimation is given that anyone desirous to make a proposal for the purchase of the property has only to send his offer to Messrs. Willis and Willis, by whom it will be duly brought before the judge. This is a straightforward and practical attitude, which we hope will soon bring about a settlement of the difficulties and place the properties of the *Times* once more in a position to command public esteem and support. This will almost certainly be the result, for, as we have all along said, the *Times* is still a property of immense value and potentialities, if care be taken to reject all offers embodying inflated issues of capital such as the scheme put forward by the Pearson syndicate. Nothing would more certainly produce disaster for all concerned than a loading up of the *Times* with fancy amounts of share or other capital. The smaller the nominal capital is the better will it be. If enough money is raised to pay cash down for the assets taken over, and if the goodwill is capitalised at a modest figure, then it would be better if the shares distributed to the proprietors were no more than £100,000 or even £50,000, provided this capital stands to receive all the free revenue after due provision has been made for depreciation and reserves. A capital of £250,000 all told would amply suffice for all reasonable purposes on this understanding.

Premier (Transvaal) Diamond.

We could talk about the affairs of this now notorious undertaking until we sickened ourselves and everybody else. As we have before remarked, the astounding incidents packed into its brief career would provide material for a good-sized volume, and now we have the annual report, which would go a long way towards filling book No. II. It need hardly be said that this document has been awaited with an extraordinary but quite natural curiosity. Scarcely a day passes without giving birth to some fresh story affecting either De Beers, the Premier, the Syndicate or the diamond trade, and it is highly significant that many of these statements, although seeming highly improbable at first blush, are subsequently borne out by events. There is a frankness about the Premier company's reports that it would be useless to look for in the case of De Beers, and the statement just issued enlightens us not a little. It is not our intention to dwell upon past history. We shall merely pick up the threads where we dropped them a couple of months ago when the Premier announced the postponement of the deferred dividend declared in the previous month. The period covered by the report is the year to October 31, 1907, and during the greater part of that time the company's experience was comparatively uneventful. There was a bit of a set-back in June, but a couple of months later sales are said to have been active again, and matters appear to have been all serene until negotiations were opened for bringing the Premier into the Syndicate, at the instigation of De Beers we should judge, which by the autumn was evidently feeling the pinch pretty severely. The first part of the contract is now almost at an end, and the directors are evidently very doubtful if the Syndicate will renew, but they have no hesitation in declaring their adherence to the principle of monopoly for the sale of rough diamonds. This does not quite square with general gossip, which is to the effect that the Premier company threatens to break with the Syndicate and once more go on its own. But possibly more stringent terms are being imposed with which the company does not see its way to agree. However, production has been curtailed, likewise by De Beers.

The directors do not feel called upon to defend the dividend declaration in December last, and we will pass that by, just keeping our own opinion about the matter, but could they tell us something about that disagreeable business in connection with the run up of the shares two or three hours before the dividend postponement was announced? The market is mentioning names, and possibly the directors might be able to tell us who are the guilty parties. The trick was said to have originated not a hundred miles away from the mine. Attention is drawn to the general manager's report, which is said to give fullest details of all work done at the mine, but we are not favoured with a copy, and can merely intimate that 6,538,669 loads were washed which yielded 1,889,987 carats, an increase of 990,241 carats over last year. Diamonds realised during the year, exclusive of the Cullinan, brought in £1,064,595, after providing £43,964 for brokerage, discount, insurance and duty. Stocks on hand were £638,036, making £1,706,631, and here it might be explained that of these stocks £473,238 were apparently sold to the Diamond Syndicate before the close of the financial year, and have been delivered since, £164,000 has been allowed as a reserve and not brought into the profits, and £797 worth of stones lie at the company's office. Mine expenses were £766,748, and the total outgo, including the £164,000 reserved, came to £1,000,902, leaving £701,729 as the divisible profit. Of this £192,273 has been expended on general equipment and £509,456 is divisible, giving the Transvaal Government £305,674 or 60 per cent., and the company £203,782 or 40 per cent. In addition, there is sundry revenue of £97,440, which includes the company's 40 per cent. interest in the sale of the Cullinan diamond, presented to the King, after making adjustment with the Transvaal Government on account of British income-tax, &c., and £1,644 brought forward, in all £302,782. Income-tax of £9,256 has to be deducted, and the preference dividend which is paid absorbs £100,000, leaving £193,612 to meet the £160,000 deferred dividend which was not paid, so that the margin was not a lavish one, although account must be taken of the large sum reserved or spent on equipment.

The amount owing to the Transvaal Government at the end of the previous year was £281,948, to which must be added refund of British income-tax £10,586, and percentage of last year's profits £305,674, making £598,208. Of this £342,535 was paid during the year, and the remaining balance of £255,673 the Government has allowed the company to retain for the time being. So by deferring the dividend the directors boast that the company started its new financial year with cash assets of about £400,000, "and in addition it commands the proceeds resulting from the delivery of its production for the first four months of the current financial year to the Diamond Syndicate." We like that word "commands," and should be glad to know how much has been paid on account. Is the Syndicate a debtor on account of last year's production, and if so to what extent? Has it actually borrowed any money from the company, and if so how much? Shall we get light on these points at the meeting next Tuesday? It is more than doubtful. Including the past year's outlay the total sum spent on the equipment of the property is £1,206,718, practically the whole of which has been provided from profits. One other point is of interest. As announced in the last report the directors were anxious to create a trading fund in order to release the value of the diamonds produced pending realisation, and could have got £300,000 secured on the floating stock of stones, but the Government objected, so that nothing was done, and in the light of after events (the contract with the Syndicate presumably) the policy of inaction is considered to be the right one. Altogether an illuminating and instructive story, but that relating to the current year will be trebly so unless a miracle happens in the diamond trade.

The Pekin Syndicate.

Nothing particularly cheering is conveyed to the shareholders in the report of this company's board for

1906, and it seems a pity they could not have brought the information, and particularly the balance-sheet, down to a later date. The directors, however, have had a troublesome negotiation on hand over the Shansi concession which the Chinese authorities have compelled them to give up for what they consider a mean price. The Shansi provincial authorities have all along been against the syndicate, and refused to grant it permission to buy land and commence mining. At last the directors entered into negotiations with a view to a settlement, and after a long struggle they agreed to give up their rights in the province for 2,750,000 taels, the price they asked having been £1,500,000. Why do they not tell us what value they place on the tael? We should judge that the sum named represents little more than £350,000. However, hope is not abandoned that the syndicate may yet be allowed to participate in undertakings started within this province, and meanwhile its officials have been struggling with adverse circumstances in Honan, where the great coal mines from which so much was anticipated are not only giving poor result, but presenting many difficulties. The coal found was friable and yielded only a small percentage of lump. Shafts have been flooded with water, new pumps are required, and prospecting has to go on in various parts of the field in order to see whether a good, hard, workable coal can be found. That such coal exists seems to be proved by the results found at No. 5 borehole, but it is obvious that the fortunes of the shareholders are not going to be made speedily or without great effort and large expenditure. Up to the end of December, 1906, the share capital issued amounted to £1,242,822, and £106,023 had been received as premiums on the issue of ordinary shares. The total receipts for that year on revenue account came to £45,097, including £36,073 representing interest on the Honan Railway bonds. Current expenditure in London and China took £15,598, and £103,802 was spent on capital account, £28,472 of it on land for wharfage accommodation at Tientsin and Hankow, the rest going into these Honan mines. Expenditure in Shansi was only £1,201, and that was well seeing the fate of that enterprise. Except from the railway and a little interest from investments the company has no income. The balance-sheet shows investments at cost, including £10,000 stock sold, £122,241 besides £23,135 lent against security at the date of the balance-sheet but since repaid. The cash in London and China stood at only £3,428. Upon concessions the amount spent up to date is £524,340, and the amount of Imperial Chinese Government Honan Railway 5 per cent. gold bonds outstanding is £696,780, proceeds of the sale of the undertaking to the Chinese Government, exclusive of £13,358 representing expenditure in China, stamp duty on bonds, &c., bringing the total up to £710,138. The company holds £19,010 in shares of other companies taken at cost, sundry debtors owe it £16,762, and there is a suspense item on the other side of the balance-sheet called "Balance of interest account Tao-ching Railway" amounting to £35,299. Nothing very tangible can be drawn from entries of this description, and the company gives no profit and loss account, for the very good reason that as yet it has no income from its business. It looks as though the directors had long feared that the Shansi concession would ultimately slip from their grasp, because they have been considering the question of consolidating the interests of the three classes of shareholders, the original Pekin Syndicate ordinary and deferred shares and the Shansi capital raised for the purpose of developing the properties both in Honan and Shansi. The first efforts to effect this object have proved unsuccessful, much diversity of opinion being expressed at sundry informal meetings of the larger registered proprietors held early in the present year. The directors rather shirk the responsibility of putting out a scheme of their own, but want something to be devised, mainly because it would give a freer hand to engage in business outside the original concession. As things exist now no end of complications would ensue as to who the profits, if any, belonged to. An important contract just concluded between the Chinese Government and the Chinese Central Railways, in which the Pekin Syndicate has an interest, may possibly bring in some profit, but that is probably looking a good way ahead.

American Business Notes.

Wall Street does not seem to have been quite pleased with the Bank statements last week. That of the Associated Banks shows a decrease of about £902,000 in the loans and of £131,400 in the specie, but greenbacks have risen by £81,200. Nett deposits though are down £1,015,200, and consequently the surplus reserve is £203,000 higher at £6,170,000 against £886,200 a year ago. Credit, however, has not disappeared to the extent of the decline in the loans and deposits of the Associated Banks, for the statement now made by the other banks in conformity with the new law shows an increase of £718,000 in the loans and of £1,371,000 in the deposits, while the specie held has gone up by £449,200 to a total of £8,113,600. The greenbacks, however, are less by £39,200, but the return as a whole shows that credits and debits have been transferred from the Associated Banks to the other banks, and the wonder is that the figures were not more bulged out than they are, seeing the amount of money required in the process of subscribing for the New York loans of £10,000,000.

These loans are said to have been a great success, no less than 1,103 bids having been received, headed by the Morgan Syndicate, which offered $103.377 for £9,600,000 or £200,000 more than the entire amount of the loan due in 1957 and $100.397 for the £600,000 due in 1917. In celebration of this great success, which seems to have been a purely financial success in which the outside public had no participation, the long-dated bonds were at once dealt in in the street at 104⅝ to 105½. It is said that London, Paris and Berlin together have been allotted £1,000,000 of the new bonds, and that bids for another £1,000,000 were received on foreign account but at too low a price. The average price at which the long-dated bonds were allotted was $104.22 and the short-dated bonds fetched an average of $100.90. The bankers had sold sterling bills in expectation of larger awards to the foreign subscribers, and in consequence there has been a great flurry in the Exchange market this week, the sellers having been obliged to buy back raising fears that gold would go abroad instead of paper. There does not, however, seem to be any immediate prospect of large shipments of gold to Europe, in spite of call money at 1¾ per cent. and the violent spurts in rates of exchange, because the import trade of the Republic is being even more sharply curtailed than the export. The decline, however, in the export trade is so marked as to cause increasing weakness in the produce markets, and raw cotton is not finding the demand expected at the prices quoted. There is no foreign demand worth speaking of for American iron, and even wheat is suffering, as was to be expected, from the absence of foreign buyers. We have always said that the people who were engineering the produce markets as if they controlled the world's trade and could dictate to Europe the prices at which it was to buy, will pay for their foolhardiness and New York may by and by have to send gold instead of agricultural and mineral commodities in order to meet obligations due abroad.

It is announced that the Missouri Pacific Railroad Company has placed £10,000,000 of refunding 6 per cent. mortgage bonds with the Guaranty Trust Company. The bonds are to run for thirty years, and are secured on the Port Scott, Wichita and Western lines and that part of the Missouri Pacific line within Kansas State.

Another statement is to the effect that the board of the Gould Texas and Pacific Railway has decided to reduce the interest payable on the second consolidated income 5 per cent. bonds to 3½ per cent. on the ground

that the surplus of last year's working does not warrant the payment of full interest. These bonds have received their full interest since 1902. In other ways the railroad companies are drawing in their horns and the Pennsylvania is said to be reducing its working forces and placing a large number of men on part time instead of reducing wages. All expansion work has been stopped, and even repairing work has been suspended because the number of idle cars and locomotives enables the management to allow the damaged cars to be merely laid aside. That surely is a most significant statement, and the other railroad systems are imitating this policy. All over the country men are being thrown out of work, not only by the railroads, but by the building trades, so powerfully stimulated by financial expedients in the last years of the madness. It is estimated that 750,000 men belonging to different branches of this trade are now out of work, and the textile industries are also slowing down, while the iron trade is in a more depressed condition than it has experienced for many years back.

Mr. James M. Swank of the American Iron and Steel Association has just published his figures for 1907. They show that the output of pig-iron last year was larger than in 1906, but the increase is due wholly to the first half of the year, when 13,478,000 tons were made against 12,582,000 tons in the first half of 1906. In the second half of last year, however, the output fell to 12,303,000 tons against 12,725,000 tons in the second half of 1906. These figures give little indication of what is now happening, for the *Iron Age* states that the output fell from 2,337,000 tons in October to 1,828,000 tons in November and little more than 1,234,000 tons in December. That is to say, the October production was at the rate of about 27,000,000 tons a year, while the December output was equivalent to less than 15,000,000 tons a year as against the actual production last year of 25,781,000 tons. Mr. Swank indirectly confirms these figures by reporting that the number of furnaces in blast on December 31 last was only 167 against 359 on June 30 and 340 at the end of 1906. In spite of these ominous figures the iron masters have determined to keep up prices and they will share the same fate as the produce brokers.

It is reported that the nett earnings of the United States Steel Trust for January came to £1,160,000 as against £1,007,000 last December and nearly £2,300,000 in January of last year, but even this income is not attained except by the combination to maintain prices. It is also said that some time about June the Union Pacific Company is going to issue £7,000,000, of new bonds, the money to be used in extinguishing the floating debt, so that, of course, this is not "new capital," it is only filling the hopper. A loan of £6,000,000 has been decreed by the board of the Illinois Central Railroad, and Mr. Harriman, who has won a great victory over Mr. Fish, boasts that the company has £8,000,000 worth of equipment free of mortgage, so it has something to pawn. But a few days or weeks may elapse before the issue is made. The market is not starving for this credit operation, so many are afoot. Messrs. Speyer and Messrs. Kuhn, Loeb, have just bought £1,200,000 of Baltimore and Ohio 5 per cent. bonds, secured on £1,600,000 in Pittsburg, Lake Erie and West Virginia bonds.

Missouri Pacific stocks have been falling with scarcely an interval since August last, and the ordinary shares are now 40 below the then price. All the Gould stocks, in fact, have been going down, and the gossip of Wall Street has it that Mr. George Gould has decided to let "Missouris" fall to their level, whatever that may be, which is magnanimous on his part. He denies, however, that the Missouri Pacific Company is going to pass into the hands of a receiver, and declares that this step will "never under any circumstances be permitted," which is ominous.

A remarkable decline is shown for the eleven months of last year to the end of November in the exports of cotton tissues, the total for that time having been only 205,151,000 yards as compared with 485,229,000 yards in the corresponding period of 1906. To China alone the shipments have declined from 268,304,000 yards to 37,145,000 yards. With Europe also the export business of the Republic is shrinking fast, and domestic business is also getting worse and worse as the traffic returns of the railways show. The falling off in the import trade is hailed by the extreme Protectionists with delight. "No reduction in the tariff can take place," they say, being unable to grasp the simple proposition that the true way to stimulate business is to unshackle it. A deficit is in prospect in the federal revenue, and it is already suggested that stamp duties may have to be imposed in addition to the trade-throttled tariff in order to balance the budget. Follies of all kinds have to be paid for by nations even as by individuals.

Merchandise exports in January were only worth £41,242,400, but they exceeded the imports which amounted to £24,102,800 by £17,140,000, or by £4,600,000 more than in January, 1907, when the imports were £12,342,000 more than in January last.

Reuter's agency in Montreal quotes the Winnipeg Grain Dealers' Association as authority for the statement that 91 per cent. of the Canadian North-West crop has already gone to market, leaving in the farmers' hands only about 12,000,000 bushels or 28,000,000 bushels less than at the same date last year. The moving of the crop has been facilitated by the mild winter, and we fear there is no more good wheat or grain of any kind left, but some fair quality and low-grade stocks are said to remain for shipment in the spring, if anybody here will buy the stuff. Meantime, the Government is arranging to provide seed where necessary, and, of course, "the general outlook is satisfactory."

Passing Events.

The numbers on relief works or gratuitously fed in the Indian Empire have risen to 902,836, and the United Provinces continue to bear the brunt of the calamity, 551,451 being on the relief works there and 220,509 in receipt of gratuitous aid. Further general rain has fallen throughout Northern and Central India, and spring harvest prospects have improved, but the misery spreads, and will get deeper for some time yet.

Meanwhile, the expedition against the Zakka Khels is pursuing its triumphant way and doing its best to ensure famine and desolation amongst the mountains. And humanitarians in the House of Commons like Mr. Swift McNeill and Mr. Lupton are seizing the opportunity this little war affords to display their lack of the proper Imperial spirit. Mr. Lupton asked Mr. Morley if it was in accordance with the humanity of the troops, which the Secretary of State had just been praising, to destroy the houses and carry off the food, corn and cattle of the inhabitants of the valley. Mr. Morley replied that if his hon. friend "thought military operations could be conducted on the principle that regulates our own pacific dealings he was afraid his view was chimerical." This is so. Empire implies war always, and we cannot maintain a man-killing organisation in a perfect state of efficiency without the exercise of its functions. Hence the value of these hill tribes to the great army of India. They can always be attacked with comparative impunity, and now that we are at peace with Afghanistan, that Tibet has been proved useless as a field for military exercises, and that we have an agreement with Russia, it is only amongst the uncared-for hill tribes that our Indian army can, as it were, perfect its discipline and test its weapons. Considerations of humanity have no place in this Imperial function, and the sooner that is recognised the better. Mr. John Morley is right, doubly right, for without little wars how would our military heroes secure promotion and titles, and if the Khels do lose houses and harvests,

that honours may come, will they be worse off than the hunger-gnawed millions of India?

Last week's revenue figures given in another column show a decline of £55,000 in the total receipts compared with the second week of February last year, the total last week being £4,317,000. Besides this £312,000 was received from China on account of the indemnity, and at once utilised to buy in public debt to a corresponding amount. The total receipts of the week were thus brought up to £4,629,000, and as the current expenditure was only £2,768,000, there would have been another large addition to the public deposits in the Banks of England and Ireland but for the £1,000,000 devoted to redeem Treasury bills falling due. Thanks to this less than £450,000 was added to the Treasury accumulation, which, however, is now £9,906,000 or £1,673,000 more than twelve months back. Until this total is reduced the money market will remain embarrassed for current means. By the payment of the due Treasury bills the outstanding amount in the hands of the market or the Japanese Government is reduced to £12,213,000, but the £2,500,000 held by public departments has to be added to this, so that the floating debt in this form still reaches £14,713,000.

A few interesting figures about the Post Office and trustee savings banks were disclosed last week by the Chancellor of the Exchequer in answer to questions put. Some of the trustee banks' figures have been revealed for the first time. These banks hold deposits of over £52,000,000 against £157,518,000 held by the State Savings Bank, and the whole of that money is absolutely useless for any good purpose, locked up in Government debt instead of being devoted to the fructification of industries, the restoration of prosperity to the rural districts of the United Kingdom or otherwise employed in beneficial directions. The most interesting points, however, in the return are, first the deficiency of income to meet expenditure, which was £88,190 last year in the Post Office Bank and £7,327 in the trustee savings banks. These deficiencies have to be provided by the taxpayer in the long run, and in addition he stands to make good the loss on capital account, which is most formidable, and we fear increasing. For look at this significant fact. Two years ago the average price at which the Consols held by the Post Office Savings Bank stood in its books was £102 16s. 5d. per cent. During the past year the Post Office Bank sold £2,193,464 of its Consols, leaving £59,072,319 still on hand as it were, and one result of this operation has been that the average price of the balance left is now exactly 10s. per cent. higher at £103 6s. 5d. Thus the dealings of the National Debt Commissioners with the assets of the Bank in this stock must have added sensibly to the loss ultimately to fall upon the nation. It is further worthy of note that the average price of the Consols held by the trustee banks was only £94 3s. 6d. at the end of 1907, so that these banks have an advantage of £9 2s. 11d. per cent. over the Post Office Savings Bank Department, though still afflicted by a heavy book loss. Can their better position arise from the fact that these banks are managed by persons of some business experience and intelligence, and not by mere out-of-the-world bureaucrats?

Apparently, the new Transvaal gold law is not acceptable to the controllers of the mines, their mouthpiece, Reuter's agent in Johannesburg, having telegraphed their opinion that as the law stands it "offers no inducement to capital and is calculated to check enterprise." We shall welcome it if this is the only complaint these men of genius can make, because in our glossary of Kaffir market cant "enterprise" signifies diligence in creating sham values for mining propositions, and "capital" means the valueless masses of shares manufactured to represent the fruits of this industry. So the Government of Mr. Botha deserves support if, as his colleague Mr. De Villiers, the Minister of Mines, says, its intention is to safeguard the interests of the smaller and unrepresented shareholders. All power to it in that direction.

From the *Monte Video Times* we learn that the Customs revenue of Uruguay for 1907 reached a total of $13,195,210, an increase of $331,012, or 2½ per cent. on the total for 1906, which in its turn was $1,367,000 above 1905. Compared with 1904, the year of the latest "civil war," the increase last year was $4,184,000. Uruguay must, therefore, have been very prosperous last year, and we hope it will continue so. Its railway revenues have been good, and the traffic returns so far published for the current year do not indicate any great recession in the tide.

A simplification of the capital involved in the Cordoba Central Railway system is about to be effected. At the present time there are seven different classes of securities embraced in that system owing to the fact that the Cordoba Company absorbed the North-West Argentine extension and the Central Northern section without touching their outstanding capital issues. This perplexing multitude of stocks is to be reduced to four by the creation of 4 per cent. consolidated debenture stock for £3,000,000 and of second 5 per cent. debenture stock to the amount of £600,000 in the first instance, but with power to double that amount on a simple majority vote at the meeting of the income debenture stockholders representing the Northern Central section. This second debenture stock will take priority over the income stock. Then the share capital of the company is to be increased by the creation of 60,000 new shares of £10 each, or £600,000, such shares to be converted when fully paid up, half into 5 per cent. preference stock and half into 5 per cent. ordinary stock ranking with the existing similar stocks of the company. During the current year only £240,000 of this increased share capital is to be issued. Of the consolidated 4 per cent. debenture stock £2,000,000 is to be exchanged for similar stock of the Central Northern section and £900,000 for the same amount of the North-Western Extension stock, leaving £100,000 to be issued for capital requirements as and when the directors deem expedient. Not more than £150,000 of the second debenture stock is to be issued between now and January 1 next.

The Argentine North-Eastern Railway Company is going to proceed with its Bill after all, the board having come to an arrangement with the ordinary shareholders, who have agreed to accept £105,000 of the new capital or 30 per cent. of the nominal amount of the shares now held in satisfaction of their claim, so an extraordinary general meeting is to be held next Monday to sanction the proposed legislation, and the board announces that the Chairman of Committees in the House of Lords has assented to the restoration of the Bill to the list. What threatened to be a troublesome and vexatious business is thus happily in the way of settlement.

So Bruce Peebles and Co., Limited, have decided to go into voluntary liquidation, and a meeting is to be held in Edinburgh on Monday to pass certain resolutions giving effect to this determination. Mr. Andrew Wilson Tate, chartered accountant, Basildon House, Moorgate Street, London, is to be appointed liquidator for the purpose of winding up, and the winding up is merely to be preliminary to a reconstruction. This, at least, is hoped, but we have long had our doubts about the financial strength of this enterprising firm, and have had occasion to hurt the feelings of its controllers more than once when dealing with its report and balance-sheet. No doubt the business was, and perhaps is, an excellent one, but it has been driven much too strenuously, with the result that it has been compelled to lean too much upon credit. Paper has been taken in payment for contracts executed, and at the present time we should judge the business to be much hampered for want of capital. Nearly a year ago, in dealing with the report then published, we pointed out that £411,000 had been accumulated on the assets side of the balance-sheet represented by current work on hand, book debts and stocks and stores, &c.

Besides this about £52,000 was invested in the shares of power and traction companies, paper taken in payment for work done, and against these items sundry creditors stood to claim about £209,000, an increase of £100,000 on the year. The goodwill of the business figured at about £160,000, and we fear a drastic cutting down must take place as preliminary to any reorganisation promising success. It is so difficult to get new capital on favourable terms in these times.

Mr. Percy Lindley is on the warpath again, and any shareholder with an atom of respect for his pocket should lend a vigorous support to the latest effort to get a little light on the past record of yet another Rhodesian fiasco—the Chicago-Gaika Development Company. Mr. Lindley has lodged a requisition for a special meeting which the directors cannot, of course, ignore, and the gathering is fixed for Monday, March 2, at Salisbury House. The idea is to get a committee of investigation to look into things generally, and more particularly in connection with the London and Rhodesian expenses and directors' fees and the transfer of the London agency and offices without shareholders' knowledge to Willoughby's Consolidated. Mr. Lindley also wants the present auditors, who have been acting in a dual capacity, replaced by another firm, and the appointment of directors representing the cash part of the capital, the whole of the present board being vendors' nominees. The directors make no attempt to meet the charges made or implied, and say they will answer them at the meeting, meanwhile describing the movement as an unscrupulous agitation. This looks like a very bad case, and no shareholder in his senses would give his proxy to directors who do not instantly meet the charges brought against them. Support Mr. Lindley, and try to find out where some of the money has gone to. Rhodesian mining finance is a scandal.

The Week in Mines.

Kaffir Shares.

Fortune still refuses to smile upon the Kaffir Circus, and House professionals who helped themselves to a few shares during the new year boomlet under the impression that things were really going to hum this time are now having a very rough time. Every man who is not a stale bull is a bear, and as there is not an atom of support from outside, prices go steadily down. During the early days of the week the market was in a most miserable condition. There was the Balkan trouble, which upset almost every section on the Stock Exchange, and also the speech of Mr. Jacob de Villiers, Transvaal Minister of Mines, clearly indicating that it is Government's intention to see that the gold mining industry is conducted, so far as possible, for the good of the country as a whole and not in a capricious manner just to suit the interests of a handful of magnates. The amalgamation craze came in for pretty severe criticism, and the policy of foisting rotten mines on to good ones was severely condemned. Moreover, companies possessing payable mines are apparently to be compelled to work them and to employ a certain amount of white labour. Of course, the market did not like the look of these perfectly reasonable propositions, and Sir George Farrar apparently got tremendously excited. Along with the cabled summary of the Minister's speech came a statement from the East Rand chairman to the effect that the amalgamation reference could not have been directed against his little plan, because the scheme had not been concluded and no figures had been submitted. So what with one thing and another the bears had matters pretty much their own way, and quotations slumped badly, so much so, indeed, that a vigorous effort had to be made to bring about a rally. A few buying orders were judiciously distributed, some at the Cape and some in Paris, just enough to worry the shorts who were scrambling back in the middle of the week, with the result that a pretty brisk recovery ensued. Prices, however, are still down on the account, and next Monday's make-up will not be a very pleasant affair.

Land, Finance and Rhodesian.

Chartered shares have also provided a good deal of excitement. In anticipation of the board's capital proposals, the bears have been active of late, and on Monday the price was banged down to 12s. 3d. But a price like this was dangerous to the new capital schemes, and the quotation was briskly rallied to 14s. The full report of the company, containing details of the latest desperate attempt to get more money, is dealt with elsewhere, and here we need only make very brief reference to the proposal. Proprietors are offered one million new £1 shares at par with the option to take another million at the same price at any time before March 31, 1910, and over a second million at any time before March 31, 1912. This means that a holder of say ten shares has the call of twenty up to March 31, 1910, and of ten up to March 31, 1912. When the worst was known and the shorts had nothing else to go for, immediately covering operations were the order of the day, and the shares were actually lifted to 15s. 10½d., although they could not stay at that giddy height. The market says the new issue will go, and is quoting the rights on the old shares at 6s. 9d., and the new option certificates are called 7s. 6d.-8s. Other things in the Rhodesian market vainly endeavoured to follow their leader, and closed dull as ever. There was an occasional improvement in the Land and Finance division, Oceans going up owing to the advance in Taquahs and Abossos, in which the company possesses an interest, but most things are lower on balance, Central Minings especially so. Lord Harris spoke optimistically at the South Gold Trust meeting, but could not keep the shares even steady.

Diamond Shares.

These have been as flat as everything else, and showed little or no rallying power. De Beers were on offer from Paris in considerable numbers, and the deferred began by slumping to 13⅞. The preference dropped below 15, Premiers were only 5¼ and Jagers were also easier. Even these were not the bottom prices, De Beers subsequently going down to 13⅜ and premiers to 5 1/16, the annual report dealt with elsewhere doing little to help the last named. They did manage to put on about ⅛, but the market remains in a deplorable condition, and De Beers scarcely recovered at all. The smaller things did not move.

Australasian and West African.

Broken Hills still suffer from neglect, and the absence of support, either colonial or local, meant an easier tendency, which gradually developed into pronounced weakness. The drop in the Broken Hill Block 10 quarterly dividend from 5s. to 1s. created a bad impression, and as the metals were none too steady the market finished rather miserably. Zincs were better, on anticipations that the new plant will soon be started. Among West Australians, Horseshoes, Fingalls and Lake Views were dull, but Ivanhoes spurted well, and Kalgurlis kept up. A sensation was caused by the heavy collapse in Tasmanian consols directly traceable to the failure of a well-known firm. It was said that 17,000 shares were open, and the circumstances have excited a good deal of sympathy for the partners. Curiously enough, West Africans are the most cheerful section of the House, and quite a sharp demand sprung up for Abossos and Taquahs. Nigeria Bitumens, dealt in on this market, were harder on the financial aid given by the Government.

Copper and Tin Shares.

Copper shares have had a very bad week. The metal has been exceedingly flat, partly the result of another cut in the price in America, and the outlook is thought to be exceedingly unsatisfactory. Tintos were heavily offered, and fell £2 to 61½ in a very short time. Even this was by no means the worst, and the decline was not stayed until the quotation had touched 60½. Paris was a very heavy seller in the middle of the week, but the shares were taken more readily than in the beginning, and a small improvement was brought

about. The American shares were very flat, Amalgamated and Anaconda showing quite serious falls, and the Australian division made a poor display, although not closing at the worst. Tin was lower, and shares were easier in a number of cases.

MISCELLANEOUS.

Among Miscellaneous shares, El Oros and Esperanza rallied a trifle on the improved profit displays for January, but the advance did not hold, and the other American shares also weakened. Deep Leads were lower, New Zealands were not quite so good, and Siberians fell away. Indians were inclined to dulness, and the Nundydroog dividend of 1s. 2d. a share making 3s. 6d. for the year against 3s. 8d. in 1906 was hardly so good as expected.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

WOLHUTER GOLD MINES.—This company's financial year ended on October 31 last, and during the period the tons milled were 219,990 yielding 43,387 ozs. of fine gold, while 157,940 tons of sands gave 23,007 ozs. and 62,050 tons of slimes produced 4,771 ozs., the total extraction being 71,166 ozs., an average recovery of 6.470 dwts. per ton or 27s. 1.508d. This was about 1s. 4d. less than in the preceding period, and the working costs were lowered only 3d. per ton to 21s. 6.165d., so that the profit per ton was only 5s. 7.343d. as against 6s. 8d. Value of the bullion was £298,369 against which the working expenses were £230,499 and the general charges £6,141, leaving the profit at £61,728 against £47,556. Add other items of revenue amounting to £641, and the total for disposal is £62,369, from which falls to be deducted profit tax for 1906 £1,719, interest £7,364, strike insurance £785, and auditors' fees £210. Sum still available is £52,291, and, as in the previous year, this has been written off towards the capital expenditure incurred in excess of the capital raised. Total amount so allocated is £114,469, but there was a nett capital outlay during the year of £20,907, so that the overdraft and loan have been reduced only £35,278 to £90,282. Ore reserves at the close of the year were 270,740 tons worth 6.77 dwts. per ton as against 279,854 tons valued at 7.31 dwts., but the consulting engineer points out that while this decrease is shown the large development footage accomplished is beginning to justify itself, in that the work during the past two months is opening up ore of better values than has been encountered for several years, especially on the south reef.

CHARTER TRUST AND AGENCY.—Just to keep the record continuous, we may devote a dozen lines or so to the statutory report of the bigger half (permit the phrase) of the old Charter Trust and Agency—the portion that is supposed to be all alive and kicking. Of course, everyone knows that last year a surgical operation was performed on the miserable creature, the effort to hold up the Chartered Company and sundry other unfortunates having produced a sort of spinal complaint rendering the thing terribly weak in the back. After the division three-fifths were considered to possess vitality and two-fifths were counted dead. They were named the Charter Trust and Agency and the Trust and Agency Assets respectively. As above mentioned, the directors are now reporting on the live bit. The Act of Parliament does not compel them to say how the patient is progressing, but merely to tell a fact or so about his financial condition. The company was registered on November 30, 1907, with a nominal capital of £750,000 in £1 shares, all of which have been allotted as fully paid to or by the direction of the Charter Trust and Agency, Limited (old company), as part consideration for the assets taken over by this company, including cash to the amount of £12,930. Of this about £5,000 will be absorbed in preliminary expenses, leaving the company with less than £8,000 in hand. Application has been made to the Stock Exchange Committee to appoint a special settling day in and to grant a quotation to the company's shares.

AYRSHIRE GOLD MINE AND LOMAGUNDA RAILWAY.—This used to be considered one of the most promising of Rhodesian undertakings, but it appears to be going the way of all others. That is to say, the reorganisation stage has been reached. The mine, of course, has not fulfilled expectations—what Rhodesian mine ever did?—and in consequence of the impoverishment of the pay chute between the fourth and sixth levels it has been impossible to keep the mine developments sufficiently ahead of the mill, which has only been kept running by using poor-grade ore. Some of the largest shareholders have given a helping hand, but in order that the company may pay off its liabilities and proceed with the proper development of the mine further funds are necessary. So a pretty drastic reorganisation is contemplated. Debenture-holders' position will remain just as at present, but the share capital will be cut down from £550,000 to £160,000, and existing shareholders are asked to accept one new share for every seven now held, absorbing 69,643 of the new shares. They are then to be offered 30,000 shares of the new company at par *pro rata* to present holding carrying a call at par to a further equal number for three years, a Chartered plan on a small scale. These shares are guaranteed, and while the reorganisation does not involve an assessment it must be noted that if the shareholders do not take up the new shares others will come in, and the 60,000 (provided the option is exercised) be entitled to almost as much benefit of anything earned in the future as those who put up all the original capital. During the year to June 30 the battery crushed 88,372 tons of ore of an average value of £1 0s. 5d. per ton, and it appears that the decrease in the number of tons crushed and rise in working costs from 7s. 2d. 14s. 11½d. to 18s. 9½d are due to a change in the method of stoping together with the scarcity of labour. Gross railway income was £94,741, and the expenses no less than £82,487. Mine development redemption, equivalent to 5s. per ton crushed, was £22,093, depreciation came to £18,523, interest and premiums were £6,943 and £12,330 was written off the cost of railway claims, meaning a deficiency of £50,746, increasing the total to £53,226. Ore reserves at the close of the year were 57,773 tons, but a new reef has been tapped at the fifth, sixth, and eighth levels, and the manager estimates this will eventually open up some 300,000 tons. Sanguine man.

MOUNT MORGAN GOLD MINING.—During the six months ended November 30 this well-known Queensland company treated 192,428 tons of ore, which yielded 2,310 tons of blister copper and 78,188 ozs. of gold, in addition to which 195 tons of copper precipitate were recovered. Revenue under all heads was £465,236 against expenditure of £314,268 and £29,222 allowed against mine plant, machinery, &c. The company paid in wages £161,588 and the Queensland Government got £30,953. Balance of profit was £140,967 and £13,336 was brought forward, making a total of £154,303. A dividend of 1s. 3d. per share was paid in October last, and the directors now propose a further payment of the same amount, making 2s. 6d. in all and leaving £5,109 to be carried forward. In view of the severe fall in the price of copper and the unsettled state of the market, the directors have adopted the prudent course of valuing the unsold copper in the balance-sheet at £50 per ton. There is a balance of £46,591 at the credit of contingent account, which provides a reserve to meet any reclamations that may occur through a severe fall in market values. At the copper reduction works only two furnaces have been used, but a third will be brought into commission within a few weeks when a much larger production of blister copper may be looked for. Scarcity of skilled miners and difficulty in securing regular supplies of coke have prevented this being done before. An exceptionally dry season caused the quantity of water stored to become greatly reduced, but recent rains have brought the supply up to 110,000,000 gallons, and a new dam estimated to hold 10,000,000 gallons has been constructed, which will bring the storage capacity of all dams up to 370,000,000 gallons. The preliminary survey for the proposed railway from Gladstone to Many Peaks has been completed, and the directors express the hope that the construction of the line will soon be commenced. The property is being opened up, exposing extensive ore bodies there, which are waiting the completion of the railway before they become available as fluxing ore in smelting operations at Mount Morgan.

BROKEN HILL PROPRIETARY.—A cabled summary of the half-yearly report has just been received from Melbourne, and indicates a very severe falling off in profits, thanks to the drop in the price of metals. Revenue is returned at only £137,642 compared with £314,284, and the credit to profit and loss is £571,927 against £680,040. Nett assets are £407,471. A sum of £45,607 has been spent on additional equipment, and large expenditures have been incurred on development work. The concentrating plant treated 298,327 tons of ore, and the Zinc concentration plant has worked satisfactorily; 175,021 tons of zinc tailings have been dealt with, producing 41,203 tons of zinc concentrates. The sudden decline in the prices of silver and lead which could not be anticipated when declaring a dividend early in October seriously affected the financial results, but the large balance in hand from the two previous half-years, amounting to £142,522, enabled the directors to pay dividends amounting to £288,000. Profit for the half-year was only 8s. 9d. per ton of ore treated, as against £1 0s. 9d. per ton for the last half-year. The output was 2,785,535 ozs. of silver and 29,612 tons of pig lead.

ANGLO-AUSTRALIAN EXPLORATION.—This company gathered a revenue of £17,582 in the year to December 31, consisting of dividends on shares in the Mount Boppy and Mysore Gold Mining Companies and sundry other items. Outgo was £1,335, leaving a profit of £16,249, to which is added £767 brought forward, increasing the total to £17,013. Out of this it has been necessary to provide £1,522 for loss on shares held in São Bento Gold Estates, which has not fulfilled expectations and has gone into liquidation, and the further sum of £3,000 to cover depreciation in other share interests. Two dividends of 5 per cent. each are paid, making 10 per cent. for the year against 12½ per cent., and leaving a trifling sum of £234 to be carried forward. Altogether the company possesses holdings in 14 separate undertakings, including the Tanganyika Gold Mining, the Sudan Gold Fields, and the New Rand Limited, the last a company formed with the view to tracing the extension in the Orange River Colony of the Witwatersrand formation containing the main reef series. Boreholes have recently been put down on the property and the most recent information is to the effect that the results are, so far, satisfactory.

RED HILL, WESTRALIA, GOLD MINES.—The directors' report just issued covers the full year to October 31 last, but that of the mining engineer begins from December 1, 1906, when the company assumed possession of the Higginsville property. Attempts

has been equally divided between developing the ore bodies underground and placing the surface equipment generally in an efficient condition. Revenue under all heads was £14,245 and the expenditure £16,829, leaving a deficit of £2,585, but the directors refer to what they call the drastic manner of treating the accounts. The whole of the development, including shaft-sinking costing £5,940, has been charged against revenue, and although £841 has been expended in dismantling, altering and re-erecting the plant, a further £908 has been written off for depreciation. Moreover, no credit has been taken for profit on accumulated sands estimated to produce £1,900. The leases of the old mines and water rights at Red Hill have, with the exception of one which was sold for a nominal consideration, been allowed to lapse rather than continue to pay the rents and observe the other conditions attaching to them. In July last an agreement was entered into with a Mr. Edquist for the treatment at his expense of the accumulated concentrates on a profit-sharing basis. As yet no result has been achieved, but it is hoped that success will presently be earned. In any case, it was not considered advisable for the company to embark on the work at its own expense. The development policy now contemplated is to go ahead with all dispatch on the Central reef at No. 2 level, to continue sinking the Central shaft down to No. 3 level and to open out at this depth.

Queen Cross Reef Gold Mining.—We gather from the half-yearly report for the six months to November 18 that operations on the 948 ft. reef have been confined to tributing, and tributors crushed 2,316 tons for 2,475 ozs. valued at £7,940, while sands realised £1,222, a total of £9,162. From the 1,700 ft. formation the company crushed 1,011 tons for 802 ozs., worth £2,815, while concentrates yielded £925 and sand £605, or £4,346 in all. The entire output therefore amounted to 3,327 tons for a yield of £13,507. Revenue accruing to the company was £7,544, but the expenses were £8,357, and a loss of £813 resulted. Fortunately a credit of £10,310 was brought in, so that there remains a balance on the right side of £9,497. Developments on the 1,700 ft. formation are described as disappointing, and it is unlikely that operations on any scale will be persevered in unless more favourable indications are disclosed. There are, however, possibilities that the stone exposed in the north levels will yield a fair profit. The chief work, as previously indicated, will be the deepening of the main shaft.

Kent Coal Concessions.—We are sorry for Kent. She does not deserve the fate that is about to overtake her, and we can imagine a national protest against the intention of the Kent Coal Concessions to turn this delightful county into a "mining and manufacturing" centre comparable with Lancashire, Glamorgan, or Northumberland. The imagination almost fails to grasp the magnitude and extent of these wonderful coal concessions. We know it must be so because the directors themselves tell us they "have with conspicuous success followed up their programme for the systematic and rapid development of your coalfield, and without swerving from their determined policy." Heaven alone knows how many collieries will be in existence presently, but the directors appear to be dividing up the ground into sections of 1,500 acres, each containing 25 million tons of coal, without taking into consideration the unproved deeper seams. And business is meant, too, because a contract has actually been concluded in respect of one section, and in a few weeks the number should be three instead of one. We have tried and failed to discover how many enterprises are in existence for the purpose of digging coal out of Kent, what with overflow companies, extension companies, subsidiaries, the Sondage Syndicate, and all the rest of it, but we who live in the South-Eastern corner of England have to rejoice at the prospect of a winter's coal bill that will not impoverish us for the rest of the year, and feel almost inclined to go a bull of Dover "A."

Arizona Copper Company.—This company's business was adversely affected by a variety of circumstances during the year to September 30 last, with the result that the profit display is less satisfactory than in the previous 12 months. A serious flood which occurred in December, 1906, suspended operations for practically a month, and involved the expenditure of £38,000 for repair of damage done and protection works. In addition there was, of course, the much larger indirect loss arising from the interruption of operations and the consequent curtailment of production. Then the unprecedented industrial activity all over the States meant high wages, scarce labour, and costly supplies, the last being very difficult to obtain. The violent slump in copper naturally made these difficulties doubly severe, and although arrangements were made for a reduction of wages as speedily as possible, these did not take effect until November 1, so that the benefit was not felt during the period under review. Working expenses in other directions were also pulled down, with the effect of further lowering the cost of production, which is now well below the selling price of copper. The company really consists of three separate undertakings—namely, the Arizona Copper Company, the Arizona Copper Company of Arizona, and the Arizona and New Mexico Railway Company—and, needless to say, the enterprise is a very important one. Value of the copper production was £1,145,399, railway earnings amounted to £213,088, transfer fees gave £409 and £11,508 was brought forward, a total of £1,370,404. Working expenses of the copper mines, smelting, &c., after crediting profit on stores, rents, &c., were £771,044, general charges took £23,114 and railway working expenses and charges came to £84,017, leaving a profit of £492,228. From this must be deducted interest on debentures and loans £9,029, income-tax £17,230, and dividends on preference shares and stock £24,531. The amount carried to reserve for capital outlay, &c., is £108,000 or £28,000 more, and the sum remaining for disposal is £333,438. From it dividends are provided of 3s. 9d. on the preferred and deferred ordinary shares being 1s. 6d. less than for the preceding twelve months, but the credit carried forward is heavily increased to £48,457, in view no doubt of the uncertain condition of the copper market. Sundry alterations are to be made to the smelters in order to prevent the formation of flue dust as a considerable quantity of copper appears to have been lost in this way. The estimated cost, inclusive of the plant for handling and dealing with the slimes, is $111,000 or about £22,200, and the board has given instructions for the work to be completed at the earliest possible date. The company's financial position looks a sound one, large reserves being possessed, while the policy of charging capital outlays to revenue must make for stability in the future.

Dolcoath Mine.—It was inevitable that the operations of this company for the half-year ended December 31 would compare unfavourably with the result for the corresponding and previous periods. Black tin sold was 772 tons, realising an average of £97 18s. per ton as against 799 tons sold in the previous six months at an average of £123, showing a fall of £23 3s. 5d. Slimes sold amounted to 72 tons at an average of £67 15s. 10d., while in the first part of the year 64 tons were realised at an average of £89 12s., or a drop of £21 16s. 2d. per ton. Gross receipts diminished by £23,400, and the working expenses, including royalties, were up by £1,266, making the company's nett profits worse by £24,666. A new item of revenue was £130 from the sale of copper ore and arsenic. The usual percentages on buildings and plant have been written off, namely 10 per cent. on buildings and 5 per cent. on loose and fixed plant and machinery, the total under all heads being £3,784. Including £4,746 brought in, the sum available is £17,716, and, as recently announced, the directors propose to pay a dividend at the rate of 7½ per cent. per annum as against 20 per cent. per annum in the second part of last year, making 13¾ per cent. for the twelve months or 3¾ per cent. less than in 1906. Good progress is said to have been made in sinking the eastern shaft, and if the present rate is maintained the 490 fathoms level will be reached in the second half of next year. Every effort will be made to secure the rapid equipment of the shaft as soon as it is completed, and to direct the mining operations so "that the company may reap without delay the advantages which this great work will give by the diminution of working costs. The directors feel that to this end every consideration must be subordinated, and they do not conceal from themselves the prospects that until this is attained (if the price of tin does not improve) the shareholders may have to be content with comparatively moderate profits."

Carn Brea and Tincroft Mines.—After a couple of years of fairly satisfactory working, this company has again to report a loss on operations. In the six months to the end of December last the tin stuff crushed was 29,677 tons or 857 tons in excess of the previous half-year, while the black tin sold was 396 tons, an increase of 56, the produce per ton of "stuff" in lbs. being 29.91 against 26.42. But the average price per ton of tin, including slime metal, was fully £34 lower at £87 odd, so that the average value per ton treated was only £1 3s. 4.21d. against £1 6s. 3.82d., bringing down the sum realised from £37,924 to £34,649. Revenue under all heads was £41,363, a decrease of £4,932. Expenditure, however, went up £2,517 to £44,294, largely due to the increased cost of coal and coke, but there was a reduction in the royalties payable of £822. Loss on operations came to £2,931 compared with a profit of £4,518, but fortunately there was a credit brought forward of £5,726, so there is still a balance on the right side of £2,795. For the previous six months a dividend was paid on the £38,607 of priority shares of 2s. per share, but, of course, nothing is forthcoming now, and the auditors point out that not a penny has been written off the mine, buildings, machinery, and plant, and nothing off development account.

O.K. Copper Mines Development Syndicate.—This company's statement is for the six months to September 30, and during the period the converter plant produced 866 tons of blister copper, containing 858 tons of pure copper, equal to a recovery of 8.1 per cent. The quantity of material furnaced was 10,661 tons of ore, 2,666 tons of limestone and 1,194 tons of coke, and it is satisfactory that the quantities of lime and coke consumed per ton of ore both show substantial reductions, especially as the ore was distinctly more refractory than heretofore. Revenue on account of copper shipments was £88,637, ground rents produced £35, stocks amounted to £14,082 and £32,424 was brought forward, a total of £135,179. After meeting expenditure of all kinds, the balance over was £65,800, but it is evidently not the intention of the directors to rush into dividend payments. A large part of this credit balance is involved in the business, and it looks as though the concern is to be built up and established out of revenue, an excellent policy, of course. Development work to the value of £5,947 was carried out in the half-year, and £6,077 was laid out in the previous six months, making £12,025 in all, but the allowance from profits against this item was £6,025, so that the account now stands at a round £6,000. The tonnage of ore reserves, 23,200, has been made on a thoroughly conservative basis, the directors assure us. Only the ore actually blocked out has been taken into account, and though it is known that a substantial quantity of ore will be won from the Northern and Gully shaft bodies, this has not been included in the estimation of the available supplies.

Mr. T. P. W. Forrester, the managing director of Houlder Bros. and Company, has joined the board of the Durban Navigation Collieries.

NEXT WEEK'S MEETINGS.

MONDAY, FEBRUARY 24.

Argentine North-Eastern Railway.—Salisbury House, E.C.
Century Insurance.—Edinburgh, 2 p.m.
Financial Times.—72, Coleman Street, E.C., noon.
Grays Chalk Quarries.—4, Eastcheap, E.C., 2.30 p.m.
Hayes, Candy and Co.—Winchester House, noon.
New Canadian Co.—Queen Anne's Chambers, S.W., noon.
Pekin Syndicate.—Cannon Street Hotel, noon.
Prairie Cattle.—Edinburgh, noon.
Scottish Life Assurance.—Edinburgh, 2.30 p.m.

TUESDAY, FEBRUARY 25.

Arizona Copper.—Edinburgh, 3 p.m.
Atlas Assurance.—92, Cheapside, E.C., 2.15 p.m.
Bahia Blanca and N.-W. Railway.—Winchester House, 12.30
Bent's Brewery.—Liverpool, noon.
British General Insurance.—Cannon Street Hotel, noon.
Carn Brea and Tincroft Mines.—Carn Brea, 1 p.m.
Charter Trust and Agency.—Winchester House, 1 p.m.
City Offices.—Palmerston House, E.C., 12.30 p.m.
Dolores.—3, Princes Street, E.C., noon.
Faudels.—Holborn Viaduct Hotel, noon.
Kent Coal Concessions.—Cannon Street Hotel, 2.30 p.m.
Knowles (Andrew) and Sons.—Manchester, noon.
Legal and General Life Assurance.—10, Fleet Street, E.C., 2 p.m.
Morris (B.) and Sons.—Winchester House, 12.30 p.m.
Notting Hill Electric Lighting.—Notting Hill Gate, W., 5 p.m.
Patent Enamel.—Birmingham, 2 p.m.
Perry and Co.—Birmingham, 3 p.m.
Southdown and East Grinstead Breweries.—Lewes, 12.30 p.m.
Wolverhampton Gas.—Wolverhampton, noon.

WEDNESDAY, FEBRUARY 26.

Atlas Trust.—Winchester House, 2 p.m.
British South Africa Company.—Cannon Street Hotel.
Clydesdale Bank.—Glasgow, noon.
Cordoba Central Railway.—Winchester House, 2 p.m.
Fleming, Reid, and Co.—Glasgow, 2.30 p.m.
General Hydraulic Power.—Winchester House, noon.
Girls' Public Day School.—21, Queen Anne's Gate, S.W., 3 p.m.
Gwalia Consolidated.—Winchester House, noon.
Holborn and Frascati.—Restaurant Frascati, W., 3 p.m.
Holt Brewery.—Birmingham, noon.
Isle of Wight Central Railway.—11, Ironmonger Lane, E.C., 12.30 p.m.
Lancashire Waggon.—Bury, 8.30 p.m.
Law Life Assurance.—187, Fleet Street, E.C., 1 p.m.
Leonor Nitrate.—Winchester House, 12.30 p.m.
Marine and General Mutual Life Assurance.—14, Leadenhall Street, E.C., 1 p.m.
Port Talbot Railway and Docks.—Paddington, 2.30 p.m.
Rotherham (Jeremiah) and Co.—Shoreditch Town Hall, E., 3 p.m.
Scottish American Investment.—Edinburgh, 12.30 p.m.
South Metropolitan Electric Light and Power.—Winchester House, 3.30 p.m.
South Staffordshire Mond Gas.—Tipton, 2 p.m.
Westminster Electric Supply.—Eccleston Place, S.W., 11 a.m.

THURSDAY, FEBRUARY 27.

Aylesbury Dairy.—11, St. Petersburg Place, W., 2 p.m.
Boddingtons' Breweries.—Manchester, noon.
British Oil and Cake Mills.—Winchester House, 1 p.m.
Cerro Muriano Mines.—Cannon Street Hotel, noon.
Commercial Gas.—Cannon Street Hotel, noon.
Dunderland Iron Ore.—Winchester House, noon.
Dunlop (James) and Co.—Cannon Street Hotel, 2 p.m.
East Worcestershire Waterworks.—Birmingham, 3 p.m.
Employers' Liability Assurance.—Hamilton House, E.C., noon.
Great Western Colliery.—Bristol, 2 p.m.
"Illustrated London News and Sketch."—Winchester House, 3 p.m.
Kensington and Knightsbridge Electric Lighting.—148, Brompton Road, S.W., 11 a.m.
London Electric Supply.—Winchester House, 3 p.m.
Maple and Co.—Tottenham Court Road, W., 5 p.m.
New Sharlston Collieries.—Cannon Street Hotel, 1 p.m.
Regent's Canal and Dock.—5, Lloyd's Avenue, E.C., noon.
Somera Gold Mining.—Winchester House.
South Hetton Coal.—Palmerston House, noon.
South Staffs Water Works.—Birmingham, 1 p.m.
Spencer, Turner and Boldero.—18, Duke Street, N.W.
Thomas Wallis and Co.—Holborn, E.C., 3 p.m.

FRIDAY, FEBRUARY 28.

Abstainers' and General Insurance.—Birmingham, noon.
Borax Consolidated.—Cannon Street Hotel, noon.
Bradford Dyers' Association.—Bradford, noon.
British Land—Cannon Street Hotel, 3 p.m.
Cambrian Railway.—Palmerston House, 2.30 p.m.
Dolcoath Mine.—Cannon Street Hotel, noon.
Empire Palace.—Leicester Square, W., noon.
Harrod's Stores.—87, Brompton Road, S.W., 3 p.m.
Home and Colonial Stores.—2-4, Paul Street, E.C., noon.
Interoceanic Railway of Mexico.—Winchester House, 2.30 p.m.
Merchants' Trust.—Winchester House, 1 p.m.
National Provident Institution.—Cannon Street Hotel, noon.
North British and Mercantile Insurance.—Edinburgh, noon.
Plymouth Breweries.—Institute of Chartered Accountants, noon.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and February 15, 1908:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Feb. 15, 1908.	Total Receipts into the Exchequer from April 1, 1906, to Feb. 16, 1907.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,[illegible]12
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	[illegible]

Treasury, February 18, 1908

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending Febuary 15, 220,000 poods, equals 3,603 tons.

Baku Russian Petroleum.—Production of crude oil for week ending Feb. 16, 229,000 poods, equals 3,692 tons.

Mr. Arthur Serena, of Messrs. Galbraith, Pembroke and Co., has joined the Council of the Corporation of Foreign Bondholders.

Mr. William Mackenzie, president of the Canadian Northern Railway, has secured control of the Electrical Development Company, bonds of which, to the amount of $8,000,000 (£1,600,000), are held in Great Britain. It is officially declared that the reorganisation will result in the interest being met.

Edinburgh: 35, St. Andrew Square.
London: 3, King William Street, E.C.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Reduced from 5 per cent. on January 23.)

Norfolk House, Friday Evening.

When it is mentioned that three, four and six months' Bank bills are now being discounted at 3 per cent. for delivery in the second half of March and first half of April, it is easy to grasp the drift of markets. We are told that even spot six months' bills can be disposed of at 3 per cent., and with the Paris open market rate at $2\frac{5}{16}$ per cent. for three months' paper it is hard to see how we can keep current quotations here from falling. In the end of last week the bill brokers called the rate $3\frac{3}{4}$ per cent. on three months' remitted paper, but it has never been that this week, and by yesterday it had fallen to $3\frac{1}{2}$ per cent., and this morning to $3\frac{3}{8}$, recovering, however, to $3\frac{1}{2}$ before the end, because of tight money. Six months' bank bills are weak at $3\frac{1}{4}$, but July bills for delivery in April were done to-day at $2\frac{7}{8}$ per cent.

All the time short loans have been searce, thanks to the Exchequer's activity in tax-gathering. So the market is still dependent on the Bank of England, which most days does a fair business, chiefly in the discount of short-dated bills, through which the liability of the market under other securities has been increased by £914,000 during the Bank week. Almost all the further increase of £993,000 in the reserve, now up to £29,611,000 or £2,106,000 more than at the same date last year, has gone on to the Government balances, which have risen by £1,683,000 since last week to £15,338,000, for other deposits are only £177,000 better, and at £39,988,000 stand well below parity line. Therefore, seven-day money has steadily commanded $3\frac{3}{4}$ per cent. with bankers, and call loans have never been less than $3\frac{1}{2}$ per cent., and have sometimes risen to 4 per cent. or more in the open market. To-day the Bank, it is said, did the largest business for the market it has done so far this year, the Treasury having swept up £1,000,000 yesterday and another £1,000,000 to-day, the whole of which had to be borrowed. To-day's business at the Bank was about equally divided between loans at $4\frac{1}{2}$ per cent. and short discounts at 4 per cent.

None the less are the influences nourishing hopes of coming ease in the money market strong. They embrace the diminished supply of commercial and other bills due to contracting trade and finance demands; the favourable aspect of the foreign exchanges; cheap money in Paris, by which competition for bills in our market is made effective and strong, and the more comfortable prospect in the bullion market. Last week the Bank lost £506,000 in gold exported, all but £108,000 of it which went in Paris going to South America, and yet its receipts exceeded the total outgoings by £192,000. The product of the mines, in short, together with the miscellaneous inflow of coin from various quarters—no less than £440,000 came last week from Egypt alone—combine to insure us against a renewal of the danger arising from excessive exports. It therefore appears probable that unless credit trouble arises in Germany, where the position is still delicate and strained, or unless alarming failures occur at home, failures great enough to induce our banks to strengthen their gold reserves at the cost of the Bank's stock, we shall soon see the Bank rate lowered to 3 per cent. Fears about wars over the European portion of the Turks' misgoverned Empire, which are said to be unpleasantly strong on the Continent, would also have the effect of lowering discounts and the price of short credits for the time being.

SILVER.

Prices for bars dropped sharply last Saturday from $26\frac{5}{16}$d. per oz. for cash and $26\frac{3}{8}$d. for future delivery to $25\frac{13}{16}$d. and $25\frac{7}{8}$d. per oz. on selling from the bazaars. Business has been unimportant as the supplies coming from America at present are very small, but India turned round on Monday and became a moderate buyer. Quotations consequently rallied to $26\frac{1}{16}$d. and $26\frac{1}{8}$d. per oz., but did not hold the recovery long, and at the close to-night they were back to $25\frac{3}{4}$d. and $25\frac{7}{8}$d. per oz. Applications for the Rs. 40,00,000 Council drafts on India offered this week amounted to Rs. 99,00,000 in bills and Rs. 45,00,000 in telegraphic transfers. The whole amount was again allotted in bills, tenders for which at 1s. 3 29-32d. per rupee received about 40 per cent. Next Wednesday another Rs. 40,00,000 will be offered.

The Stock Markets.

Evidently the public has no money left to invest for business of a solid kind has been lamentably deficient all this week. The heavy railway dividends, however, will soon be distributed, and after next week's account is settled there may be some renewal of the flow of savings into investments. Meanwhile tired speculators have been selling, and in the early part of the week the Home Railway market was conspicuously depressed owing to fears of a conflict in the engineering trade up North, and to disappointing traffic prospects. Nor were any other departments really strong. They were eddying markets, not tidal ones either backwards or forwards. All departments connected with foreign Bourses have felt the absence of any stimulus. New York has pushed up the prices for its gambling tokens now and again, but the bears have always taken advantage of any advance to enter into further commitments for the fall, and holders of stocks have also unloaded on the "dog-eat-dog" principle. On the Continent affairs are not really better, and in Germany particularly the actual amount of business doing and the prospects of the market are equally unsatisfactory. The monetary position in Germany is still most ticklish in spite of the improved look of the Reichsbank's figures, and we do not believe that the industrial crisis has half worked itself out yet in any part of the Empire. Paris is blessed with cheap credit, if that can be called a blessing, but the market there is about as professional as it is here and everywhere else. There is consequently no understanding the forces behind the ups and downs. Why should Kaffirs be hard one hour or day and soft or flabby the next? It is not because the public is doing anything. No sane man touches such paper, it belongs to the gambler, professional or habitual, and the rises and falls have nothing to do with prospects, intrinsic qualities, or any nonsense of that kind.

In these circumstances it is waste of space to enter into any disquisition about market tendencies, probabilities of the near future, chances of making a profit in this and the other direction, for the cross-currents are either so feeble or so spasmodic as to make any attempt at prediction pure vanity. We cannot form the least estimate of a valuable description about what the course of markets will be during the next few weeks or even months. In all probability we, like Paris, will enjoy cheap credit, and that always stimulates gambling in the long run, but it takes time, and in the meanwhile the resources that the public might have available for investment or speculation are being drained away by new issues. The cheaper money gets the more these will multiply, because there is an insatiable hunger for the use of other people's means in all centres of credit. Last year's crisis dammed up the flow of new issues for a short time, and increased the craving for fresh capital in all directions. Had international credit been then seriously breached at any point we should have had relief from this stream of new promotions, fresh loans, issues of additional capital, but it was not breached in Europe at all and consequently every market is proceeding, or trying to proceed, as if nothing whatever had happened. Loan upon loan is pouring out, and in all probability we shall have industrial companies of every quality seeking further capital in a continuous stream should the promise of the Money market be maintained for the next three months.

Trustee Securities.

Consols and other Home Government securities have picked up a little on the week, rising by from 5s. to 10s., but except in Consols and India 3½ per cents. business has usually been trifling and the market for Home Municipal stocks is once more deserted. So is the Colonial market, where days pass with hardly a trace of interest. Changes are accordingly unimportant and not worth enumerating. It is the same with Colonial and Foreign Corporation securities, very few of which have moved, but it may be mentioned that New York 4½ per cents. quoted here have been put up by way of helping the new loan.

Foreign Government Stocks.

The weakest group in this department has been Japanese bonds, and the second issue of 4½ per cents. is 1¼ down since we last wrote. There is less talk of war with the United States, but unpleasant facts are coming to light about the way Japan is handling its conquests on the Asiatic mainland, and investors are becoming nervous about the indications given there of what is vulgarly called "the swelled head." Other Foreign Government bonds have not changed much, and may be described as on the whole firm, with the exception of Russian issues, all of which have given way, some of the older loans as much as 2 to 3½, the weakest being the 3½ per cent. issue. This expression is entirely due to the mood of Continental markets, especially Paris, and does not, we are told, imply any hitch in the arrangements for the looming new loan. Argentine 4 per cents. have given way slightly, but Brazilian are well propped up, and the weakness in the issues of Central American and minor South American States amounts to nothing. German 3 per cents. reflect the stagnation on German bourses.

Home Railways.

Early in the week selling was persistent in this market and the struggle made during the last two days to put rather a better face on things has not done much to obliterate the fall then established. The settlement is at hand, and bears are closing. A comparison of the week's prices therefore shows general declines

which have been especially severe in Caledonian ordinary and deferred, Great Central preferred, Great Northern deferred, Leeds, North-Eastern, North-Western and North British preferred and deferred. The stocks of the last-named company have given way on the new issue, which, although well enough taken up on the market, is disliked because of the warning it conveys that most of our railway companies want to raise more capital. North-Eastern and North-Western stocks went down on the engineering troubles in Newcastle and elsewhere in the North, and South-Eastern ordinary and deferred have been notably weak, because there is no reason why they should be firm. Investment business in the debenture, guaranteed and preference stocks has quite subsided and prices for speculative preferences have relapses, especially for some Great Central issues. No encouragement came from the traffic receipts, which show a decline of £65,579, on the week, the *Railway News* says, and although comparison is made with swelling figures last year, that is no consolation, because expenses are not yet coming down likewise.

Indian and Colonial Railway Stocks.

Very few transactions have taken place in Indian Railway stocks, and as they have been left alone prices are mostly where they stood a week ago. It is otherwise in the Canadian section where weakness has been pronounced most days, particularly for Grand Trunk third and ordinary stocks, which began to give way when the dividend announcement appeared and have kept falling ever since because of the fresh issue of guaranteed stock rumoured a week ago, and now an accomplished fact. That is to say, another £1,000,000 of this stock has been underwritten for 1½ per cent. commission without the slightest difficulty, and it will be at once offered to the public. Canadian Pacific shares have also been heavy, and not nearly so much dealt in, but when we come to the great possessions of the Chartered Company, we find an advance of 2 to 3½ per cent. in Rhodesia Railway bonds, which has doubtless been ordered to try and help the new issue of Chartered shares.

American and Foreign Railroad Securities.

Most of the gamble in Yankee Rails this week has centred in Union Pacific. There has been a certain amount of play in some of the others, like Atchison, Missouri, Southern Pacific common and Pennsylvania, but it has never come to much, and on the whole London sells to New York, but the play is a mere gamble always, and it is unnecessary to analyse the course of prices with any minuteness. The heaviest decline of the week has been $11 in Denver preferred, but Missouri preferred has lost $6 and Louisville $3. Not one of the more familiar London favourites of other days has resisted the decline, and the bond market is weaker also wherever tested.

There has even been some reaction in the Argentine group of railways, notwithstanding the glowing accounts of the harvest there and the fine show of the traffic receipts. The market is simply tired, and also embarrassed by the digestion of the new issues, so declines of 2 to 3 have taken place within the week in all the leading stocks beginning with Great Southern. Uruguay Railway issues have also fallen back, and, in fact, the Foreign Railway market as a whole presents both a deserted and a depressed appearance, chiefly because it is getting no orders worth speaking of from people with money in their hands. Brazilian, Cuban, Mexican and Central American Railroad emissions either stagnate or have gone back to be in the fashion.

Banks, Breweries and Docks.

Even amongst Bank shares the movements are the wrong way with now and then an exception, as in the case of the Bank of British North American shares or Chartered of India, which have gone up a little, as well as the shares of the London Provincial Bank and of Martin's Bank, otherwise the declines are somewhat numerous but never of any importance. Brewery shares, too, have resumed their familiar course and the few changes of the week are rarely diversified advances however small. London Docks preferred and deferred stocks have also gone down on a little selling, but the later preferences of the Surrey Commercial Company have been marked up.

Commercial and Industrial Securities.

Argyll Motors debentures have been put up 5 by Glasgow, and we hope this means some improvement in the affairs of the company. Motor shares otherwise are lifeless enough, and, in fact, the whole of this great list is cheerless. Prices, however, are very rarely worse to an important extent and there is less disposition shown to lift industrial debentures, a goodly number of which, however, again show improvements of 1 to 2, although rarely giving trace of much demand. Nitrate shares are disposed to wobble. Imperial Tobacco preference and preferred shares are harder on the fine report and on the speeches made at the shareholders' meeting, Nelson Bros. debenture stock is quoted 5½ up, also on that company's report, and the profit-sharing notes of the Underground Electric Railways Company are marked 9 higher in view of the forthcoming proposals designed to readjust this company's finances.

Only a few ups and downs, seldom of much importance, are to be seen in the Electric group, but the bonds of the Electric Development Company of Ontario are 4 lower, and weakness has again become manifest in the shares and bonds of the Mexican Light and Power Company, as also in the shares, but not the bonds, of the Shawinigan Company; in fact, the whole Canadian group of Electric companies seems disposed to fall back, but home undertakings of this kind keep their prices well.

Financial Land and Investment, Financial Trusts, Gas Securities, &c.

We can always be sure that speculation is at a very low ebb when Hudson's Bay shares lie quiet, and they have mostly done so this week. Pekin Syndicate shares are still flat, and naturally enough; Peruvian Corporation issues, too, are depressed because of the proposed new issue of prior lien or first charge debenture stock, which holders of the existing debentures contend to be a violation of their rights. This is very doubtful, but the contention is quite plausible enough to induce selling. No other movement is worth pointing to in the Land and Investment market, nor are the changes amongst Financial Trusts of any great importance, although favourable enough; in fact, Merchants' Trust ordinary and Foreign and Colonial Trust deferred stocks are both quoted 3 higher on the week and a few others have risen 1. Gas stocks are also firm if by no means run after. Gas Light ordinary, however, has slipped back a few shillings, and its preference stock is 2 down. Insurance shares, on the other hand, are firm with Royal Exchange stock dealt in at 205. Gresham new shares are 1½ up, but the movements have been very few this week, just because business has so completely died away. In the Iron, Coal and Steel group we note an improvement of 3 in Cargo Fleet debentures and of ½ to 1 in Guest, Keen debenture stock, Bell Bros. debenture stock and the debentures of the Sneyd Collieries, while United Collieries debentures are 1½ down. A small recovery has taken place in Carnegie Steel Trust issues, and there has been no pronounced weakness at any point during the week.

Shipping, Tea, Coffee and Rubber and Telegraph and Telephone Securities.

Hardly a change is to be seen in the Shipping group of securities, not one, in fact, worth emphasising. Among Tea, Coffee and Rubber things, however, it is quite otherwise, for the weakness in the prices for rubber, which is now cultivated by so many of the tea and coffee companies, has caused a general disposition to sell, and the changes of the week are consequently rather numerous and with one exception adverse, especially for Rubber shares. The exception is Dumont Coffee debentures quoted ½ up. Telegraph and Telephone securities, on the other hand, have been

rather firm, especially those of the National Telephone Company. A recovery is also noticeable in West India and Panama shares, ordinary and preference, in Eastern Telegraph ordinary stock and the shares of the Great Northern Telegraph Company as well as in some other minor securities. Among Tramway and Omnibus things we note renewed weakness in the shares and 5 per cent. debenture stock of the B.E.T. Company and a relapse of 1 in the debentures of the London General Omnibus Company. Mexico Tramway shares are also down, and the market altogether cheerless in appearance.

Friday Evening.

Not a bit more life has been in markets to-day, but Trustee stocks have been firm on money prospects, and Home Railways were no longer pressed for sale because hopes are now strong that Mr. Lloyd George will once more successfully mediate to keep the peace. Among Foreign Government things there was some improvement in Russians and Turkish issues on the denials that the two will go to war. In most other directions the market either had no colour or the colour was a sort of Court mourning; Yankees drooped and were coy, Canadas had hard work to keep from shrinking, Trunks receded again, and the old guaranteed closed at 95. A rig in copper helped Tintos, and it was said that one account representing very large speculations had been taken care of by a big finance house. The Kaffir market is as poorly supported as ever.

New issue premiums—Grand Trunk guaranteed 1, North British preferred ½ (allotments expected to-morrow), Copenhagen 9/16 cash, ¾ special settlement, Bahia Blanca ⅛ dis.-⅛ premium, and Montreal Street Trams 1½-¾ premium.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: 2½ p.c. Annuities Cash and Acct. ¼, to 85½-6, Irish Land ¾, to 89¼-¾, do. Acct. ½, to 89¼-¾, Transvaal Loan Acct. ½, to 97½-8½. **Fall:** Bank of England 2, to 280-5, India 2½ p.c. Acct. ½, to 78½-9½.

WATERWORKS.—Rise: Conso'. Water Wrks. 1st Deb. Stk. 2, to 91-3.

Critical Index to New Investments.

Canadian Government 3½ per Cent. Stock.

The Government of the Dominion of Canada offers through the Bank of Montreal an issue of £3,000,000 3½ per cent. stock, for the purpose of providing for maturing liabilities and obligations in connection with the construction of the National Trans-Continental Railway and for other purposes. Half of the amount is held at the disposal of holders of the £1,500,000 4 per cent. guaranteed Intercolonial Railway Bonds, maturing on April 1, who may apply for an equivalent nominal amount of this stock and will receive preferential allotment. The new stock is redeemable at par on July 1, 1950, or may be repaid on or after July 1, 1930, on six months' notice and is offered at the fixed price of par, but a full three months' interest will be paid on July 1, although the final instalment of 25 per cent. is only due on May 28. It is, of course, a trustee security under the Colonial Stock Act, 1900.

Grand Trunk Guaranteed Stock.

A fresh issue of £1,000,000 in this 4 per cent. stock is now made by the directors of this company. The price asked is 92½ minus the April dividend, whereas the price of the old stock contains that dividend. The scrip of the new issue is quoted to-night at 1 premium, and that brings the two prices close together. As is well understood, this guaranteed stock ranks in priority to all the preferred stocks of the company, and for 1907 the margin of nett income after all fixed charges and the guaranteed stock dividend had been met was £512,000, which is surely adequate protection. This issue added the amount of the guaranteed stock will be £9,129,000.

Rio de Janeiro City Improvements Co., Limited.

In their report for the year ended December 31, 1906, the directors announced that the Government had called upon the company to extend its system to Copacabana, and in order to provide the necessary funds for this and for further working capital they now offer £250,000 5 per cent. debentures for subscription at the price of 96. The company's income is mainly derived from a fixed charge on each house drained, which is levied by the Brazilian Government and paid to the company at the fixed rate of 19d. to the milreis, and the nett earnings during the seven years to 1906, after providing for debenture interest and redemption and about £20,000 a year for drainage alterations and improvements averaged £89,000. Profits in 1905-6 fell off sharply, owing partly to increased expenditure on improvements and higher sterling working costs and partly to the demolition of houses through the reconstruction of the city, but even when at their lowest the nett profits were sufficient to provide the interest on this issue more than five times over. The outstanding debentures amount to £564,600, but are being reduced by annual drawings, the total service for interests and redemption being £50,612, and the new issue will be redeemable on or before December 31, 1931, by drawings at par or purchase when under par, the drawings commencing in 1909. Shareholders in the company will be given a preferential allotment, and as the debentures seem tempting at the price asked, they will probably take full advantage of their opportunity.

Manaos Improvements, Limited.

In January, 1907, this company, which has a concession for the service of drainage and the supply of water to the city of Manáos in the State of Amazonas, Brazil, made an issue to the public of 18,800 £10 preference shares out of a capital of £400,000. Construction of the works has been pushed on so rapidly that the directors hope that some portion of the new water service will be in operation by the end of April next, and that the entire water and drainage systems will be completed well within the time fixed by the contract, *i.e.*, three years from February 8, 1907. In the meantime more money is needed, and an issue of £250,000, forming part of an authorised total of £500,000 6 per cent. debentures was this week offered for subscription at the price of 97½ per cent., a decided innovation being that the interest is to be paid free of income-tax. The debentures will be redeemable at par within 42 years by the operation of an accumulative sinking fund of 1 per cent. per annum, commencing in 1915, but they may be repaid at par at any time after June 30, 1915, on six months' notice. At present the company is working the existing water system, but with what result the directors do not say, preferring to repeat the estimate of profits made by their engineers in 1906. According to those figures the revenue and profit when the services are in full operation are expected to amount to £106,400 and £75,750 respectively, and on this basis the debentures may be classed as a fair speculative investment.

Richelieu and Ontario Navigation Company.

Although this is the latest Canadian enterprise seeking funds on our side of the Atlantic, it is not by any means a recent creation, having been incorporated as far back as 1857. It is the oldest and largest inland navigation company in Canada, and in addition to a fleet of 21 steamers engaged in passenger and freight service on Lake Ontario and the River St. Lawrence, it owns a good deal of real estate in Montreal, Quebec, and elsewhere, as well as two of the largest and most popular summer hotels on the St. Lawrence. The total value of the assets as shown in the balance-sheet of December 31, 1906, was $3,955,940 or £812,864, and the profits for the past ten years, after providing for depreciation and all fixed charges, have averaged £32,197 per annum, while for 1907 they were $232,223 or £47,717. Subscriptions were invited for £200,000 5 per cent. 30 year mortgage debentures out of an authorised total of £400,000 for the purpose of redeeming existing debentures, discharging liabilities incurred in connection with the construction of various new vessels, and for the general requirements. The debentures are redeemable by September 1, 1937, by annual drawings at 105 or by purchase in the market if under that figure, and seeing that, upon repayment of the £10,300 debentures of the 1895 issue now outstanding, they will become a first charge upon the steamboats and property, they should be a fair enough investment.

A New Salvador Loan.

It is not out yet, but that it should be in preparation shows the spirit of enterprise to be still alive. Briefly, the nominal amount of the loan is £1,000,000 in bearer bonds of £100 each, and if the plan holds this mouth-

ful will be offered to the public at 86, but underwriters will get £6 off this for guaranteeing the issue. The sponsors are the London Bank of Mexico and South America and Messrs. Chalmers, Guthrie and Co., Limited, who say that a minimum amount of £700,000 has been underwritten by leading firms in Salvador and their friends. A portion of the money is wanted to repay recent local borrowing in Salvador at a higher rate of interest and the remainder will be devoted to carrying on public works of considerable importance which the state has been busy with for some years past. There is a speculative interest in this issue which may tempt some people to put money into it, and one of these days Central American States seem bound to emerge from the semi-chaotic social and political conditions where they have so long weltered. But with sinking fund added, this loan will cost Salvador 8½ per cent.

CONSOLIDATED TRUST DEBENTURE STOCK ISSUE.

Subscriptions will be received by the London and Joint Stock Bank, under authority from the board, for an issue of £145,000 of this Trust's 4½ per cent. perpetual debenture stock at par, the whole to be paid up by March 31, when the last instalment of 50 per cent. becomes due. With this addition the Trust's debenture capital will be brought up to £595,000, or exactly the same amount as the whole issued share capital in first and second preferred and in deferred stocks; but there is £300,000 of authorised share capital unissued. Profits have steadily risen in the three years ended April 15, and for the latest year came to £47,402, while the entire debenture capital, including the amount now added, requires only £25,288. A valuation of the assets made on the 1st inst. shows a net amount of £1,000,000 in assets, exclusive of what this issue will add thereto. The "cover" is therefore ample.

Notes on Books.

Issues 1907, July 1 to December 31, being a reprint of the prospectuses of public companies, &c., advertised in the *Times*. The new volume of this special book of reference has been out for some weeks, and should have had earlier notice here but for the extreme pressure on our space. Its name describes the book, which is one no person dealing in finance can well do without. For, after all, the *Times* is the one journal from whose columns no prospectus can be omitted, and these half-yearly reproductions, therefore, form the most complete and handy record of current events in company promoting and loan raising available. A statistical index of issues is appended, as well as the results of subscriptions by tender and a record of the new securities admitted to official quotation on the Stock Exchange.

The Mining Manual for 1908. Edited Walter R. Skinner. (Twenty-second year's issue). (12, Clements Lane, E.C.) Price, 21s.

It should only be necessary to remind all those interested in mining that this well-known and reliable annual is now on sale for the current year. It contains particulars about all mining companies that are alive, and obituary notices relative to most of those recently defunct. The mines are arranged by groups or countries, and a full list of directors and secretaries of mining companies is appended, while reference is facilitated by a complete index. The tables of crushings by which the detailed information about each company is preceded, are most useful for reference, and must have entailed a great deal of labour. Hence the always well-thumbed look of the older issues.

Bradshaw's Railway Manual. Edited by Herbert H. Bassett, F.S.S. (London: Henry Blacklock and Co.) Price, 12s.

This old and authoritative compilation, whose sixtieth issue has just made its appearance for the past year, has fallen into competent hands in Mr. Herbert H. Bassett, who is now the editor. There is more information about the domestic history, so to say, of the railways of the United Kingdom in this reference book than in any other book of the kind, and the introduction for the new issue contains a summary or review on railway finance for the past year, which, though brief, is most useful for reference. No other commendation is needed.

Killik's Argentine Railway Manual, 1908. Compiled by Stephen H. M. Killik. (London: Effingham Wilson.) Price, 2s. 6d. nett.

The map alone accompanying this little compilation is worth a shilling of the half-crown charged for it. All the railways in the Republic are dealt with historically and financially, and the information is brought close up to date. The map, it should be said, is that issued by the Buenos Ayres and Pacific Company, and the editor duly acknowledges the courtesy of that company in allowing him to reproduce it. A most useful little book.

Letters to the Editor.

"JOHNNIES."

SIR,—May I inquire through your columns if this concern is qualifying to pass into the category of dividendless Kaffir wildcats which have brought ruin to tens of thousands, and made the names of the gold bugs of the Rand infamous to all time? No dividend has been paid since that of 1904, which was a very small one. Indeed, we upon whom the rubbish was foisted at £6 10s. a share in the year of shame, 1895, have not received 5s. per cent. per annum upon our outlay! The scandal is the greater from the fact that the shareholders in the subsidiary companies get dividends, while those of the parent company are left wholly out in the cold. That cognate undertakings like the East Rand can pay dividends of 27½ per cent., while "Johnnies" pays nothing is a convincing proof of the incapacity of the board of the latter. If the directorial conscience exist (of which I have my doubts) how can it reconcile itself with the existing state of things when substantial fees are drawn year after year at the further expense of the wretched shareholders, who have not only been shorn, but skinned alive.

With Machiavellian subtlety the magnates arrange their annual meetings at Johannesburg, where the vast majority of their victims, resident in Great Britain, France, and Germany, cannot make their grievances vocal. But we are not so helpless as they think. Public opinion still counts for something in this country, and no body of men can flaunt it with impunity beyond a certain point. The columns of that portion of the Press which has not been "squared" by the wholesale debauchers of City journalism are still open to us, and I exhort my brother shareholders to use them for all they are worth. This advice is tendered to all having interests in South African undertakings directed by a tainted personnel, and God knows there are few which can claim exemption from this category.

But to pass from the general to the particular. I strongly urge the victims of the Barnato bubble "bank," the "Investment" Company (save the mark!), and other equally reputable undertakings to engage a large City hall, and hold an "indignation meeting" therein at an early date. There is no hide so pachydermatous but some weapon will pierce it, and there is no conscience so callous but it may be shamed into activity. The shares of this precious "investment" company have fallen from £6 15s. to 15s., and they may fall to 15d. if the proprietors do not bestir themselves. The house responsible for this financial abortion has been charged with "bearing" its own shares, and I am not aware that it has repelled the accusation. Could cynical effrontery go further?

The movement for "expropriation" of all the mines in the Transvaal is gathering force not only among the outside public, but shareholders generally. Personally, I would a thousand times rather trust the Government than the miscreants who have been accused in the British House of Commons (and have taken the charge "lying down") of being "without honour, without conscience, and without God."

The gold bugs first engineered the boom of 1895, and afterwards the war to cover up the record of their crimes. Which was the more shameful can only be determined by a higher power. The sordid gang has impoverished half the members of the upper and middle classes, and brought misery incalculable into thousands of homes. The blight, the *malaise*, which has settled upon this country is directly traceable to their gigantic conspiracy against the public purse. Let us show them by concerted action that the resources of civilisation are not exhausted, and that those who sit in the high places of infamy may be brought low. Let some potent voice call to arms all the shareholders of these Kaffir undertakings which are being run only for the benefit of rapacious directors and costly officials. Let us call indignation meetings without number, agitate in the Press, and voice our wrongs in Parliament. Finally, let society, which is contaminated by its association with them, send the Randlords to Coventry, although I question whether any period of quarantine, however long, will sweeten them. Hating the light because their deeds are evil, publicity is the thing they most detest and fear. Therefore, let the searchlight be turned full upon them.

VICTIM.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

LONDON AND NORTH-WESTERN RAILWAY.

This company's gross revenue increased by £376,283 in the December half-year to £8,375,223, but of that increase all except £4,440 was swept away in added working expenses. These rose by £371,843 to £5,353,684 or 63.93 per cent. of the receipts. The nett revenue accordingly was only £3,021,539 and as the miscellaneous receipts at £83,374 show a decrease of £2,313, it follows that the entire free balance is only £2,127 up at £3,104,913. Interest on debenture stock, rents, leases, &c., paid by the company took £12,921 more at £688,861, so that the actual balance available for distribution on the guaranteed, preference, and ordinary stocks is down £10,794 to £2,416,052. Happily the balance brought from the previous half-year is £37,271 up at £133,385, so that the actual sum distributable is £26,477 better, and of this increase the directors place £20,000 more to reserve, making the total thus assigned £50,000 for the half-year against £30,000 in the corresponding half. In these circumstances the dividend on the ordinary stock could not be increased. It remains at the rate of 7¼ per cent. per annum, which requires £1,554,672 to pay it, the total dividend distribution on guaranteed, preference, and consolidated stocks being £2,374,143. This leaves £6,465 more than was brought in to be carried forward at £125,294. The number of passengers carried fell off by nearly 105,000, but the passenger receipts went up by almost £85,000. Capital expenditure in the half-year amounted to £497,802, of which £146,729 went into working stock, making the total capital sunk in that direction £12,058,870. In the current half-year the estimated outlay on capital account is £747,000, of which £114,000 will again go into new working stock, and the capital account was overdrawn on December 31 last by £3,860,877, against which the company holds £3,707,000 of trust funds. Looking at the sources of increase in working expenditure we find that £14,658 more was spent on maintenance, £205,686 more on locomotive power, £24,209 more on carriage and wagon repairs, and £79,140 more on traffic expenses. General charges also rose by nearly £5,000 and compensation by no less than £23,290 to a total of £95,929 for the half-year. Of fixed charges chief rents took £2,956 more, but £3,657 less was paid away under the Birmingham Canal agreement. Rates and taxes rose by £3,657 and steamboat expenses by £4,677. It is quite startling the way working charges are going up in all directions, and with declining receipts the prospect of this and other railway companies for the present and coming year is anything but reassuring. Dividends will be paid on the 25th inst.

LONDON, PARIS AND AMERICAN BANK, LIMITED.

This bank's business in America lies mainly in San Francisco, so that it was too far removed from the centre of the financial upheaval to be appreciably affected, and as conditions on the Pacific Coast seem to have improved the gross profits for 1907 showed a recovery of £4,843 at £74,096. Expenses of management were £2,041 heavier at £38,451, but £9,418 or £843 more was brought forward, making the nett profit £3,645 up at £45,063, out of which dividends aggregating 8 per cent. are again paid, and the sum carried forward is raised to £13,063. For the second year in succession the reserve is passed over, but the omission to add anything to it is not a very serious one, seeing that the fund stands at £240,000 against a paid-up capital of £400,000. Liabilities on deposits, current accounts and bills payable, &c., have risen by £167,794 to £1,701,980, and the bulk of this addition to the bank's resources has been added to the cash on hand and call loans, which is £155,027 up at £510,552. Investments are £95,447 higher at £351,749, and bills of exchange, bills receivable and advances come to £57,749 more at £1,400,410, but the sums due by correspondents, &c., have been reduced by £136,783 to £108,333.

ST. JAMES' AND PALL MALL ELECTRIC LIGHT COMPANY.

For the year ending December 31 the sale of electricity produced £115,589, the sum of £211 was received for sales under contract, and £1,125 from public lighting, while sundry other receipts, including £3,199 for rental of meters brought in £4,263, making a gross total of £121,188. Coal cost £14,315 and electricity purchased £25,729 out of working costs, £56,534. Rates and taxes were £1,300 less at £7,811; management required £9,403, depreciation £13,943, and £32,278 is nett revenue. With £486 brought in and £861 from interest, £28,375 is available after payment of debenture interest. Dividends for both half-years are paid at rate of 7 per cent. on the preference and 10 per cent., as last year, on the ordinary shares, leaving £1,375 to go forward. Works account is reduced by £3,629 to £425,756. The company holds 10,000 ordinary shares of £5 each in the Central Electric Supply Company, on which a dividend of 5 per cent. is paid. Investments figure at £31,347 —the market value being given in a note as £28,480. Contingency fund £1,500 and capital reserve £66,529 are unaltered. In conjunction with other companies a Bill is being promoted in Parliament with the object of securing additional economy of production and regularity of service by linking up their several sources of supply in West London.

WESTMINSTER ELECTRIC SUPPLY CORPORATION.

In the year 1907 this company increased its supply of current by the equivalent of about 90,000 lamps of 8 candle-power, the largest addition in any one year. Expenses, however, rose considerably, so that the available nett revenue fell off a little. Nevertheless the directors are able to make up the dividend on the ordinary shares to 10 per cent. for the year, leaving £2,185 to be carried forward against £2,005 brought in. A praiseworthy change has been made in dealing with the reserve and the accumulation against depreciation, £243,000 representing these having been invested in first-class securities. The yield will be less than the money might have earned in the business, but, as the directors say, this move places the company in a very strong financial position. Gross revenue of all descriptions came to £252,067 and working expenses absorbed £185,638 of this, leaving £66,429 as the actual nett receipts of the year, besides which £10,830 was received or had accrued as interest on investments, &c., and rents gave £875, so that with the balance brought forward £80,138 of clear revenue was available to meet interest and to feed the reserves and pay dividends. Out of this revenue £26,344 was credited to the depreciation account and £3,500 to the sinking fund.

CENTRAL ELECTRIC SUPPLY COMPANY.

This company, created to supply current to the St. James's and Pall Mall and the Westminster Electric Companies, earned last year a revenue of £5,043 after making full allowance for sinking fund and depreciation charges. The board pays a dividend at the rate of 5 per cent. on the ordinary shares for the year and carries forward the odd pounds. Sales of current brought in £84,397 and the entire revenue of the year was £85,620, but working expenses took £56,336 of this, leaving only £29,254 as nett revenue, and of that revenue £10,000 was credited to depreciation fund and interest on the debenture stock and on other borrowings took £14,218, hence the smallness of the sum distributable on the ordinary shares. The depreciation fund stands at £12,900 after carrying £6,700 to the sinking fund, bringing the total of that fund up to £32,846.

SOUTH METROPOLITAN ELECTRIC LIGHT AND POWER CO., LIMITED.

The extension of this company's system during 1907 was not quite so large as in the previous year, but was nevertheless substantial as 15,668 8 c.p. lamps were connected, bringing the total up to 160,380. No mention is made of the number of units sold, but they would seem to have increased in still greater proportion, as the receipts from sales were £4,161 up at £39,657 and the total income from all sources showed an improvement of £5,057 at £43,302. Expenses naturally rose with the growth of the business and were probably further increased by the cost of coal as they took £2,108 more at £16,234, leaving a nett income of £27,068 compared with £24,119. The sum brought forward was £644 smaller at £7,104, and the company had no special receipts like the profit on the sale to the Beckenham Council to help out revenue this time, so that the disposable surplus was therefore only £366 larger at £34,172. On the other hand, nothing is written off preliminary expenses out of revenue compared with £1,419 last year, and as the dividend of 2½ per cent. on the ordinary shares requires more owing to the additional capital issued, the balance remaining after transferring an extra £500 at £5,500 to depreciation fund is £79 up at £7,183. During the year £19,262 debenture stock, 25,000 preference and 3,000 ordinary shares of £1 each were issued, and on these £3,488 was realised in premiums, of which £1,988 is written off preliminary expenses and £1,500 is added to reserve. Expenditure on capital account was £42,282 making £514,929, and after deducting the depreciation fund of £19,000 there is a debit balance of £15,895 against which the reserve even now only amounts to £5,000. With the fresh funds brought into the business and the payment by the Beckenham Council, &c., of the £6,554 appearing in the last balance-sheet the bank overdraft has been reduced by £7,100 to £3,900 and liabilities for plant supplied are £8,225 down at £7,715. Other creditors and bills payable, however, total £11,408 against £16,562 or £2,424 more to come in from sundry debtors, while cash, although £699 up, is small at £2,478.

NOTTING HILL ELECTRIC LIGHTING COMPANY.

In the year ended December 31 last this company spent £2,169 on capital account, making the total of that account £233,527, and the expenditure in this direction exceeds receipts by £25,527. A larger business was done last year than in any previous year of the company's history, but the nett revenue fell off by £1,031 to £19,008 against an increase of £1,131 in the gross income. After setting aside £2,000 to the depreciation, renewal, and reserve fund, and meeting the debenture stock interest, besides placing £1,154 to the credit of the sinking fund and writing off £50 for bad debts, the free balance was £11,000, out of which the directors pay the usual 6 per cent. on both the preference and the ordinary shares with a balance left which is divided between the holders of these shares and the holders of the founders' shares, giving the ordinary and preference shareholders a further 1 per cent. and the founders' shares a dividend of £2 15s. per £10 share for the year. The reduction in the nett profit is more than accounted for, the directors say, by the increased cost at the Wood Lane works during the second half of the year, an increased cost arising partly from the price of coal, but mainly from the extensive repairs which had to be carried out under unfavourable conditions, owing to the impossibility under the existing Electric Lighting Acts of obtaining current by joining up with neighbouring companies. A Bill is now before Parliament to enable a group of West-End companies to work together more closely than they have hitherto done. Gross

revenue was £38,000 against rather less than £37,000 in the previous year, and working expenses rose from £16,911 to £19,048. Rates and taxes, about which all the companies complain, were greater by nearly £370 at £2,733. The depreciation renewal reserve now amounts to £27,532.

HARROD'S STORES.

This business must be managed with rare ability, for in spite of keen competition its trading profits increase year after year. In the twelve months ended January 31 last the gross profit on trading, manufacturing, &c., was £516,749, or £39,821 more than in the preceding year, and after meeting all current outgoings, including a modest £21,341 devoted to repairs and renewals, depreciation, and sinking fund, the nett balance was £172,838, out of which the preference dividend is paid and the dividend on the ordinary shares made up to the fixed 8 per cent. per annum. Then £13,004 is added to the reserve, being 10 per cent. of the balance of net profits, and £117,034 remains to be divided between the ordinary shares and the founders' shares, giving £58,517 to each. The ordinary shares get an additional dividend of 12 per cent., making 20 per cent. for the year, plus a bonus of 4 per cent., making the total distribution 24 per cent. on these shares, and holders of the founders' shares get in all dividends equivalent to 4,000 per cent. on the original £1,400 nominal of these shares, or 40 per cent., against 37½ per cent. upon the £140,000 nominal, being the share capital of the Harrod's Stores Founders' Shares Co., to which this interest was transferred. The whole of these founders' shares belong to the directors, so they do very well out of the business. Balance-sheet changes offer nothing specially interesting, but the total amount due on deposit and current account balances and to sundry creditors is now £747,251, deposit and current account obligations being £62,341 up at £563,540, and sundry creditors £1,548 up at £183,712. No capital expenditure occurred on the Brompton buildings last year, but £10,324 has been spent on the Barnes property and on the plant and fixtures, against £2,529 written off plant, or 33 1-3 per cent. for the year. Stock in hand amount to £319,016, and cash to £116,559.

BRADFORD DYERS' ASSOCIATION.

A noticeable and praiseworthy step has taken by the voluminous board of this great combination in publishing the full report of the auditors along with the balance-sheet and directorial report. It to be sure is a most satisfactory certificate on the whole, and other companies would doubtless be able to make as good an exhibit, but it is an innovation none the less deserving praise. The report itself covering the past calendar year is also satisfactory. During its course, as the auditors explain, the businesses hitherto carried on by the Bleachers' Association have been incorporated with the Bradford Dyers' Association, and this has led to an addition of £449,152 to the book value of the land, water rights, buildings, plant, machinery, goodwill, &c., &c., which is now entered at £5,099,691. No doubt also the increase of £27,330 in the stock-in-trade, now entered at £339,438, and of £53,928 in the item "sundry debtors," which appears at £379,626, are also to be attributed to this addition, and probably the decrease of £140,775 in the cash at bankers and in hand, which now amounts to £239,054. On the other side of the balance-sheet, sundry creditors are up by £64,306 to £274,361. Out of the past year's profits £70,000 has been added to the depreciation fund, raising it to £401,764, so that our complaint in former years about the meagreness of the allocations in this direction begin to be less well founded. The gross profits of the year, including the balance of £51,133, or £1,592 more, brought forward, rose by £50,646 to £466,274, the nett trading profit of £406,608 included in this total being £47,420 up. Of the aggregate free profit £150,790 was absorbed in meeting the debenture stock interest, which remains at £58,150, in adding the above-mentioned £70,000 to the depreciation fund, in providing £20,000 to cover the proportion of fire losses borne by the Association and in paying auditors' fees and local and other professional charges amounting to £2,640. From the balance the 5 per cent. preference dividend is paid, and it, owing to the increase in the preference capital, took for the entire year £104,700, or for the second half of the year £13,297 more than in the same half of 1906. The ordinary shares again get their dividend made up to 7 per cent. for the year, £40,000 is added to the reserve fund, raising it to £325,372, and £2,477 goes to the investments contingency fund, bringing it up to £10,000 against a depreciation noted by the auditors of £11,703, the amount of the reserve separately invested being £130,000, all in first-class securities, including £66,200 nominal in Consols. A balance of £73,354 will then remain to be carried forward, no doubt subject as heretofore to the directors' remuneration to be voted at next Friday's meeting of the shareholders. We hope the current year will make as satisfactory a display.

MERCANTILE INVESTMENT AND GENERAL TRUST COMPANY.

The revenue for the year ended January 31 came to £158,523 and after charging against it all working expenses and interest on debenture stocks the free balance is £108,884, or, including £1,145 brought forward, £110,299. This enables the directors to complete the 5 per cent. dividend on the deferred stock and to transfer £12,000 to the capital reserve account, leaving £3,299 to be carried forward. For the past year £18,893 has been written off the capital reserve for depreciation, as compared with about £55,000 a year ago, but the trustees say that the value of the company's investments was at January 31 in excess of the capital of the company, and these investments are, as we have often had occasion to mention, set forth with most praiseworthy minuteness at the end of the report. That they are all of excellent quality is more than we dare say, but they are widely distributed and even the comparatively speculative investments appear to be mostly of fairly good class. The whole of the past year's new acquisitions are given in detail and now and then an item in that list surprises us, such as London General Omnibus stock or the stocks of some of the motor omnibus and tramways companies in or around London. Such acquisitions, however, may have been made at low prices. During the year £262,340 in 4¼ per cent. second debenture stock was issued, and the proceeds invested, but only to the current year will the full benefit of this additional capital appear in the accounts. The balance-sheet shows a total cost on debenture stocks, including the new issue of £1,262,340, and a paid-up capital of £2,000,000. The capital reserve is up of the amount credited to it out of the year's revenue, together with the balance of £8,143 representing the nett gain on realisations of investments after deducting the discount and expenses of the new debenture stock issue, is up only £1,250 to £204,250 because of the amount already mentioned written off.

HOLBORN AND FRASCATI, LIMITED.

According to the directors business at the two restaurants owned by this company was fairly satisfactory during the year ended December 31, but they complain that competition seems to be getting keener and keener. Gross profits, notwithstanding this, showed a very comforting improvement of £10,482 to £140,976 at the cost of an increase of £6,395 to £93,668, in outgoings, and after providing for debenture interest and leasehold redemption fund, &c., the nett surplus was £4,087 better at £36,851. Adding £7,240 or £351 more brought forward the disposable total was £44,091 compared with £39,740, but the directors are content to declare the usual dividend and bonus making 10 per cent. for the year, and in order to transfer an extra £5,000 at £15,000 to reserve they cut down the sum carried out by £650 to £6,590. Additions to property only cost £465, making a total of £616,947, and as the capital account is now closed the directors write off £91,947 out of the reserve to bring this item down to the same figure as the issued capital. This reduces the reserve to £3,053, which has been invested in trust securities, and the amount now transferred from revenue will also be dealt with in the same way. The leasehold redemption fund now amounts to £20,714 against which £20,314 in the company's own debenture stock is held by the trustees for the debenture holders. Sundry creditors look heavy at £31,592 against debtors for no more than £7,372 and £19,681 in cash, but stocks of wines, spirits, &c., at cost are valued at £47,432.

FINANCIAL TIMES, LIMITED.

After providing £1,100 or £129 more for cost of electrification of printing works and writing £500 off the suspense account for special renewals, the profits for the year ended December 31 were £1,747 up at £23,943. This improvement is hardly so striking as the directors at one time anticipated, and they appear to have been so far discouraged by the moderate fulfilment of their forecast of a year ago that they refrain from any opinion as to the future. With £12,098 or £1,308 more brought forward the disposable total amounted to £36,041 compared with £32,986, and after providing £1,073 for managing directors' remuneration, £2,588 for debenture interest, and £4,730 for preference dividend, £27,650 was left, out of which the ordinary shares receive their usual 12½ per cent., and the balance carried out is increased to £15,150. Nothing is added to reserve which remains at £13,200, while the property account, after deducting £4,461 for depreciation, is £5,898 larger at £290,466, and £4,000 had to be raised by an issue of 5 per cent. debentures, repayable in ten years by annual instalments of £400 each. Sundry debtors of £24,347 only exceed creditors by £1,332, but cash comes to £7,597, and work in hand, stock, &c., is valued at £3,486.

MERRY AND CUNNINGHAME, LIMITED.

We noted a year ago the remarkable prosperity of this company, but the growth of 1906 was insignificant to that of 1907. The balance-sheet and accounts are made up to November 30 last and in the year then ended the nett revenue earned was £80,493 or £22,858 more than in the previous year. This fine income is judiciously dealt with, no less than £20,000 more having been placed to reserve and depreciation funds, the reserve getting £20,000 against £5,000 a year ago, and depreciation £10,000, also against £5,000. The dividend on the ordinary shares is made up to 20 per cent. for the year and the balance left to carry forward is £10,743 against £10,300 brought in. Accumulations under various heads, including nearly £134,000 held against depreciation, now amount to £230,000. The outstanding debts due by the company are only £32,659 and the debts due to it amount to £55,000. Five hundred shares at £52 10s. each, fully paid, representing £26,250, are held in the Carnbroe Chemical Co., Limited, stocks on hand amount to £49,019, cash to £19,151, and investments and loans to £32,097.

HENRY POOLEY AND SON, LIMITED.

We were able to record last year that after making a very bad start as a limited liability company this concern had managed to set itself a fairly straight course, and are glad to find from the latest accounts that the position of affairs remains fairly comfortable. After reserving £1,706 for doubtful debts and £3,699 for depreciation, the balance of profit comes to £14,444, and as £7,426 was brought forward, the disposable credit is £21,870. Debenture interest and preference dividend took £5,506 between them, 5 per cent. is again paid on the ordinary shares, £5,000 goes to reserve, and £8,108 is carried forward. The contribution to reserve is the happiest incident of the year's operations, and should be considered the nucleus

of a substantial fund to be built up in the future. A small addition to the property and goodwill increases their total to £94,794, and £3,282 was added to the plant, machinery, patterns, &c., making them £6,036, and these items need to be strengthened by some provision against contingencies. Depreciation account of £16,942 is fair. Stock on hand, independently valued, has been reduced a little to £25,051, debtors owe £33,250 against £6,295 due to creditors, and the cash balance is £11,372.

ASHTON BROTHERS AND CO., LIMITED.

Although the results of this cotton-spinning business for the twelve months ended December 31 still fell short of those for 1905, it must not be forgotten that that year was an exceptional one, and, when comparison is made with a year ago, the trading profits show a very satisfactory advance of £12,554 at £67,725. Interest on reserve fund gave £450 more at £1,950, making, with transfer fees, a total income of £69,683 compared with £56,677, out of which an extra £2,363 at £19,841 is written off for depreciation, but only £1,000 or £2,150 less is put to the fire insurance fund. Adding £8,567 brought forward, the nett amount available is £13,808 up at £49,175, but the directors keep the dividend at 10 per cent., the same as for the two preceding years, and again transfer £15,000 to reserve. Of the large surplus still at their disposal they add another £5,000 against £1,000 to the fire insurance fund, and set aside £10,000 to form a dividend equalisation fund, leaving a slightly smaller balance of £8,375 to be carried to the new account. Liabilities to sundry creditors are £10,276 up at £54,798, while sundry debtors come to £38,142 or £1,713 less and cash has dropped by £793 to £1,254, but, on the other hand, stocks have risen by £29,355 to £170,761. Land, buildings and machinery, &c., show a nett reduction of £1,466 at £245,616, against which the reserve funds, including £2,160 from debenture premiums, will now amount to £82,160, and the fire insurance fund to £10,731. Investments representing these accumulations have a book value of £42,912 or an increase of £14,855.

HAYES, CANDY AND CO., LIMITED.

A further set-back took place in this company's business during the twelve months ended January 18, and nett trading profits were £3,199 lower at £14,927. Managing directors' salaries, directors' fees and income-tax having been met at an extra cost of £191, the disposable surplus, including £659 or £562 less brought forward, was only £11,107 against £15,059. The directors, therefore, while managing to pay the dividend of 7½ per cent. to which the ordinary shares are entitled, are unable to add anything to reserve or to distribute any bonus compared with £2,000 put to that fund and a bonus of 2½ per cent. paid a year ago, and even then they can only increase the sum carried forward by a trifle of £48 to £707. Goodwill remains at £50,000 and leasehold premises, fittings, &c., are £570 down at £13,732, against which the reserve has been reduced by £159 to £15,759, the amount written off for loss on investments exceeding by that figure the addition made for interest. A big decrease of £11,445 to £39,067 has been effected in floating liabilities at the cost of a reduction of £12,955 to £61,915 in sundry debtors, and while cash is £1,520 down at £7,161, bills receivable show a big jump at £12,074 and stocks are £4,733 larger at £75,873.

G. B. KENT AND SONS, LIMITED.

Nett profits of this brushmaking business for the year ended September 30, including £231 brought in and £8 from transfer fees, amounted to £12,898 of which interest on loans and mortgages took £1,245, life directors' fees £2,100, and other directors' fees £200, and after providing for preference dividend and income-tax £3,798 was left. Out of this the ordinary shares get 5 per cent., £500 is added to reserve, a similar sum is written off goodwill, and £44 is applied to writing down Consols to 80, leaving £354 to be carried forward. Expenditure on property for the year was £3,630, making a total of £85,180 on which a depreciation allowance of £924, or about 1 per cent., is apparently considered ample, although the item includes leaseholds, machinery, plant, &c. Deducting £34,136 for mortgages the balance-sheet value is £50,120, in addition to which goodwill, patent rights, investment policy, &c., stand at £35,100, while the reserve is now only £3,500. Trading balances are decidedly favourable, £8,524 being due to creditors and £7,916 on bills payable against £24,846 to come in from sundry debtors, £1,336 in bills receivable, and £3,436 in cash. Stocks, however, seem very heavy at £69,179.

HULL BREWERY CO., LIMITED.

Profits on trading for the year ended December 31 amounted to £75,421, and rents gave £11,589, making a total income of £87,010, of which repairs, &c., took £10,956, depreciation £3,859 and £1,500 was charged to the eastern extension, leaving £70,695. Administration charges, debenture and other interest and preference dividend having been paid, the disposable balance, including £7,258 brought in, amounted to £44,411. Out of this the directors pay dividends on the ordinary shares aggregating 11 per cent., together with a bonus of another 2½ per cent., and transfer £5,000 to depreciation fund and £10,000 to general reserve. They then give the staff a bonus of £825, and after putting £500 to pension fund, still have £10,536 or £3,278 more to carry forward. Properties bought during the year cost £7,884, and after deducting the sum now written off this item will stand at £663,529, and plant, &c., is valued at £19,246, against which the reserve comes to £137,500, but is apparently all in the business. Trading balances are favourable £16,767 being due to creditors, while debtors owe £23,796, stocks amount to £45,836 and cash is £8,605.

BRISTOL UNITED BREWERIES, LIMITED.

The people of Bristol keep their breweries in a condition of considerable prosperity and for the year to December 31 last this one gathered a revenue from all sources of £66,035. Contribution to the compensation fund was £2,269 and balance of income-tax took £250, leaving £63,516 nett, to which is added £7,367 brought forward, making £70,883. After reserving £5,000 against properties and investments account, paying directors' and trustees' fees, debenture interest, and preference dividend, the directors can provide 15 per cent. for the ordinary shares by carrying forward the considerably reduced balance of £4,215. During the year a further £10,000 has been devoted to the redemption of the Sykes 5 per cent. debenture stock, leaving only £7,500 outstanding of the original amount of £35,000, and this it is proposed to deal with when an opportune moment occurs. As it exists now the company's debenture debt amounts to £257,500 against a share capital of £460,000, not a dangerous percentage by any means, and the existence of reserves equalling £152,800 adds to the company's strength even though the greater part remains in the business. Outside investments are only £25,413, and the cash balance is not generous at £11,162. Stocks, however, appear at £56,009, and debts due are in excess of floating liabilities if we take into consideration the sum owing the company on mortgages, loans, &c. The report contains the usual exhortation to shareholders to use their utmost efforts to prevent brewery properties from being prejudiced by "unjust and confiscatory legislation."

BRISTOL BREWERY GEORGES AND CO., LIMITED.

Here we have another Bristol brewery company which continues to do well, but the directors have a paragraph printed in red in the report, in which it is declared that the threatened licensing legislation by Parliament this year has most seriously affected and depreciated the values of investments in brewery companies. Of course, radically unsound finance and often criminal acts have had nothing to do with it, and we thought prices went up with a rush as soon as the time for the licensing Bill to be introduced was actually imminent, but no matter. Trading profits in the year to December 31 were down only £1,843 to £68,709, and this was about made good by increases in interest and the balance brought in, so that altogether the revenue was £85,319, a drop of £57. Before this total was brought out £3,650 was provided for the compensation fund charge, so that actually the profits were that much larger. Directors' and trustees' fees, debenture interest, and preference dividend reduced the credit to £62,676 and of that £4,000 is applied in reduction of brewery premises, making the writing down to date £200,000 and £8,000 is set against licensed houses and other properties. So the dividend on this imperilled brewery company's ordinary shares can be 15 per cent. only, and £3,876 goes to next account. Brewery premises, plant, goodwill, &c., now appear at £153,264, a drop of £4,000, and the freehold and long leasehold licensed houses and other premises are up by £10,144 to £704,634, and it is probably fortunate that the general reserves are substantial at £182,235 apart from the dividend equalisation fund, £31,902. The reserves are in the business, but the general position seems clean and healthy.

STYLE AND WINCH.

In 1907 this brewery made a trading profit of £121,119 or £6,489 less than in 1906. Rents at £12,540 gave £340 more, but the final balance was £6,142 to the bad. The total expenditure, however, was £7,634 down at £58,557, so that the final nett profit of £75,109 was £1,492 higher, and the directors are able to meet all charges as also to put £1,676 more at £5,476 to the compensation fund account, and to give the ordinary shareholders a 6 per cent. dividend for the year with £5,000 added to the ordinary reserve against nothing the year before and £2,000 to the property reserve against a similar amount. The general reserve will, therefore, now be raised to £70,000, and the balance left to carry forward is £4,528 against £4,465 brought in.

BRISTOL AND SOUTH WALES RAILWAY WAGGON CO., LIMITED.

A recovery of £1,809 to £34,091 is shown in the revenue from wagon rents for the year ended December 31, and with £1,640 brought in and £484 from interest and transfer fees the total income was £2,024 better at £36,215. On the other hand interest took £409 less at £13,903, but expenses rose by £1,379 to £3,618, and as the directors transfer £2,000 against £1,000 to contingent fund the improvement in nett income was only £54 up at £16,694, so the dividend is maintained at 10 per cent., leaving £1,694 to be carried forward. Like so many of these wagon-hiring concerns this company has a small share capital and depends for its resources upon borrowed money, and we find that with a paid-up capital of £152,000 it has raised £337,286 on debentures, in addition to which it owes £27,979 on temporary loans, £8,362 to its bankers, and £10,930 to sundry creditors. Against these the assets consist of £560,754 for wagons, rolling stock and investments secured on rolling stock, and £20,854 due by sundry debtors. The company has a contingent fund of £45,700 after deducting £515 written off investments, of which only £8,178 is invested outside the business.

NORTH CENTRAL WAGON CO., LIMITED.

Gross profits from all sources for the six months ended December 31 were £936 higher at £35,806, and with £763 or £281 more brought forward the total revenue amounted to £36,569 against £35,352 a year ago. Debenture interest, administration and works depreciation having been provided, the available surplus

was £892 larger at £13,954 and after transferring another £3,000 to reserve, the directors pay an extra 1 per cent. bonus at 4 per cent. in addition to the regular dividend of 10 per cent., and increase the sum carried out by £142 to £455. With a share capital of £150,000, the company owns 32,329 wagons, the book value of which, less the depreciation fund of £407,997, is £15,781 up at £1,057,525, and further borrowing has therefore been necessary. Debentures and loans consequently show an expansion of £26,789 at £908,985, but apparently the overdraft appearing in the previous balance-sheet has been paid off out of this increase. The reserve of £106,176 is, of course, employed in the business, and the company also owes £2,776 to wagon-builders and £37,275 to sundry creditors, while £15,931 is due for debenture interest accrued. On the other hand, tenants for wagon rents owe £61,600, other debtors come to £44,106, and the company has £9,783 in cash. Freehold, land, buildings, &c., at Rotherham, Cardiff and elsewhere are valued at £25,646 after deducting depreciation, and stores are worth £38,792, bringing the aggregate of the balance-sheet up to £1,235,097. The directors state that negotiations are proceeding with the view to the amalgamation of the business with that of the British Wagon Co., Limited.

WESTERN WAGON AND PROPERTY CO., LIMITED.

Business was decidedly better with this company during the year ended December 31, and gross profits rose by no less than £3,453 to £24,758, while expenses were only a trifle heavier at £4,762. With £528 brought forward, the nett revenue showed an increase of £3,350 at £20,524, of which £3,994, or £648 more was absorbed by debenture and other interests. In the two preceding years the directors neglected to allow for depreciation of simple hire wagons in order to maintain the dividend at 10 per cent., but with the improvement in income they are now able, after repeating the dividend at that rate, to write £2,148 off the wagon account and still leave £554 more at £1,082 to be carried out. Wagons on simple hire have been reduced by 16 to 1,074 in number and by £660 to £22,759 in value, while the purchase hire wagons now total 2,130 or an increase of 99, but the amount outstanding is £557 smaller at £58,703. Advances, investments and other securities are £17,226 down at £228,918 and sundry debtors show a drop of £3,228 at £5,649, and the realisations represented by these decreases have evidently enabled the company to pay off its overdraft, as the item of £22,860 for bank loan appearing in the previous balance-sheet has now disappeared. Sundry creditors are £791 higher at £2,327, but, on the other hand, there is now a cash balance of £1,609 against nothing a year ago.

WELFORD'S SURREY DAIRIES, LIMITED.

This company opened two new branches during the twelve months ended December 28, but they do not appear to have reached a remunerative stage, while business seems to have fallen off in other directions. Gross profits were £556 down at £67,888, and at the same time expenses were decidedly heavier, with the result that the nett income showed a decrease of £959 at £17,497. Adding £4,330 brought forward, the disposable total was £21,827 against £22,831, but the dividends aggregating 8 per cent. are paid as usual and £5,000 is again put to reserve. The directors, however, only write £3,000 off plant, utensils and machinery against £4,000 a year ago, and are therefore able to keep the sum carried forward within a few pounds of that brought in at £4,327. Freeholds, leaseholds, plant, &c., after allowing for the present appropriation from revenue, are £1,473 up at £172,895, against which the reserve and insurance funds stand at £45,000. Trading balances are favourable, £11,626 being due to creditors, while book debts amount to £15,483 and cash has risen by £1,720 to £7,606.

EAST END DWELLINGS CO., LIMITED.

The new cottages in Bethnal Green built by this company continue extremely popular, but the same cannot be said with regard to the block buildings in and near Victoria Park Square in the same district, the number of vacant tenements on December 31 being 115. In making comparison of the results obtained with those of 1906 the directors point out that on all properties except four 53 weekly collections were made in the former year against 52 last year, making a difference of about £445 in favour of the earlier period. Nett profits, however, after meeting all charges and writing off £978 for depreciation were £856 down at £12,339, and with only £376 or £576 less brought forward the disposable total showed a decrease of £1,432 at £12,715, and in order to maintain the dividend at 5 per cent. the directors reduce the allocation to reserve from £4,000 to £2,500, leaving £444 to be carried forward. An arrangement has been made with the Public Works Loan Commissioners, under which the annual sum payable in reduction of the advances made by them has been reduced from £8,609 to £4,202, the period within which the debt is to be extinguished having been extended to 1931. This, the directors say, has the effect of considerably easing the finances of the company, and the company can do with the help. Liabilities on mortgages are down by £8,369, but still reach the big sum of £111,223, in addition to which £32,680 is due to depositors and £1,970 to sundry creditors. On the other side of the account freehold land is valued at £24,473 and the buildings thereon, less £305 for depreciation, at £80,795, while leasehold buildings, including additions of £2,797, are £2,124 up at £293,220. Sundry debtors are trifling at £229, and cash has dwindled to £3,865.

MARITIME INSURANCE CO., LIMITED.

Payments during 1907 for losses, averages and returns on risks taken in 1906 amounted to £132,483, and after transferring £15,000 to underwriting suspense account, a credit of £12,901 was left. Adding £17,545 for interest and transfer fees earned in 1906, and deducting £16,876 for expenses, the final result was a profit of £13,571. The internal re-insurance fund of £10,071 has been written back to profit and loss account, and £24,316 was brought forward, but £20,500 has been applied to meeting the depreciation in investments, and out of the balance the usual dividends aggregating 10 per cent have been paid. Nett premiums on risks taken during the past twelve months were £263,286, of which £99,787 had run off, leaving £163,498 on risks still outstanding. Losses and averages paid took £76,775 and expenses £16,602, leaving £169,998 to be dealt with at the end of the current year.

OCEAN MARINE INSURANCE CO., LIMITED.

On closing the underwriting account of 1906 a credit balance remained of £25,861, of which £15,000 or £7,000 less than a year ago is transferred to reserve underwriting account, while £10,861 or £2,814 more goes to profit and loss account. For 1907 nett premiums rose £6,492 to £168,684, while losses and averages took £4,327 less at £58,928. So that charges being practically the same, the balance of underwriting account carried to balance-sheet is increased by £10,689 to £90,216. The nett balance brought into the year's profit and loss account is £50,807; this is increased by interest on investments £15,904, rent £2,900, and the transfer from 1906 account to £80,507. The interim dividend absorbed £5,000 and depreciation of securities required £8,138 more at £13,576, so that the balance disposable of £60,461 is £5,346 less than a year ago. Out of this the dividend of 2s. 6d. and bonus of 5s. per share is declared, making 20 per cent. for year, as before, and the carry forward is reduced by a like amount to £45,461. Government and other securities now stand at £443,273 or £14,575 less, but cash and loans aggregate £9,862 more at £43,384, and debtors for premiums owe £2,624 less at £29,907. With the allocation referred to, the reserve underwriting account now amounts to £93,229, and reserve is £200,000, as before. A meeting is being called to approve of arrangements for combining the business of the company with that of the North British and Mercantile Insurance Company.

DAMANSARA (SELANGOR) RUBBER CO., LIMITED.

In accordance with the agreement for the acquisition of the Labnan Padang Estate from the Malay State Coffee Company, the profits accruing up to June 30 last remain the separate property of each company. In consequence the present accounts deal only with the half-year ending on that date. During that period the gross proceeds of 15,495 lbs. of rubber realised £3,574, equal to over 4s. 7d. per lb., while coffee added £1,061. Sundry credits raised the gross revenue to £4,790. Expenses in Selangor amounted to £2,941, and in London to £496, the profit for the half-year being £1,352. With £247 brought forward £1,599 is divisible, being equivalent to 2 per cent. on the paid-up capital of £76,827. Property is taken at £74,913 and cash amounts to £1,865, to which will be added £2,774 receivable after June 30 for rubber sold, while sundry creditors want £1,682. For the year ended December 31 the rubber crop produced 39,233 lbs., against the estimate of 35,000 lbs. while Labnan Padang yielded 16,577 lbs. for the six months ended the same date, but it seems unlikely that anything approaching last year's prices will be obtained.

MINOR NOTICES OF COMPANY REPORTS.

BOURNEMOUTH GAS AND WATER COMPANY.—Revenue for December half-year showed a satisfactory increase and amounted all told to £84,414. Of this £22,365 remained as nett, out of which dividends at the rates of 6, 7 and 14 per cent. were paid by the board on the company's various stocks, leaving £7,928 to be carried forward against £6,952 brought in. The quantity of gas sold increased by 6¾ per cent. on the corresponding half-year.

BRITISH LAND COMPANY.—After again passing £2,000 to reserve, the available profits are £104 less at £24,939, including £4,227 brought in. Dividend 5 per cent. and bonus of 1s. per share, as before, leaving £6,938 to go forward. Land purchased £31,939, sales produced £3,142 less at £55,824, leaving property £133,745, due on land sales £101,423, advances £75,481, investments £23,755, cash £21,000.

BUFFALO AND LAKE HURON RAILWAY COMPANY.—In addition to the rent of £35,000 paid by the Grand Trunk Railway, this company received £395 from interest and transfer fees and brought forward £752, making £36,146 in all. Interest took £21,003 and administration expenses £545 leaving £14,598 to be dealt with, out of which the usual dividend of 5s. 3d. per share is paid and £813 or £108 more is carried forward.

CHESTER WATERWORKS COMPANY.—No information at all is given by the board of this company as to the business done or the reason why expenditure has risen so sharply, but we note that the overdrawn capital account has risen to £13,080, that £1,563 was spent last half-year on repairs and renewals against £137 the same half of the year before, and that the revenue balances have fallen off from £10,276 to £5,863. The reserve fund, however, has gone up from £4,540 to £7,200, and the directors pay the statutory dividend with £365 over. But the accounts seem to want an overhaul.

CITY OFFICES COMPANY.—Credit balance for the year 1907, £8,504. Preference and ordinary dividends met, the ordinary being 8s. per share for the year, leaving £165 to carry forward against £139 brought in. Gross receipts came to £50,000, all of which except the balance named was absorbed in current charges, ground rents alone taking £15,056, interest £11,865, and rates and taxes £9,605. £5,052 was also spent on repairs. Revenue rose by £3,409.

Croydon Gas Company.—Nett revenue in December half-year £25,100, out of which £21,737 went to pay dividends ranging from 5 to 14½ per cent. on the various stocks of the company numbered "A" to "E," the "A" stock getting the highest dividend, £2,755 was placed to the renewal fund and £4,548 left to carry forward. The reserve fund amounts to £32,650, the insurance fund to £15,376, and renewal fund to £8,000.

Employers' Liability Company.—Is it true that the real trading profit of this company last year—it has not sent us its report, never does—is only about £30,000, in spite of the fine and swelling business it does? What is the experience gained teaching its managers with regard to the reserves required to be held against current risks?

English Association of American Bond and Share Holders.—Gross revenue for year £10,676, expenses £5,952, nett profit for year £4,724, an improvement of £188. Add £1,494 brought in. Dividend 6 per cent. and bonus of 1½ per cent., making the statutory 7½ per cent. for year, as last, and £2,341 forward. Investments at market price December 31 £68,818 against issued capital £51,690. Reserve £10,000, cash £7,347. The registration and dividend collection business makes very satisfactory progress.

Fleming, Reid, and Company.—Profit for 1907 was about £4,000 up, allowing for a rather smaller balance of £18,996 brought forward, and the disposable amount was £3,513 more. Out of this the ordinary shareholders get 10 per cent. in dividends and 20 per cent. in bonuses, or 30 per cent. for the year, but the extra or special bonus of 10 per cent. is to be applied as far as it will go in payment for 10,000 further ordinary shares at £1 each to be issued at par. At the same time, 10,000 £1 5 per cent. cumulative preference shares are to be offered *pro rata* at 2s. premium. The stock-in-trade seems heavy at £212,974 and sundry debtors at £19,544 are small against sundry creditors for £34,475. Out of the larger profit only £250 more at £8,000 was written off for depreciation or added to reserve. Cash amounts to £11,763, and the value of the property was increased by £1,218 to £140,564.

Kensington and Knightsbridge Electric Lighting Company.—Gross revenue for 1907 was £81,766 and nett revenue £24,806. Out of the gross revenue £8,697 nett went to depreciation and £4,612 to repairs. From the balance of nett revenue the dividend on the ordinary shares is made up to 10 per cent. for the year, leaving £2,479 to be carried forward. Rates and taxes took no less than £6,552, which really seems excessive. Business increased during the year. The renewal fund now stands at £69,602, having been increased by £3,224 on the year.

Lancashire Waggon Company.—Profit for the December half-year £11,229, including £1,885 brought forward. Dividend on ordinary shares at the rate of 7½ per cent. per annum and £2,500 added to reserve, making it £18,500. This leaves £1,111 to carry forward. Usually a bonus is paid at the end of the year, but last year being the company's jubilee year this was distributed in August, so that the shareholders get the same return for 1907 as 1906, and two previous years. Altogether the company's debenture and floating debt seems to be £8,511 down at £239,538, but the share capital is £3,805 up. During the half-year new waggons, &c., cost £36,073, but £62,647 was deducted as replacement of capital, so that the value of the stock of waggons is now £306,884. The total income was £73,334.

Lion Brewery Company.—Vigorous efforts are being made by the new board to pull this business round and last year's trading account is again charged with £20,000 in respect of bad loan debts made prior to the present management. Also the board has taken £143,000 from the reserve to write down the value of the leasehold properties. Out of the nett profits of £8,908 for 1907 the preference stock gets its full dividend, and the ordinary share capital gets 4 per cent. for the year, leaving £247 to carry forward against £459 brought in. In addition to the above writings off £12,684 was deducted from the value of plant, casks, leases, &c., all out of current revenue.

London Electric Supply Corporation.—Gross revenue for year 1907 down £6,500 to £105,539, expenses up £3,702 to £59,219, free revenue £10,202, less at £46,320. Income less from current sold per meter £9,409, but meter rents rose over £3,000. Capital expenditure in year £28,904. Dividend on ordinary shares 2½ per cent. for year, with £2,500 to reserve and £2,837 carried forward, against £3,270 brought in. Less custom from the County Council cause of reduced revenue, but the general business, excluding the L.C.C., shows increase of over 30 per cent.

London and Middlesex Freehold Estates Company.—Profits on sales of land declined slightly by £174 to £4,082, while nett profits were down £576 to £3,033 and the amount available was £1,118 lower at £4,437. So the dividend is 1s. against 2s. Property is up £2,282 at £35,178. Of stocks held £279,156 are stated to have a saleable value, but of this £230,602 in Cambrian Railway stocks have a nominal value of about £13,000.

Nelson Brothers.—After paying debenture interest, London expenses, and directors' fees, the nett profits show an increase of £14,812 at £42,548. Costs in the colony have been high, but the demand for meat from English possessions tends to increase. The ordinary dividend of 7 per cent. is maintained for the fifth consecutive year. Reserve gets £10,000, making £50,000, and £4,254 or £1,244 more goes forward. Creditors owe £29,791 against floating liabilities of £100,966, cash £20,934.

Patent Enamel Company.—Nett revenue for 1907 £8,248, exclusive of £2,949 brought forward. The preference share dividend at the rate of 8½ per cent. has been paid and 3s. per share or 15 per cent. is given to the ordinary shareholders. £2,000 is carried to the reserve and £2,988 left to carry forward. Depreciation fund now amounts to £10,534 and reserve to £2,500. The company is strong in cash at £13,100. It owes £12,407 to sundry creditors, and sundry debtors owe it £10,422 nett.

Port Talbot Railway and Docks Company.—Receipts increased £15,774 to £72,015 in the second half of last year, but working expenses took away fully half this increase, leaving £7,705 additional nett revenue. Out of the free balance, after meeting all fixed charges and the preference dividend, the ordinary shares get a return at the rate of 4 per cent. per annum, leaving £858 to carry forward compared with £2,608 brought in. Capital expenditure in half-year £15,506. Shareholders will be asked to sanction the creation and issue of £16,000 in ordinary shares, part of £120,000 authorised. Capital account is overdrawn £12,147.

Provident Clerks' and General Mutual Life Assurance Association.—Quinquennium ended last year, and result of "a thoroughly stringent valuation" is a rate of bonus higher by 2s. than was ever paid before. Reversionary bonus of 34s. per cent. accordingly allotted on participating policies. Funds increased by £87,148 to £2,529,066. Expense ratio to premium income, 9.24 per cent.

Read Brothers.—Gross profits again show a good increase, being £4,112 up at £56,576, general expenses £1,350 higher; with £1,369 brought in, £34,159 or £3,790 more is available. Ordinary dividend again 10 per cent. Reserve is raised by £6,000 or £2,000 more to £48,000, contingency fund gets £1,500 or £500 more, and £1,659 goes forward. Godwill is reduced by £10,000 again to £130,000. Cash is ample at £49,196. Reserves are in the business, but position seems sound.

Regent's Canal and Dock Company.—Gross receipts for the six months ended December 31 were £2,952 down at £42,925 and expenses rose by £360 to £18,295. Nett profits, including £649 brought in and £114 from interest, showed a decrease of £3,666 at £25,393, and as annuities and interest required £247 more at £11,180 the dividend on the capital stock is reduced by ½ per cent. to 2 per cent. and £417 less at £633 is carried forward. Capital expenditure in the six months was £3,672, but further funds were raised, and credit balance on this account is now £10,602 compared with £1,227 a year ago.

Royal Bank of Queensland.—Gross profits for the six months ended December 31 were £37,869 or an increase of £2,555, but expenses were heavier, and with £1,146 or £822 less brought in the nett income was only £871 better at £13,772. The dividend is again increased by ½ per cent. to 4½ per cent., but £500 less at £1,000 is put to contingency fund, and after adding another £1,000 to reserve £610 is carried forward against £690 a year ago. Deposits, &c., are about £19,000 higher at £1,075,710 and on the other hand debts due to the bank have risen by £72,850 to £1,211,788, but cash, bullion and investments show a drop of £39,240 at £400,912.

Sheffield United Gas-Light Company.—An increase of 8.13 per cent. in the company's business is reported for the second half of last year. Coal cost £28,807 more. Gross revenue £189,153 and nett balance remaining amounted to £39,684, which was insufficient to meet the dividends declared on the company's stocks. These absorb £43,424, so £2,684 had to be taken from the balance brought forward. The reserve fund remains at £86,848.

South Staffordshire Water Works Company.—Water rates for half-year to December 31 are £2,138 up at £72,446 compared with the corresponding period. After providing preference and debenture requirements and £2,000 for depreciation, £30,197 is available. Dividend on ordinary stock 7 per cent., as usual, and £7,760 forward. Works are increased by £11,753 to £1,433,853, depreciation fund £26,788.

South Suburban Gas Company.—High costs of coal were counteracted by increased price of gas and coke, but increase on sales of gas for first part of half-year was nearly all lost owing to mild weather in latter part. Gross receipts £124,333, nett profit 22,825; with £1,892 brought in, £24,716 available dividend at rate of £5 6s. 8d. per annum, full amount allowed by Parliamentary sliding scale. A protest is raised against the eight hours limit Bill.

William Wallace and Company.—Statement of accounts for 1907 is about as humiliating a confession as could be put forward. For 1906 no dividend was earned and £15 was carried forward. In 1907 the turnover has decreased by £13,000 and a loss of £4,673 is carried to balance-sheet. This and goodwill £28,551 represent nearly half the capital. £2,475 has been allocated to depreciation on leasehold properties, investments, &c., and the auditors remark that this is insufficient. Cash, bills receivable, and debtors total £20,859 against liabilities £5,213.

Wolverhampton Gas Company.—Gross receipts for the half-year ended December 31 were £55,138 and £7,293 was brought in, making a total of £62,431, of which expenses took £45,135, leaving a balance of £17,296. Out of this dividends are paid at the rate of 3 per cent. on the preference stock, 5⅜ per cent. on the consolidated stock and 3⅜ per cent. on the new ordinary stock, after which £699 is added to reserve and £45 to insurance fund, and £7,808 is carried forward. Expenditure on property is £283,780 and stock of meters, &c., is valued at £13,616 against a share capital of £256,689 and a debenture debt of £46,370, but the company has a reserve of £13,726 represented by cash or deposit. Debtors exceed creditors by about £1,600 and cash in hand amounts to £7,406.

TRADE AND PRODUCE.

WHEAT.—A very desultory business has been done in the markets this week. The very heavy shipments reported from the Argentine and the continued pressure to sell both favoured the buyer, but even at a decline of from 2d. to 4½d. per cental sellers of foreign spot wheat found consumers not very eager. Cargoes dropped from 2s. to 2s. 6d., and English wheat, of which samples were fairly numerous, were on the Manchester Exchange yesterday 2s. 6d. per quarter under last Thursday's rates. Farmers' deliveries here, 54,555 qrs., averaging 33s. 1d. per qr., compared with 84,514 qrs., averaging 26s. 7d. a year ago, and supplies from abroad continue large. Imports last week came to 311,430 against 221,547 in the same week last year. The quantities of wheat and flour on passage this week are up to 4,305,000 qrs. to the United Kingdom and 2,020,000 qrs. to the Continent. American markets have fluctuated a good deal, and exhibited an easy tone towards the close. The visible supply is 637,000 bushels less this week than last at 45,639,000 bushels.

WOOL.—The condition of the raw material trade grows more and more depressed. Nothing but a few forced sales have taken place in the Bradford market this week, and prices are lower than ever. Even English wools are giving way now. Nor are the reports from the Continent any better. Spinners, though actively employed up to the present and firm in their quotations, are beginning to grow disturbed as to new contracts. Why all this stagnation should be the *Manchester Guardian* explains in a note sent by a correspondent from Melbourne, to the effect that, for one thing, Yorkshire and Continental never bought so largely before at the Australian sales as this year, and now find themselves overstocked; for another, instead of the prophesied scarcity in wools, they are simply pouring into all European markets. Already there are 126,000 bales on hand for the next series of London auctions, and besides these, 112,500 bales have been forwarded direct to Yorkshire and the Continent since the last series closed.

COTTON (from our Manchester correspondent).—Nothing has transpired in our market this week to stimulate buyers to greater activity, and the total sales have been quite unimportant. Speaking generally, the market is in a state of rest, and buyers are adopting a waiting attitude, owing to poor advices from abroad and the anticipation of lower rates from spinners and manufacturers. It does not seem likely that any appreciable increase can occur in the turnover until greater confidence shows itself on the part of buyers. Scarcely any news of importance is coming through relating to the prospects for supply of the raw material. American advices are dull, and from Egypt the telegrams do not present any fresh feature of moment. American cotton in Liverpool has fluctuated from day to day, but there is no pronounced movement either up or down. Spinners, on the whole, keep fairly well covered, but there is not now much disposition to go "long." In piece goods for export there has been very little practicable demand for any market. The business all round has been restricted to small lots. China inquiry has fallen away, and although something has been done in heavy goods, shirting makers have not done so well. Shippers, on the whole, scarcely seem prepared to anticipate future requirements, and the business is mostly of a sorting up character. Poor advices are coming through from India, and although stocks are being gradually reduced in the chief outlets, yet we seem to be some distance off renewed buying on this side. The Mediterranean markets, on the whole, are unsatisfactory. Something has been done for the Levant, but Egypt is very quiet. Manufacturers are much hampered, owing to large stocks being held by them, and merchants are also in the same position, warehouses in Manchester being full up with piece goods. The prospects all round are discouraging. There is no distinct movement towards more activity in home trade cloths, but, if anything, the total sales are a little larger than earlier in the year. Much short time is being worked throughout Lancashire. Many looms are stopped owing to want of work to go on with. American yarns for home consumption have moved off slowly. The all-round supply is increasing. Twists are not now at all scarce. Ring beams are backing up in first hands. Deliveries are easier. In export descriptions only a retail trade has transpired. Certain Continental shippers are cancelling orders rather freely. Bolton spinnings remain flat and unsatisfactory. Margins have been narrowed considerably since the beginning of the year. Some mills in South Lancashire are curtailing their production.

COAL.—The position of the trade stands just about where it was a week ago. Prices have not generally risen, though in one or two cases best steams in the North of England, for instance, are a little stiffer, and some improvement in exports from that quarter is noticeable. One or two big contracts are coming to hand, and competition to secure them is keen. It is not likely that they will be renewed at the high prices of last year. 150,000 to 200,000 tons of Welsh steams have been taken on at 16s. to 16s. 6d. best Admiralty and about 15s. for best Monmouth, and this one instance alone shows the modification that has taken place. Several collieries in Wales are only half employed, and elsewhere, particularly in house coals, the full time at the mines is causing stocks to accumulate unpleasantly, for the owners.

COPPER.—Under the influence of American depression prices fell steadily till yesterday, when, in spite of a further reduction in American quotations the market here showed a turn for the better. Sellers were more reserved, and bear covering ensued on a fairly large scale, seeding prices £1 up on the day, to £57 15s. cash and £58 three months. Market closed Friday, cash 58—58¼ and three months 58¾—¾ weaker.

Messrs. H. R. Merton and Co., Limited, give the visible supply as 22,175 tons against 20,060 tons at the end of January. Supplies for the first half of February were 18,418, and deliveries 16,903 tons, making stocks in England and France 69,975 tons, against 13,360 tons at the end of January. Chili charters total 1,600 tons.

TIN.—Prices came down in this metal also for the first day or two, forward metal dropping to £125, but later, owing to the firm attitude of holders in the East, and the predominance of buying orders towards the close, markets became decidedly firmer, and closed yesterday at £127 10s. cash and £126 10s. three months. To-night's closing: Cash 130½—131, three months 129½—130.

IRON AND STEEL.—Prices of West Coast hematites have not dropped any further since last week, but that and the fact that warrant stores are low are about the best that can be said, for a slacker time than ever seems ahead of the trade. In East Coast metal, on the other hand, things seem to have already changed for the better. Demand has improved, and prices are up 1s. 6d. per ton. In face of all the labour troubles in the North, this seems rather surprising, but increasing shipments and decreasing stocks have had a good deal to do with the improvement. In fact, exports of Cleveland pig-iron for this month are said to "break the record" of former Februaries, the average being over 5,000 tons per working day. The steel trade is more active just now, owing mostly to the new battleship orders, but otherwise new orders for either finished iron or steel are not very satisfactory.

TEA.—Prices for practically all grades are now below those of the corresponding period in 1907. But the difference, so Messrs. W. J. and H. Thompson point out, is to a great extent due to the fact that India has supplied little or no tea of good autumnal flavour, so that the bulk of the invoices have been of only medium quality. This week's sales were fairly moderate, only 35,737 packages being offered, and of these 32,693 packages sold on garden account at an average of 7.80d. Further weakness was noticeable chiefly in common and lower medium kinds, which dropped sometimes ½d. per lb, and large quantities were withdrawn by sellers who did not care to meet the market. The average price last year in the same week was 8.85d. The same drop occurred in Ceylon common and medium grades. 21,531 packages were offered, and the average for the whole sale was only 7.80d. against 8.64d. in 1907. Java sales, which comprised 1,611 packages, were fairly steady, only a few of the lower grades showing some irregularity.

SUGAR.—The market was again easier, May sugar closing at 10s. Consumers continue to buy from hand to mouth only, says Mr. Czarnikow, and the decline in New York from 3.73 to 3.67 cents, together with the continued reports of a poor Cuban crop, did not help matters. The complete January statistics for Europe are now to hand, and, according to Mr. Czarnikow, may be considered fair. Consumption and shipments elsewhere show a slight increase, and with 36,000 tons less produced the European stocks have decreased 200,000 against 164,000 tons. The key of the situation remains in America, where meltings in January were only moderately less, but will show a larger decrease in February. As regards the Cuban crop, the latest mail from the Island reports that the cane in some western districts is described as so small (though better in yield) that the mills cannot be kept supplied at full power, but in other districts it is evidently better. That a large quantity of Javas will be required in United States (diminishing pressure here) seems certain, but what interests our market specially is whether old beet will be wanted. With a crop of 1,100,000 tons, which is not assured yet, there are 175,000 tons less sugar in sight in Cuba and United States stocks, and we do not know how many Javas will be available, nor whether Cuba will always be a free seller, but America may allow her stocks in August-September to go down, because in previous years refiners held more than their immediate requirements. It is partly a question of prices and premium. Landings in the three ports of the United States for the week were 42,000 tons, and meltings 30,000 tons, stocks increasing to 126,000 tons.

JAMES DUNLOP AND CO.—Gross profit for 1907 was £97,363 and nett £92,659. With the balance of £5,911 brought forward, £98,570 was divisible, of which £30,000 was set aside to depreciation. Dividend on ordinary shares made up to 12½ per cent. by final payment at the rate of 10 per cent. and £19,432 left to carry forward. Cash amounts to £94,157, investments reach £17,063, debts due by company are £59,100, and due to it £81,721. Property now valued at £401,201, the £30,000 written off for depreciation having been more than offset by the £21,130 cost of additions.

MILFORD DOCKS COMPANY.—Gross revenue for half-year was £2,221 up at £11,780, and after providing £653 interest on special mortgages and £572 cost of issue of further £16,500, nett profit is £402 higher at £3,417, debenture stock "A" gets 1¾ against 1½, making total for year £2 3s. against £1 17s. per cent. in 1906. Land is £1,024 higher at £43,584 and docks £3,082 at £644,680. Sundry expenditure unchanged at £492,022.

MILLWALL DOCK EQUIPMENT COMPANY.—Changes minimal. Gross revenue unaltered at £12,020, but with small savings nett profit is £217 higher at £3,470. Sinking fund for share capital takes £200, and the same dividend is paid at 7 per cent. for year, leaving £219 to go forward.

COMPANY MEETINGS.

IMPERIAL TOBACCO COMPANY.

CONTINUED GROWTH OF THE COMPANY—BIG INCREASE IN PROFITS.

The sixth annual meeting of the Imperial Tobacco Co. (of Great Britain and Ireland), Limited, was held at Bristol on Tuesday, February 18, Lord Winterstoke (Chairman of directors) presiding.

The Secretary read the notice and the auditor's certificate and report, and the directors' report was taken as read.

The Chairman, in moving its adoption, said that the past year had been one of considerable anxiety in commercial circles on both sides of the Atlantic, but happily they had reverted to a condition of things in business matters which was fairly normal, and he hoped they would have nothing in the immediate future of a disturbing character to affect their interests. (Hear, hear.) He had again to congratulate them on the prosperity of the working of the company. In 1906 they had available for dividends a million and a quarter sterling—speaking accurately, one and a quarter million plus £873. This year they had £1,493,441, making an increase in their profits of nearly a quarter of a million. He had no doubt that that would be satisfactory to the shareholders. (Applause.) As long as the tide set in the direction of flow, and they had no ebb, he did not think anyone had a right to complain. (Applause.) Last year the directors were able to present them with a dividend, which represented 10 per cent. on the deferred ordinary shares, free from income-tax. This year they offered the same dividend, plus a bonus of 2 per cent., also free from income-tax. (Applause.) He hoped they would agree with him that in that respect the year's trading showed very satisfactory progress. (Applause.) During the last two years they had had a steady advance in the price of leaf tobacco. Altogether for the two years it amounted to about 2d. per lb. Fortunately for their interests, the Imperial Company had got very large stocks of leaf and strips; consequently up to the present time they had not felt the pressure of the advance in price, but the prices now ruling in the tobacco districts of the United States of America gave a very remunerative return to the planters. The policy of the Imperial Company had always been to recognise that they must pay a price for leaf which would pay the farmer, because unless he could get an adequate return for his industry, he would not lay down the land to tobacco, but would rather put it to cotton. They had got to a point which gave the planter a very adequate return for his capital, and he sincerely hoped they had arrived at the highest point in the flow of prices in the tobacco market. If so, they might hope that, with care and attention, and having certain reserves against an abnormal increase in price, they might hold their own in the immediate future.

LITIGATION IN AMERICA.

The Government of the United States had recently, at the instigation of President Roosevelt, commenced a crusade against trusts, and in connection with that crusade an attack had been made upon the American Tobacco Company, and in an indictment that had been presented to the American Law Courts, both the British America and the Imperial Tobacco Companies had been joined. They had been compelled by circumstances to enter an appearance in the High Court of the United States, but they were told by their legal advisers that they saw no ground for believing that they had done anything contrary to the law either of the United Kingdom or the United States. At the same time, there was no doubt that they would be put to a very considerable expense in the matter—in retaining counsel and paying legal expenses—and the directors had thought it fit to make a reserve, in view of any possible charges in that respect. Just before they held their last meeting there were various disturbances in the State of Kentucky, and perhaps he ought to point out that things there were very different from what they were in this country. In America every State was to a certain extent a law to itself, and the United States were merely united for the purposes of foreign policy. In England if there was a riot, as they had 90 years ago in Bristol, when great damage was done to property, a levy was made, and people were compensated, but there was no such law in the State of Kentucky. The Imperial Company, unfortunately, had had some of its property interfered with, and the policies they held for insurance in the United States contained a clause that the insurance companies were not responsible for the action of mobs; consequently, they had had very great difficulty, and had not succeeded in getting what they called adequate redress for the damage done to their property.

DISTURBANCES IN KENTUCKY.

These disturbances in the State of Kentucky had been mainly caused by feuds between the independent planters, who were willing to sell their produce direct to the manufacturers and others in Europe and associations formed for pooling purposes, in which the produce of respective districts was collected and sold through the secretary or agent of the pool. Several factories, including one of the Imperial Company, had been attacked and burnt, and last year one of their buyers was dragged from his house and violently assaulted. He had been informed quite recently that that assault was committed because he had given offence to certain people before he entered the service of the Imperial Company, and, therefore, he thought there was considerable ground for supposing that it was not directed so much against them as a company as against the individual. All these circumstances made the directors careful and circumspect.

DEVELOPING NEW SOURCES OF SUPPLY.

There had been, unfortunately, in America in the last two or three years a shortage of crops—they had not had the same amount of leaf and strips as they had in former years, and that had led them very carefully to consider the sources of supply. The gradual extension of British influence in East Africa had led to the companies interested therein making several experiments in tobacco growing. They had assisted one or two of the companies by their advice and by seeds, and by supplying them with expert opinion which would be of value to them, and they had seen several samples supplied to them of leaf of excellent colour and great promise in the way of quality. The Imperial Tobacco Company was experimenting with tobacco crops at Blantyre, East Africa. They were erecting a factory for dealing with crops there, and hoped ultimately to develop there a large and valuable source of additional supplies. During the past year the company had sustained two serious losses, one by the death of Mr. Wellford Claiborne Read, who was their representative in America, a man whose high character, large experience, and keen business qualities constituted him an ideal representative of the Imperial Tobacco Company. Then they had lost recently Mr. A. W. Hignett, who was for some years a director of the company, but retired to make way for his brother, Mr. Lawrence Hignett.

INVESTMENT DEPRECIATION.

Another matter which he thought was of some little interest to the shareholders was the pension fund. They had felt that they were able this year to add £100,000, and the bonus this year was about £34,000 more than last year—that was to say, they would divide among their customers this year something like £160,000. When the accounts of the company were made up on October 31 interest was high and financial stocks were low, and they felt it only right to write down their investments to the extent of £86,000. Since that time there had been a recovery, and he was assured by their chief accountant that today that deficiency had been completely wiped out. He thought the shareholders would recognise that the directors did the right thing in facing the position in which they were placed, and putting a true and accurate statement before the shareholders, and now they had the benefit of it. (Applause.) Before he concluded, he would like to advert for a moment to the loyal support and assistance which had been rendered to the board, not only by the managers of the different branches, but by the whole staff, both in the manufacturing and warehousing departments. He thought that was the tenth year since the formation of the company. When he assumed the chair he felt that he had a very difficult task before him in bringing eighteen different companies or firms, which had been managed on their own lines, into line. He was able to tell them that day that, without the least friction, without the least unpleasantness, all the branches of the Imperial Tobacco Company had been brought into line. They had a schedule for the working of the factories; they had a schedule of amounts; and everything now, he thought he might say, was managed on the same lines, and, therefore, they could compare one year in one factory with another. It was a great source of gratification to him that he had been able in some humble degree to pilot the company through the initial difficulties of its formation, and he only hoped that when the time came—and it could not be far distant—when he resigned the chair to a younger and abler man, he might hand over the trust unimpaired and uninjured. (Applause.) In conclusion, he moved: "That the report and accounts now submitted to the meeting be and the same are hereby received and approved."

Mr. G. A. Wills (Deputy-Chairman) seconded the motion, which was carried.

THE DIVIDENDS.

The Chairman proposed: "That the payment of the dividend of 5½ per cent. upon the preference shares up to October 31, 1907, be and the same is hereby approved and confirmed."

The Deputy-Chairman seconded the resolution, and it was carried.

The Chairman moved: "That the payment of the dividend at the rate of 6 per cent. upon the preferred ordinary shares of the company for the half-year to April 30, 1907, be and the same is hereby approved and confirmed."

The Deputy-Chairman seconded the proposition, which was adopted.

The Chairman proposed: "That a dividend at the rate of 6 per cent. per annum upon the preferred ordinary shares of the company for the half-year to October 31, 1907, be declared, and be paid on March 1, 1908."

The Deputy-Chairman seconded the resolution, and it was approved.

The Chairman then submitted: "That a dividend of 10 per cent. (free of income-tax) and a bonus of 2 per cent. (free of income-tax) upon the deferred ordinary shares of the company for the year to October 31, 1907, be declared, and be paid on March 1, 1908."

The Deputy-Chairman seconded the motion, which was carried.

Mr. Heben Mardon proposed: "That the retiring directors, Messrs. Richard Davey, James Macdonald, and Henry Herbert Wills be and they are hereby re-elected directors of the company." He said that after hearing the remarks of the Chairman,

they felt that the directors had done their very best to maintain the prestige of the Imperial Tobacco Company, and he felt sure that in their hands the business would continue to make as good progress as it had done in the past. (Hear, hear.)

Mr. W. L. Davies seconded the motion, and it was adopted.

REAPPOINTMENT OF AUDITOR.

Mr. Fenwick Richards submitted the following resolution:—"That Mr. William Plender, of Messrs. Deloitte, Plender, Griffiths and Co., be, and he is hereby, elected auditor of the company for the current year at a remuneration of £1,000, exclusive of out-of-pocket expenses." Mr. Richards said Mr. Plender had become an old friend of the company, and they hoped to have the benefit of his services for many years to come. (Hear, hear.)

Mr. E. H. Mayo Gunn seconded the motion.

The Chairman said that up to the present time Mr. Plender had been receiving a remuneration of £700 a year, but as the profits declared had doubled, and Mr. Plender had rendered valuable service every time he was called upon, and had been most helpful to him in consultation and as a financial adviser the board had recommended that the remuneration be increased to £1,000. (Hear, hear.)

The motion was adopted.

Mr Plender, in returning thanks, said he was obliged to the Chairman for his kind remarks, and to the shareholders for re-electing him as auditor to the company. He could only say that it had been a privilege for him to be connected with the undertaking. He had seen its steady progress to its present position of financial strength, and as long as he was privileged to serve them, they might be sure that the advice which he had hitherto given would be continued—namely, to make the company financially strong, and to make the amount of the dividend a secondary consideration. As far as he knew, every possible provision had been made by the directors for contingencies, and, apart from these provisions, a large pension fund had been created which was almost without precedent in the commercial history of the country in its amount, and a reserve fund had been built up, which represented an undivided nett profit equal to 25 per cent. on the deferred capital of the company. That, he thought, reflected great credit upon he efficient manner which had distinguished the management of the company from the commencement. (Applause.)

Mr. E. B. James moved: "That the 'fair value' of the deferred ordinary shares until the ordinary general meeting in the year 1909 be, and the same is hereby fixed at, 28s. per share, plus interest at the rate of 5 per cent. per annum from March 1, 1908, or, in the event of an interim dividend being paid, from the date of such payment." Mr. James observed that the increased value was the natural result of the increased dividend. It was 2s. per share more, and he could only say that, for himself, he intended to hold them a little longer. (Laughter.)

Mr. R. H. Walters seconded the resolution, and it was carried.

APPRECIATION OF THE CHAIRMAN'S SERVICES.

Mr. H. E. Thornton proposed a vote of thanks to the chairman, who, as president of this truly Imperial concern, had done such splendid service. (Hear, hear.) He was no figurehead, no ornamental chairman, but a man who knew the business from top to bottom. It seemed to him, speaking as an outsider, that it was of the greatest possible benefit to this magnificent company to have so able a chairman. (Hear, hear.) With regard to the profits, they almost staggered people who, like private bankers, thought they did very well if they made one-hundredth part of the profits. But here was a concern with profits in seven figures. He had known those connected with the Nottingham branch, and it was with the greatest possible pleasure he found them connected with this magnificent heritage. (Hear, hear.)

Mr. R. Davey seconded the resolution, and congratulated the chairman on occupying the position at a time of life when most men thought of retiring and taking their ease. He came forward and flung himself into the work when the company was formed, and had since then given most generous and lavish service in their interests. (Applause.)

The resolution was carried by acclamation.

Lord Winterstoke, in reply, said he was very sensible of the kind expressions which had fallen from Mr. Thornton and his friend, Mr. Davey, in reference to his services. He could only say that they had been given with very great pleasure and satisfaction to himself, and if they had resulted in benefit to the company and not injury, he was extremely well satisfied and well repaid. (Applause.)

HASTINGS AND DISTRICT ELECTRIC TRAMWAYS.

The ordinary general meeting of the shareholders of the Hastings and District Electric Tramways Co., Limited, was held on Monday at the offices, 1, Queen Victoria Street, E.C., Mr. E. C. Morgan (chairman) presiding.

The Secretary (Mr. W. R. Elston) having read the notice convening the meeting and the auditors' report,

The Chairman said: The accounts, which include those of the statutory company, call for little comment. The expenses, as will be seen, total about 60 per cent. of the receipts, a proportion which we hope to reduce, but we can hardly hope to emulate the figures of other lines, where the conditions of working are less onerous than those of our undertaking. We have two serious difficulties with which to contend, one being the very heavy gradients upon certain portions of our line, and the other the high price which we have to pay for our coal and water. These are factors beyond our control, and the only way in which we can hope to reduce our ratio of working expenses is by increasing our gross take. Although we consider that our takings are satisfactory, amounting to £54,128, which have been earned by the carriage of 9,530,345 passengers, it must be borne in mind that the climatic conditions during the year under review were singularly unfavourable to an undertaking such as ours, and it is not unreasonable to suppose that with more normal conditions the number of our passengers will be materially increased, apart from the natural growth in traffic, which is the almost invariable experience of all tramway undertakings. Building to a certain extent already following our lines, and parts of the town hitherto inaccessible are likely before long to increase the population of the area, and thus add to the importance of those districts through which our lines pass. No comparison has been made between the years 1906 and 1907, because the conditions are not similar, the front line only having come into operation at the beginning of the latter year. This is a very important addition to our system, not only for the facilities which it gives to the inhabitants of Hastings and St. Leonards, but also by the direct link which it creates between Hastings and Bexhill. As you are aware, our concession required that this line should be constructed upon a plan other than the overhead system, although that had been adopted with so much success throughout the remainder of the route. We, therefore, had to fall back upon one of the surface contact systems (the conduit being impossible), although very little was known as to their merits, and practically nothing as to the particular system which we have put into operation. We were, therefore, pioneers of this—the Dolter—system, and at first, and for a considerable period, we experienced many difficulties which did not tend to improve our traffic. By patience and perseverance, however, we have surmounted most of the difficulties, and the line is now working in such a manner as to lead us to hope for fairly good results. When we last met I mentioned to you that certain proposals were on foot for the construction of a line passing through the old town. These have made little, if any, progress during the year, but there are many of the inhabitants of the old town who are very anxious that this extension should be carried out, and we are quite willing to favourably consider it, if we can obtain conditions which justify us in so doing. Tentative proposals have also been made as to extensions in the Bexhill district, but at present nothing definite has been arrived at. In conclusion, I may add that our relations with the municipal authorities have continued to be of a friendly character, and that our cars, overhead line, permanent way, buildings, and plant have been maintained in a first-class state of efficiency by our able manager, Mr. Holliday, who has done so much to popularise our undertaking.

Mr. George Kitchin seconded the motion, which was carried unanimously without comment.

READ BROTHERS.

The tenth ordinary general meeting of Read Brothers, Limited, was held, on Thursday, at the Holborn Restaurant, W.C., Mr. George Edwards (chairman of the company) presiding.

The Secretary (Mr. Charles G. Webb) having read the notice convening the meeting and the auditors' report,

The Chairman said: With reference to the accounts, if you take the profit and loss account you will see that the gross profit for the year is £55,422, which is £3,515 more than last year, and the interest is £1,147, or £599 more. Transfer fees make up the total to £56,576. Then, on the other side, the salaries, commissions and other things set out are £18,470, and that is £1,349 more. I might say, in passing, that that increase is accounted for by exceptional repairs that were charged to revenue, and additional commission which has been earned by the managers. In the balance-sheet on the debit side the trade creditors are £19,488, which is £9,071 more than last year. I am pleased to say the reason for that is that we were able to buy an enormous quantity of bottles at a reasonable price, and we have been getting them in rapidly and paying for them. The reserve fund was £38,000, and we are adding £4,000, making it £42,000. In the profit and loss account the £12,585 brought down is £2,585 more; adding to that the amount brought forward, £1,300, gives £3,150 disposable money—that is £2,700 more than last year. On the credit side cash at bankers and in hand is £49,195, which is £19,892 more. Bills receivable are £19,302; that is £9,714 more; and the payment to Messrs Bass and Co. in advance is £4,630, which is £12,700 less. That is accounted for by the fact that we had the beer in much more rapidly than we did last year. Money owing to us was £13,105, or £2,105 less. The stock in hand, £[illegible]-58, is £7,133 more—principally, I am pleased to say, in bottles. Freehold land and building are £50,000, the amount at which they were purchased, and we have spent up to the date of these accounts £27,054 in enlarging the place; that makes a total of £77,054. Goodwill and trade marks are £[illegible], and last year we wrote off £10,000, bringing them down to £[illegible]. I think these accounts are very satisfactory, and that is all I have to say upon them. I am very pleased indeed to be able to meet the shareholders again after a very successful year, and I can only congratulate them on the continued increase in the company's business. With reference to the additions to buildings during the year, the sum spent amounts to £[illegible]. In order to cope with the business and work with economy, it has been found necessary to again increase our buildings very

considerably, and we are now erecting a large four-storey brick building on our own freehold land, which will cost, when completed and equipped, about £15,000. Of that amount £2,240 has been paid already, and appears in these accounts, and the balance will have to be paid during the current year. The profits for the year have been adversely affected by the great increase in the price of bottles. We have to contend with a very great increase in the price of bottles, partly owing to general conditions, which have advanced the price throughout the world, but more particularly because of a great European combine, which includes nearly all the firms who make bottles. Thus far, while our bottle costs have largely increased and have affected our profits, we have succeeded in paying only a price which was warranted by general conditions and have not had to pay the prices demanded by the combine. We have given most careful attention to this matter for some time past, and hope we have discovered a way to avoid paying more than reasonable prices. The conservative policy adopted by the board in creating a reserve—which is available in cash—will enable us to carry out any policy which may be determined upon with reference to this matter. The financial position of the company is a very strong one, as is shown by the accounts. The liquid assets amount to £224,755; last year they were £199,742, so that we are £25,013 better off as regards liquid assets this year than last. These liquid assets are comprised in the items in the balance-sheet of cash, bills receivable, payments to Messrs Bass and Co. in advance, sundry debtors, stock, which is worth every shilling it is put down at, and freehold land and buildings, put down at £77,000, but worth a great deal more than is shown in the books to-day.

Mr. Jeremiah Colman seconded the resolution, which was carried unanimously.

Answers to Correspondents.

****** A Key to these Answers will be posted early each week to Subscribers of ONE GUINEA per annum, 11s. for six months, or 5s. 9d. for three months.***

Deposits against future queries may be lodged with the Publisher.

H. D. R.—A pure "spec" in present circumstances, but should the trade dispute be settled then a sharp rally is probable enough.

Anxious.—These shares are speculative, because the expenditure of capital has been excessive, and we fear the price must go lower yet. In the present state of the industry we fear your broker's advice is about the best that can be given,

Felix H.—Firm believed to be good for all its engagements and quite fair dealing, but it has been mixed up with some rather disastrous promotions.

D. H. C.—You are right so far as the current revenue goes, but we were thinking of the capital. There is no reserve, no stock to speak of, little cash and we fear the properties are over valued, since only ½ per cent. deducted for repairs.

H. E. W.—(1) This baffles us altogether, but your information is probably right. In either event we should not buy in the present condition of the market. (2) After a recent experience we dare not name a figure, but we should not think of buying within 35 per cent. of the present figure.

R. S. J.—(1) Business is a good one, and with the trade improving the ordinary shares seem a fair purchase. (2) We should be disposed to wait a little in view of the present traffic returns. (3) Both good at present, but on the whole the deferred is cheaper. (4) Quite speculative, but has chances under the present administration. (5) No; too much new capital wanted.

O. E. G.—Your proposition seems a tempting one, but the shares held are in one of the best enterprises of the kind in existence. Still, if you have a good profit you might sell part and make the exchange proposed.

Safety.—(1) These are not very marketable and they are only a second charge on the property. We should not select them as an investment. (2) Good of their class, but are redeemable by annual drawings. (3) Also good, and likely to improve on their merits. Difficulties in Canada might affect them. (4) Another rather unmarketable stock. There should be sufficient cover for this issue, but it is redeemable by drawings at 102½, commencing in about two years. (5) We know of no public issue of this description. Can you send further particulars? Before accepting any of these would it not be well to check the prices asked?

R. L.—We don't think you should sell now as you have paid for the shares. Traffics are poor as the crop is delayed, and is also short.

Scottish American Mortgage Company.—In pursuance of the scheme adopted in July, 1906, the directors are offering to the holders of partly-paid ordinary shares the option of paying up in full in advance of calls, when the shares will be split into one fully-paid 4½ per cent. "A" preference share of £8 and one fully-paid ordinary share of £2. The total number of shares to be dealt with in this way is limited to 9,000, which will bring the total of the "A" preference stock up to £218,376.

The directors of the London City and Midland Bank announce with much regret the retirement of Mr. Arthur Keen from the position of chairman and director. Mr. Keen, although recovered from his recent illness, wishes to be relieved from some of his more arduous duties. The directors desire to place on record their high appreciation of the services he has rendered to the bank. Mr. E. H. Holden, M.P., managing director, has been elected chairman.

MINING RETURNS.

Antenior (Matabele).—Crushed 822 tons, 203 ozs.; cyanide 400 ozs., 25 ozs.

Brilliant and St. George United.—Crushed 719 tons; value, including concentrates, &c., £3,498.

Brilliant Gold.—Stockholm: 846 tons, £2,117

Brilliant Extended.—Crushed 3,314 tons for £6,748.

Briseis Tin.—Shipped 15 tons of tin, including 7 tons on account of New Brothers Home No. 1 Company.

Carrington's United.—171 tons smelted; 35 tons matte roasted for 9 tons copper; 41 tons matte on hand.

Camp Bird.—Crushed 7,111 tons, 6,744 ozs.; and approximately 500 tons of concentrates. Received from sales: bullion, $120,721; concentrates (389 tons), $14,327—$135,048; profit, £15,548.

Central Chili Copper.—154 tons copper.

De Lamar.—Crushed 2,700 tons, $31,190; profit, $770.

Dolcoath.—Crushed 6,543 tons; black tin sold, 106 tons; slimes 10 tons; amount, £9,135; average prices, £80 10s.; slimes, £54 1s. 4d.

Duff Development.—Total for week, 101 ozs.

Eaglehawk Consolidated.—Crushed 850 tons, 150 ozs.; cyanide, 97 ozs.

Foldal Copper and Sulphur.—Ore produced, 901 tons; ore sorted from tonnage already published (including 85 tons under-estimated for December), 3,281 tons. Ore shipped, 6,570 tons.

Forbes Rhodesia.—Veracity: Crushed 586 tons, 277 ozs.; cyanide, 475 tons, 77 ozs. Dumbleton: Crushed 231 tons, 47 ozs.; cyanide, 250 tons, 9 ozs.

Kelly's Queen Block.—Treated 897 tons; value, £2,161,

Mexico of El Oro.—Crushed 6,221 tons; value, U.S., $75,156; profit, $31,158.

Oroville Dredging.—Gross returns week ending February 3, $17,200.

Rhodesia Matabeleland Development.—Darling Downs (tributed) for December:—Crushed 605 tons, 135 ozs.; value, £512.

Theta.—Crushed 1,930 tons, 249 ozs.; cyanide 1,320 tons, 92 ozs.; total value, £1,130.

Vogelstruis Estates.—Milled 7,900 tons, 1,947 ozs.; tailings 5,750 tons, 508 ozs.; total, 2,455 ozs.; profit, £190.

Whim Well Copper.—Shipped 64 tons copper ore, 26 per cent.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Cleator and Workington Junction.—4 per cent. per annum on the ordinary stock for half-year ended Dec. 31, carrying forward £414.

Cockermouth, Keswick, and Penrith.—At the rate of 4¼ per cent. per annum for half-year ended Dec. 31.

Quebec Central.—Full interest on the 7 per cent. income bonds for the year 1907.

MINES.

Broken Hill Proprieary Block 10.—1s. per share, payable March 25.

Great Boulder Proprietary.—9d. per share, on account of year 1907.

Mysore Gold.—Balance for 1907 of 5s. per share, payable March 12.

Nundydroog.—Balance for 1907 of 1s. 2d. per share, payable March 20, making 3s. 6d. per share for year.

MISCELLANEOUS.

Adelaide Electric Supply.—At the rate of 6 per cent. per annum for half-year ending Feb. 29.

Bank of British North America.—30s. per share and a bonus of 10s. per share, making 7 per cent. for the year, payable April 3, transferring £20,000 to reserve, £20,000 to bank premises account, and carrying forward £24,000.

Bournemouth and Poole Electricity Supply.—Final on the ordinary shares at the rate of 9 per cent. per annum for half-year ended Dec. 31, making 7 per cent. for the year.

Broken Hill Water Supply.—4½d. per share, payable April 1.

Hoare and Co.—2¼ per cent. on the "A" preference shares.

International Investment Trust.—At the rate of 3 per cent. per annum on the deferred stock for year ended Jan. 31.

North's Navigation Collieries (1889).—Further of 5s. and a bonus of 5s. on the ordinary shares for half-year ended Jan. 4, making 15 per cent. for the year.

River Plate Trust Loan and Agency.—Further 13 per cent. on the "A" shares, making 21 per cent. for 1907, and 4 per cent. on the "B" shares, making 6 per cent. for year, placing £50,000 to reserve.

Spencer, Turner and Boldero.—On the ordinary shares at the rate of 9 per cent. per annum, making 7 per cent. for the year ending January 15, placing £5,000 to reserve, and carrying forward £19,400.

W. B. Fordham and Sons.—Final at the rate of 5 per cent. per annum for half-year ended Dec. 31, making 5 per cent. for the year.

W. T. Henley's Telegraph Works.—On the ordinary shares of 15 per cent.

Water and Gas Debenture and Share Investment Trust.—10 per cent. on the ordinary shares for the past year.

Bank of Liverpool.—The directors have elected Mr. Isaac H. Storey, of Lancaster and Ambleside, and Mr. Oswald Dobell, of Liverpool, to be directors.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 530. SATURDAY, FEBRUARY 29, 1908. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

The Investors' Review.

The Army and Navy Estimates for 1908-9.

It would be ungracious to deny that the present Government is making efforts to economise in the cost of the offensive and defensive home fighting forces of the Empire, and in spite of the increase of £900,000 in the navy estimates for the coming year it must not be forgotten that the total charge laid upon the revenue thereby will still be £4,750,000 less than that for 1904-5. A slight offset is also provided against this increase in the navy estimates by a reduction of £301,000 in the army estimates, whose total has been brought down to £27,459,000. Altogether, however, the home budget for the coming fiscal year has still to bear a charge of almost £60,000,000 on account of the two branches of imperial fighting services, and if we add in the cost of the Indian army, thrown upon the poorest people in the world, the military burden of England and India for the coming financial year will be at least £78,000,000. Nor is this the whole tale, for during the eight years ended with March 31, 1907, about £35,000,000 has been borrowed by our Governments for military and naval purposes in addition to the expenditure provided for out of the revenue, viz., £13,893,000 for military works and £21,034,000 for naval works. It is, however, a point much to the credit of the present Government that this system of leaning on usurers in order to strengthen the fighting apparatus of the Empire has been much diminished since it came into office. To what extent borrowing has been resorted to in the year now closing we do not yet know, but in the past year the outlay on military works from borrowed money was brought down to £300,000 as compared with £3,500,000 two years before, and the borrowing for naval works came down to £2,398,000 against £3,453,000 in 1904-5. But until we know to what extent borrowing will have to be resorted to in the coming year we cannot be sure that the figures now put forth by the two Secretaries of State tell the whole story any more than they have done in past years. And in any event, an outlay of £60,000,000 per annum upon the army and navy to be provided for by the taxpayer is more than the country can permanently bear. It only stands up under such a crushing load now because of the help given to it by its investments abroad, the interest received upon its Indian, colonial, and foreign securities of all descriptions. That is precarious as a permanent foundation for national prosperity in the very best of times, and in the period of reaction upon which we have now fully entered disappointments and failures are sure to arise, the effect of which will be to throw back upon the home population more and more of the duty of finding all this money out of its own earnings. It cannot do that for long, and by-and-by, whether permanent officials and political chiefs like it or not, these estimates will have to be cut down in all directions.

As being the biggest, let us look at the navy estimates first. They have gone up by £900,000 over the total for the year drawing to an end, and in his able and cogent explanatory memorandum Lord Tweedmouth gives only too good reasons for the belief that still higher figures must be reached in future years. Much of the growth indeed is automatic, and the product of past generosity in legislation and of engineering and other inventive zeal in augmenting the numbers and size of our

vessels of war. Quite £500,000, for instance, has had to be provided suddenly to pay for cooling apparatus to be applied to the magazines containing cordite on board ship. Explosions on French ships of war gave warning, and made this outlay imperative, and indirectly the cost of furnishing the Navy with stores of this dangerous kind has been increased by the necessity the new explosive has laid the Admiralty under to destroy the old stocks of it. Then the Cunard subsidy for the *Lusitania* and *Mauretania* is now payable to the full amount of £150,000 per annum, and the cost of coal has risen to an extent which adds £284,000 to the coal bill, while the annuity created to pay off the large debt contracted for naval works now demands £1,264,000. No efforts at economy can cope with automatic increases of this kind which extend to pensions, up £70,000, higher pay and greater cost of upkeep; for the more ships of war we provide the more money must be spent in maintaining them in a state of efficiency. It is thus only upon the construction part of the programme that anything approaching savings can be made, and even there very little can be done until we either alter our policy and slow down or abandon the fashion of large battleships which, instead of being a strength are, in our opinion, emphatically a weakness to the navy. Between April 1, 1907, and March 31 in the current year, 26 new vessels will have been added to the navy including one battleship, and we should like to see an exhibit of the relative cost of the different classes of vessels embraced in this number. How many torpedo boat destroyers go to the cost of one battleship, whether in the original building and equipping or in after upkeep? There are, furthermore, 60 new vessels in course of construction, including 7 battleships, 18 submarines, 10 torpedo boat destroyers, 20 torpedo boats, and 4 armoured cruisers. Again, we should like to know whether the cost of the new battleships will not equal, or almost equal, that of all the other 53 vessels put together, except, perhaps, the 4 cruisers. The more these battleships are multiplied, the higher must become every item of working cost in the navy. Coal, stores of every description, repairs, ammunition, and armaments, must all be provided on a larger and more expensive scale. It is claimed by Lord Tweedmouth that the construction programme for the coming year is to be reduced by £554,798, and he contrasts this figure of £7,545,202 with the maximum reached in 1904-5, which was £11,654,176. The contrast is striking, and eminently to the credit of the present Government and its officials at the Admiralty, but the bill must go up in other directions for the reasons given, and we must look for a complete change in the spirit and ideas now dominant at the Admiralty before we can hope for any material lessening in this one crushing burden. Why, but for the zeal of the inventor and armoured plate and gun manufacturer—a zeal that often lures us into spending millions on new inventions—should our navy still cost us £11,000,000 more than it did 10 years ago? Nothing has changed for the worse in the world, no other Power has overtaken us in building vessels of war or is ever likely to overtake us. We can build faster than any other nation on earth, for we have the finest shipbuilding facilities in the world. Why then this foolish and trembling haste to provide for dangers that do not exist outside the superheated imaginations of the terror-stricken alarmist? With increasing emphasis the democracy will ask this question, and will refuse to be put off with evasive answers as the progress of industrial and commercial reaction increases its poverty.

About the army estimates there is little to be said. The great part of Mr. Haldane's very able memorandum is made up of explanations of his change of policy, descriptions of the effect of this, that, and the other new departures, and an elaborate exposition of the Cardwell system and its beauties. But here also it is to be noted that the expenditure is not fully stated in the estimates. Mr. Haldane, however, sets forth, and the exhibit is welcome, the position of the borrowing for army expenditure and shows that the average annual amount for the three years ending March 31, 1908, will be only £430,000 per annum as compared with an average of £2,539,000 per annum in the three preceding years. There is thus a reduction of £2,109,000 per annum shown in the expenditure of borrowed money. But why any borrowing at all? Surely it would be more to the purpose to devote a portion of Mr. Asquith's budget surplus to meet military and naval "works" expenditure hitherto provided for by increases in the national debt, than to keep alive a system ruinous in the long run to the credit of any nation however wealthy. Some extra charges are involved in the development of the new territorial forces scheme; pensions are going up here as everywhere else, and in the matter of pay likewise the increase in expenditure may be said to be more or less automatic up to a certain point. But the garrison in the Transvaal is to be reduced, and that should bring some relief to future military budgets, especially if these territorial forces should really prove effective in providing the nation with a reserve of efficient man-slayers that could be freely drawn upon in any emergency. The more such a reserve can be depended upon, the less necessity should there be for the maintenance of a large standing army, and we are glad to see that the numbers of this army are to be reduced by 5,000 men in the coming year. This will lead to a reduction of £413,000 in the pay or wages of the regular army, but against that an increase of £443,000 is imposed by the territorial forces scheme, and the nett result of all the changes is a decrease of only £301,000 in the cost of the army, exclusive of what may have to be borrowed. The total is, therefore, still nearly £27,500,000, and ten years ago it was barely £18,300,000. Our army and navy together cost us only £40,359,000 in 1897-98, and that was an increase of nearly £7,000,000 upon the total for 1892-93. Now the total will be quite £60,000,000, everything included, and the trade of the nation is falling back, will probably continue to diminish for at least the whole period of the coming budget year. The prospect ahead is therefore rather wintry, and we do not wonder that the Protectionists are making moan and moving all the engines of public opinion they know to get their irksome share of the public load hitched on to the shoulders of the poor.

The Finances of the Stock Exchange.

After all the root of the mischief lies in the Imperial magnificence with which the representatives of the Stock Exchange proprietors have spent money and paid away earnings in dividends. During the last 21 years, the period ended March 25, 1907, dividends to the amount of £3,202,500 have been distributed on a share capital of £240,000. In 1904-5 the dividend distributed was exactly 100 per cent. or £12 of dividend upon the £12 paid share. One has only to look at the record to see how the money has flown, and also to note the effect of the wild abandon of market and nation to the attractions of the African mine and finance share gamble which began to grow uncontrollable in 1895. Up to that time the highest dividends paid on the Stock Exchange £12 share had been £6 10s. for each of the years 1889-90 and 1890-1. The succeeding four years down to and including that ended March 25, 1895, saw only £6 per share or 50 per cent. distributed, but in 1895-6 and the two succeeding years the shareholders got £7 10s. per share per annum, and in 1898-9 the distribution rose to £8. Next year it rose to £8 10s., and for the four years ended March 25, 1904, £9 per share was each year handed out. Then followed £10, then the £12 already mentioned, and last year £11. We have not the figures sufficiently complete for earlier years to enable us to say what the dividends were before 1884-5, but the shareholders then got only £4 per share or 33⅓ per cent. upon their investment. It must not be overlooked either that a good deal of the original paid-up capital was found by appropriating some of the dividends. The old or original shares, of which there were 400, were paid up to the amount of £515 per share in 1877, and of that total £210 had been furnished out of past profits and only the balance paid or due by the holders. At that time the paid-up capital was only £206,000, but it has been £240,000 for a quarter of

a century back or more, and if the shareholders had been thoughtful of the interests of the market in their day and generation the great revenues which came with the enlarging trade, the year of wild speculation and of increasing international business would have been utilised in great measure for the good of the members as a whole instead of being dispersed in dividends which really benefited very few. Notwithstanding the great efforts made to distribute the proprietary capital so as to make every member of the Stock Exchange also a proprietor, the number of shareholders was only 1,753 on March 25 last, an increase of less than 750 on the number shown at March 25, 1887.

In 1876 the Stock Exchange had little or no debt. Its balance-sheet did show a deficiency on capital account amounting to £40 per old share, but the borrowing did not begin until some years afterwards, and in 1887 the debenture stock outstanding was only equal to the amount of the paid-up capital—*i.e.*, £240,000. By that date, however, the free revenue, as it might be called, had risen from a mere £48,156 in 1877 to £97,951, and although a large proportion of this revenue came from entrance fees paid by members, from money that should never have been treated as current revenue at all by any body of men imbued with some regard for the future, the managers distributed the whole of it, or almost the whole, in dividends. If they had not done this, if instead they had limited the dividends to, say, £4 per share or 33⅓ per cent. on the paid-up capital, there would have been £1,500,000 of so-called revenue accumulated during the past 21 years with which to pay for all the improvements and extensions made in the market and all the acquisitions of new property, and something over to provide a guarantee fund in the interests of the outside public clients of the market; in the interest also of the members themselves, who could have been much more effectually protected from marauders, much better controlled also in their methods of doing business and in their handling of questionable speculative adventures, if they had been members of a body who mutually guaranteed each other's honesty and solvency towards the public. Instead of taking a course of this kind, the proprietors of the Stock Exchange spent all they got and borrowed money in order to effect the developments and extensions, limiting their saving propensities to the creation of sinking funds for the extinction of the various debenture issues, and, in quite recent years, to the accumulation of a proprietors' reserve fund of £200,000.

And what are the consequences? The whole body of membership, aggregating over 5,000, exclusive of some 2,000 clerks, is in a helpless position alike against outside competition and against the malpractices amongst their own number. A period of reaction has set in, destined to last for years yet, during which not only will the numbers of those seeking to become members diminish, but the numbers of those already inside who disappear through misappropriating the securities of their clients or through inability to pay their subscriptions and live will increase. The action of the board of managers in recent years will contribute to bring about a diminution in the numbers of new members, and of old also, because the entrance fees and subscription rates have been augmented, so that newcomers now pay an annual subscription of twice what the dwindling cohort of old members pay, and middle-aged members of many years' standing are now obliged to pay £31 10s. per annum against the £21 paid by the old men. At the same time, the entrance fees have been raised with such effect that the average income from this source alone for the five years ended March 25, 1906, was £110,284 per annum. In the past year it had fallen to £42,095 as compared with £273,788 in the year ended March 25, 1905. A reduction in dividends is, therefore, inevitable, and may be continuous, for in the meantime charges, working expenses of all kinds, have risen, as well as the burden of the interest and sinking fund upon the two issues of debentures and for leasehold redemption. Working expenses in the past year came to £124,300, and in the preceding year to £120,310, whereas in the year ended March 25, 1887, the total was under £58,000, and in 1877 it was less than £19,000. With expenses at a high figure, a figure that cannot be much reduced for years to come, with the number of members falling away, and the revenue therefore declining, the proprietors have in prospect a serious diminution in their dividends, and we hope they are prepared to regard this as a painful but necessary preliminary to the introduction of reforms that may not only help to alter for the better the whole character of the government of the Stock Exchange, but to initiate changes in the methods of dealing with the revenue that will in time do much to restore to the market its pristine supremacy.

Many years ago proprietary life insurance companies were obliged in their best interests to pass a self-denying ordinance in virtue of which their share of the profits on the business was limited to a definite proportion, generally 10 per cent. Had they not done this they would have been in a comparatively short time beaten out of the field by the mutual offices. In like manner the Stock Exchange is on the way to be, at least partially, beaten by the free outside broker unless the proprietary body is prepared to make large and permanent sacrifices in order to give the market back its commanding position, to bestow upon it something it can offer to the outside client as guarantee of good faith and of immunity from loss. If dividends go back to £4 or under per share the recoil will chasten the minds of proprietors and prepare them to assent to such a scheme as would set aside at least the whole of the entrance fees to constitute a guarantee fund and limit the dividends for all future time payable upon the proprietors' capital to, say, 35 per cent. per annum. Were this done, in a few years' time the Stock Exchange might be in a fair way once more to a complete mastery over the whole business of dealing in public securities, certainly over all the good business. It would be able to offer safeguards against loss through fraud or malversation which no outside dealer or group of dealers could in any way imitate. Also the governing body would have obtained a control over the market habits, usages, and systems of dealing so effective as to be in a position to put down abuses at the very beginning.

Short of some change in this direction, we really do not see what is going to happen to the Stock Exchange. Its position, whether as a market or as a joint-stock undertaking, must go from bad to worse. It will never as long as stock dealing exists be other than a powerful body of men, but it will not be able to command anything like the whole of the business to be done, and in the course of years may not control even half of it. The membership must dwindle, the spirit go out of it, and the outside rival triumph more and more. So strong is the position of the outsider at the present time, because of his liberty to advertise and circularise and his complete freedom in dealing for his clients, whether honestly or the reverse does not matter, that we are surprised whenever the fact obtrudes itself to see the tenacity with which members of the Stock Exchange cling to it even when they are starving. If a body of from five hundred to a thousand of the present membership which is eating its heart out, were to club together and go outside to commence an open market, what is there to hinder them from succeeding? There are halls in the City they could procure at a moderate rent, and they should have enough money left amongst them to make a beginning with a mutual guarantee fund such as we have indicated. They would be free to spread the attractions of their method of doing business before the world without restraint of any kind; and one day something of this kind will happen unless the jobbers and brokers refrain from squabbling about "double commissions" and "shunting" and the "uselessness" of the one or the other class of member, and set themselves to work with earnestness and singleness of purpose to rescue the Stock Exchange from decay.

Economic and Financial Notes.

The Finances of the New Zealand Dominion.

According to a telegram which we find in an issue of the Christchurch newspaper *Truth*, of January 13 last, the Premier of New Zealand endeavoured to explain away or to answer some criticisms of ours on the finances of the colony. We asked, in dealing with the budget, where New Zealand was going to raise the £2,215,000 it had to borrow in its current fiscal year, and Sir Joseph Ward replied that only £1,000,000 of this sum was "required by loan," the rest being in hand or lying ready to be transferred from the consolidated fund, which will furnish £800,000. Sir Joseph added that the financial results of the year have already showed the Government to be more than able to make the transfer. This is not an answer, but an evasion, as is aptly demonstrated by another New Zealand newspaper, *The Dominion*, a most promising and ably conducted new organ of independent opinion recently started in the city of Wellington. The answer it gives to the Premier's misguiding statement is so apposite and complete that we make room for it as being a better exhibit of the facts illustrative of the way in which New Zealand is being swamped in debt than any we could furnish. There is no explanation of these figures other than the one repeatedly suggested in The Investors' Review, viz., that the so-called "public works fund" and the "consolidated fund" are the fruit of borrowings in one form or another. Long ago the sinking funds of the New Zealand debt were annexed, and the money which should have accumulated in order to pay off debts at maturity was utilised "in the business," to use a common phrase. Money is also borrowed through the land settlement schemes, and the result is seen in the appalling growth of the debt laid upon the sparse population of this new dominion, a country that ought to have been one of the best and most comfortable in the world. Every year, it may be added, the late Mr. Seddon "required" only a million by loan in his annual budget, and each year the real addition to the debt was usually between two and three millions.

The following table will show the annual "surplus" for every year since 1891, the public debt in each year, and the yearly increases in the public debt:—

Year.	Surplus. £	Gross Public Debt. £	Increase. £
1891	143,965	38,832,350	164,400
1892	165,574	38,713,086	117,282*
1893	283,779	39,257,840	544,772
1894	290,238	39,826,415	568,575
1895	180,024	40,386,964	560,549
1896	215,559	43,050,780	2,663,816
1897	354,286	44,366,618	1,315,838
1898	421,144	44,963,424	596,806
1899	495,861	46,938,006	1,974,582
1900	605,351	47,874,452	936,446
1901	427,213	49,591,245	1,716,793
1902	270,488	52,966,447	3,375,202
1903	303,905	55,899,019	2,932,572
1904	345,835	57,522,215	1,623,196
1905	761,036	59,912,000	2,389,785
1906	788,795	62,191,404	2,279,040
1907	717,825	64,179,040	1,988,000

* Decrease.

It will thus be seen that the gross public debt has increased by no less than £25,465,972 since 1892. During the past 14 years the increase has been £24,921,200. The increase during the first half of those 14 years was £8,616,612; the increase during the past seven years 1901-7 has amounted to £16,304,588, or almost twice as much as the extra liability incurred during the seven years preceding. Instead, therefore, of a slackening of borrowing—instead of even a maintenance of the old million-a-year rate—we have had an astonishing intensification of the borrowing policy. No more complete abandonment of Ballance's "self-reliant policy" could be imagined. Against these depressing figures—which mean an increased annual charge of about 13s. per head of the population—must be set the reproductive and permanent works that have been constructed, and the increasing value of some of them. But no prudent man can contemplate such an enormous debt, and by its side the preposterously small sinking fund—amounting to only £1,167,389 on March 31 last—without feeling that it is time to call a halt. The annual charge upon the country's loans has increased from £1,837,169 in 1893 to £2,444,885 in 1907, an increase of £607,716 in the annual burden. Many of the works constructed out of loan money are gone, many of them are unreproductive. The nett revenue of the railways last year amounted to only £3 3s. 10d. per cent. on capital. Year by year the Dominion, although it has continued to enjoy a wonderful prosperity, has increased the number of hostages, as it were, that it has given to fortune. During the current year 4 per cent. loans totalling £2,065,788 fall due. No doubt the Premier will arrange their renewal or conversion. Is it not possible to utilise some of the "surplus" to reduce the debt, or to increase the sinking fund? With this "surplus" the public ought rightly to be asking for remissions of taxation. The public will forego that right gladly if the Government will celebrate the record "surplus" by inaugurating an era of "going slow."

Exploration Company.

It is not customary for the directors of this in many ways remarkable enterprise to burden their annual report with too much news, and on the present occasion there is no departure from the usual practice. We used to complain at the paucity of the information given, but we can imagine the shareholders offering up a silent prayer that their masterful board should favour brevity and not length. Even two pages of the dismal stuff they have to utter are enough to drive proprietors to distraction, and anything more would probably lead to a demonstration in Cornhill. The report is full of regrets about serious and universal depression, losses sustained, depreciation in securities, unsettled conditions, hopes unrealised, until one begins to think that nothing even passably good can be left in the world. Almost a transformation has taken place in the position of the undertaking during the past twelve months, and the changes are so important that it is necessary to begin at the beginning and take the points *seriatim*. Some nasty losses have been sustained in the course of realising certain securities, and the market depression affected the value of practically all the company's investments. Shares in copper-producing companies have naturally been prominent in the fall, and certain interests referred to, but not described in the last statement, actually acquired during the twelve months, landed the Exploration Company in losses to the tune of £85,000. The wise men of Cornhill seem to have got in at the top, but not, so far, out at the bottom, as we gather that these unlucky investments are still held. "This depreciation is due to the unsettled condition of the copper industry, which has caused the companies in the United States in which this company is interested to temporarily suspend operations. As, however, these investments were made on the basis of a selling price for copper of about £65 per ton, the directors are confident that when these companies resume production the depreciation will be recovered." Yes, yes; and all will appreciate the directors' shrewdness, but as copper was rarely below this figure during 1907, and ofttimes exceeded the £100 mark, how comes all this loss?

From North to South America is not such a very far cry, and there more trouble is encountered. It appears that the development of the Maravillas Copper Mines (the name is evidently mentioned by accident) did not give the results hoped for, or justify the purchase of the property, so the option has been abandoned, and the expenditure of the last three years, £18,429, written off. "The depreciation in the other investments is due to the general conditions prevailing during the past year, which it is unnecessary for the directors to explain." Quite. But the board is evidently proud of its Mexican connections, and waxes enthusiastic over the Mexico Mines of El Oro. The reduction works were completed and commenced operations in October last, and a first dividend may be expected during the current half-year. The company can do with it. Another old friend, the El Oro Mining and Railway, continues to earn "steady and substantial profits," and the weakness of this company's shares is particularly unfortunate, because it arouses a fear that some at least are doubtful about the permanence of these steady and substantial profits. But the Tomboy is evidently all serene, as it also continues to earn large profits, and the developments are eminently satisfactory. In the circumstances it would be more than interesting to learn the respective holdings in these enterprises. During the year the company has disposed of a portion of its holdings in South African

mining shares, but retains its investments in real estate in Johannesburg, and the policy speaks for itself. There is a "sort of a" market for shares, but probably none at all for the real estate. This brings us to the balance-sheet, and the changes therein are certainly startling, almost bewildering. Twelve months ago the directors were called upon to write down the investments to the tune of £98,726, and were able to do so, since some fine profits, roughly £120,000, had emerged from the unknown, and there was a nice fat sum brought forward. But how different are things now!

The depreciation for the past year is £158,418, and there is nothing to make it good—no premiums, no reserves, and no profits—and sundry investments, which are up £69,188 on the year to £715,247, must perforce stand in the balance-sheet at a fictitious valuation. Proceeding, we find that all the contango loans running to £88,128 at December 31, 1906, have been called in, the cash has about halved itself at £6,189, debtors are only £27,211 against £52,986, and likewise creditors have been reduced from £39,408 to £11,009. Before leaving the balance-sheet we may point out that the freehold property in Cornhill valued at £150,000 has been mortgaged for £100,000, and that £50,000 has been borrowed from bankers. Now for the dismal profit and loss account. Gross profits for the year are put down at £11,083, goodness knows how arrived at, a drop of not quite £108,500—think of it—but transfer fees were a lot better at £87, in all £11,170 against £119,613. Directors' fees were only £2,400 or under 25 per cent. of the revenue, administration took the trifling sum of £13,331, sundry investigation expenses were modest enough at £9,468, and the £18,429 written off on account of Maravillas raises the total outgo to £43,628 and the deficiency to £32,458 as against last year's credit of £97,974. Sum brought forward was £19,882, leaving the debit to be carried forward at £12,576. By the way, do not run away with the idea that the actual depreciation of £158,418 represented the full wastage of the year. At the annual meeting held on Wednesday, February 20, 1907, the chairman made great play with the fact that at the date of the accounts the securities held showed an unrealised profit of £121,000, which had grown to £183,685 by February 18, 1907. So the subsequent depreciation on the assets then held or afterwards acquired was £183,685, plus £158,418—say, £342,103. Add the revenue deficiency £32,458, and we get a total of £372,561—not bad for ten months. How about the Exploration Assets Company, the "unproductive" portion of the Exploration Company lopped off in 1904? What has it done during the year? Is a statement of accounts ever issued? We may hear something at the Exploration meeting on Tuesday or we may not. It may be "out of order" to discuss that company's affairs.

"Chartered" Finance and the Meeting.

Tuesday's *Morning Post* contained some very interesting statements relative to the finances of the Chartered Company, and most opportunely its City Editor reiterates and brings documentary proof to support his accusation, originally published by him in the *Pall Mall Gazette*, to the effect that a portion of the Rhodesian system of railways has been covered twice over by "first mort." bonds. Referring to the two prospectuses dated respectively March 20, 1903, and March 11, 1905, he shows that £1,000,000 of 4 per cent. first mortgage debentures of the Rhodesia Railways was issued on the former date, the money to be applied to the construction of the Bulawayo-Victoria Falls second section line, 100 miles long, and the Victorian Falls Kafue-Copper Deposits line, 250 miles long. The prospectus issued two years later called for £2,560,000 5 per cent. guaranteed mortgage debentures of the Mashonaland Railway Company, and stated that these were to be secured by a first mortgage on the main line from Kalomo to the Rhodesia Broken Hill mine, a distance of about 250 miles, and the proceeds were to be devoted to the construction of that line. At that time the nearest station of the Mashonaland Railway was about 670 miles from Kalomo, and the projected line to which the money was to be devoted was the same as that for which the £1,000,000, or part of it, was raised two years before. The Kafue line of the Rhodesia Railways has never been built, but the Broken Hill line, as Mr. Still explains, is exactly the same length as that mentioned in the earlier prospectus, and the map shows that there is nothing to choose between them. His contention seems, therefore, well founded that the money has been raised twice over for the same purpose, and a double "first mortgage" granted over the line from Kalomo north-west. A grave accusation of this description again and again deliberately made and supported by evidence cannot be ignored by the board of the British South Africa Company or the boards of the two railway systems in question, if any such there be.

Incidentally, the financial editor of the *Morning Post* also points out that the directors of the Chartered Company, in their latest issued report, travel away from the truth in stating that the general traffic receipts of their railways have been "progressive," and in expressing their confidence that "improvements in traffic will continue to be progressive." No reports for these railway companies have been issued of a later date than September 30, 1905, and the accounts for that period only made their appearance in December, 1906, therefore we have only traffic receipts to rely upon in testing the accuracy of the directorial statement, and this is how the facts relating to these seem to belie the board. Decreases of £55,905 in the earnings of the Mashonaland Railway and of £76,503 in those of the Rhodesia Railways, comparing the later figures with the earlier of corresponding dates, do not appear to betray "progress," but language may have a special and peculiar meaning in the offices of the Chartered Company:—

	Mashonaland Rly. £		Rhodesia Rlys. £
1905.			
September	30,530	.....	54,346
October	28,428	.....	50,535
November	34,560	.....	52,433
December	34,222	.....	57,292
	127,740	.....	214,606
1907.			
September	17,991	.....	32,796
October	19,158	.....	30,976
November	16,747	.....	35,719
December	17,939	.....	32,612
	£71,835	.. ...	£138,103

It is on properties developed in this singular fashion that the Chartered Company is committed to guarantees of interest amounting to £522,659 per annum. At present they say "only a portion" of this interest is earned by the railways, and that also seems to be Chartered language. We do not believe that a penny of this interest is really earned now, or ever has been squarely earned by these railways. And the immediate impelling cause of the increase of 50 per cent. in the company's share capital, voted "unanimously" at Wednesday's meeting after the usual flag and drum display which has become stale by often repetition, is the necessity of providing money to meet these guarantees. No wonder, therefore, that the mere million now asked for, and to be paid up "too soon," as a foolishly discontented shareholder intimated, must be had at all costs. It will not last long. There is no end to the number of millions required if the show is to be kept going, and the valiancy with which the Duke of Abercorn, whose speech as mouthpiece of the board was read by Mr. Rochfort Maguire, scorned the very idea of any help from the home Government, was but one more illustration of the truth of the fable about the fox and the grapes. More than this, it seems to be quite unnecessary to say anything about the meeting. The shareholders have decided to find the money, and that is their affair. Far be it from us to interfere with their decision, or to hint that the money is already lost. Two sentiments no doubt govern their readi-

ness—the "Imperial" sentiment *à la* Cecil Rhodes, and the gambling sentiment. Each man who now proceeds to find his quota of the new capital does so mainly in the hope that such a rise in the shares may be engineered as will permit him to get out of part at least of his holding at a profit, and while waiting he can indulge in dreams about the grandeur of the Empire of which he is part owner, and nourish his imagination on the great things in the way of introducing a selected waif population to be done by the Salvation Army.

Employers' Liability Assurance Corporation.

A brief note about this company's business appeared in last week's issue, and we now have the report before us. It does not throw much more light upon the company's affairs, we regret to say, and the form of the accounts will have to be materially changed before we really know how it is getting on. In the matter of premium income, a fine expansion of £172,064 is shown, the total for the past year being £963,256, and the "reserve" was strengthened during the year by £137,500, being the premiums received on the 1906 issue of shares. But we cannot tell what it costs to conduct this business, because commission is hidden up with losses paid and outstanding, these confused items making a total outgo of £780,219 against the above-mentioned premium income. In addition £80,358 was spent on office charges, directors' fees, salaries, pensions and house expenses, &c., advertising and other items, so that altogether only £102,679 of the premium income was left out of which to make provision for unexpired risks or to make additions to the reserve and to pay dividends. To be sure the company received £45,465 as interest and rents, and made a profit of £3,320 on exchange, while transfer fees gave about £58, and profits on sale of investments £1,257, but this altogether amounted to only about £50,000, and the dividend of 6s. per share, or 20 per cent. takes £40,000, leaving £901,279 to be carried forward, including reserve, money for dividends and everything. This is an increase of £253,000 on the gross balance brought in, without counting the share premium money, but of only £120,000 if it is added in. In the mere interest of comparative statistics, we hope the directors of this company will see their way to increase the information given. They might also take some early opportunity to explain why branch and agency balances should stand at the unpleasantly large looking total of £159,572 over and above the £28,342 set against outstanding premiums. But the truth is the accounts are far from being either full or explicit at any point, and they will have to be amended and improved. The business is from its nature a speculative one, and we can quite understand that there should be a reluctance felt to give information too generously until it could be seen how the enterprise promised and took shape; but this company is now 27 years old, its management has been conspicuously resourceful and enterprising throughout, and it has come triumphantly through its infancy and first youth. Now, therefore, the time would seem to have come to systematise and expand the revenue account and to clarify the balance-sheet in such a way as to enable every shareholder and every client to follow and note the progress made from year to year. What is the amount of the real reserve, for instance?

Yorkshire Penny Bank.

It is much to be wished that a little fuller information were given about this enterprise, and although its business seems to have run quite smoothly for the past year there is an unpleasant uniformity in the results, as well as the meagreness in the profits. Last year the overturn in receipts and withdrawals aggregating £21,491,000 resulted in an increase of £6,769 in the total at the credit of depositors in the bank's books, said total being £16,576,334. Compared, however, with the previous year, this total shows an increase of £424,898, and the apparent discrepancy is made to disappear by adding the whole of the £418,129 earned as interest on deposits to the total due. Does interest thus credited become part of the capital deposited, and in turn produce compound interest of the depositor? The profit on this great overturn is stated to be £12,921, all of which is added to the reserve fund, raising it to £429,383, but how or at what costs the profit is earned we are not told, because the balance-sheet is of the most meagre and unsatisfactory description, and we fear there must be a considerable depreciation on the investments held, the total of which in marketable securities or mortgages is now £15,988,738 or £144,938 more than at December 31, 1906. In this handsome aggregate £1,308,844 is represented by Indian and Colonial Government securities; £4,647,545 by British Railway stocks, debenture, preference, and guaranteed; £1,724,056 by stocks and bonds of English joint-stock companies or "corporations," and another £1,279,930 stands against English Municipal Corporation, District Council, and Union loans, while £2,930,202 is represented by 1,062 first mortgages, or an average of nearly £2,800 each. Cash in hand, at call, and short notice, and in course of transmission from branches is entered at £879,020, and dividends, interest, and rents accrued at £150,227. That is all the information worth quoting, and it amounts to nothing without a profit and loss account, together with some indication of the present value of the investments. What is the total income from these investments? It ought to be quite £500,000 per annum; considerably more than that, indeed, if the heavy working expenses are to be covered with £431,000 left to give to the depositors as interest, and to provide "profits" for the reserve fund. The bank had 917 branches open on December 31 last, and the business must be expensive to conduct when the average amount deposited in the year is £3 1s. 1d., "exclusive of the school transfer department," and when on an average balance of £29 8s. 6d., or 7s. 11d. less than the average of the previous year, the drawings almost balance the payings in. Really more light upon this business is most desirable.

Home and Colonial Stores, Limited.

In face of the figures submitted for the year ended December 31, it is difficult to see what justification the directors have for their statement that the company's business showed a satisfactory extension and expansion. It is true they add that during the greater part of the year the market cost of some grades of tea was higher by nearly 100 per cent. than for many years past; but that fact alone will not account for the very serious decline shown in the nett profits. Even when we add in £30,000 transferred from reserve towards meeting the cost of establishing tea agencies and of special trading advertisements, whatever that may be, the nett profits were down by no less than £40,815 at £116,919. Interest yielded £393 more at £6,583, and, on the other hand, management expenses were about that much lower at £29,000, while directors' and auditors' fees were reduced by £1,617 to £5,898, but £11,205 or £1,392 more was written off for depreciation, leaving the surplus £39,827 smaller at £197,399. With the balance brought forward the disposable total amounted to £115,242 against £149,065, of which the dividends on the 6 and 15 per cent. preference and 15 per cent. cumulative ordinary shares absorbed £112,575. A year ago the "A" ordinary shares also got a dividend of 15 per cent. and £14,722 was transferred to the compulsory reserve, but so far from anything of the kind being possible on this occasion, even the sum carried out has to be reduced by £5,176 to £2,667. Yet the extension and expansion of the business were satisfactory! We fear the holders of the "A" shares will pray to be delivered from any repetition of such a satisfactory expansion. Goodwill and leaseholds have been reduced by £6,563, balance of premium on the issue of 6 per cent. preference shares, but still stand at the high figure of £671,246, and plant, &c., in spite of £11,205 written off, is only £1,089 down at £202,628. Against these, however, there are various reserves aggregating £218,759, of which £153,778, representing the compulsory reserve, is separately invested. Securities are valued in the balance-sheet at £237,909

or an increase of £14,722—but in this figure no allowance is made for the shrinkage in market values, which now amounts to £13,401 compared with £5,995 a year ago—freehold properties and trading investments, which form part of the same item, are £7,595 down at £23,547. Floating liabilities have been reduced by £12,309 to £167 616 against which debtors owe £31,104 or £29,761 less, but stocks are £8,017 higher at £440,456, and cash has risen by £35,448 to £86,027.

The East Rand Amalgamation.

The official details are out at last, and do not differ in any essential particular from the brief outline of the proposal we gave in our issue of February 8 last. The thing has been hanging over the market for a much longer time than dealers cared about, and the Kaffir Circus will be glad to see it consummated and out of the way. There can be no question that the proposals will be carried, and in view of the preponderating interest held by the East Rand Proprietary in practically all the subsidiary companies embraced in the fusion, there is a certain irony in the statement that the special general meetings to consider the scheme will be held on May 29, so that shareholders may have ample time for the consideration of the full reports, with plans attached, which the directors and general managers are forwarding from Johannesburg for distribution among the proprietors on March 26. Including the East Rand itself, the plan involves the joining up of 11 separate undertakings, and it is pretty certain that the plot—we mean scheme—has been long a-hatching. Call to mind how the path was cleared by the payment of a big dividend on East Rand shares in 1907 so as to bring up the total distributed to £920,000, beyond which the H. F. Company stands in for 25 per cent. of the parent company's profit, and Sir George Farrar's references to the immense advantages to be secured from joining hands at the annual meetings last year. In drawing up the scheme the first thing to be done was to liquidate the H. F. Company's lien on profits, and as the East Rand capital is £1,000,000, this is accomplished by the issue of £333,333, making the proportion one in four. There remain nine companies to be dealt with, and for the purposes of Exchange East Rand shares are taken at the arbitrary valuation of £3 13s. 9d. each.

Beginning with the Cason, whose capital is £525,000 —£272,568 held by the East Rand—there is to be a square exchange, namely, 252,332 East Rand shares for the equal number of Casons held by others. Angelo shares are valued at £3 7s. 6d., which will give nine East Rands for 10 Angelos, the capital being £625,000, and the amount held by the Proprietary Company £427,589. This means that the remaining 197,411 Angelos must be parted with for 180,681 East Rands, Descending the scale, Driefontein Consolidateds are to be exchanged on the basis of £2 10s. per share, which will give six parent shares for every nine, or 133,807 for 197,365, the capital being £625,000, and the Proprietary Company's holding £427,635. New Comets must be content with £1 12s. 6d. per share, and in this case £297,909 out of the £500,000 is already possessed, so that the balance of 202,091 will be exchanged for 89,057. Cinderellas can only be considered worth 10s. each, and on this basis the nearest we can get is eight Cinderellas for one East Rand—that is 21,583 against 2,927, the capital being £100,000 and the existing holding £78,417. New Blue Skys are to get one Proprietary for every four, the shares being taken at £1 each, meaning 12,176 East Rands against 44,900, the balance of the capital of £150,000 not already held. In this way the claims of seven companies have been disposed of, leaving three, and these appear to be absorbed on a different footing, no official valuation of the shares being attempted. The Angelo Deep has 623 claims and about £300,000 in cash, and for these 176,000 East Rand shares will be allotted to rank for dividend from July 1 1908. That is to say, anything paid in June next will not be distributed on these shares. The same condition is to apply to the 51,007 shares to be given for 129 claims and approximately £97,000 in cash to be handed over by the Driefontein Deep. The remaining 127 claims and £40,000 cash will be sold to the Witwatersrand Deep on similar terms. Finally, there is the Hercules Company, with the big holding of 766 claims but only £10,000 in cash, which will get 160,000 East Rands, ranking for dividend as from January 1, 1910. For the purchase of 91 claims to complete boundaries about 14,577 shares will be allotted, making the total to be issued 2,405,897 out of the proposed capital of £2,500,000, thus leaving £94,103 in reserve.

There is the scheme, and the independent shareholders have got to take it because the controlling group and its allies can ram it down their throats whether it be good, bad or indifferent. We can imagine a deep growl from shareholders of such companies as the Cason, Angelo, Driefontein, and New Comet at having to take on their shoulders several unproductive properties, and we doubt if they will be much impressed with the schedule of "advantages of amalgamation" which follows details of the scheme. As the East Rand will acquire 1,609 deep level claims, making the total 3,760, the life of the concern is presumed to have been indefinitely prolonged; but in some respects at least the transaction has a very close resemblance to a pig in a poke. There is this Hercules company which has never done any boring, but sunk an immensely deep shaft merely on the strength of favourable results on adjoining properties, and is now practically stone broke, while the chances of many other claims being profitably worked are to say the least problematical. Dividends of 40 per cent. are confidently expected from the present plant, and we are told that "only" 401,584 shares are issued for properties which have not yet reached the dividend-paying stage, but it looks as though the scheme is devised with the idea of providing a marketable share in exchange for the more or less dead stuff represented by these unproductive and, possibly, never to be dividend-earning mines.

The New York Life Insurance Company.

Can it be that this giant among United States insurance offices has mended its ways, that good has really come from the exposures of two years ago? We trust so, for the business done is so enormous, and the numbers are so great of those who suffer from past robberies, as to make it a positive relief to think that a better spirit and more honest usages have come into being with the change of management. In our issue of January 18 attention was drawn in no very complimentary terms to the first trumpet blare of the management over the company's wonderful business for the past year, and we then, on the lumpy figures given, came to the conclusion that the working expenditure was still about 24.34 per cent. of the premium income. Now comes a more detailed balance-sheet, forwarded by Mr. Wm. E. Ingersoll, second vice-president of the company, the contents of which appear to demonstrate that our guess was quite wide of the mark. Working by the new light afforded, we are led to the conclusion that the expenses incident to conducting the business have been brought down to 14.31 per cent., if we disregard the "gross decrease in book value of ledger assets, £1,080,810." If this be the true figure, or near it, then we have reform indeed. Since the good man in charge of the insurance superintendency at Albany was changed we have not been favoured, as formerly, with the annual reports of the New York State Insurance Department, and infer that he has not been allowed to spend postage on us any more. So the latest official returns with which we can at the moment compare Mr. Ingersoll's exhibit are those for 1904, and they show a ratio of working expenditure to premium of quite 23.55 per cent. Last year's totals therefore display a reduction of no less than 9.24 per cent., and represent a great change for the better, or will do so provided the policyholders reap the benefit. At present they cannot, because so much has had to be written off the value of the assets. In the past year, for instance, not only had the above-mentioned "gross decrease" in the book value of the assets to be allowed for, but in addition the "book value" of these assets had to be written down by £4,593,390. Even then the reserves appear to reach

a total of nearly £11,000,000 against £9,506,000 three years before.

We are only too pleased to note these contrasts and signs of amendment, for it has been no pleasure to us to see past criticisms in The Investors' Review on the business methods of United States life insurance companies so amply justified by events, because we have always had in mind the losses and disappointments of those who entered into contracts with them. Perhaps, however, the victims of American zeal in providing big salaries and large commissions for the great ones and the working staff of the flare order of life offices deserve less sympathy than we have been disposed to accord them, for a large part of the business done must be of the "hedge" or guarantee order. So far as we recollect, the two other mammoth offices have not followed the example of the New York Life in cultivating the small policy as a basis for credit in business, as substitute for the "bill of sale" and other devices for raising the wind on our side of the water, but none the less have their policies been employed as "collateral," as means to raise credit, to an extent far beyond anything known here. Accordingly, it is not life insurance business these companies do, so much as a credit generating business, and the people who want policies for the purpose of being able to command capital not otherwise procurable do not usually care what the desired credit generator costs them. Nor are they much concerned with the duty of making provision either for old age or for those they may leave behind them. From this point of view there are some highly suggestive figures in Mr. Ingersoll's condensed balance-sheet, no less than £15,049,204 of the company's assets being represented therein by loans upon its own policies. Three years before the amount thus advanced was only £7,173,500, but then, as the office eagerly boasts, no less than £5,602,700 was added to the company's assets in this form of policy loans during the past year, whereby the fall was doubtless broken to many a poor fellow who would otherwise have been at once overwhelmed in the crisis. Whether or not it was good for them to have this money at command we cannot say, and the business altogether is not one we are much in love with, but we hope the reduction now shown in the current expenditure will be permanent, although the policyholders last year received little more than 47 per cent. of the total income from all sources.

American Business Notes.

Last week's exhibit of the New York Associated Banks revealed a further increase in the superabundance of cash and of paper money. Also the demand for credit was larger, loans having risen by £1,744,000. Specie increased by £990,200, the stock of greenbacks by £32,800, the deposit average by £2,796,400 and the surplus reserve by £323,600. The total of that surplus reserve is now £6,434,000 against £862,000 a year ago. No wonder therefore that money or short credit is abundant in the New York open market at 1½ to 2 per cent. The supplementary statements issued by the non-clearing-house banks show a decline of £584,000 in the loans, some of which have evidently been transferred back to the Associated Banks. The stock of specie, however, is up by £212,200 and that of greenbacks by £38,200, but none the less has the reduction in the loans brought down the deposits by nearly £132,000. The aggregate reserve of these banks, however, is said to be now 25.6 per cent. of their deposit liabilities against 24.9 per cent. the previous week. How this reserve is reckoned we are not yet able to define, because the detailed exhibit made is not luminous on that point. In the case of the Associated Banks, however, the available figures indicate that one-third of the 48 banks still embraced in this category possessed a fortnight ago reserves more or less short of the statutory minimum, and we should infer that the Clearing-House certificates have not yet been all withdrawn. These expediency props to credit have not been altogether satisfactory in their working, and some loss is likely to arise to the guaranteeing group of banks through the failure of some of those of their number that were kept going by certificates and still could not pull through, indeed the Clearing-House certificate is said to have become an unpopular instrument not likely to be resorted to again, and hopes are founded upon the Aldrich Bill that before another panic comes along a currency device may have been lighted upon by means of which notes without stint can be furnished to distressed credit-mongers so as to avert a panic and ruin a community.

We have always dreaded the action of the finance trusts, most of which have sprung into existence in the United States within a comparatively brief period of time. That their operations are often harmful to honest business we have no doubt whatever. They contribute powerfuly to the inflation of markets and lend effective assistance to the large speculators in their loan emitting operations and still more in their schemes for consolidation, absorption, amalgamation, and so on. In justice, however, to the managers of these credit mills, we must admit that they stood the strain imposed by the November panic in a quite marvellous fashion. A few of them went down both in New York and throughout the Republic, but the great majority stood out the tornado and faced a drain upon their resources which beforehand almost everybody would have considered a certain prelude to their insolvency. As illustrating the stability of these trusts, Messrs. Moffat and White of New York have compiled a table setting forth the aggregate deposits of the New York and Brooklyn trust companies on August 22, 1907, and January 1 last respectively. They have worked out the percentage of decrease the comparison reveals, and this shows that many of these companies lost from 30 to 70 per cent. of their deposits between these two dates, and yet weathered the storm. The Lincoln Trust Company, for instance, paid out £3,183,600 of its deposits, or over 71 per cent., and did not fail, and the Farmers' Trust and Loan, the largest and one of the oldest and most solidly founded of all this group of companies, paid away £4,641,000 or 28.4 per cent. of its total liability on deposits without even staggering. The Trust Company of America, whose deposits amounted to £12,825,000 on August 22 last, saw this total reduced to £4,142,000 or thereby, a reduction of 67.7 per cent. That was the most severe run of all, but not a single company escaped whether large and small, and the aggregate reduction in the deposit liabilities of this group of trusts comparing January last with January a year ago was no less than £146,546,000 on the total for January 1, 1907, or less than that at January 1, 1905. Between August 22 and January 1, 1908, the shrinkage was nearly £52,000,000. How were these trusts able to meet this enormous pull upon their resources? They threw the risk of ruin, the certainty of grievous loss, on their clients. On January 1, 1907, their aggregate loans on Stock Exchange securities amounted to £131,458,000. On January 1 last this class of business had fallen to £81,169,000. They called in the loans and the borrowers had to raise the money as best they could, probably sacrificed their all in many instances in order to pay up. It is from this point of view that the action of credit manipulators like these is so injurious to a community. When all goes well they lend freely on securities, thus encouraging speculation, price inflation; and when the squall arises they call in their loans mercilessly, as they must, and throw the resulting ruin upon the borrowers. Not much of the money they had to pay out came from sales of securities in their own possession for the simple reason that it was for a time impossible to sell investments. Nevertheless, compared with a year before, the total of these investments shows a reduction of £8,000,000, and their cash resources were pulled upon to an extent probably much greater than the figures of January 1 last disclosed, because the worst of the strain was over a month before that time and the trusts had been able meanwhile to draw back

some of the cash paid away in the height of the panic. Deposits were returning to them, and yet they held at the new year only £9,160,000 of specie and legal tenders in their own vaults. The aggregate resources of the trust companies in New York State were still £202,550,000 on the first day of the present year, which is only £70,500,000 less than the total of a year before. Even this reduction, however, serves to reveal the strain they were put to, and enhances the merit of the energy with which the pressure was resisted.

In spite of the decline in earnings towards the end of the year, the gross income of railroads in the United States was larger in 1907 than in any previous year of their history. The New York *Commercial Chronicle* illustrates this in some elaborate tables comparing the figures of the greater part of the United States railroad mileage over a series of years. For the past year its return covers roads working an aggregate of 201,767 miles of line. No important railroad is outside this mileage, and it is sufficiently complete for comparative purposes. According to the figures, the gross earnings of this enormous network was last year £455,092,000, showing an increase of £43,200,000 on the total for the previous year. The comparative figures go back to 1896, when the earnings of 148,916 miles of railroad were given, and in that year the gross receipts came to only £176,000,000, while the increase on the previous year was only £464,000. Since 1898, however, the increase has each year, with the exception of two, been at or over £20,000,000 per annum. In 1904 it was little more than £2,227,000, but in 1906 it rose to £44,812,000. We should like to know how much of this stupendous expansion, which was much more in receipts than in mileage, although the growth in mileage was also continuous, is due to the natural growth of business, and how much to consolidation and the consequent enhancement of charges for work done.

An interesting step towards propping banking credit has been taken by the First National Bank of New York in imitation of the move made by certain of our English banks after the Baring crisis. It proposes to create a holding company with a capital of £2,000,000, to which the marketable or other, especially other, securities owned by the bank will be transferred, so that it may be relieved of an embarrassing deadweight amounting to over £11,000,000, consisting of stocks, bonds and mortgages, and left free to carry on "purely commercial banking business" without interruption. This is suggestive enough, and we are not surprised that other banks are said to be about to follow the lead thus given. It may be a successful move, too; only we hardly see how the banks are to continue to earn dividends if they cut off the ample profits they have in most years gathered in through their stock punting and Stock Exchange lending.

Passing Events.

The revenue is coming to bank in such abundance as to not only embarrass the Money market, but gorge the Exchequer. Last week the receipts rose to £5,675,000, exclusive of £100,000 repaid on account of advances for the purchase of bullion. Altogether, therefore, the week's receipts came to £5,775,000, and the expenditure was only £3,226,000, income being £237,000 larger and outgo £386,000 smaller than in the same week of last year. It follows that the Exchequer balances were increased by £2,549,000, and now stand at £12,455,000, or £2,668,000 more than in the third week of February, 1907, and it is to be hoped that Mr. Asquith will now be able to let loose a large proportion of this accumulation, so as to afford relief to a market very seriously incommoded by the withdrawal of such a large mass of its working resources.

So well is the revenue coming to hand that speculative statisticians are already exercising their minds as to what the surplus is going to be at the year's end. The calculation is easy. This year the receipts of 32 working days have still to be accounted for as against 29 working days from the end of the third week of February last year. The average daily receipts for the past week came to £946,000. Multiply that by 32 and it indicates upwards of £30,250,000 to come in. Now the Exchequer has already received £132,704,900, or an amount within £20,130,000 of the entire budget estimate. If, therefore, the public income were to continue for the remainder of the fiscal year on the same scale of magnitude exhibited by last week's returns, the surplus would be £10,000,000 or thereby, instead of less than nothing, as estimated; but we must not expect any such display of revenue yielding vigour. In all probability the revenue is now being collected at much greater speed, especially the income-tax revenue, than it was twelve months ago, and as the end of the year approaches the daily and weekly totals are likely enough to display some falling off. Allowing for all this, however, it seems by no means improbable that Mr. Asquith will have from £4,000,000 to £5,000,000 more in the Treasury at the end of March than he reckoned on last April.

Last week's Indian famine figures are sickening. The total number of human beings in receipt of relief exceeds 1,000,000; such is the statement of the Governor-General in his message dated last Monday. Of that total upwards of 900,000 are in the United Provinces alone, and of these upwards of 252,000 are being relieved gratuitously. In Central India the numbers on relief works have risen to nearly 92,000, and those in receipt of gratuitous relief to over 10,000. There are also 16,250 persons in receipt of gratuitous relief in Bengal, besides 3,000 on test works. Rain, too, has again failed all over India except in the North-Eastern districts and in part of Burma, but the Viceroy says that the harvest prospects continue favourable, while admitting that existing distress is so acute in certain areas that the State is compelled to extend its help. The outturn of the rice crop in the chief districts where that cereal is grown is estimated at 10 per cent. below last year, and in Bengal where the shortage is most serious it is put at 36 per cent. below the average of the last ten years, but there has been a good crop in Lower Burma and the yield of sugar cane over India is estimated to be about equal to the average of the last five years, owing to the large increase of cultivation in the Punjab. For all that a deadly famine now ravages the miserable inhabitants of large areas of the Indian Peninsula, and powerfully contributes to its depopulation.

A most glowing account of the financial position of New South Wales was given the other day by Mr. Waddell, the Treasurer of the colony. For the last seven months, he said, the increase in the receipts had been £706,000, including £312,000 from railways and £572,000 from the returns of revenue collected by the Commonwealth. This fine result, too, had been obtained notwithstanding the reduction of railway rates, remissions in the land tax, income-tax, and stamp duties and the abolition of school fees. Mr. Waddell, therefore, looks forward to a splendid revenue balance at the end of the year, and gives some interesting information regarding the progress made in redeeming the colony's debt, and in transferring it from the mother country to investors at home. Within the last two years, he says, £2,000,000 of debt has been transferred from London to New South Wales, and at the present time "more than one quarter of the public debt is held within the State." During the past two years £5,599,000 of public debt, bearing 4 per cent. interest, has been converted into 3½ per cent. stock, "thus effecting a considerable saving in the annual payment." But was this new stock all issued at par? In the past two years, moreover, only £2,000,000 of debt had been placed in London, while no less than £6,940,000 had been floated locally, excluding mere deficiency bills.

Business has been so good of late in New South Wales that the earnings of the Government Railways and Tramways show a steady expansion. For the last quarter of 1907 the railways gave an increase of

£62,220 and earned altogether £1,381,542, but nearly the whole of this increase in gross earnings was swallowed up by the expenditure, which rose by £60,782 over that of the corresponding quarter in 1906. The increased earnings came from coaching, mining, live stock, and general business, grain and flour showing a falling off, and wool also giving less, owing to the much heavier business done in it in the early part of the year. On the tramways the revenue for the quarter was £27,910 up at £260,427, and the expenditure rose by no more than £13,960.

Some interesting statements are made by that very able administrator, Senor Limantour, who has for so many years guided the Finance Department of the Mexican Government under President Diaz with regard to the means by which Mexico sustains her credit. Presumably the figures he gives are as nearly accurate as such things can be, and he points out that the balance of trade for the financial year 1906-7 was only £1,465,463 in favour of exports, while the national debt of the Republic alone requires over £2,500,000, to be remitted abroad each year in satisfaction of the claims of the bondholders. In addition to this millions of dollars go abroad as profits earned by foreign bondholders and owners of enterprises carried on in the Republic with foreign money. Assuming this meagre margin to be more or less constant, how is Mexico able to cover these liabilities? It does so, his Excellency says, according to the summary of his observations furnished by Mr. R. McClay, Second Secretary to the British Legation in Mexico, through the investment of new foreign capital, which is continually coming in and helping to counterbalance the foreign drain for interest. But obviously the situation is a precarious one, and Mexican affairs will have to be closely watched for the next year or two to see whether the rather artificially sustained finances of the country are able to stand the additional pressure put upon them as a result of the crisis in the neighbouring United States. Demands for Mexican exports are certain to diminish in consequence of that crisis, and unless imports fall back to a much larger extent, there may be a crisis in Mexico next, prudent and enlightened though the management of its affairs undoubtedly is. We may add that Senor Limantour's budget estimate for the financial year ended June 30, 1909, is for a normal income of £10,338,500, and a surplus of £18,118, a margin which looks narrow, but estimates are never based upon the results of the current year. Always the figures for the latest two completed years are used as the foundations on which to build, and as there has for a considerable time back been an encouragingly larger revenue received than was estimated for each year it may be that by June 30, 1909, there will again be a surplus of some magnitude.

Colombia does not seem to be a progressive country, although it should be, seeing that it has incalculably great natural resources of almost every description, agricultural and mineral; but it is terribly handicapped by the depreciation of its paper dollar, which has reached such a depth of degradation as makes one gold dollar worth 100 paper dollars. Contracts, our Minister at Bogota says, are now made out in native currency for convenience sake at the rate of £1 for $500 paper. There is a new gold currency on the way, it seems, but none of it has yet been issued, and trade is, consequently, difficult to carry on. Yet this Republic is a large consumer of British cotton goods and also a buyer of other British products, although not to the extent that it ought to be. Germany sends large quantities of woollen cloths imitating the better qualities produced in the United Kingdom, and captures that part of the trade; but the country suffers not only from lack of money but from the absence of roads. The present head of the Government, however, General Reyes, is endeavouring to construct roads and railways so as to open up the interior, and with the help of a little money and a little honesty Colombia should have a future of some distinction.

Ecuador seems perfectly incorrigible. We are always inclined to hope for the best for the future of these Central American States, but some of them assuredly make hope shake hands with despair. It should not be so very difficult for the Government of this Republic to meet its obligations to the bondholders of the Guayaquil and Quito Railway in an honourable manner. The best interests of the country dictate that kind of behaviour, for unless railways are built as a preliminary to road-making in the interior there will be no chance for any one of these countries to emerge from its semi-barbarous position. Instead of acting on the square, however, the Government of Ecuador has defaulted on the railway bonds and a new scheme is to be proposed whereby the interest due July last is dropped out altogether, and the coupons for January and July of this year and January, 1909, are to be funded in a ten-year 4 per cent. bond to be issued by the Government. As the *Pall Mall Gazette* suggests, the penalty for not accepting these conditions seems to be that the three coupons will be ignored altogether. Then an issue of $2,000,000 in prior lien bonds is to be made, half the proceeds of which will be applied to pay off the present floating obligations of the railway and the other half to buy new equipment, and until these prior lien bonds are paid off the 6 per cent. interest now payable on the existing debt is to be cut down to 4 per cent. Shabby in the extreme.

One after another the neighbours of the Great Northern and Great Central Railway companies are intimating that they will oppose the projected working agreement or fusion between these two. Sir Ernest Paget was particularly emphatic at the meeting of the Midland shareholders, and denounced the proposal in the strongest language he could find. At the North-Western meeting Lord Stalybridge spoke with more moderation, but with no less resolution, and we fear, when such powerful opponents take the field, there is not much chance of the compact succeeding in obtaining the approval of the Railway Commissioners. We have no enthusiasm for it at all, and have throughout considered it a bad bargain for the shareholders of the Great Northern Company. The Great Central is a bankrupt system, no matter from what point of view it is looked at, and no agreement that does not imply something like an organised robbery of the community served by the two roads can in the least degree lift it out of that position. But the other railway boards do not mean to allow any exclusive league of plunder to be formed. They mean to squelch the compact unless it is extended to embrace all.

Where did Mr. Alfred Mosely get his information about the immunity of Germany from the guinea-pig director plague? He is quite right in drawing attention to the more drastic and businesslike company laws of that Empire compared with ours, and in emphasising the fact that directorial responsibility there is a much more real and effective thing than it is or ever has been here, but he goes too far when he proceeds to insist that even the drastic laws of Germany have eliminated the guinea-pig plague. Let him examine the lists of directors presumably to be found in one or other of the numerous German commercial handbooks, and unless we are grievously misinformed he will discover that there are men on the boards of the great German banks who hold from 10 to 25 or 30 directorships upon the various companies in which their banks are interested as promoters or shareholders. It may be said these men are not guinea-pigs, that they are merely delegates, but we hardly know what other designation to apply to them. They cannot possibly attend to the business of so many companies. They simply draw blood in the shape of fees as representatives of the promoting organisation, doing nothing whatever worth speaking about in return therefor. In some respects we are not sure that this breed of guinea-pig is not a more noxious one than ours.

The Lisbon correspondent of the *Times* states that the Portuguese Finance Minister has given him par-

ticulars about the debt of that country. Its total seems to be about £125,000,000 or £25 per head of the population, this being the sterling equivalent of 628,000 contos. It is a huge—indeed, a hope-destroying—burden upon a country so poor, so little developed, and so out of the current of modern progress. Of the total about £61,100,000 is represented by the internal consolidated debt, which is irredeemable. Then there is an internal redeemable debt of £6,527,400 and an external redeemable debt of £29,800,000, after which come the Lisbon Municipal bonds for £2,103,000, a tobacco loan amounting to £6,949,000, and outside all stands a paper money circulation of no less than £106,455,000. Without this paper further defaults would have occurred long ago, and even now there is a floating debt of £15,366,400, of which £2,838,000 is held abroad. It looks a hopeless business, but the resources of the financier are endless, and past experience warns us to be sure that whatever happens to Portugal and Portugal's creditors he will make money.

Some useful statistics about the gold mines have been issued by the Transvaal Government. They serve to illustrate the causes that have made this favourite industry, from the speculator's point of view, such a disappointment, for out of the 402 mining companies in the Transvaal with a nominal capital of £122,485,455, of which £109,585,777 has been issued, although only £82,501,231 of this represents the actual cash received, a mere 50 companies with an issued capital of £27,161,101 are producing gold and paying dividends. The mines shut down have a total issued capital of £31,500,000, and it is amongst these mines that the Government ought to select those of a promising kind to be worked by itself in the intersets of the unfortunate shareholders. That, at least, should be done as a beginning.

The trade balance in favour of India for the nine months ended December 31 last was only at 1s. 4d. per rupee £2,190,070, but that is the excess value of the exports after deducting the treasure imported, £16,530,000, and the bills drawn by the India Council in London and payable in India another £11,573,000, so that the position is by no means unfavourable from the point of view of Imperial finance. It remains true, though, that England reaps nearly all the advantages accruing through the expansion in the foreign trade of the dependency; true also that but for the supply of about £10,000,000 of new capital in one shape or another to India every year the balance of trade, now favourable to the creditors of India would be very much the other way. And the true balance is hidden even now by the artificial value given to the silver rupee.

The Week in Mines.

The Carry Over.

It commenced with the arrangement of the fortnightly contango, and a very unattractive affair it was. Throughout the account the mining markets had been in a miserable and disheartened condition, while a quite unexpected failure in the middle of it created a very unpleasant impression. Carry-over rates were much the same as those we have grown accustomed to these many months, and the general charge for continuing Kaffir shares of all kinds was 6½-7½ per cent. There were the usual exceptions. Gold Fields and Rand Mines were taken in at 4½-5½ per cent., Modders and Johnnies at 5½-6½ per cent., East Rands at 3-4 per cent., and Randfonteins at 5-6 per cent. On the leading Diamond shares rates were light, and it looks as though a considerable bear account exists in De Beers, continued at ½-1½ per cent., and to a lesser extent in Jagers, carried over at 3½-4½ per cent. On Premiers the rate was 5½-6½ per cent., and New Vaals were done at the same figure. The usual charge on Rhodesians was 6-7 per cent., and Chartereds were borrowed on at ¼d.-½d. On Manicas the rate began at 10 per cent., but fell to 7 per cent. West Africans and West Australians were taken in at 6-7 per cent., and Siberians at 6-8 per cent., the last-named figure also prevailing on the American things. Australian Copper shares and Broken Hills were arranged at 5-7 per cent. The making-up list provided a most dreary spectacle, practically every movement of importance being the wrong way. Diamond shares again did badly. De Beers and Premier deferred dropped ⅛, and the preferences ¾ and ¼ respectively. Central Minings fell ½, as did Ferreiras; Rand Mines, Modders, Manicas and New Heriot each ¾, and Gold Fields, Daggafontein and Robinsons 5/16. Apex and Village Main Reef were ¼ lower, and declines of 3/16 occurred in Gold Trusts, Driefonteins, Tanganyikas and Welgedachts. A sorry display. West Australians provided a little relief with a gain of ½ in Ivanhoes, and West Africans showed the effects of their little spurt, Taquahs being up 9/16 and Abossos 9-32. Egyptian things were lower, Central Egypts falling 5/16 and Egyptian Estates 5-32. Tasmanian Consols were ⅛ lower, thanks to the slump produced by the failure. Rio Tinto Copper shares made up 3 lower, and the other prominent declines were ¼ in Utah, ¼ in Great Cobars, 4s 6d on Cerro Murianos, an 5/16 in Arizonas, Famatinas, and Spasskys. Among Tin shares Redhills lost ¼ and Tronohs 3/16, and one or two Broken Hills were appreciably lower. Block 10 showed a drop of 21-32, owing to the heavy fall in the dividend, and Proprietary of 5/16. In the American group Frontenacs put on 3/16 and Le Roi II. were as much better. Of other miscellaneous, Mysores and Ooregums were 3-32 down and Waihis were ⅛ up.

Kaffir Shares.

What is there fresh to be said about the South African market? We fear, nothing. It has been in a most unhappy state throughout the week. All signs of life have long since departed, and the daily report scarcely ever varies: "Dull, nothing doing, public sick, professionals tired, Continent rather disposed to sell." The entire market is in a condition of absolute despair, and probably the only things that prevent a wholesale exodus of dealers are that matters cannot conceivably become worse, and most other speculative sections are in much the same plight. The House seems to be in a semi-paralysed condition, and it would not require very much selling to bring about renewed demoralisation. Paris operators have been in a very uncertain frame of mind, and threw out small lots of shares every day. A rumour, happily unfounded, or at least premature, of important Egyptian financial troubles exercised a depressing influence, and the sharp criticisms of the various amalgamation proposals constantly appearing in the newspapers, in which the tactics of the magnates are laid bare, help to keep away the public. The story has been revived that the Transvaal Government is negotiating for the importation of labour from Madagascar, but it passed unnoticed. The market closes dull and dejected, practically without a friend.

Land, Rhodesian, and Diamond.

Quite a lot of shares in the Land and Finance section have seen lower prices, and all the leading things like Gold Trusts, Central Minings, T. C. L. General Minings, and Johnnies finished lower. Rand Collieries fell sharply to 1/16 on a cable from the mine announcing that the reef, which has just been struck at the terrific depth of 2,730 ft., averages less than a pennyweight, say, 3s. 0d., to the ton. It is explained, however, that the reef is much disturbed. Apart from Chartereds, Rhodesians have attracted the smallest amount of attention, and except for a small spurt in Tanganyikas the tendency was the familiar one. Chartereds were skilfully maintained round 15s. until the meeting, and then dropped to 14s., finishing up on meeting day at 14s. 6d. New Chartereds were 22s. "call options" if anyone wanted them, and option certificates were round 7s. 6d. Diamond shares were dull as a rule, and De Beers were sold from Paris, but picked up again. Premiers could not maintain a small improvement, but Jagers after going down a trifle recovered the loss. New Vaals fell to 10s., and it was only in

1906 that they were rigged to £12. The syndicate people have had another meeting, but no decision was come to, and the speech of the chairman at the Premier meeting held in Johannesburg on Tuesday was not too pacific.

Australasian and West African.

Broken Hills commenced quietly, and the tone was dull despite a cable from the Proprietary Company announcing the conclusion of a contract with the Block 10 and South Blocks for the purchase of the whole of their output of leady concentrates. Good progress is reported with the alterations of the zinc distilling plant. Later the market improved a little, but the rally did not hold owing to the decline in lead and the poor advices from the colony. West Australians did not develop a settled tendency, and apart from rather pronounced firmness in Horseshoes movements were of the smallest consequence. The market was not helped by the Government's reply to Mr. Hermann Landau's assertion at the recent meeting of the Northern Blocks that "what was true of their mine was true of all the other producing mines of Kalgoorlie. So far as they could see they were approaching the end." To this the Government retorts that "there does not appear to be any scientific reason for believing that the mines of Kalgoorlie have by any means reached the limit of ore deposition, or that the lode will not as a whole prove productive on depth." West Africans relapsed into pronounced inactivity, and there is nothing to mention, except that Bibianis went to 1s. 3d. on the reconstruction proposals.

Copper, Tin, and Miscellaneous.

Copper metal has not given way appreciably, and the market takes the view that a sustained effort is being made to keep up the price in order to facilitate the unloading of Rio Tintos. The Metal Exchange is declared to be selling, and Paris turned out shares, so that the best price of the week was 62, and more often it was near 61. The American things kept tolerably steady, and Great Cobars fluctuated between 6 and 5⅞. Lyells were not very bright, notwithstanding good developments at the 1,000 ft. level, and the rest were inclined to ease. Tin shares responded to a falling metal market, and nearly all the leading shares ended lower. In the Miscellaneous group the American shares showed irregularity, and Siberians found lower prices. Indians were quiet, and Waihis were up to 9 again.

London and Paris hold different views as to the probable amount of the forthcoming Rio Tinto dividend. The former is "going for" 35s. to 37s. 6d., but the Continental estimate is just 10s. less. There is talk of another copper pool in Paris, but all the selling comes from there and it is the Yankees who are trying so frantically to hold up the market. The reopening of the Anaconda is hinted at, but this is a political move designed to keep the populace quiet.

MINING NEWS.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Rhodesian Mine Crushings.—The following table gives the total monthly returns for 1908, and the previous five years:—

	1904. ozs.	1905. ozs.	1906. ozs.	1907. ozs.	1908. ozs.
January	19,359	32,531	42,950	47,048	50,521
February	18,673	30,131	38,037	40,482	
March	17,756	34,927	44,574	46,887	
April	17,862	33,268	42,423	49,772	
May	19,424	31,332	46,729	52,668	
June	20,402	35,256	47,664	54,918	
July	24,339	34,693	48,485	54,271	
August	24,669	35,765	50,127	54,558	
September	26,029	35,785	48,410	53,622	
October	24,919	33,383	45,644	53,823	
November	26,183	32,861	48,503	50,891	
December	28,100	37,116	48,329	53,113	
Total	267,715	407,048	551,875	612,053	50,521

The value of the output is £201,508, an increase of £6,445 compared with January, and the highest figure ever reached, despite the apparent drop in the quantity of gold recovered. The decline is due to the fact that the majority of producers declare their returns in fine gold instead of bullion as formerly. At the end of last week it was announced that the Bulawayo and Salisbury Chambers of Mines, and the Rhodesia Small Workers and Tributors' Association have agreed to this course, and while the change does not actually come into force until April 1, some of the companies are already anticipating the alteration. It will, of course, entail a considerable reduction in the number of ounces declared, but Rhodesia clearly thinks she has arrived at that stage of gold production which entitles her to follow the example set by the Transvaal in 1901.

Regina Diamond Syndicate.—This concern is of quite recent origin, and was formed to acquire an option for two years ended June 1, 1908, from the Klipfontein Diamond Mine and Estate to prospect and develop the company's mine, situated on the farm "Rorich's Hoop," No. 191 District Fauresmith, in extent 5,206 morgen. Prospecting operations were commenced in May, 1906, and were continued until July 16 last. The mine previously worked by the Klipfontein Diamond Mine and Estate has been proved by extensive diamond drill boring to extend to an area of at least 158 claims, and shows all the characteristics of a true diamond pipe. That is encouraging, and it appears that 6,289 loads taken out from the open workings of the old mine yielded 407½ carats of diamonds equal to 6½ carats per 100 loads. In addition 3,501 loads from dumps left by the old company were retreated, and yielded 181 carats or 5 carats per 100 loads. The object of the syndicate's operations was to determine the size of the mine and the approximate value of the yield. This end has now been attained, but financial conditions have not been favourable enough to enable the directors to set forth a scheme for the further working and development of the property. The syndicate, however, hopes to be able to arrange for an extension of the option. Capital of the company is £25,000, of which £20,000 has been issued, and the cost of the option was £11,000, Expenditure on prospecting has amounted to £6,487, from which has to be deducted the value of diamonds recovered, £1,135. These are still on hand, awaiting a chance to sell, we suppose, and the company has also £1,905 in cash and on loan at call Options on the 5,000 shares in reserve have lapsed.

Manica Copper.—Anyone who mixed himself up in the Manica Copper gamble doubtless appreciated the risks to be run, and we imagine the directors were by no means pleased to see the shares rushed up to 22s. in a few days, and then collapse to 12s. or 13s. in one. Needless almost to say all kinds of wild rumours have been in circulation, and the board has seen fit to issue a circular to the effect that "nothing has occurred since the general meeting, held a month ago, to alter in any way the position, and very favourable prospects of the company, as then put before the shareholders by the chairman and manager." Sufficient working capital is said to be in hand, and the necessary additional machinery will be shipped shortly. The manager reports that the reserves of auriferous copper ore available for treatment are rapidly increasing, and the directors are confident that the company possesses a profitable copper mine. We hope so, and see no reason to modify our previously expressed opinion, that the thing is a fair venture of its kind.

Pekin Syndicate.—In the report of this concern dealt with last week reference was made to the proposed consolidation of the interests of the three classes of shareholders, the ordinary, deferred, and Shansi. Early efforts to arrive at some workable plan were not attended with success, and it was left to a shareholder, Mr. Torr, to propound a scheme at the meeting held on Monday last, the directors not being keen on the responsibility. The idea is ingenious, if nothing else, and a committee representative of all sections of the shareholders will be appointed to confer with the board on the subject. At present the capital consists of 1,500,000 £1 Shansi shares, 39,900 £1 ordinary shares, and 2,000 deferred 1s. shares, all possessing different rights. Of the Shansi shares 1,202,822 are issued, and the plan is to divide the £1,540,000 nominal capital into 1,210,000 "A" shares and 330,000 "B" shares, the former to be exchanged share for share for Shansi shares and the latter, which will be entitled to three times as much profit as the others, to be distributed among the holders of ordinary and deferred and the directors. This would give 55 per cent. of the entire profits to the Shansi shares instead of that percentage on the Shansi and Honar concessions only, which seems not unfair, seeing that the Shansi business is at an end, and the compensation will apparently go into the coffers of the company for general purposes. The ordinary, having a priority right to £40,000 in dividends will receive 30,000 "B" shares, leaving 300,000 still available. This would mean 50 per cent. to the ordinary shareholders, 40 per cent. to the deferred shareholders, and 10 per cent. to the directors. Assuming this division were made, there would in future be a mathematical distribution of the profits precisely in accordance with present rights, namely, 55 per cent. to Shansi, 24½ per cent. to the ordinary, 16⅓ per cent. to the deferred, and 4 per cent. to the directors. It is not improbable that something on these lines will be finally decided upon, and if so it does not appear that any body of proprietors will have a grievance.

Bibiani Gold Fields.—On the face of it, there seems no good ground for the drastic reconstruction which the directors of this disappointing West African venture propose. The company has certainly been doing very poorly, but we are not convinced that the suggested remedies for unsatisfactory results are to bring salvation. The report covers the year to June 30, and in that time 40,393 tons were crushed and treated by amalgamation and 42,690 tons of tailings treated by cyanide. Value of the bullion recovered was £109,764 or £2 14s 4.17d per ton. After deducting expenses of all kinds, including redemption at 10s. per ton, the balance of profit, including sundry items, is £15,703, which provides general and other charges and debenture interest

and leaves £5,349. Balance brought in was £5,987 making £11,336, and the whole of this is written off various outlays, including mine development and expenditure and machinery and plant. Thus there is no debit balance. An unfortunate flooding at the mine upset things considerably in the early months of the new financial year, but apart from this returns have been falling off and a deficit has arisen. The amount for six months, however, was only £7,564 after providing debenture interest. So Mr. Bernard Hunt went out to advise, and although his actual report has not yet been received, correspondence indicates that the poor returns are chiefly due to the condition of the mill. He considers that the 40 stamps of 850 lbs. should be at once replaced by a new battery of 30 heavy stamps. Surely the old mill could be altered and this heavy expense saved. However, the large share and debenture holders have been called together, and as the directors say that more money must be provided a committee of shareholders was appointed to confer with the board. The outcome is a reconstruction proposal. Shareholders are to be assessed to the tune of 5s. a share, 2s. to be called up at once or at the discretion of the directors and the balance only if sanctioned by a general meeting after an independent expert has been to the property and reported. As to the £100,000 of debentures holders are asked to exchange into £50,000 of "A" and £50,000 of "B," date of repayment to be extended to 1918. Provision is made for redemption out of profits (if any), the "B" debentures will be paid off first, and holders of the "A" are to have the right of exchange into an equal amount of shares at par.

ESPERANZA ORE RESERVES.—These have fallen heavily during the past year, and fully explain why the shares keep low in face of recent good results and large dividends. A cable just received gives the consulting engineer's estimate of the ore reserves actually in sight at December 31 last at 65,500 dry metric tons, which should yield an operating profit of $225,000. In addition there are probabilities of further profit from ore not fully developed. The proposed tailings treatment should yield $270,000 making $495,000 in all, equal to £101,538. At the end of 1906 the ore reserves were estimated at 141,000 tons and the profit at £296,000, so that the shrinkage is enormous. The Esperanza Mining Company (the Mexican undertaking) had free liquid assets on December 31 amounting to £316,176 after providing for current liabilities and the final dividends for the year 1907.

HAMPDEN CLONCURRY COPPER MINES.—A decidedly heavy addition was made to the capital of this North Queensland copper company during the year ended August 31 last. An amount of 15,000 shares was issued in part payment for the Duchess and Tip Top leases, etc., leaving 35,000 shares in reserve, which were subsequently placed at 20s. each. Then the directors had a firm offer for 50,000 shares, provided an option was given over an equal number for six months, and they proceeded to increase the capital by 100,000 shares, selling half of them at 27s. 6d. each, with the call of the other half at 35s. each for six months from February 13, 1907. This option, which expired on August 13, was not exercised. Thus the company's resources were increased by the handy sum of £103,750, giving funds for the development of the mines, erection of smelters, and the construction of tramways, etc. But unfortunately the work of developing both the Hampden and Duchess mines was very considerably retarded during the greater part of the year, due principally to the dearth of suitable labour, and the protracted delay in the arrival of the necessary plant, machinery, and shaft timber. The failure on the part of certain contractors to carry out definite arrangements made with them, to convey machinery and timber from the railway terminus to the mines, resulted in the stoppage for some considerable time of all work below water-level in the main shafts. However, these difficulties have been overcome, and towards the latter part of the period under review, as well as since the close of the financial year, better progress has been made with the development work in hand. The results obtained are considered very satisfactory, and all concerned appear very sanguine regarding the future. It has been found impossible to make an absolutely definite estimate of the ore reserves, but the directors recall that Mr. F. Stanley Low calculated the quantity of ore in the Hampden mine (exclusive of pyretic bodies below water-level, and the ore from No. 1 open cut northwards) at 116,000 tons, averaging no less than 15 per cent. copper. Quantity of ore stacked on the surface of this mine on August 31 was 3,903 tons, worth £40,401 with copper at £60 per ton, while the ore on hand and in reserve at the Duchess mine is put at 7,546 tons, of a gross value of £64,645. Operations for the period under review were on a small scale, and resulted in a working profit of £2,920, to which was added £2,352 on account of interest. But general charges and commission took the rather considerable sum of £5,550, and the debt balance brought forward was increased to £2,347. The company's cash balance is the big one of £93,766.

GWALIA CONSOLIDATED.—There is a very subdued tone about the report of this enterprise, in sharp contrast to the enthusiastic language indulged in by the Government inspector, and referred to in a circular to the shareholders about a year ago. The policy of the directors seems to have been to get up the new plant at all cost, and never mind development, a cart before the horse sort of business, which has landed the company with a practically undeveloped mine. A firm of consulting engineers, who have been reporting on the property, tell the directors this, and recommend them to stop spending any further money than is absolutely necessary on the surface, and to adopt a systematic and vigorous policy of development to a definite plan without delay, so as to ascertain the value of the property. The new mill consists of 20 stamps, and there was a suggestion to pull down the old mill of 10 stamps and re-erect it alongside, but the engineers do not advise this policy, and rightly, considering that it is only "reasonable to anticipate that you have approximately 40,000 tons of ore more or less partially developed in your mine," and that the battery is already considerably in front of the capacity of the cyanide plant. Moreover, a certain amount of "picking" has been necessary to keep the grade of ore milled between 7 and 8 dwts. During the twelve months to June 30, 21,907 tons were treated, which produced bullion valued at £35,087, tribute produced a further £283, and other items brought the total revenue to £35,609. Expenditure was £28,044, leaving a profit of £6,765, the whole of which is written off against development and depreciation. This is sound, and as the company is modestly capitalised it may presently do pretty well. It does not at the moment look like becoming a second great Fingall, as the Government inspector hinted at, and as the engineers say, "it remains to be proved as to the value of the ore bodies at depth and the character of the deposits after the unoxidised zone is entered." Also note that "it may be possible that other treatment of the ore will be necessary to that at present employed."

GREAT WESTERN COLLIERY CO., LIMITED.—The coal "boom" last year brought considerable benefit to this company, as with a reduction of about 9,000 tons in the output at 800,853 tons the gross profits jumped by no less than £27,158 to £109,445. Miscellaneous receipts were a trifle down and expenses, including £5,000 written off for depreciation rose by £1,267 to £33,513, but nett profits with £1,263 brought in nevertheless amounted to £78,078 or an increase of £24,815. Out of this the ordinary "B" shares get an additional 5 per cent. at 15, but this extra payment is perfectly justified as the directors increase the sum put to reserve for improvements by £10,000 to £25,000, and after transferring another £5,000 to reserve for shortworkings carry £1,815 more at £3,078 to the new account. Expenditure on property for the year was £41,875 and £5,000 was written off leaving the total outlay at £496,725, and as the share capital is £300,000, the directors, in addition to utilising the reserves of £120,000, have had to raise £40,049 by loans on cottages and temporary borrowings. Debtors only slightly exceed creditors and cash and bills at £9,069 fall very far short of the sum required to pay the dividends just declared. The company has acquired 5,000 £1 shares in the Treforest Electrical Consumers Co., Limited, a company which has been formed to take over the Treforest works of the South Wales Electrical Power Distribution Company, and on these it had paid up 5s. a share or £1,250 by the end of the year.

ATLANTIC MERTHYR COLLIERIES.—In the twelve months to December 31 there was a trading profit of £12,801, interest, &c., produced £217 and £1,073 was brought forward, in all £14,091. Debenture interest, preference dividend and directors' and trustees' fees accounted for £3,025 and 3 per cent. has been already paid on the ordinary shares leaving £8,866. A further 7 per cent. now proposed on the ordinary shares will make the total payment for the year 10 per cent. and £6,066 will be carried forward. Good progress is said to have been made with the putting down of new plant and machinery. New boilers and a new air compressor with buildings have been erected and other work in connection with the sinking of the third pit and excavation for a new fan, &c., is now being proceeded with. Capital expenditure in the year was £6,897, making £102,242, and the auditors point out that no depreciation has been written off the colliery property. Liquid resources are fair.

West End Office: 44, Pall Mall, S.W.

The CENTRAL Insurance Company, Ltd.
Chairman: Walter Chamberlain, Esq., J.P.
Guaranteed by the Liverpool & London & Globe Insurance Company.
Total Funds exceed £10,000,000.
FIRE. ACCIDENT. BURGLARY. WORKMEN'S COMPENSATION.
SHORT AND UP-TO-DATE CONDITIONS.
Head Office: 1, Cornhill, London, E.C.
Applications for Agencies invited. HUGH LEWIS, *Manager & Secretary.*

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Reduced from 5 per cent. on January 23.)

Norfolk House, Friday Evening.

When the Bank return shows another increase of ing to the Treasury and the various Government deing to the Treasury and the various Government Departments, bringing the total up to £17,170,000 or £2,198,000 more than a year ago, it is unnecessary to discuss why short credits should be dear. They must be dear until a considerable amount of this accumulation has been disbursed, and the sooner the Chancellor of the Exchequer takes measures to reduce the pressure upon the banking credit of the country the better will it be for his popularity. Great, however, as the accumulations are, there must be other influences at work to account for an increase of £5,251,000 in the market's debt to the Bank, an increase which brings the total of other securities up to £34,840,000 or £1,608,000 more than this time last year. No doubt the increase in the debt of the market is less than the amount drawn away from it by the tax-collector, but, on the other hand, business is much smaller. Every day brings a complaint of the short supply of bills, and it is not because foreign competition, although present, is aggressive, that this scarcity exists. There is less business doing, particularly less finance business, and the supply of negotiable instruments is therefore much smaller than it was a year ago, as witness the reduced overturn of the London Clearing House. Why the borrowing at the Bank should have been so heavy is therefore difficult to explain from some points of view, but of the fact and the consequent pinch there can be no question at all. No doubt, too, the railway dividend money has contributed much to intensify the distress among credit jobbers, for between last Saturday and to-morrow, inclusive, nearly £9,000,000 will have been collected and paid out again by the five great companies, the Midland coming last with £2,032,000 to-morrow; but the amount is not much larger than usual at the same time of year, and the real cause of the scarcity is the revenue collection.

Short loans in the open market have been 3¾ to 4 per cent. all week, and rather than go to the Bank people have been willing to pay 4¼ to 4½ per cent. for overnight money. But they had to go to the Bank, and the borrowing continued yesterday under the influence of Stock Exchange payments, and not only were all the loans due renewed, but some additional loans applied for. To-day, however, the release of so much railway dividend money helped the market, and it began to repay the Bank, only about a quarter of the moderate amount due this morning having to be renewed. Outside, however, 3¾ to 4 per cent. was still the general quotation for both day and seven-day money, although the demand was less urgent.

Everybody recognises that the causes working for dear short credits are temporary, and the Bank return issued on Thursday has increased the confidence of those who are speculating in bills for cheap money in April. The Bank rate, they say, will be down to 3 per cent. next month, and many were disposed to grumble yesterday because it was kept at 4 per cent., forgetting in their eagerness that the inflow and outflow of gold now do little better than balance each other, that we still owe probably quite £1,500,000 to the Bank of France, that Argentine requirements are not nearly at an end, and that further supplies of coin from Egypt are not likely to be of great magnitude. The market forgets, too, that the reserve of the Bank has been built up since the New Year by the return of much coin and some few notes from the internal circulation. Moreover, great loan operations are getting ready to be entered into, and the foreign commitments of this country alone on new securities are already formidable enough to warn people of the danger of renewed exports of gold on a considerable scale when money does become cheap. All these considerations are left out of sight, and bill brokers continue to buy three months' remitted paper for payment in April at or near 3 per cent. The spot discount rate for such paper was not better than 3½ per cent. early in the week, although the bill brokers usually quoted 3½-⅝ per cent., and yesterday the working rate fell to 3⅜-3½ per cent., with few bills to be had even at the finer figure.

To-day's discount rates have been weakened by the readiness of the joint-stock banks to buy three months' bills from the brokers at 3¼ per cent. One leading bank was taking sixty-day paper from them at 3⅜ per cent. Discount houses accordingly quoted 3⅜ to 3 7/16 per cent. for full three months' paper, and were rather above the market because the supply of paper was moderate, and business could be done in threes and fours mixed at 3⅜ per cent., while 3 5/16 per cent. was a working rate in more than one quarter. Some holders of bills tried to sell mixed parcels of all dates at 3 per cent., but did not succeed; the market, however, is slipping back, and it is difficult now to get 3¾ per cent. on the best class of inland paper. How the brokers mean to drive rates down may be measured by the statement that business in July Treasury bills for delivery in April has been talked of, if not done, at 2½ per cent.

In Germany the position is improving fast, so far as the Reichsbank is concerned, its latest return showing an increase of £2,028,000 in the cash in hand, and a decrease of £2,268,000 in the note circulation. The effect of this has been to bring that circulation £11,843,200 below the legal maximum, against £7,229,450 the week before, but the industrial, and even the credit, situation in Germany is not yet comfortable, and our market must not leave out of sight the danger of demands of gold from Berlin should rates here be permitted to fall much further. In short, our market might be liable to unpleasant surprises.

Exclusive of £500,000 in sovereigns due in immediately from Egypt, there is about £800,000 in raw gold to be dealt with in the open market next week, and it is expected that the Bank of England will get £500,000 of this. That should at least be enough to set against any immediate exports visible, and the March internal currency suction as well.

Silver.

The drop in prices recorded last Friday was followed by a further fall to 25⅜d. per oz. for cash and 25½d. per oz. for delivery two months forward on a continuance of the selling from India. By Monday, however, the bazaars were again buyers, and although the orders were mostly at a lower figure than brokers would accept, they helped to lift quotations to 25 13/16d. and 25⅞d. per oz. Indications, however, are not wanting

that the demand from that quarter is nearly satisfied for the present, and during the latter part of the week the tendency has been downwards. To-night the market closed at 25½d. and 25 9/16d. per oz., with sellers predominating. Applications for the Rs.40,00,000 Council drafts in India on Wednesday amounted to no more than Rs.14,55,000 in bills and Rs.25,00,000 in telegraphic transfers. The whole of the tenders for bills were allotted at 1s. 3 29-32d. per rupee, but no allotments were made in transfers. Next week only Rs.30,00,000 will be offered.

The Stock Markets.

"The worst week we have had this year"—such is the verdict of the stockbroker. Yet prices have not been bad in the circumstances, only there is next to no investment business doing, and what of it there is takes money into the new issues more than into established stocks, as we have before pointed out. All new securities have gone off well when they represented in the public estimation durable property, and the only grumble of the week has been over the allotment of the new North British preference. Outside subscribers got nothing, the shareholders having taken it all, and the market thinks it has been badly treated. Perhaps it was a mistake on the part of the board to offer the stock outside its own proprietary, but in times like these, when the temper of investors is so uncertain and their means often so limited, it is difficult to be bold. We note the premiums on these new issues below, and now the market waits for the next batch. On the Continent there appears to be nearly as much activity in new capital emissions as here. The Paris municipality, for example, has sanctioned an issue of £1,880,000 by the gas undertaking to provide means with which to make improvements, and some banking firms and a syndicate of provincial bankers in France have bought a Russian railway loan of £1,397,000 guaranteed by the Government, and will offer the 4½ per cent. 500-franc obligations, which is the form it takes, at 437.50 francs. Wiesbaden is also raising a new loan of £600,000, and we may be sure that as money markets grow more favourable the bids for the savings of investors will everywhere multiply.

Meantime our market is hung up by the tax collector, and has been very pinched all this week in spite of the liberal applications for short credits at the Bank of England. When Treasury balances of all descriptions rise to a figure of over £17,000,000 it is well-nigh impossible for investment business to attain any magnitude. Everybody is hoping, therefore, that times will change for the better in April. Between now and then markets can do little more than mark time, and the efforts made to enter into new combinations for the purpose of influencing prices, such as the rumoured fresh shuffle amongst copper mine and metal gamblers in the United States, are not likely to lead to any particular result, certainly in present circumstances to no good result. But some of the £9,000,000 in Home Railway dividends distribution this week and in the end of last ought to find its way to the Stock Exchange and give it a little work and a trifle of comfort.

Contangoes.

The settlement this week was got through with no particular difficulty beyond that arising from the scarcity of money, and brokers were able to arrange their Stock Exchange loans with the bankers on the same terms as were charged at the mid-monthly settlement. Rates were light inside; that is to say, the banks charged 4½ per cent. to the general body of their customers and 4 per cent. to money brokers, while inside the Stock Exchange the rates were from 3 to 4 per cent. on Foreign Government bonds and from 5 to 6½ per cent. on Home Railway stocks, 4 to 4½ per cent. on American Railroad shares, and 4 to 6 per cent. on most other classes of securities in which there is a speculative account of any appreciable size open.

Until speculative business revives we must expect contangoes to be light, and yet there must be a good deal of carried stock about, for the pay-day demand for credit is at the worst of times quite sufficient to cause a scurry amongst credit dealers, and the demand for overnight loans was quite sharp yesterday.

Trustee Securities.

Consols have just about held their own, or barely, but other Home Government securities are firmer on the week. Indian also show strength and improvements are again here and there noticeable in the Domestic Municipal list with County Council 3 per cents. showing the way. Colonial bonds have rarely moved, and business in them is extremely slow outside New Zealand 4 per cents., still the favourite with investors. There is also nothing to notice in the Colonial and Foreign Municipal assortments.

Foreign Government Securities.

Money continues very cheap in Paris, and although, contrary to common report, the French speculators have been unloading Rio Tinto shares in thousands—it is presumed to American buyers intent upon forming a new plundering "combine"—the tendency of prices for Foreign Government securities has been good almost everywhere. Russian bonds show some recovery on the week, and Argentine, Brazilian, one or two Chilian and some of the Chinese issues are all rather better, but the public is not in the play, and the movements are for the most part the work of arbitrage dealers. German 3 per cents. have recovered a little on the easier position of the German Money market, and altogether this section looks more cheerful than it has done for some time, if only it had some good business to do.

Home Railway Stocks.

We wish the same remark as to mood could be made about our Home Railway stocks, but it cannot. They are mostly down, in fact, if they have moved at all, and the business has so dwindled that dealings cannot be described as active in more than two or three out of the whole list. North British have suffered most, partly on the new issue, partly as expression of the above-mentioned market dissatisfaction, but Brighton, Central London and other stocks have likewise given way to some extent and the market is out of humour on many grounds, not least on the multiplying indications that business is diminishing throughout the country. Last week's traffic receipts, for instance, according to the *Railway News*, show a reduction of £94,182. This is the greatest loss so far shown this year in any single week, and we fear an improvement cannot be looked for these many weeks to come. Investment business has also dwindled to minute proportions in the debenture, guaranteed and preference stocks. Some of the preferences have again lost ground, especially those of the Great Central and North British companies.

Indian and Colonial Railway Stocks.

The changes among Indian Railway stocks have been minute as a rule, but nearly all to the bad, and prices fall of their own weight, as it were, because no outside support is forthcoming. Grand Trunk stocks have also been treated with a shocking want of ceremony during the week, but the changes have not amounted to much over that period, only dealings have shrivelled, and even in Canadian Pacific shares, where the activity is still considerable, there has been no change in prices worth mentioning, although ups and downs of $1 or more have been of frequent occurrence within the single day. Mashonaland and Rhodesia Railway debentures have been pushed up on a little demonstrative buying to help press puffs in furthering subscriptions for the new shares, but there is no life there either.

United States and Foreign Railways.

Wall Street has been as stagnant as Throgmorton Street this week, and in spite of the daily messages about improvements in business, orders for rails given out by some of the big companies, sharp reductions in the wages bills, resumption of business here and there, and dirt cheap money, the speculative mood does not develop amongst the public in American any more than here. Prices, though, have been supported wonderfully well, especially in the latter part of the week, and the changes shown are usually favourable, though to a slight extent. Erie shares, however, are still notably weak, because the directors are not going to pay any dividend even in paper, it is said, on the preferred issues, but even these have not lost ground to any noticeable extent. The bond market, however, has been heavy, and Erie general liens have dropped below 60, while losses of $1 or more appear against a good many other securities, such as the consolidated bonds of the Denver and Rio Grande Company, sundry New York Central and Northern Pacific issues, Atchison general, and so on.

Foreign Railway stocks have just been as unsatisfactory as the other groups, and even the leading Argentine stocks have been pushed back on realisations. Usually they have lost only £1, and there is still a certain investment business noticeable, particularly in Great Southern Pacific and Rosario stocks. It is not, however, great enough to sustain the market. Brazilian Railway stocks have also dipped a little, but the only change worth noting is a decline of ½ in Leopoldina. The Uruguay group continues firm, especially Central Uruguay stock, and the only really flat market has been that for the lower stocks of the old Mexican Railway Company, where the high prices have tempted bears to make an attack. They have been wonderfully successful, driving the second preference and ordinary stocks 2½ to 3½ below the prices of a week ago. The stocks of other Mexican Railways have also suffered. Unsatisfactory traffic receipts on the railways of Cuba have not told on prices during the week, but they have effectually kept the buyers away. Elsewhere nothing has happened.

Banks, Breweries, &c.

Bank shares have again been weak, although the only outstanding decline has been in the shares of the Standard Bank of South Africa, which are 2 down on the reduction noted elsewhere in the dividend. Agricultural Bank of Egypt shares have likewise been flat, and unpleasant reports keep making their appearance about the state of affairs in Egypt generally. There must be exaggeration in the tales so far as the agricultural population is concerned, but we have been repeatedly told of late that the land speculation in and around Cairo and Alexandria is still in an awful mess.

Business in Brewery securities has been altogether stopped pending the appearance of the new Licensing Bill introduced Thursday night by Mr. Asquith, and therefore too late in the week for us to form a definite opinion about it. It appears to be hailed with a chorus of praise by the temperance reformers, and is doubtless in many ways an excellent and far-reaching measure, but we fear the proposals will have to be modified in relation to the time limit and the sources of compensation for loss of licences if the Bill is to go through smoothly. Such changes as the week shows are of the usual description, and Watney, Combe stocks have been disgustingly flat, that being the biggest bubble of the whole lot, not exen excepting Allsopps. There is nothing at all to say about Dock securities.

Commercial and Industrial.

Why Artizans and Labourers' Dwellings ordinary stock should be marked up 6 we cannot guess, because the real financial position of the company is far from strong. It has but little reserve, and has spent too much money to be in a comfortable position. In most Commercial and Industrial securities business is as much to seek as in the Kaffir Circus, but prices have been fairly good, all things considered, and a certain number of bond issues have been put up, although not all. Hotel debentures, for instance, seem to be on offer, and the shares and debentures of motor manufacturing companies are still out of favour. The shares of nitrate-producing companies are also neglected, and the bulk of the changes shown from day to day are without sign of business done. Borax

consolidated preference shares have been put up on the report, Daimler shares are flat, English Sewing Cotton debenture stock is up 2, Underground Electric profit-sharing notes have dropped back 3½, and the debenture stock of the Piccadilly Hotel is marked down 4, but Pawsons and Leafs debentures are 2 up, as well as the debentures of Walkers, Parker and Co., and of the Havana Cigar Company.

Electric, Financial, Gas and Insurance Shares.

The happenings in the Electric group have been few and the largest change is a decline of 5 in Edmundson's debenture stock. Among shares, Brompton and Kensington ordinary are up ¾, and the bonds of the Electrical Development Company of Ontario are marked $5 better. Another week has passed without making any change in the price of Hudson's Bay shares, but then scarcely any business is done in them. Bull and bear stand facing each other on the watch for a lead. British North Borneo securities have been moved up a little, but Chartered debentures are 1 down. The changes amongst Financial Trust issues are not all favourable, but most of the comparatively few movements are upwards, and International deferred stock is quoted 2 higher. In Gas stocks the changes on the week number only five altogether, and they are all to the good, Continental Gas ordinary stock being quoted 3 up. Movements are much less numerous in the Insurance group, and London Guarantee and Accident shares have dropped back ½, as well as British and Foreign Marine, but the shares of the old Marine Company are 1 higher and Ocean Accident and Guarantee shares are up ½.

Iron, Coal and Steel and Other Groups.

A good many changes of from 1s. 3d. to 5s. are to be found on the week's comparison in the Iron, Coal and Steel assortment. They have, however, no significance except as an indication of the sentiment prevalent about the immediate future of our iron and coal trades. Measures Bros. shares, however, are flat and the debenture stock has been knocked down 9. We have tried to get the company's report, which is said to be shockingly bad, but at the time of writing it has not come to hand. Cammell, Laird's ordinary shares are also down ¼, but that is only a sympathetic fall with others, like Stewarts and Lloyds, which have lost ½. A decline of 3 may be noted in the bonds of the Khedivial Mail Steam Company and Royal Mail stock is again 1 up. A few crowns and half-crowns have been shifted in the Tea, Coffee and Rubber group, the largest change being in Singlo Tea ordinary, down ¾. Anglo-Ceylon consolidated stock, however, is up 1½ and the debentures 2 higher. The Telegraph and Telephone market is quite stagnant, and beyond a drop of 5 in London General Omnibus stock and a rise of 1½ in Perth Electric debenture stock, there is nothing to notice amongst Tramway and Omnibus issues.

Friday Evening.

The Brewery market was dumfounded to-day by the proposals of the Government outlined by Mr. Asquith last night and it has been impossible to deal in that part of the Stock Exchange, jobbers refusing to make prices, or widening prices so as to frighten any would-be seller off. It is the shortness of the time limit and the consequent excessive burden of compensation much more than any question of licence abolition which have upset the market. Prices elsewhere did not recede much, but the market was without business all day, and Home Railway stocks were depressed throughout. In contrast to this Yankee Railroad shares were sustained from Wall Street, but no support came from this side. Can. Pac. shares were also kept up, but Grand Trunk stocks remained dull. Argentine Railways also receded and there was really no energy at any point. The French are still selling Kaffir shares, and nobody seems particularly in love with the East Rand amalgamation proposals, so altogether the market was dead enough. The carry-over rate in Consols was stiffer than expected at 3¾ to 4 per cent., indicating the existence of a larger bull account than people reckoned on. Why should the investor buy Consols? Leave that to Mr. Asquith.

Most of the new issues were quoted at a premium, the Copenhagen loan at ½ premium for the ordinary account and at ⅝ premium for the special settlement—Vickers new debentures par to ½ premium for the account and ½ to 1 premium for the special settlement—Bahia new debenture ½ discount to par, the only exception to the rule—Montreal Street Railway debenture 1⅜-2 premium—Canadian new 3½ per cents. ¼ to ½ premium—Grand Trunk Pacific 4 per cents. ½ to ⅝ premium—Cape new ⅜ to ⅝ premium and Grand Trunk guaranteed new, par to ½ premium.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: 2½ p.c. Annuities ¼, to 85⅞-6¼, Irish Land ¼, to 89½-90, India 3 p.c. Acct. ¼, to 92-½. **Fall:** Bank of England 1, to 279-84, Rupee paper 3 p.c. 1, to 49-53.

CORPORATION AND COUNTY STOCKS.—Rise: Metrop. 3½ p.c. ½, to 103½-4½, do. 3 p.c. ⅛, to 93⅜-4½, L.C.C. 3 p.c. Acct. ½, to 91½-2½, London Corp. 3 p.c. 1923 1, to 93-5, Cardiff 3 p.c. 1, to 86-8, Devonport 1, to 86-8, Hull 3 p.c. 1, to 84-6, Leeds 3 p.c. 1, to 88-90, Middlesbrough 3½ p.c. 1, to 96-8, Middlesex 3 p.c. 1, to 89-91, Swansea 3 p.c. 1, to 84-6, West Ham 3¼ p.c. 1, to 85-7, Douglas Town 1, to 94-7.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Rise: Canada 4 p.c. Debs. 1912 ½, to 102½-3½, S. Australia 1, to 103-5, Brit. Columbia 1, to 85-7, W. Australia 1, to 103-5. **Fall:** Cape 3½ p.c. ½, to 93½-4½.

FOREIGN AND COLONIAL CORPORATION STOCKS.—Rise: Dunedin Water Wks. Debs. 2, to 117-20, Melbourne 4½ p.c. 2, to 101-5, Para (Belem) Gold Bonds 1, to 72-5, Rio de Janeiro (Fed. Dist.) 1, to 90-2, Wellington 6 p.c. Waterwks. Debs. 6½, to 120-3.

FOREIGN STOCKS, BONDS, &c.—Rise: Argentine 4 p.cs. all ½, to 86-7, do 5 p.c. Internal ½, to 97½-⅜, Brazil 4½ p.c. 1883 1, to 87-9, do. 5 per cent. West of Minas ½, to 97-8, do. 5 p.c. 1895 ½, to 92-5, do. 1903 ½, to 97⅛-8½, do. Cia. Lloyd Brasileiro ½, to 100-1, B. Ayres (Prov.) ¼, to 59⅝-60¼, Bulgarian 6 p.c. 1, to 103-4, Chilian 4½ p.c. 1889 1, to 86-8, Chinese silver 1894 ½, to 99-100, do (Canton Kowloon Rly.) ½, to 100½-1½, Dutch 3 p.cs. both 1, to 92-4, Greek Monop. ½, to 48½-9½, do. 4 p.c. ½, to 38-9, Honduras ½, to 8½-⅝, Japan 5 p.c. 1907 ½, to 99-½, Russian 3½ p.c. 1½, to 72-5, do. (Dvnsk and Vibsk) 1, to 82-4, do. 5 p.c. 1906 ⅜, to 92½-3, San Paulo (Prov.) 1, to 92-6, do. (State) 1, to 94-6, Swedish Conv. 1894 1, to 84-7, Turkish 4 p.c. 1902 1, to 95-100, Uruguay 5 p.c. Conversion 1, to 90-4, Argentine Cedulas "B" ½, to 44½-5½, Dutch 2½ p.c. 1, to 75-8, do. 3 p.c. Certs. 1, to 91-4, German 3 p.c. ¼, to 82-3. **Fall:** Danish 3 p.c. 1894 1½, to 83-6, Guatemala Extern. ½, to 28½-9½, Japan 5 p.c. 1895-6 ½, to 97½-8¼, do. 4 p.c. ½, to 81⅜-2½, do. 4½ p.c. ½, to 88½-9½, Sao Paulo (State) 1, to 88-90.

HOME RLYS.—Ordy.—Rise: Barry Ordy. 2, to 167-72, Rhymney Prefd. 1, to 92-6. **Fall:** Caledonian Prefd. ½, to 66-7, Glasgow and S.-W. Defd. 1, to 31-2, Hull and Barnsley ½, to 46½-7, Brighton Prefd. 1, to 129-31, Plymouth, Devonport 1, to 70-5.

Leased.—Rise: Victoria Stn. and Pim. Ordy. 2, to 225-30.

Deb. Stocks.—Rise: Charing Cross, Euston, and Hamp. 2, to 78-81, Brighton 4 p.c. 2, to 109-12, N.-Eastern 1, to 90-2, N.-Western 1, to 91-3, Metrop. "A" 2, to 89-92.

Guar.—Rise: Mid. and S.-West. Junc. 1, to 75-8, N. Staffs., Trent and Mersey Nav. Prefce. ½, to 27-8. **Fall:** District 3 p.c. Cons. 2, to 73-8.

Prefce.—Rise: Cambrian No. 2 1, to 9-12, Hull and Barnsley 1899 2, to 88-90, N. Brit. Edinburgh and Glas. 1, to 118-21, do. Conv. 1875 1, to 117-20. **Fall:** Gt. Central 1889 1, to 84-9, do. 1891 1, to 59-64, do. 1894 3, to 48-53, Gt. Eastern 1893 1, to 92-4, Chatham 1st 2, to 70-2, N. Brit. 4 p.cs. all 1, to 107-10.

Critical Index to New Investments.

Metropolitan Trust Co., Limited.

A further issue of £300,000 4 per cent. debenture stock, ranking *pari passu* with the existing stock, is offered for subscription at the price of 99 per cent. The stock is redeemable after January 1, 1926, at the company's option, on six months' notice, at 103 per cent., and is secured by a floating charge upon the business and assets of the company, which on January 1 last showed a surplus of £1,055,868 over liabilities other than the share and debenture capital. A valuation of the investments at that date showed a value exceeding £150 per £100 ordinary stock, after allowing for the debenture and preferred stocks and all liabilities, and on a further valuation this figure has been more than maintained. During the five years ended January 1, 1908, the nett revenue has increased from £19,487 to £43,622, and the dividends paid have risen by ½ per cent. per annum from 6 to 8 per cent. The issue therefore is amply secured and should be a good enough investment.

Hanipha (Ceylon) Tea and Rubber Co., Limited.

This company acquires a group of estates in the district of Pasara in the Uva Province of Ceylon, having an area of 1,969 acres of which 632 acres are under tea and 197 acres have been planted with rubber. Only 500 acres of the tea are as yet in full bearing, and these last year produced a crop of 253,000 lbs. which realised a gross average of 41⅜ cents or about 7¾d. per lb. The rubber yield does not appear to have reached a quotable figure so far, but it is expected that by 1910 a large number of trees will be ready for tapping. For the Pasara group of estates the owners ask £34,000, half in cash and half in shares, and for an odd 63 acres included in the above area the vendor accepts £2,000 in shares. The total capital of the company is only £50,000 in £1 shares, of which 5,000 are held in reserve and subscriptions were invited this week for the remaining 26,000. No promotion money is being paid, and although the business is in its present condition a speculative one, the offer seems very straightforward.

Notes on Books.

The Mining Year-Book ; "The Busy Man's Book of Mines," for 1908. London: The *Financial Times*, 72, Coleman Street. Price 15s. nett.

We have only one fault to find with this capital book of reference—it does not come out often enough. But it is very useful at any time, handily arranged in alphabetical order. A glossary of mining terms precedes the dictionary, as well as a mass of well-arranged statistics and a number of helpful sketch maps, by means of which the mine share-owner can, without effort, discover in what part of the world his property may be found. Reference lists of company officials and engineers, in which directors alone occupy a space of 226 pages, so great is the host of them, come in at the end. As usual, the introduction by Mr. J. W. Broomhead surveys mining enterprise from China to Peru, and from Alaska or the North Pole to New Zealand, and does it well—as few men, indeed, could do it. He sees more gold at times than we can, but what would be the use of him if he did not? Even so his facts are carefully marshalled and up-to-date.

The Directory of Directors, 1908. By Thomas Skinner. (London: 77-81, Gresham House, Old Broad Street, E.C. Price 15s. nett).

This is the 29th annual issue of an indispensable book of reference, interesting not merely to journalists and bankers or Stock Exchange people, but valuable to all who are shareholders in joint-stock companies. Here they can at once get a key to the record of every professional or other director whose name may apepar on a prospectus. In his preface Mr. Thomas Skinner characterises 1907 as one of the worst years on record from a financial standpoint, and justly attributes its ugly story to overtrading and overspeculation in the United States. Unfortunately these dangerous habits were by no means confined to that part of the world, as we shall probably find out before 1908 has run its course, and in spite of the bad wind-up of the past year, 5,250 new companies were registered during its course in England and Wales, with an aggregate authorised capital of £136,500,000, which was only £240,000 less than the total for the previous year, when only 4,840 companies were registered. Looking back over 20 years, Mr. Skinner finds 1888 the year in which the largest aggregate capital recorded was embodied in joint-stock projects. It amounted to £353,700,000, but the largest number of companies was registered in 1897. The amount of capital per company, however, has almost steadily gone down. It averaged £140,000 in 1888 and was only £56,000 in 1897, while in 1904 the average sunk to £24,000, rising last year to £26,000.

Bourne's Insurance Directory, 1908. Edited by F. Harcourt Kitchin, B.A. (London: Effingham Wilson.) Price 5s.)

We have space only to mention the issue of this cheap and invaluable compendium of information about insurance companies of all kinds. That it is well done and up to date the name of its editor, Mr. Harcourt Kitchin, is sufficient guarantee.

Cape Colony To-Day. By A. R. E. Burton, F.R.G.S. (Cape Town: Townshend, Taylor, and Shashall.)

This is in a manner an official illustrated guide to the scenery, resources, and products of this, the greatest of the South African States embraced in the British Empire. The information given is set forth in an attractive way, and the pictures are well chosen with a view to helping the reader to understand what manner of country Cape Colony is. Much historical information is also embraced in the book regarding the pastoral, farming and mining industries through which the country has prospered, and is slowly, very slowly, becoming peopled with whites.

Principles of Company Law. By Alfred F. Topham, LL.M. (London: Butterworth and Co.) Price, 7s. 6d.

Notes on the Companies Act, 1907. By L. Worthington Evans and F. Shewell Cooper, M.A. (London: Ede, Allom and Townsend, Limited, Sweet and Maxwell.) Price, 6s. nett.

The Law and Practice Relating to the Formation of Companies (Limited by Shares). By Vale Nicolas and W. F. Lawrence, M.A. (London: Butterworth and Co.) Price, 17s. 6d. nett.

These three new editions of well-known books have been rendered necessary by the changes made in the law last year. All of them have been enlarged, and the greater part of Mr. Nicolas's work on the "Formation of Companies Limited by Shares" has been rewritten. Topham's "Principles of Company Law," now in its second edition, embraces the widest field and gives a variety of illustrative cases. The work of Messrs. Worthington Evans and Shewell Cooper contains a special chapter on "Auditors," by Mr. Francis W. Pixley, and has reached its fifth edition, sufficient proof of its utility to the legal profession, accountants, and people engaged in joint stock enterprise. Mr. Vale Nicolas's book is in the third edition, and embraces everything requisite to constitute it a valuable book of reference in its particular field.

Company Reports and Balance Sheets.

**** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns*

BRITISH LINEN BANK.

The annual accounts of this old Scotch bank in virtue of an arrangement made a year ago are now made up to January 15 in each year, and as the previous report covered only nine months it is impossible to make accurate comparison between the profits earned in the two periods. We should judge, however, that the nett income for the bank's past year was a few thousands less than that of the year before. The total is £262,719 after providing for bad and doubtful debts, interest due to customers and rebate of bills current, none of which items are exhibited because no profit and loss account is published. To this £76,289 has to be added, being the balance brought forward, which is £9,768 more than the balance of a year ago. Then £50,000 is taken from the reserve fund to be applied in meeting depreciation on the bank's investments, so that altogether £389,008 is available, out of which the shareholders get their dividend at what must now be called the usual rate of 20 per cent. per annum, while £10,000 is again applied in reduction of the cost of bank offices. Then £83,000 in all is written off for depreciation, leaving £45,544 or £30,745 less to be carried forward. In regard to depreciation, the directors say that they have for the first time found it necessary to make a special provision against the reduced market prices of the securities held, and they add that in most cases the recovery since January 15 has already more than made good the amounts then written off, and taking the investments altogether they showed at the date of the balance-sheet after writing off £83,464 a substantial surplus in their market value over the amounts at which they stood in the books, all of which is wonderfully satisfactory. In the balance-sheet the liabilities on deposit and current accounts with interest accrued to date show an increase of £581,213 on the year at £13,107,944. Drafts, letters of credit, etc., outstanding are also up by £86,643 to £257,604, but the diminution in business activity is probably indicated in a decrease of £43,678 in the note circulation down now to £805,434. Acceptances tell the same story with a decrease of £185,910 to a total of £370,030, but the total of the balance-sheet is still £420,022 higher than a year ago at £17,711,555. Of the acceptances, it may be added, the decline has taken place in those representing the transactions of the bank's private customers, these being down £185,911, to £110,741, whereas acceptances of banking customers have risen by £51,788 to £259,288. Changes in the assets correspond and the mixed item gold and silver coin, notes of other banks, cash balances with London bankers and money at call and short notice in London, a most unwholesome looking mixture which will one day have to be separated up, shows an increase of £470,413, at £2,779,005. Investments in British, India, and Colonial Government securities are also up £178,762 to £1,852,517, and other investments represented by Bank of England stock, Corporation stocks, Railway debentures and other stocks are no less than £523,636 higher, at £2,523,556. From these increases it is to be inferred that the board considered that last year's low prices offered a favourable opportunity to invest. And the money to pay for the added stocks seems to have been taken from the Stock Exchange, loans to which have fallen off by £885,683 to £2,002,630, a sufficiently grave total still. From no other source indeed could it be taken since bills discounted and advances show an increase of £314,329 at £9,546,889. The real estate belonging to this bank continues to figure at an amount not far short of the total paid-up capital and in spite of the £1 [illegible] written off against these properties the capital [illegible] sheet shows an increase of £4,475 on the year, the total being now £1,441,928. The expenditure has thus exhausted the provision made from profits by the amount named and the Lombard property alone shows a small diminution in book value, it being entered at £380,000 which is £5,000 less than a year ago. On the bank's own offices, entered at £319,873, there is an increase of £3,564, and on the other real estate or "heritable property yielding rent" owned by the bank the increase is £4,911, making the total on that account £307,125.

THE BANK OF VICTORIA.

Profit for the second half of 1907 was £41,021, making with the balance of £12,490, £62,411 free for distribution. The nett balance was thus £9,760 higher, thanks to an increase of £2,742 in the balance brought forward and of £9,646 in the gross profits. Working expenses, however, took £2,563 more, and there was an increase of £74 in the bank note tax bringing back the increase in the nett profits to the figure given. Out of these profits the reserve fund is increased by £20,000 to £200,000 or double the addition of a year ago, and the dividend on the ordinary shares is again at the rate of 5 per cent. per annum. Changes in the balance-sheet show an increase of £260,012 in the interest bearing customers' deposits now up to £3,480,002. Non-interest bearing deposits, including rebate, however, show a decrease of £152,695 at £1,722,212. Government deposits bearing interest are also £174,394 lower at £432,616, and the Government deposits not bearing interest are now a mere £39,168. Bills in circulation have gone up by about £295,000 to £727,051. There is also a small increase of £1,700 in the note circulation of £143,164. Contingent liabilities, a cross entry of £499,008, show a decrease of £22 652, and amongst the assets coin, bullion and cash at bankers is £147,446 lower at £1,027,435. Bills and remittances in transit are up £71,829 to £756,892. Victorian Government stock and other debentures held is an item remaining at £183,040. Notes and bills of other banks have fallen off £89,138 to £10,992, and balances due from other banks are entered at £36,911, the total of the investments and cash being now £2,016,899. Bank premises are entered at cost at £261,850 and other real estate at £158,407 or together £420,233, a decrease of £8,565. Bills discounted and other advances show an increase of £359,708 at £5,772,314, and the total of the balance-sheet is £154,873 higher at £8,643,165.

COMMERCIAL BANK OF AUSTRALIA.

It jogs along in spite of its dead weight, and profits for the half-year ended December 31, including figures of the London office up to November 20, were £3,677 better at £78,538. The balance brought forward, however, is at £8,488, £5,246 down, so that the entire nett revenue of £87,026 is really £1,569 less. Happily the loss involved in nursing the assets handed over to the Special Assets Trust was at £26,860, £1,710 less last half-year than in the corresponding half of 1906, so the directors pay a dividend at the rate of 3 per cent. per annum free of Victorian income-tax on the preference shares, and, besides meeting the just mentioned loss, place £7,500 more to the Special Assets Trust reserve or £20,000 in all, and still have £8,406 to carry forward. The amount set aside to the Special Assets Trust Company, Limited, just covers the loss involved in nursing the dead assets of the old bank for the six months. It is not much use analysing the balance-sheet, but the figures may be set down for reference. Note circulation £202,820, bills in circulation £446,378, Government deposits, including £71,518 not bearing interest, £351,558, other deposits £4,598,432, of which £1,855,424 bears interest. Balances due to other banks amount to £33,153, and there is a cross entry of contingent liabilities of £168,469. Coin, bullion and cash at bankers amount to £975,056, short money in London to £475,000, investments in public securities, Government and municipal, to £143,350, bills and remittances in transit to £998,279, notes and bills of other banks to £232,105 and balances due from other banks to £18,056. Real estate, including the bank's premises valued at £301,005, amounts altogether to £430,765, and bills discounted and advances, exclusive of provision for bad and doubtful debts, figure at £5,517,345, the total of the balance-sheet being £7,961,287. It should be added that the estimated position of the assets of the old bank held in trust by the Assets Trust Company, and amounting to £2,558,213, indicate a value of only £1,120,000, showing a loss of £1,388,213.

COMMERCIAL BANKING COMPANY OF SYDNEY.

This prosperous Australian bank made a profit of £96,105 in the December half of 1907 or £14,906 more than in the corresponding half-year. The balance forward was also £4,582 higher at £27,000 so that the disposable balance was altogether £19,688 better, and the directors are able to place £2,500 to the reserve fund besides paying the usual dividend at the rate of 10 per cent. per annum, leaving £26,357 to be carried forward. The changes in the balance-sheet indicate continuous growth, its total being now £1,027,214 higher than a year ago at £20,191,048. The reserve at £1,169,235 is £[illegible] higher. Notes in circulation have risen by £53,435 to £605,025 and the liability on deposit and other accounts is £[illegible] up at £15,085,400, but bills in circulation have dropped back by £400,934, to £1,038,288. Coin and bullion amongst the assets show an increase of £803,425, at £4,[illegible], but money lent at short notice in London is £805,[illegible] lower, at £[illegible]. The holding of British Consols and Government securities, however, is up by £73,400 to £2,141,750 and bills receivable are £441,501 more at £2,322,745. There is also an increase at

£1,164,956 in bills discounted and debts due to the bank, the total being now £10,556,489. Bank premises, furniture, etc., figure at £484,762. Queensland Government notes held at £56,722, and notes and bills of other banks held at £54,561. Rebate on bills is entered at £7,100.

BANK OF NOVA SCOTIA.

Nett profits for the past year after making provision for bad debts amount to £140,077, giving with £11,189 from last account £151,267 to be dealt with. A contribution of £2,055 is made to the Jamaica relief fund and of £4,110 to officers pension fund. £25,845 is written off bank premises, £30,822 transferred to reserve and £72,973 absorbed by a dividend of 12 per cent., leaving £14,623 to go forward. Cash assets, consisting of £622,266 due from other banks partly on notes and cheques, specie £616,702, Dominion notes £605,898 and sterling exchange £302,129 amount to £2,146,995. Investments and loans total £4,548,030, comprising provincial, municipal and other bonds £1,015,000, call loans secured on bonds, &c., £921,176, and loans on grain and staple commodities £464,859. Other loans and overdrafts stand at £552,481. Notes and bills discounted and current £2,868,058, deposits with Government £30,167 as security for note circulation, which amounts to £576,174. The total liabilities to depositors is £5,661,769, of which £4,396,156 bears interest and £91,159 is outstanding on account of drafts drawn between branches. The reserve now aggregates £1,109,589, while the paid-up capital amounts to £616,438, and altogether a very strong position is exhibited. A contingent liability of £41,010 in conjunction with other banks in connection with the liquidation of the Ontario Bank is not expressed in the statement. The balance-sheet totals £8,104,952.

BANK OF BRITISH NORTH AMERICA.

In the December half-year profits, including £36,200 brought forward, amounted to £110,290, out of which a dividend of 30s. and a bonus of 10s. per share is provided, making up the total distribution for the year to 7 per cent. £20,000 is added to the reserve fund, £20,000 to bank premises, and £4,000 given as bonus of 5 per cent. to the staff, leaving £24,014 to be carried forward. The bank has joined in guaranteeing the liquidation of the failed Sovereign Bank of Canada to the extent of £60,000. It is also under a guarantee to the creditors of the Ontario Bank in liquidation, but does not anticipate any loss in that quarter. Balance-sheet changes indicate a pulling in, not at all surprising in view of recent events. The total of the balance-sheet, in fact, is £930,000 down at £9,336,000, deposit liabilities are less by £263,712 at £4,481,038, notes in circulation less by £87,974 at £633,381, and bills payable, &c., show a diminution of £601,203 at £2,656,150. Liabilities on endorsements amount to £260,984, but this is not brought into the exhibit. Cash is up £219,701 to £1,118,910, but money lent at call and short notice is £757,331 less at £1,874,951. Bills receivable, loans, &c., is an item also showing a decrease of £380,043 at £5,603,761, and investments, including £251,490, representing £303,000 in Consols, taken at 83, are less by £9,244 at £550,221. Bank premises also are down £5,077 to £152,692, but the deposit with the Dominion Governmen as security for the general bank note circulation is £1,817 higher at £35,288.

MATHER AND PLATT, LTD.

This fine company must have had a good year in 1907 although no close comparison can be made because the previous figures issued covered only six months. On a rough estimate, however, the nett profit shown, after charging depreciation and making provision for directors' fees and expenses, seems to be about £25,000 higher measured by the return for the last six months of 1906. The total is now £125,677 and adding £15,380 brought forward, the free balance is £141,057 although the balance brought forward is about £10,000 down. The directors accordingly pay a 10 per cent. dividend on the ordinary shares and add a bonus of 5 per cent., giving them 15 per cent. for the year and transfer £40,000 to the reserve, raising it to £340,000, besides putting £5,000 to the employees' benefit fund. All this done, £16,057 is left to be carried forward. Some of the figures in the balance-sheet indicate a considerable extension of business. Thus the company owes sundry creditors £72,888 more at £203,170, and amongst its assets stock-in-trade is down £17,714 to £158,224. Sundry debtors, moreover, owe the company £499,150, which is £295,980 more than the company owes to its creditors. Bank balances and cash and bills in hand have also gone up by £46,344 to £97,116. Investments remain at £58,408, but the property, which includes land, buildings, plant, machinery, patterns, fixtures, and fittings, trade investments, patents, and goodwill, shows a reduction of £27,789 at £619,839, which is a most satisfactory change, indicating, as it no doubt does, full provision for depreciation. Altogether an excellent balance-sheet.

TELEGRAPH CONSTRUCTION AND MAINTENANCE COMPANY.

The year 1907 did well for this old company. Profits amounted to £87,616 or £22,838 more than in the previous year before deducting the directors' minimum and extra remuneration, which came to £4,083 in all. The nett profit was, therefore, £83,517 and the balance brought forward was £104,309 or £4,453 less than that of the year before. Thus the final available amount was £187,880 or £16,119 more, and out of this the directors distribute £1 4s. per share as dividends and give also a bonus of 6s. per share, being together equal to 12½ per cent. per annum, making with the interim payments £2 2s. per share or 17½ per cent. for the year, all tax free, as against 15 per cent. for the previous year. This leaves £109,445 or £5,136 more to carry forward. In the skeleton balance-sheet the debts owing by the company, together with reserves for insurance and contingencies, are up £19,809 to £1,070,439 and sundry securities owned by the company are £48,759 up at £1,064,729. Cash in hand and on deposit or current account is £132,868 lower at £161,525, and debts due to the company stand at £358,853. Freehold and leasehold, machinery, plant, stores, materials, &c., appear at £299,059. The directors say that the general business of the company during the past year has been very satisfactory, and no doubt it will benefit in the current year through the fall in the price of copper, many of its existing contracts being doubtless based upon much higher prices for the metal than those now ruling.

GENERAL HYDRAULIC POWER CO., LIMITED.

On December 31 the London undertaking of this company had 6,335 machines contracted to be supplied with power, of which 6,209 were connected with the mains, the increases being respectively 190 and 184, while in Liverpool the contracts amounted to 1,094 or 27 more and the number connected was 32 up at 1,086. The larger business represented by these figures did not bring a correspondingly large improvement in profits, as the gross revenue was only £1,579 more at £128,090, and in spite of an extra £3,169 at £4,295 brought forward, the gain in nett income was no more than £1,611 at £53,906. After meeting preference dividend with £1,293 the ordinary shares again receive a distribution of 6 per cent., leaving a slightly increased balance of £4,612 to be carried forward. The reserve funds have been charged with £3,545 for discount on allotment of debenture stock and expenses of preference share issue, and £2,770 for expenditure on renewals, &c., and credited with £7,744 out of revenue for depreciation, &c., the nett result being an increase of £1,429 at £126,432, of which, however, £32,334 represents premiums received. Capital expenditure in London for the year amounted to £27,114, principally for the enlarging of the pumping station at Blackfriars, the building of a reserve coal store at Rotherhithe, and the laying of additional mains, while in Liverpool £1,241 was spent on additional mains. The total outlay now amounts to £938,729 in London and £182,675 in Liverpool, or together £1,121,404, against which the capital called up is £847,126 and the debenture debt £200,052. With the new funds provided, the directors have been able to pay off half the loan from the bankers, leaving £12,000 still outstanding. Sundry creditors are small at £8,277 against £36,435 due from sundry debtors, while there are also £46,769 to come in on account of meters and machinery on hire and on deferred payment. Other assets consist of stores valued at £14,180, investments on account of leases reserve £3,565, and cash £4,554.

BORAX CONSOLIDATED, LIMITED.

As the profits for the year ended September 30, 1906, were the largest in this company's history, it might have been expected that some set-back would be experienced during the following twelve months. So far, however, from anything of that sort happening, the company again had a very successful year, and its trading profits come to within a few hundred pounds of the "record" figures at £297,750. Interest and transfer fees yielded £3,558 more at £15,157, making a total of £312,908 compared with £309,712, and after meeting administration expenses the surplus was £2,172 larger at £283,391. Debenture interest and preference dividend again absorb £109,000, an extra £5,000 at £30,000 is added to depreciation reserve, and £5,825 is, as usual, transferred to the debenture stock redemption fund. These allocations still leave a very large sum in hand, and nothing is this time written off expenditure on exploration and development of property against £20,034 a year ago, but for some unexplained reason the directors prefer to reduce the dividend by 2½ per cent. to the 17½ per cent. paid for 1905 and to increase the amount carried forward by £32,822 to £47,666. Mines and goodwill are valued at £1,851,086, the only change being the deduction of £497 for a sale, and buildings, plant, &c., are £16,982 up at £576,029 against which the reserves now come to £371,218 or £35,825 more. Trading balances are decidedly favourable, creditors and bills payable amounting to £142,363 and debtors and bills receivable to £208,288, while cash comes to the comfortable total of £110,910, advances, investments, &c., are valued at £499,626, and stocks stand at £179,850.

RIVER PLATE TRUST, LOAN AND AGENCY CO., LTD.

As in the previous year, this company's income for 1907 was augmented by exceptional profits on securities realised, amounting to £23,098. This was £4,182 less, but the revenue from the ordinary business improved by £17,565 to £188,668 so that the total income was £13,382 better at £211,766. London office charges and income-tax only rose by £906 to £16,258, while there was a saving of £2,048 at £15,869 in expenses in the River Plate, but debenture interest required an extra £4,750, at £39,921, and £265 more at £986 is written off costs of debenture issue. Including £28,306 brought in, the disposable total was £167,037 compared with £155,806 and the directors again pay 21 per cent. on the "A" shares and 6 per cent. on the "B" shares, but this time the distribution is all in the form of dividend, instead of being made up of dividends and a bonus of 2s. per share as was the case a year ago. Then £50,000 or £10,000 more is transferred to reserve, making it £490,000, and after giving another £2,000 to the staff pension fund the sum carried out is raised by £1,231 to £29,537. Gold loans on first mortgage of freehold properties have been increased by £134,803 to £1,834,543, but so carefully is the business managed that in spite of this big total the company does not appear to have any defaulters, at least there is no mention of its having any properties on its hands through foreclosure. As regards the

general investments, valued at £319,901 or £113,868 more, the same prudence is exercised, with the result that the directors are in the happy position of being able to state that, so far from any depreciation having to be provided, the market value at the close of the year was in excess of this figure. Only in the case of Consols held has any writing down been required, and even there it only amounted to £1,250, bringing the item down to £83,750. Sundry creditors, constituents' balances, &c., have increased by £56,767 to £231,213, but this is partly offset by a reduction of £27,000 to £23,000 in bills payable. On the other hand sundry debtors, &c., are £67,858 down at £11,373, but short loans in London have risen by £36,000 to £194,000, and cash and bills receivable are £38,193 up, at £88,095.

MERCHANTS' TRUST, LIMITED.

Interest and dividends produced £3,060 more at £112,202 last year than in 1906, but Commissions and trusteeships gave £3,131 less at £2,250, so that with £47 or £4 less from transfer fees there was a small decline of £75 in the gross revenue, irrespective of the balance of profit by sale of securities, which is transferred yearly to general reserve. Few opportunities can have occurred during the past year of realising stocks at a profit, so it is perhaps not surprising that this item is reduced by £26,468 to £8,090. After providing interest on debentures £34,175 and management expenses £10,750, with other small debits the nett revenue is £24 less at £69,882 making, with £2,257 brought in, £72,080 available. The preference dividend provided for, the ordinary shares again get 6 per cent. for the year, but only £1,174 as compared with £10,000 goes to reserve, and the carry forward is £9,158 higher at £11,415. The total contribution for the year to reserve is thus £9,268 against £44,558, and is written off the cost of investments, leaving the reserve at £160,000. Investments at or under cost are taken into balance-sheet at £2,259,428 and advances on security at £93,372, together £2,352,800, but a valuation at prices of January 31 reduces this amount by £172,272 or £12,000 more than the reserve fund, leaving a surplus over capital and liabilities of £36,643 to cover dividend fund of £37,500 and the carry forward. There is £18,812 to come in on sundry outstanding accounts; £55,000 is lent temporarily against security, and cash and bills receivable amount to £17,158. On the other side £40,014 is due on deposit and outstanding accounts. In the list of securities accompanying the report are to be found two quite unknown in the market. It must be news to the directors of the De Beers Mines that they have issued 6 per cent. preferred and common stock in $100 shares. Is there any connection between this and the passing of the De Beers dividend?

SCOTTISH AMERICAN INVESTMENT COMPANY.

This old company did well last year, its accounts running with the calendar year and it steadily increases its commitments, the investments having risen by nearly £250,000 on the twelve months to a total of £3,495,505, exclusive of £104,800 invested in this country. Its revenue in the past year, including £40,646 brought forward, was £221,128, and after meeting interest on debentures, debenture stocks, &c., and working expenses, to the modest amount of £8,733, the balance left was £169,264 or about £17,600 more than in the previous year. Preference and ordinary dividends are provided for, the ordinary at the rate of 12½ per cent. per annum, and a bonus at the rate of 1¼ per cent. per annum is added to this dividend for the ordinary shares, after which £44,726 will be left to carry forward, the total distribution being 3s. per share on the old shares and 2s. 11d. per share on the new. After March 2 there will be no distinction between old and new shares, the whole being merged in one class representing a paid-up capital of £600,000 or £2 per share on 300,000 shares. In March last year £200,000 in new 4 per cent. preference shares was offered for subscription and £193,410 of this was applied for and allotted. The shares are now converted into 4 per cent. preference stock, the total of which outstanding is thus brought up to £1,193,410. A premium of £25,000 was obtained by the sale of these shares and this has been added to the reserve fund, bringing it up to £700,000. There is also an insurance fund of £10,000, yet the company has still a bank overdraft and other floating liabilities of £22,543. Cash on hand, &c., stood at £29,349 at December 31 last, and the company held £11,847 representing coupons purchased.

PALACE HOTEL.

In spite of the increasing competition about which the directors of this "royal" hotel always grumble they have the "pleasure" of placing what they call "a gratifying result" before the shareholders for the past twelve months. Presumably this phraseology is used because the board declares a dividend at the rate of 3 per cent. per annum as against nothing at all last year, but did the company earn this dividend? We doubt it very much. To pay it requires £3,000 and the money is found by refraining from placing just this sum to the general reserve which a year ago was favoured to that extent. The gross receipts are put at £55,269, although in the profit and loss account the figure is £55,257, which is £1,302 up on the year, but expenses increased to a corresponding extent so that the free balance of £17,531 shown in the account is only £14 higher. In the report, however, the figure is given as £17,544 and £4,277 was brought forward, so that altogether the disposable balance is put at £21,821 of which £4,000 goes to maintenance account and £5,000 to pay the interest on the debenture debt. When all this is done and the dividend paid the balance carried forward will be reduced by £1,808 to £2,469, certainly not a brilliant result, especially as no depreciation has been provided for as usual, the auditors, Messrs. Deloitte, Plender, Griffiths and Co., certifying to that effect, also as usual. The directors consider no depreciation necessary in view of the large outlay during past year on repairs but we have only their word for that, and the balance-sheet is extremely meagre, showing in fact only one prominent asset, viz., the property of all kinds, which still figures at £338,178. Stocks of wines are down to £2,017 and debtors to the company owe it £3,783, these two amounts together being less by £2,588 than the amount owing by the company to its creditors which is £7,588. The expenditure on repairs and renewals during the year came to £32 more than the amount set aside from revenue to cover this outlay. It is a pitiful exhibition, and we are not surprised at the disgust emphatically expressed by a shareholder in another column of this issue.

LAW UNION AND CROWN INSURANCE CO.

In this company's life department the result last year was an increase of £190,569 in the accumulated fund, now brought up to £4,952,087. Expenses and commissions amounted to 15.10 per cent. of the premium income, and the average rate earned on the assets was £4 5s. 10d. per cent. In claims and surrenders the disbursements amounted to about 54.23 per cent. of the total income, excluding capital received from annuities sold. A moderate fire business was done at a cost of 35.22 per cent. of the premium income. Gross profit came to £111,472, exclusive of £81,772 brought forward. Shareholders get dividends to the amount of £48,750 on a paid-up share capital of £90,000 or over 54 per cent. Then as against £68,784 brought as profit or overplus for the year on fire account, £50,000 is placed back again to strengthen the fire reserve fund, bringing it up to £250,000. Fire losses, it may be added, took £88,407, or over 36 per cent. of the premium income. A balance of £72,515 is left to carry forward on the credit side of profit and loss, or £9,257 less than was brought in. No mention whatever is made of depreciation on the company's investments. It holds no less than £1,648,379 worth of Home, Indian, Colonial, and Foreign Government and Corporation securities as well as railway and other debentures and debenture stocks and ordinary and preference shares. There is an uncomfortable rumour in the market that upon its total investments a depreciation of something like £80,000 is quietly ignored.

WESLEYAN AND GENERAL ASSURANCE SOCIETY.

Total income last year was £836,534, of which £787,967 represented premium income. Claims took £309,175, matured endowments £15,692, and surrenders £20,148, or £345,015 in all paid to policy-holders. Commission and expenses of management together absorbed £264,894, exclusive of extension expenses, which came to £94,420 additional. At the end of the year the funds were increased by £123,267 to a total of £1,129,092, the interest and other income having been £39,630. In the sickness branch the product of the year's business was a reduction of £6,441 in the fund assigned thereto, and it is now £33,730. A few pounds have also come off the annuity account fund, now entered at £8,253. The total of the accumulated funds of all kinds is £1,239,201. There are 1,245,000 policies in force, and the fourth annual valuation made by Mr H. W. Manly reveals, he states, a surplus of £64,962, including the £29,092 brought forward. This is the result on the two departments together—the ordinary, whose liabilities demand a reserve of £564,368, and the industrial, where the necessary reserve is worked out at £501,074. The annuity branch also demands a reserve of £6,941. Industrial and ordinary business are not separated in the published accounts, and the ratio of the total expenses, "extension" included, to premium income therefore looks unpleasantly high at 45.55 per cent.

RAILWAY PASSENGERS' ASSURANCE COMPANY.

The directors state that the Workmen's Compensation Act, which came into force on July 1, has led to a considerable expansion of business in employers' liability insurance, and we presume that they mean us to infer from this remark that much of the improvement in revenue for 1907 came from this source. That improvement in the premium income amounted to no less than £37,858 at £381,150, and with £18,469 or £1,332 more from interest on investments the total income was £39,190 better at £399,619. Compensation paid took £18,884 more at £205,080, but the proportion of premium income was slightly lower at 53.80 per cent. against 54.23 per cent., while expenses and commission were £15,693 up at £103,921. After repeating last year's provision of £4,000 for premises renewal fund and transferring £1,000 to investment reserve against £3,000, the nett balance, including £185,249 or £19,383 more brought forward, was £240,175 compared with £215,249. Out of this £5,000 is put to reserve, and dividends aggregating 8s. per share or 20 per cent. are again paid. Investments are now valued at £503,530 or an increase of £30,530, and are well distributed, while the company follows the admirable practice of setting out the nominal and book values of all its securities.

SPENCER, TURNER AND BOLDERO, LIMITED.

A further substantial increase of £4,884 to £37,300 is recorded in the nett profits for the twelve months ended January 15, and with £3,445 more at £17,499 brought forward the total available is £8,329 up at £54,808. The allowance for depreciation of fixtures, &c., is small at £956, but the directors have taken out a leasehold redemption policy for £50,000, on which the premium comes to £952, and they now put an extra £2,500 at £5,000 to reserve. Having thus done all that seems to them necessary in the way of provision for the future, the directors proceed to raise the dividend by 1 per cent. for the second year in succession, making it 7 per cent., and carry forward £1,001 more at £10,400. In addition to the policy above mentioned a sum of £20,000 has been taken from the general reserve and specially "earmarked" as a redemption

fund, and with the present transfer from revenue and the premium paid the total accumulations, apart from the book debts reserve of £6,000, amount to £69,952 against a property and goodwill account of £139,835, a proportion which seems ample. Sundry creditors and bills payable total £64,179 or £5,040 more, but liabilities for loans and deposits are £12,704 down at £53,135. On the other hand, stocks have been increased by £17,024 to £183,262, sundry debtors owe no less than £306,822 and cash and bills have dropped by £1,044 to £16,054, while the investment in Consols on account of the reserve is unaltered at £14,141.

THOMAS WALLIS AND CO., LIMITED.

Trading during the twelve months ended January 31 was on a considerably larger scale than in the preceding year, but the margin of profit was much less and the nett gain was only £801 up at £32,439. Interest on bank loan, income-tax, and directors' fees required rather less, and after meeting preference dividend the surplus remaining was £1,408 larger at £17,997. This, however, was still sufficient to cover the 10 per cent. dividend which the directors apparently consider it a point of honour for them to pay, and the balance brought in is therefore again drawn upon heavily, reducing it from £4,375 to £2,373. During the year stocks have been reduced by £4,662 to £80,444 and the decrease has enabled the directors to pay off £5,000 of the bank loan, leaving £30,000 outstanding. Sundry creditors are light at £8,480, and as book debts show an increase of £4,167 to £35,051 while cash amounts to £3,918 the position is comfortable enough. Freehold and leasehold premises and goodwill are valued at £408,100 and plant, &c., at £28,240, but against these there is a reserve of £154,400 or just over 37½ per cent.

BENT'S BREWERY CO., LIMITED.

A further moderate increase of £6,985 to £78,781 was shown in the profits for the year ended December 31, and with a trifle more brought forward the total income was £7,188 larger at £81,305. Of this the compensation fund charge to October next took £4,401, debenture and other interest absorbed £30,873 or £440 less, and directors' fees for 1906 accounted for another £1,000. Preference dividend having been paid £510 more at £2,510 is written off short leaseholds, together with £2,507 for depreciation of brewery plant, &c., and £2,000 is again transferred to contingency fund. This left £19,064 at the disposal of the directors compared with £14,524, but instead of increasing the dividend on the ordinary shares beyond the 3 per cent. paid a year ago, they add an extra £5,000 at £10,000 to the reserve and carry forward a slightly smaller balance of £2,064. Additions and improvements to the property cost no more than £1,769 against £5,975 written off for realisations, &c., so that this item is £4,206 down on balance at £1,352,980, while brewery plant, &c., is valued at £18,223 or £1,290 less, and short leaseholds, loans to customers, &c., less depreciation, are £4,495 lower at £28,706. On the other hand, mortgages and loans, including an overdraft at the bank on security of £16,470 of the debenture stock, have been reduced by £25,847 to £168,062. Sundry creditors are much about the same at £43,223, but debtors owe £1,102 less at £14,442, stocks have been reduced by £1,917 to £59,232, and cash shows a heavy drop of £4,181 to £4,010.

BODDINGTON'S BREWERIES, LIMITED.

Nett profits for 1907, after meeting debenture interest and providing for depreciation at 2½ per cent. on buildings and 10 per cent. on plant, &c., amounted to £48,322 or a trifling increase of £218. Adding £3,299 or £2,041 more brought forward and deducting the rather larger sum of £3,595 for compensation fund levy, the disposable total was £1,929 up at £48,028. Out of this the usual dividend of 6 per cent. is paid on the ordinary shares and an extra £1,951 at £6,951 is transferred to reserve, leaving £4,777 to be carried forward, subject to directors' fees, which for 1906 were £1,500. Brewery buildings, &c., now stand in the balance-sheet at £51,933 or £1,352 less, but freehold and long leasehold hotels, &c., are £7,810 higher at £809,961 against which the general reserve will now amount to no more than £35,000. Another reserve of £158,583 is shown in the accounts, but it is exactly balanced by the item of leasehold houses and goodwill. Liabilities to depositors come to £58,798 and £30,412 is due to sundry creditors, while debtors owe £23,493 less at £39,819. Stocks are very little larger at £80,006, but investments show an increase of £33,660 at £49,805 and cash has dropped to £1,116.

B. MORRIS AND SONS, LIMITED.

In spite of keen competition and the very high prices of raw materials the directors of this company jubilantly proclaim that the results for the year ended December 31 constitute a "record." Gross profits on trading rose by £2,995 to £28,749, and the nett surplus, including £1,597 brought in, was £1,597 up at £9,737, of which £1,000 is again put to reserve, but in addition £500 is written off the advertising suspense account and a similar sum is set aside for a special advertising scheme during the current twelve months. After doing this the directors feel justified in raising the dividend from 5½ per cent. to 6, with a small increase to £1,690 in the sum carried forward, but to our mind the extra profit would have been better employed in strengthening the company's position. Freehold premises stand at £39,348, and machinery, plant, &c., notwithstanding that £607 was written off is a trifle up at £7,101, while stocks seem heavy at £62,925 or £5,711 more, and against all these the reserve even now will only amount to £4,000, none of which is separately invested. Liabilities to sundry creditors are £4,597 up at £23,638 and the bank loan secured by a charge on the freehold premises remains at £18,000, while on the other hand debtors have only risen by £1,437 to £39,540, and cash is unaltered at £3,221.

NORTH SHORE MILL CO., LIMITED.

Nett trading profits for the year 1907 amounted to £22,151 which with £2,906 brought in gives £25,057 available. Out of this a dividend of 1s. per share is paid free of tax, £10,000 is transferred to reserve, £2,000 to fire insurance fund and £5,057 is carried forward. Considerable alterations having been made to machinery during the past three years, a revaluation has been made and property account is now entered at £207,844. Stock in trade amounts to £174,049, cash is insignificant at £538 and books debts considerable at £147,718, but creditors are larger still at £191,681, while £62,110 is owing to the bankers, secured partly by £30,000 debenture bonds. With the year's addition reserve is now £70,000 and fire insurance fund £14,000, all of which are in the general assets. With adverse trading balance, a large debt to the bank, a dividend unprovided for with cash and reserves unrealisable, the position is ill-prepared for a rainy day. The only good feature is a negative one—reserves are not represented by goodwill.

CITY OF BUENOS AYRES TRAMWAYS CO. (1904), LIMITED.

With the nett annuity from the Anglo-Argentine Tramways Company of £71,035 and £2,833 rent of farms, interest, &c., the total receipts for 1907 are £18 higher at £75,344 than in the previous year. A small reduction in administration expenses raises the sum available by £110 to £65,744. The same dividend of 5s. per share is paid, £3,600 or £100 more is transferred to general amortisation fund and £144 is carried forward. Debenture amortisation fund with added interest for the year now amounts to £12,705 and general amortisation fund is increased by £130 proceeds of sale of strip of land and the year's contribution of £3,600 to £17,903. Investments at cost on account of latter fund are £16,178 and cash with amount received from sundry debtors totals £17,370.

ANDREW KNOWLES AND SONS, LIMITED.

After various allowances, including £2,364 for workmen's compensation and £500 contributed to Salford Royal Hospital, the nett profit for the year 1907 amounts to £62,090. With the interim dividend of 12s. per share of £24 paid and a final of 24s. the total distribution is 7½ per cent. Reserve fund is allocated £10,000 and £10,663 goes forward as against £3,572 brought in. Freehold and leasehold estates are valued at £197,533, collieries and plant less £12,000 depreciation £441,160, stores, plant, steamers, &c., £81,010, coal in stock £9,729. Debtors at £55,059 well outweigh creditors for £24,125, which includes rent, wages and directors' fees, &c., outstanding and cash is plenteous at £60,774. With the year's contribution reserve amounts to £65,000 and mine reserve stands at £12,376, of which £55,000 is invested in mortgage bonds of municipal corporations.

MINOR NOTICES OF COMPANY REPORTS.

Bank of Mauritius.—Up to almost the last minute the directors say that they hoped to be able to repeat their achievement of 1906, when £10,000 was added to reserve. Towards the close of the year, however, telegraphic advices were received that owing to the poorness of the crop and other unfavourable conditions certain planters and traders had unexpectedly been obliged to suspend payment. The loss resulting from this has been provided for, but it means that gross profits for the year were £7,374 down at £18,187, and as £1,760 less at £4,869 was brought in, the disposable balance was only £23,056 compared with £32,190. Administration charges took £9,950 or £162 more and the usual dividend of 6 per cent. is paid, but reserve gets nothing and the sum carried out is increased by £704 to £5,573. Deposit and current accounts are £41,484 smaller at £164,872, drafts outstanding are £20,716 down at £24,847 and £10,000 of the £40,000 borrowed on securities has been paid off. On the other hand, cash is £19,165 up at £90,714, but bills of exchange purchased have been reduced by £64,528 to £57,948 and bills discounted, advances, &c., by £24,809 to £217,871, while investments are £1,325 lower at £43,575.

Cambrian Railways.—Gross receipts for the December half-year fell off by £1,350 to £183,986, passenger traffic having yielded £1,284 less and minerals £598 less against increases of £192 in merchandise and live stock and £340 in miscellaneous. Working expenses at the same time rose by £6,176 to £118,853 and the nett revenue, including £302 brought forward, was £7,799 smaller at £65,435. Fixed charges were unaltered at £59,338, but bankers' and general interest required an extra £873 at £2,441, and the sum carried out was consequently reduced from £12,329 to £3,657. Only £5,120 was spent on capital account in the six months, but the debit balance is now £140,201, and the temporary borrowings have gone up by £40,000 to £170,000.

Chatham and District Light Railways Company.—Owing to bad weather and slackness of trade traffic receipts for the December half-year were only £1,580 up at £20,208, although the Rainham extension was open for the full period against only three months in 1906. Expenses took £12,800 and £5,555 was written off, including £5,195 on line abandoned, and after meeting debenture interest £619 was left. Adding £4,493 brought in the total available was £5,112, of which £3,000 is reserved for depreciation, £1,764 goes to pay a dividend at the rate of 3 per cent. per annum on the preference shares and £348 is carried forward. Capital expenditure for the six months was £2,060, but £1,900 debentures and £1,900 preference shares

were issued, and the proceeds utilised in reducing the indebtedness.

CROSSLEY BROTHERS, LIMITED.—During the year ended December 31 this business of gas and oil engine makers earned a nett profit of £85,823, and as £31,854 was brought forward, the disposable total was £117,677. Out of this the preference dividend is paid and the ordinary shares receive a distribution of 10 per cent. leaving £34,774 to be carried to the new account. Nothing is put to reserve, which stands at £100,000, against a capital outlay of £786,924, and the directors do not even attempt to write off the depreciation of £2,460 admittedly existing on the investments of £41,180. Stocks are valued at £144,638, while sundry debtors owe £312,887, and although the paid-up capital is £973,700, the large amount of credit involved in these items has forced the company to borrow £87,118 from its bankers. Other creditors come to £69,852, but, on the other hand, cash and bills amount to £20,576.

FREDERICK SAGE AND CO., LIMITED.—A circular has been issued, which states that it has been agreed that a new board shall be constituted, and will consist of the following:—F. G. Sage, C. B. Crisp, Frank Debenham, Walter Denny, and G. T. Moody. Mr. J. Hawes will act as general manager, assisted by Messrs. Clarey and Lynes. The directors will act without remuneration until the close of the current financial year. Mr. Sage retains the chairmanship, but will vacate the office of general manager as at March 31, and will from that date forego the remuneration attaching to that office. The petition to wind up the company has been withdrawn with the consent of all parties. The agreement, it is believed, will determine all existing conflicts, and will enable the company to make a new start and resume its former prosperity.

FULLER'S.—Gross profits for 1907 increased by £1,439 to £2,286 and nett profits were £1,610 higher at £9,417, but the sum brought forward was so much smaller that the gain in divisible surplus was only £872 at £9,751. Out of this dividends aggregating 10 per cent. are again paid on the ordinary shares and an extra £500 at £2,000 is put to reserve, leaving £1,011 or £371 more to be carried forward.

INTERNATIONAL INVESTMENT TRUST, LIMITED.—With a paid up share capital of £1,000,000 and a debenture debt of £750,000, this undertaking has investments which cost £1,646,224, and appear in the balance-sheet at that figure. According to the auditors' report, however, a considerable number of the investments are still not producing income, and there would appear to be a heavy depreciation on many of them, apart from the acknowledged loss on realisations, which is carried as an asset. Including £3,887 brought forward, the total revenue for the year ended January 31 was £82,008, of which debenture interest took £28,500 and administration and other charges £6,601, leaving £46,907 to be dealt with. Of this, £5,608 is written off the above-mentioned item of losses realised, and after paying the dividend on the preferred stock, the deferred stock gets 3 per cent. for the year and £4,249 is carried forward. Profits on sales, commissions, and returns of capital made during the year amounted to £11,021, but losses on realisations took £8,629, and the balance of £2,392 is applied in further reduction of the suspense account, bringing it down to £142,000.

LAW GUARANTEE TRUST AND ACCIDENT SOCIETY.—Income last year from premiums, fees, profits, &c., was £215,353, but the percentage of expenses to nett income rose by 3 per cent. to 28.82 per cent. Out of the revenue £5,000 has again been placed to the general reserve and £36,500 altogether to the reserve for claims in suspense, part of which is held against risks attached to licensed property. Out of the balance the dividend is made up to 10 per cent. for the year, leaving £14,611 to be carried forward against £34,611 brought in. Income was £3,255 larger than that of 1906. Management expenses rose by £6,247 to £52,017. The balance-sheet shows an increase of £13,727 in properties taken over at £271,378, and investments, including debentures, deposits, &c., are £50,888 up at £308,539. Sundry creditors are down £9,210 to £90,400 and cash is up £76,085 to £84,501.

SOUTHDOWN AND EAST GRINSTEAD BREWERIES.—Gross receipts from all sources for 1907 were £377 smaller at £43,981 and as repairs took £1,831 more at £6,049, while other expenses were also up, the nett income, including £2,254 brought in, showed a decrease of £2,948 at £21,745. The dividend therefore is reduced by 2 per cent. to 10, and after putting £888 to reserve against £988 to that fund and £1,500 to a special reserve a year ago, £2,307 is carried out. Estates and goodwill are valued at £315,745 or £3,403 more, while the reserve, with the present addition, is £1,000 less at £10,000. Floating liabilities and loans have risen by £4,086 to £17,031, while debtors and stocks are about the same as before at £16,766 and £10,231, and cash has dropped by £1,740 to £4,838, apart from £8,453 or £300 less in the hands of debenture trustees.

CLEATOR AND WORKINGTON JUNCTION RAILWAY.—Gross receipts for the half-year ended December 31 were slightly over £3,000 up at £37,065, but working expenses rose by £2,900 to £25,032. After providing for debenture and preference interest there is sufficient to pay a dividend at the rate of 4 per cent. on the ordinary stock and leave a balance of £414 to carry forward compared with £452 twelve months ago.

Messrs. J. Henry Schröder and Co. have received a cable from their Santos agents advising them that they have further encashed £19,300 in respect of the surtax collected weekly for the service of the State of San Paulo 5 per cent. Exchequer bonds, making a total of £648,100 encashed since August 1.

TRADE AND PRODUCE.

WHEAT.—A quiet but steady trade this week but prices up a little, spot parcels selling at 1d. to 2d. over last week's rates, futures fluctuated a good deal within narrow limits, but, on the whole, were firmer, and the more advanced wheat in particular were quoted higher. Argentine shipments are still heavy, and the quantities of wheat and flour estimated to be on passage at the beginning of the week were again higher, 4,160,000 qrs. said to be coming to the United Kingdom and 2,560,000 qrs. to the Continent. Imports came to 579,013 qrs. against 366,530 a year ago, and farmers' deliveries were 58,401 qrs. averaging 32s. 6d. per qr. against 76,580 qrs. averaging 28s. 10d. last year. This week English wheat has been in plentiful supply, and prices have improved to the extent of 1s. to 1s. 6d. per qr. American markets were strong and active, and prices advanced steadily till Wednesday, when a reaction set in on bearish reports of foreign crops. But a sharp advance followed this, and on strong speculative buying the market grew excited, and closed 2c to 2½c higher on the day. The visible supply showed a decrease of 1,071,000 bushels on the week.

WOOL.—On Monday last markets for raw wool were better, a fair weight of new business causing a steadier feeling, and prices without going higher were more firmly held to. But little has been done subsequently, and yesterday again things seemed at their lowest ebb. It is chiefly owing to the large imports of wool, but apart from that business is almost at a standstill, merinos especially being quite stagnant. A few sales have taken place in English wools, chiefly medium and fine qualities, but at considerable concessions, prices in some cases being ¼d. down on the week. Spinners continue to be busy, but find new business difficult to settle on account of the conflicting elements in the trade. The manufacturing business is variable, home trade in better-class goods shows a little more briskness, but shipping is very quiet except for some medium and cheap goods that Canada and South America are taking more freely.

COTTON (from our Manchester correspondent).—The market during the week under review has presented scarcely any fresh feature of moment, and the general outlook continues discouraging. Producers have not sold the production of the spindles and looms. Sellers have had to be content with small sales. American cotton in Liverpool, on the whole, tends to be easier in price, and there has been a decided drop in Egyptian descriptions. Very little interest is being taken at the present time in the prospects for supply of the raw material. The demand from abroad for cloth has been of small dimensions. Few offers of a practical character have come through. Our chief consuming markets of the East, on the whole, are slow at sending advices which stimulate shippers on this side to operate with any freedom. Small lines have been put through for China in shirtings, and Madras seems to be the best of the Indian outlets. It is scarcely necessary to mention the various minor markets in detail. Sellers of cloth have complained loudly of their poor position. Some prices taken mean a definite loss, but orders have to be secured to keep the machinery running. Home trade advices are rather discouraging. The turnover in light fancy materials compares unfavourably with the same time last year. Printing cloths are not so healthy, owing to the fashion turning on to woven goods such as zephyrs. Burnley manufacturers, although perhaps meeting with a little more inquiry, cannot improve their position. T-cloths and Mexicans remain dull. American yarns for home use have moved off slowly. There is no scarcity now in either twists or wefts. The all-round supply is increasing. Users are not taking deliveries against old contracts. Offers from our Eastern markets have not been of a practical character. The Continent is very quiet, and certain exporters are doing their best to cancel old orders. Bolton yarns remain flat, and are easier in price on the week. The outlook in this section is depressing.

Sir Jacob Behrens and Sons consider that, judging from prospective supplies alone, all grades of cotton should advance. Trade reports, however, are very discouraging, and until confidence is restored there is not likely to be much activity anywhere.

COAL.—Steam coals are having a quiet time and, except in the North of England where foreign markets are said to be buying freely, few orders or contracts are coming to hand. Railway companies are well supplied for the time being, and the difficulties occurring in the engineering and shipbuilding trades tell badly upon requirements of good manufacturing steam coals. Prices of coal for shipment at the Scottish ports are down this week 3d. to 6d. per ton, and the shipments themselves show a decrease, but that is owing chiefly to the gales of the past week. Home trade is dull, as it also is in Wales, where in spite of the fact that dispatches of coal are fairly large in the aggregate, the prospects of the trade are not regarded as very cheerful. Prices have not fallen further, but are by many not yet considered to have reached their lowest.

COPPER.—Heavy pressure by large sellers broke the market on Monday and although important buying orders came in values fell back 7s. 6d. to 10s. 6d. on the day. They fluctuated later, but again tended downwards on Wednesday on the support being withdrawn. Then came a renewal of fair speculative buying, to some extent caused by the stronger tendency of copper shares, and quotations rallied to £58 5s. for cash and £58 17s. 6d. for three months.

TIN.—Strong advices from the East, where a fair business was put through at £132 5s. c.i.f. London, caused a sharp advance at the opening. The improvement, however, did not last very long, and with narrow fluctuations prices closed at a loss on

each day until by Thursday they were down to £128 10s. cash and £128 three months. To-day a sharp rally was brought about and final quotations were £130 5s. cash and £129 10s. three months.

Iron and Steel.—West Coast hematites are still experiencing a dull time, and the outlook does not seem very promising, but prices are a shade better this week, and in other parts of the country prospects are not so dismal. East Coast hematites have had a fairly active week, and prices for mixed numbers are now 2s. higher than they were early in the month. The statement that the shipyards are not to be closed has improved the outlook considerably, and in pig-iron there is a decided change for the better. Buyers of Cleveland are finding a difficulty in getting the metal, No. 3 in particular being very scarce, and there are hopes that to meet requirements furnaces that lately have been blown out of blast will have to resume operations. Makers' stocks are nearly exhausted and Connal's stores decreasing each week, and the trade generally is in a more cheerful frame of mind. Shipments are increasing, and foreign buyers have already had to pay 1s. 3d. per ton more for their metal than was the case a week ago. In the steel trade also there are some slight signs of improvement.

Tea.—The market does not improve very much, and, according to Messrs. Gow, Wilson, and Stanton's weekly circular, the decline in rates for common and medium grades which has taken place this year is hardly justified by the statistical position. Common leaf has fallen ¼d. to 1d. per lb. from the highest point, and low mediums nearly as much. The fine qualities alone have maintained their quotations. Indian offerings were moderate at 30,548 packages, and a little more animation was noticeable than last week, but with common qualities again irregular and occasionally weak. 29,162 packages were sold on garden account averaging 7.92d. against 39,043 packages averaging 9.21d. in the same week of last year. Ceylon importers brought forward 29,151 packages, and for these demand was weak for all teas under 8d., and showed a further decline of ½d. per lb. On the other hand, good qualities were sought after, and occasionally obtained higher prices, the average for the week coming to 7.64d. against 8.64d. in 1907. Of Javas 2,581 packages were offered, and except for a few finest kinds prices showed an easier tendency.

Sugar.—The market has at last taken a more decided upward turn, says Mr. Czarnikow, May closing at 10s. 2½d., in sympathy with America, where the quotation has been raised to 3.83 cents, and where refiners paid the parity of 3.85 cents for shipments a month ahead. The sharp advance is interpreted here as pointing to less production. But, continues Mr. Czarnikow, refiners must be aware that, in any case, a very large quantity of either Javas or beet must be imported, and Javas are now held for 4.05 cents, August beet for parity of even 4.17½ cents, and an advance to 3.85 cents leaves Cuban sugars still at a cheap level. Cuba will not refuse to sell below beet parity for a long time, and a large quantity of Javas has been contracted already to fill the breach when Cubans are exhausted, so that with a moderate falling off in meltings cane sugars may cover the United States requirements up to the end of September, and perhaps even of October, provided always that the Cuban crop turns out near 1,100,000 tons. If it is much lower the situation would change, and speculators here are willing to pay a premium for the chance. Thus, whilst old crop moved 3d., new crop improved only 1d. Meantime, America has very large arrivals, 69,000 tons, but meltings were only 32,000 tons, leaving stocks at 163,000 tons.

Answers to Correspondents.

Deposits against future queries may be lodged with the Publisher.

Virginia.—Small, and not very marketable, but a fair security, as the investments are widely distributed. Also the management is rather careful,

F. E. D.—No great immediate improvement to be looked for, but for a long hold the shares are not without attraction, as they partake in extra earnings.

O. E. A.—(1, 2) Both these concerns are to be absorbed into the big amalgamation, so it would be as well to hold on for the present. (3) Has produced some rich ore, but we are doubtful if the life is now a long one. We do not think prospects justify any important rise. (4) This also has done well in the past, but its life is likewise uncertain. (5) We fear there is not much chance of improvement; dividends depend upon guarantee. It is possible this company may be absorbed by Government, but the terms are not likely to be generous.

L. G. R.—No doubt earnings have been affected by the fall in minerals, which form the principal traffic. It is possible that there are still large ore deposits to be handled, but the business has always been rather precarious, and the shares are at best very speculative.

J. T. W.—No. We are sorry to say there is trouble in connection with these bonds at present, and it would be better to await developments.

O. E. G.—The stock might go higher, but it is rather risky to buy more at the present level.

Q. E. D.—There is diversity of opinion as to whether this is a trustee stock or not—but even if allowed it is not a prudent investment at present, as the margin is small, and the company has a long struggle before it.

Enquirer.—No, we fear not. The business is a fine one, but too much dependent on credit, and new large orders will be difficult to secure for some time to come.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and February 22, 1908:—

Revenue and other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Feb. 22, 1908.	Total Receipts into the Exchequer from April 1, 1906, to Feb. 23 1907.
Balances, April 1:	£	£	£

Treasury, February 25, 1908.

The coupons due March 12 of the Imperial Japanese Government 5 per cent. Sterling Loan of 1907 for £23,000,000 will be paid by the Yokohama Specie Bank, Limited.

Letters to the Editor.

ROYAL PALACE HOTEL.

SIR,—The shareholders in this concern will hardly "enthuse" over the "gratifying result" for the year which the directors "have pleasure in being able to place" before them. As they have received no dividend since 1905, the 3 per cent. recommended is certainly better than nothing, but it is not an achievement for a modest board to boast about. The story of this ill-starred undertaking, if sordid, is instructive to a degree. Floated with a fanfaronade of trumpets in 1896, it has wholly failed to realise the glowing predictions of its sponsors, for in 11 years it has paid only three dividends, and those of microscopic proportions. For five years after the unfortunate shareholders were "roped in" not a pennypiece was paid on the ordinary shares. In 1902, 1904, and 1905 dividends of 4 per cent., 4 per cent., and 2 per cent. respectively were paid. Then occurred another hiatus until the present year, when 3 per cent. is declared. But Messrs. Deloitte and Co. never fail to incorporate in their certificate this significant comment: "No depreciation has been provided for," which can only be interpreted one way—viz., that those careful auditors do not consider that the dividends declared should be paid. If a sufficient sum for depreciation had been allocated year by year, it is clear that the ordinary shareholders would not have received a dividend to this day. Whence it follows that the concern was sold to the public for £100,000 (the amount representing the ordinary shares) more than its just value. If this be so, it is a clear case for restitution. It is proverbially difficult to snatch butter from a cat's mouth, and, speaking generally, promoters are not easily persuaded to part with their plunder. But there are promoters and promoters, and it is to be hoped that those responsible for this flotation will have a higher conception of the ethics of their calling than those from whom concessions are to be wrung only at the bayonet's point. We do not look for honour among gold-mining "rotters" to whom it would be quixotic to appeal for consideration. But we expect better treatment from the sponsors of an undertaking which was launched under the proud ægis of a "Royal" cognomen. Surely "noblesse oblige" should play some part in the relations of the promoters and the proprietors, particularly as the dividends the latter have received from 1896-1907 work out at only 18s. per cent. per annum! "Oh, what a fall is there" from the profits foreshadowed in the prospectus!

The board never fail to refer to "increasing competition" as one of the difficulties against which they have to contend, but one is tempted to reply in Mr. Burchell's expressive word "Fudge!" Why did they ignore this factor in the prospectus only to make capital of it in the reports? If competition has been severe of late years, the pretext cannot apply to the period of 1896-1902 when the ordinary shareholders received no dividend at all, notwithstanding the Diamond Jubilee and other functions of enormous benefit to fashionable hotel enterprises. As a dividend is to be paid in 1908, against none in those years when it was less severe, it would appear that "increasing competition" is beneficial, which, as Euclid says, is absurd. The truth is, the plea is disingenuous, for competition was, is, and ever shall be, and the fundamental difficulty is the iniquitous capitalisation under which the business reels and staggers.

A point to be considered is that of the management of the hotel, hitherto entrusted to an expert, Mr. Cox-Hughes, who died last year, and whose successor is the chairman. As a quick-change artist Mr. Ernest Polden "takes the cake." His legitimate trade is believed to be that of a printer, but he devotes his leisure to political propaganda and flirtations with Thalia—in other words, he directs a music hall. The versatility of his genius may be conceded; still why the rejected of Basingstoke should be qualified to manage a big hotel is not apparent. If, in addition to his many accomplishments, he could dance the tight rope or work the trapeze, his ability to manage a hotel (a highly technical business) would be still to seek. From his training and antecedents Mr. Eugene Cremetti might have been appointed to this office without cavil from anyone, but surely Mr. Polden is the square post in the round hole.

It is difficult to say to what price the £10 ordinary shares have fallen under the direction of this brilliant chairman and his gifted colleagues. In 1906 they were quoted at the derisory sum of 7s. 6d. a-piece. To-day there is probably no market for them except by negotiation. The concern's future is what the shareholders choose to make it. If they invest themselves they may save it, waterlogged though it is, from drifting on the rocks. To this end they should ascertain, *inter alia*, by what authority the chairman has been appointed manager; the amount of the shares held by the board, and the prices at which they were acquired; if any of the directors were also promoters; how much of the colossal capital (£325,000) found its way as profits into the promoters' pockets; and if the Board have made any serious effort to induce them to make such restitution as will meet the justice and necessities of the case.

FIAT LUX.

UNION OF LONDON AND SMITHS BANK.—Deposit and current accounts on February 19, came to £33,669,847, acceptances and liabilities by endorsement to £3,528,950 and other liabilities to £627,907, while assets consisted of cash in hand and at Bank of Englan £4,966,387 money at call and short notice £5,309,400, investments including reserve fund £6,006,609, and discounts, loans and other advances £21,236,132.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Emu Bay.—1s. 11d. per share on the preference shares, Nos. 250,001 to 300,000, and 1s. 7d. per share on preference shares, Nos. 300,001 to 350,000.

Great North of Scotland.—At the rate of 3 per cent. per annum on the preferred ordinary stock and at the rate of ½ per cent. on deferred ordinary stock, carrying £2,310 forward.

BANKS.

Disconto-Gesellschaft.—9 per cent. for 1907, carrying forward 1,272,139.05 marks.

Ionian.—Final of 3s. 6d. per share for half-year ended Dec. 31, making 6 per cent. per annum for 1907.

Standard of S. Africa.—For half-year ended Dec. 31 at the rate of 14 per cent. per annum (making 15 per cent. for the year), carrying forward £40,000.

MINES.

Associated of W.A.—Interim of 1s. per share.

Le Roi No. 2.—Interim of 2s. per share, payable March 7.

Mill's Day Dawn United.—1s. per share, payable March 28.

MISCELLANEOUS.

Aerated Bread.—Interim of 3s. per share.

Chelsea Electricity Supply.—For half-year to Dec. 31 at the rate of 5 per cent. per annum on the ordinary shares, making 4½ per cent. for 1907, placing £11,619 to depreciation, £519 to debenture premium redemption fund, and writing off £802 from the cost of extinction of founders' shares, carrying forward £904.

Eley Brothers,—5s. per share for year ended Dec. 31.

County of London Electric.—Final on the ordinary shares at the rate of 6 per cent. per annum for half-year ending Dec. 31, making 5 per cent. for year, placing £25,000 to reserve for depreciation, and carrying £4,381 forward.

J. and P. Coats.—Quarterly of 5 per cent. on the preferred ordinary stock, and a quarterly of 1s. 6d. per share and 6d. per share extra for quarter ended Dec. 31 on the ordinary shares.

Leopold Schwabacher.—Interim at the rate of 10 per cent. per annum on the ordinary shares.

Mackay Companies.—Regular quarterly of 1 per cent. on the preferred and common shares.

North British Locomotive.—10 per cent. on the ordinary shares for 1907.

Paquin.—Final on the ordinary shares of 15 per cent., making 20 per cent. for year ended Dec. 31, writing £50,000 off goodwill, and carrying £32,611 forward.

River Plate Fresh Meat.—10 per cent. on the preference shares, carrying forward £594.

Salt Union.—7 per cent., plus 2s. per share on the preference shares, and 1s. per share on the ordinary shares, placing £10,000 to reserve and carrying forward £2,000.

Surrey Commercial Dock.—10s. per cent. on the ordinary stock and £1 10s. per cent. on preference stock "A," making £3 per cent. for year on the ordinary stock and £4 per cent. for year on preference stock "A."

MINING RETURNS.

Broken Hill Proprietary.—Refinery products (including products from ores purchased) *silver (fine), 328,639 ozs.; †soft lead, 5,414 tons; antimonial lead (estimated), 41 tons. *Including 21,435 ozs. silver and 963 tons lead from ores purchased. Zinc concentration—5,046 tons, containing 83,253 ozs. silver, 588 tons lead, and 2,048 tons zinc.

Duff Development.—Total for week, 150 ozs.

Hyderabad (Deccan).—Output of coal, 39,002 tons.

Mill's Day Dawn United.—Treated 2,019 tons, value £7,000.

New Ravenswood.—Crushed 852 tons, value £2,418; concentrates, 76 tons, £1,227; from the tailings plant 41 tons concentrates, £525.

"O.K." Copper.—Treated, 799 tons crude ore, for 55 tons fine copper.

Orsk Goldfields.—Output, 574 ozs.; value, £2,053.

Ouro Preto.—5,403 tons, 1,992 ozs.

Palmarejo and Mexican.—Zapote.—Crushed 3,834 tons; treated, 2,900 tons; producing $47,250.

Broken Hill Proprietary Block 10.—Treated 10,805 tons crude ore, producing 1,843 tons concentrates, containing 1,087 tons lead and 58,976 ozs. silver.

Raub Australian.—Bukit Koman: Crushed 3,866 tons, 881 ozs. Bukit Malacca: Crushed 2,098 tons, 190 ozs.

United Rhodesia.—Jumbo: 2,672 tons, 1,431 ozs. Inez: 1,441 tons, 572 ozs. Properties on tribute: 3,675 tons, 949 ozs.

Westralian Mount Morgans.—Crushed 4,950 tons, 813 ozs.; cyanided 2,475 tons, 410 ozs.; slimes 2,550 tons, 458 ozs.

Shawinigan Water and Power Company.—Earnings for January were $55,000, being at the rate of $660,000 per annum, compared with $37,904, or at the rate of $454,848 per annum a year ago.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending Febuary 23, 226,000 poods, equals 3,644 tons.

Baku Russian Petroleum.—Production of crude oil for week ending Feb. 22, 236,000 poods, equals 3,804 tons.

Mexican Light and Power Company.—Gross earnings for January $500,025, increase $102,689, nett earnings $[illegible], increase $40,266; surplus $120,735, decrease $24,495. Ratio of expenses to receipts, 42.70 per cent. against 38.02.

COMPANY MEETINGS.

THE PEKIN SYNDICATE.

The ordinary general meeting of the Pekin Syndicate, Limited, was held on Monday at the Cannon Street Hotel, E.C., Mr. Carl Meyer (chairman) presiding.

The Secretary (Mr. Thomas Gilbert) having read the notice convening the meeting, and the auditors' report and certificate,

The Chairman said: The remarks which I have to make fall principally under two heads. The first of the two is the actual work we have been doing during the twelve months at the colliery in the province of Honan. Our trouble during the last twelve months has been principally a constant fight with the water, which finally at the beginning of the present year entirely overpowered all our efforts for the time being. I am glad to say that there are also favourable features, and these consist in the fact that in two of the numerous boreholes on which we have been engaged, No. 5 and No. 12, we have been fortunate enough to strike what appear to our engineers very good, very hopeful seams of coal. Our chief manager at the mine, Mr. Kenrick, sends us to-day a telegram in answer to one which we sent him a day or two ago, in which we asked him what progress he had made since last he reported. His answer is: "The new shaft at No. 12 borehole is 125 feet deep, and our No. 3 pit is now 393 feet deep." The second subject on which it is my duty to speak to you to-day is the subject of the retrocession of the Shansi concession. All our efforts to induce the provincial authorities to allow us to commence work have not been availing, owing to the very strong opposition which the local gentry and the population generally in the Province of Shansi entertained, not to the Pekin Syndicate alone, but to allow any foreign working within their province. The sum of 2,750,000 taels, at which the retrocession of the Shansi concession has been agreed upon, is undoubtedly much smaller than what we had at one time hoped to obtain, but, at the same time, we feel confident that it is the largest, under all the circumstances, that we were able to obtain. The agreement with the Shansi delegates, which has received the official sanction of the Chinese Government and of the British Minister, has since been executed in so far that the first half of the indemnity—that is, 1,375,000 taels—was paid on Saturday last to our agent in China. Before I go further I would like to say that, although we have accepted compensation for our Shansi concession, yet we have not by any means abandoned all hope of doing work in the Province of Shansi hereafter. Now, you will very likely want to know what is going to be done with this money. We have had no end of advice given to us since it became known that the concession was going to be sold, or had been sold, and there have been some angry articles in the Press that we did not, when we acquainted the public with the sale of this concession, immediately submit on the very next morning a scheme of what we were going to do with the money. I am afraid those impatient critics will have to wait a short time longer, because we have not yet made up our minds what is going to be done with this money. All I can say at present is that we shall use the money strictly in accordance with the statutes of the company. For the present we have found a good employment for the money in China itself—that is to say, we have lent the greater part of the payment that was made to us a few days ago to a department of the Chinese Government at 6 per cent. interest for one year. It would be much easier to come to a final decision on this point, as on several other points connected with the division of future profits, if we had been able to arrive at an understanding between the various classes of shareholders with respect to the unification of the different classes of shares in this syndicate. I hope that when the question comes up again for discussion the representatives of the various classes of shareholders will approach it with a general desire to come to an understanding instead of sticking too closely to the absolute wording of their acquired rights. So far as the financial position is concerned, during last year, 1907, our revenue was, roughly speaking, £45,000; our expenditure in London and China, also roughly speaking, was about £13,000, and we spent about £67,000 on capital account in connection with the development of our Honan concession, including property. I cannot help feeling, considering the prospects that we have, considering the ample cash resources of which we dispose, that our shares are unduly depreciated on the market. If I reckon that the whole of the indemnity will be paid—of which there can be no doubt—the cash assets of the syndicate amount to at least £1,250,000, and I think I am right in saying that the market value of the various classes of our shares is less by several hundred thousand pounds than this break-up cash value of the company's assets. I am glad to have the opportunity of stating that the important trunk line from Tientsin to Pukow is about to be built by the Chinese Government, and will be financed by the Chinese Central Railways and their German associates. The Pekin Syndicate hold a considerable part of the capital of the Chinese Central Railways, and will, therefore, be entitled to draw their proportion of the profit in which it is hoped the financing of the construction of this line will result. The Chinese Central Railways hold other concessions for railways in China, and now that the ice is broken we may look to further business in this direction. The secretary has placed in my hands another telegram despatched from the mines at 1.50 to-day. It is from Mr. Kenrick, and he says: "In reply to your cable dated the 22nd, good progress is being made in all departments. Yes—decidedly I expect to be in coal about next June." (Applause.)

Mr. George Jamieson, C.M.G., seconded the motion.

Mr. H. B. Vaile asked if, in concluding the negotiations with the Chinese authorities for the retrocession of the Shansi concession, it had been stipulated that the concession should not be granted to anyone else.

The Chairman, in reply, read paragraph 7 of the agreement, which provided that "if by any possible chance the Province of Shansi shall hereafter desire to raise a foreign loan in connection with mines, working of iron or transport of minerals, the Province of Shansi shall notify the Pekin Syndicate, and if the Pekin Syndicate's proposals are in all respects fair and moderate, shall then proceed to further negotiation." In answer to another shareholder, he said that the sterling amount of the payment received for the surrender of the Shansi concession depended very much on the exchange, but the board reckoned that the sum would be from £350,000 to £400,000.

The motion was carried unanimously.

Mr. H. J. Torr then gave an outline of a scheme for the unification of the capital, which, he said, would maintain mathematically the different rights of the shareholders in the future division of the profits and at the same time get over the difficulty of scaling down the Shansi capital. He moved the appointment of a committee to consult with the board on his scheme or any other proposals which might be made.

Mr. Bristowe seconded the motion, and, after some discussion, Mr. Torr's resolution was passed in the following terms: "That unification of the different classes of shares is desirable. That a committee consisting of two representatives of each class of shareholder be appointed to consider with the directors the scheme proposed by Mr. Torr, and any other suggestion that may be made, and that the board of directors should have power to add to the number of the committee.

THE "FINANCIAL TIMES."

The ordinary general meeting of the Financial Times, Limited, was held on Monday at the offices, 72, Coleman Street, E.C., Mr. F. M. Bridgewater (managing director) presiding.

The Secretary (Mr. H. A. Randall, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: It is a matter of common knowledge that business in the City has remained during the last year under the cloud from which it has never completely emerged since the South African War. I am not under the necessity of putting that forward to-day as accounting for a poor dividend, because, in spite of continued adverse conditions, we have succeeded in earning a dividend which, I venture to hope, you will consider a satisfactory one. (Hear, hear.) You will no doubt have observed from the report that during the year the balance—namely, £1,100—of the cost of the electrification of the works has been cleared off out of profits, that a further contribution of £500 has been written off the cost of special renewals and improvements to machinery, also out of profits, while the carry forward has been increased by over £3,000. I am very glad to be able to tell you that the anticipations which the directors had formed as to the probable results of substituting electricity for steam power at the printing works have been realised. We have by this change not only obtained a considerable amount of very valuable extra space, which was formerly occupied by the engines, boilers, bunkers, &c., but have at the same time done away with the injury to plant and material consequent upon the bringing in of coal and the getting out of ashes. We have also got rid of the heat from the boilers, which in summer was a very doubtful blessing. In addition to obtaining all those advantages, we have effected an actual saving in money. The change involved the scrapping of engines, boilers, &c., for about £300 or £400, which cost us something like £4,000 or £5,000, and it required the exercise of some courage to make the change; but, as I have told you already, we are entirely satisfied with the result. Probably the principal event during the year under review has been the completion of the printing works building. When the building was erected trouble was experienced in regard to ancient lights with the owner of a property opposite. The result of the opposition on the part of this neighbouring owner was that we were only able to carry our building up, so far as those three-sevenths were concerned, to the height of two storeys. Ever since I came into the position which I now occupy I have been exceedingly anxious to get that building finished as it was originally intended and designed, and overtures have during that time been made on several occasions to the militant owner to whom I have referred with the object of getting removed his objection to our carrying the building up. I am very glad to be able to tell you that during last year those negotiations have been brought to a successful issue, with the result that the building stands at this moment almost complete. We were particularly anxious to bring these negotiations to a successful conclusion for more reasons than one, a not inconsiderable factor being that the part which was less in height than the rest was covered with a corrugated iron roof, which had become very much decayed, and if we had not succeeded in our negotiations we should have had to spend a considerable amount in repairing the old roof or in providing a new one.

The finishing of this building not only makes a harmonious and complete job of what was before more or less of an abortion, but it has given us a little over 4,000 square feet of additional floor space. Our departments up there were getting exceedingly cramped, and the additional space which we have now got is of almost inestimable value to us. Now, in order to meet the cost of this building works we have issued 5 per cent. second mortgage debenture bonds to the extent of £4,000, redeemable

by ten annual instalments of £400 each. We shall probably have to incur some further expenditure in the equipment of this extra space, but I am hoping to keep that expenditure down to a very moderate figure.

Mr. A. E. Murray seconded the adoption of the report, which was carried unanimously.

BORAX CONSOLIDATED.

The tenth ordinary general meeting of the Borax Consolidated was held on Friday at the Cannon Street Hotel, Lord Lawrence, chairman of the company, presiding.

The Secretary (Mr. H. T. Daniell) having read the notice convening the meeting and the auditors' report,

The Chairman, after referring to the death of the late chairman, Sir Alexander Wilson, said:—It is with much pleasure that at the first meeting of the company at which I fill the chair I am able to submit to you so good a report. The nett profits amount to £283,391, or £2,172 more than last year, and about £23,917 more than the average of the preceding eight years, which is £259,474. The result of the nine years' trading has been very uniform, as the lowest net profit made was £243,036 in 1899 and the highest £283,391 in 1907. This may be taken as an indication of the conservative policy of the company. We have placed £30,000 to the credit of buildings and plant depreciation account, which brings the depreciation reserve to £150,000. Although we keep our plant and buildings in good condition out of revenue, it is wise to be prepared for change in plant which economical reasons may call for. In addition to this depreciation reserve of £150,000, our general reserve fund stands at £170,000, and the first debenture redemption sinking fund represented by premiums paid now stands at £51,217. These three funds amount to £371,217. Our trade in European countries continues to be very satisfactory, but business in some parts of the world is not so active or remunerative. We must, however, take the bad with the good. I am glad to say that in South America, whence we extract calcine and ship large quantities of borate of lime, conditions which have given us much trouble—especially since the earthquake—are now improving, and we have every hope of benefiting thereby. Reference has been made in some quarters to the fact that the directors do not propose to write anything off the account "exploration and inspection of properties" during the past year. I would state that no sum has been provided for this purpose, as no inspection has been necessary during the period. The directors have arranged to guarantee an issue of £175,000 redeemable 5 per cent. sterling bonds of a Tonopah and Tidewater railroad, the sum being required to complete the construction of the line. This is in addition to the guarantee originally given in respect to the first mortgage bonds. The railroad is now completed, and is connected with the Goldfield and Bullfrog Railroad, thereby establishing the shortest route from Los Angeles and Southern California to the important mining centres of Bullfrog, Goldfield, and Tonopah, and has also opened up very important borate mines in which the company is interested, the latter being the main reason which has induced us to give the guarantee. The Act obtained for an increase of our ordinary share capital and the conversion of the present ordinary shares into preferred ordinary shares and deferred ordinary shares prescribes March 1 next as the date on which it shall be carried into effect. From after that date the ordinary share capital of the company will consist of 120,000 preferred ordinary shares of £5 each and 900,000 deferred ordinary shares of £1 each, instead of the existing 60,000 ordinary shares of £10 each. The holder of each £10 ordinary share now existing will receive in exchange for it £5 in preferred ordinary shares carrying 6 per cent. dividend and £15 in deferred ordinary shares. This exchange will absorb the whole of the 900,000 deferred ordinary shares and 60,000 of the preferred ordinary shares, leaving 60,000 of the latter shares in the hands of the company for issue if required. I beg, gentlemen, to move the adoption of the directors' report and accounts for the year ended September 30, 1907, and when that has been seconded I shall be pleased to answer any questions before putting the resolutions to the meeting.

Mr. De Frieze seconded the resolution, and it was carried unanimously.

On the motion of Captain Reid, seconded by Mr. Gerstley, the final divdiend of 20s. per share, less income-tax, making 17½ per cent. for the year, was declared; and on the motion of the Chairman, seconded by Captain Reid, Mr. L. H. de Frieze was re-elected a director.

Mr. Emberson, in moving a vote of thanks to the Chairman and the board, expressed satisfaction at the splitting of the shares and said it would make them more marketable. At the earliest moment, no doubt, the board would authorise him to apply for a Stock Exchange quotation for the preferred ordinary and deferred ordinary shares.

The resolution was carried unanimously and the proceedings terminated.

SPENCER, TURNER, AND BOLDERO.

The fourteenth annual general meeting was held on Thursday at the offices, 18, Duke Street, Lisson Grove, N.W., Mr. John H. Hortin (chairman) presiding.

The Secretary (Mr. Alfred J. Carter) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Notwithstanding the adverse circumstances, so far as the weather was concerned, during the past year, you will see that we have been able to show a very considerable increase in our nett profit, and you know better than I do how necessary good weather is for the successful carrying on of a drapery business. This result shows, I think, that there is a good deal of stability in the old business, and that our very many customers appreciate the efforts that are made here. (Hear, hear.) We have made a nett profit of £37,507 as compared with £32,000 last year, being an increase of about £5,000. This, I may tell you, is the largest profit, with the exception of this year, that we have had during the existence of the company, and, singularly enough, it is almost exactly the amount of the nett profit we had in the company's first year. Adding to this nett profit the sum of £17,498, brought forward from the previous account, we have £54,805 to deal with. We have already paid you an interim dividend for the six months ended July 15 last on the preference shares at the rate of 5 per cent. per annum, and we also paid a dividend on the ordinary shares; the reserve for redemption of leaseholds (insurance premium paid) absorbs £952, and depreciation on fixtures, fittings, plant, &c., £935, leaving us a balance of £41,690 for division. We are placing £5,000 to general reserve account, raising that account to £99,000, which, with the £10,000 reserve for contingencies on book debts, and £20,000 reserve for redemption of leaseholds, makes a total reserve of £175,000. We propose to pay the usual final half-year's dividend on the preference shares and a dividend at the rate of 9 per cent. per annum for the last year on the ordinary shares, making a total distribution of 7 per cent. for the year, and leaving £19,400 to be carried forward, which is £2,000 more than we brought in. As you will see by our report, we have carefully considered the question of reserves for leaseholds, and have come to the conclusion that the time has arrived when we ought to deal with the matter. We considered whether we should put a sum annually into Consols and invest from time to time the dividends upon those Consols but we came to the conclusion that the better plan would be to effect an insurance. We are now in 1908, and in 1915 the rents payable in respect of all these premises will decrease to such an extent as to counterbalance this annual premium of, roughly, £1,000. Turning to the balance sheet, you will see that our trade liabilities are considerably less than they were. Loans and deposits at the date of the accounts were somewhat more, but that was due to the fact that we owed a larger amount to our bankers; but I may tell you that the whole of that has been cleared off since the balance-sheet was made up, and at the present moment we have a very nice sum on deposit at the bank. (Cheers.) The amount owing to creditors is much the same as before. I need not go into the other items, but it seems to me that the balance-sheet is most satisfactory, and, in my opinion, it is really the best balance-sheet we have ever had. He then moved the adoption of the report.

Mr. H. J. Turner (one of the managing directors) seconded the motion, which, after a short discussion, was unanimously agreed to; and the dividends as recommended were also approved. Mr. H. J. Turner, in proposing the re-election of Mr. Hortin as a director, said that gentleman was a very strong representative of the great number of outside shareholders in the company. Mr. Frank S. Turner seconded the motion, and it was adopted.

The Chairman thanked the meeting for re-electing him, for, he believed, the fourteenth time, and said he would continue to do his best in the interests of the shareholders.

Mr. Boissonade proposed a hearty vote of thanks to the chairman, directors, and staff for the very satisfactory balance-sheet which they had placed before the shareholders. Mr. Long seconded the vote, which was carried unanimously

THE HOME AND COLONIAL STORES.

The thirteenth ordinary general meeting of the shareholders of the Home and Colonial Stores, Limited, was held on Friday at 2 and 4, Paul Street, Finsbury, E.C., Mr. W. Capel Slaughter (chairman of the company) presiding.

The Secretary (Mr. T. W. Davidson, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman said: There has been no previous year in which the trade and business of your company has been so persistently attacked, and in which such strenuous attempts have been made to wrest from the company the splendid trade its record for fair dealing has secured. The time was opportune for such an attack, for competition all round has been of the keenest, and the markets for the goods in which we chiefly trade have not been in our favour. We draw some attention to this in our report and it does not need much knowledge of arithmetic to see that with the lowest grade of tea commanding as much as 7¾d. in the market and with a duty of 5d. per lb., the sale of 1s. tea has not been of a character to sustain, much less augment, our profits. Cheese, too, has been a most unfavourable market. Cheese which a year or two ago cost about 45s. a cwt. commanded last year 60s. to 65s. It was in such circumstances that, with such cases as those I have cited as being typical cases before us, we promptly recognised that this year 1907 could not by any possibility be a shareholders' year, and that it was bound to be a customers' year. We shaped our course accordingly, and steadily refused to raise prices, preferring by the method to advertise the company and its course of dealing, and at the same time not only to maintain, but to increase, the volume of our trade—on which it is as obvious to you as it is to me the profit-making capacity of the company depends. This fact is so patent, and its recognition so absolutely cardinal to the policy of the company that I am sure I need hardly dilate upon it, but this much I may perhaps point out, that if, for instance, a turnover of £100,000 a week were reduced to £50,000 a week by a baneful policy of increasing prices it follows that the percentage of the standing working cost of

the business would be about double on the smaller volume what it would be on the larger. In the past you have been good and wise enough to back up the directors in the sound policy of placing large sums out of revenue to reserve account, and our reserve funds, unlike those of a great number of other trading companies, are represented by investments outside the business. You can see them for yourselves on the credit side of the balance-sheet where they stand at the important figure of £261,456, less £13,000, for depreciation as at December 28th last. Of this £13,000 I am glad to say upwards of £9,000 has already come back to us by appreciation in the market value of our investments. But, important as the figure of £261,456 really is, it is a long way short of representing the actual sums set aside in twelve years out of revenue for reserve, for, to meet shrinkage in values we have already provided £31,821, so that but for the need—which is none of our creating—our reserves on the debtor side would stand not at £218,759, but at £250,580, even after the appropriation of the £30,000 this last year. These are eloquent figures, and while, of course, it would have been far nicer if we could have avoided touching our reserves, I hold that it would have been folly with such figures to have allowed the revenue of one year to have borne unaided the whole brunt of an expense by which future years will benefit. But, just to sum up what a policy of this kind means, I may say to you that our volume of trade for the last week, as shown by our very up-to-date statistical department, is over 17 per cent. greater than the corresponding week of last year. Most of our branches are held on leases, and our depreciation account has aimed at providing during the currency of every lease for that part of the capital expended upon it, which, if it were not renewed, would be lost to the company. That is perfectly sound, but since the company was formed in 1895 over 15 per cent. of our leases thus protected have been renewed without any capital cost, or at any rate any capital cost which has not been included in our depreciation calculations. He concluded by moving the adoption of the report and accounts.

Mr. G. G. Fisher seconded the motion, which was agreed to.

The usual formal business was transacted.

NATIONAL PROVIDENT INSTITUTION.

The annual meeting of the National Provident Institution was held on Friday at the Cannon Street Hotel, E.C., the Hon. Vicary Gibbs (chairman of the Institution) presiding.

The Actuary and Secretary (Mr. L. F. Hovil) having read the notice convening the meeting,

The Chairman expressed the hope that they would share the opinion of the directors in thinking that the report not only showed "the continued prosperity of the institution," to use a phrase which used to regularly appear on the first page, but which they had now discarded from a sense of modesty, but was perhaps the most satisfactory statement the board had ever submitted to the members. The end of their last financial year also concluded their quinquennium, and he proposed to deal on that occasion mainly with the results of the five years' working. The figures for the last year of the five were quite favourable, although the severe stringency in the Money Market last November put a decided check on the inflow of new business which might always be anticipated towards the end of a quinquennium. The five years' figures showed substantial progress throughout. The premium income had increased by £34,000, the interest income by £35,000, and the assurance fund by £640,000. As regarded new business, they had put on the books policies for £200,000 more than they did in the previous quinquennium, the total amount written—£3,008,000—easily constituting itself the largest for any quinquennium period in the history of the Institution, and this had been accomplished without any increase in the rate of expenses; on the contrary, the percentage of all expenses, including commission payments, attaching to the premium income, was 10.1 last year, as compared with 10.7 five years ago. The average rate of interest yielded by their funds had increased from £4 to £4 2s. 10d., and, although money was temporarily somewhat cheaper, the board looked forward to some further increase under this head. Last year the board decided to discard the all-round rate of interest of 5 per cent. for the loans on policies, and to adopt a sliding scale enabling members to borrow any amount of £1,000 and over at 4 per cent., smaller sums at 4½ per cent., and to retain the 5 per cent. rate only for small loans of under £200. They were pleased to say that the course taken by the board had met with the general approbation of members. The sum invested in this way had increased by £43,000. They wound up the quinquennium with a very favourable mortality return, the claims last year being only 65 per cent. of the expected. Proceeding to deal with the quinquennial valuations, he said the surplus they were dividing amounted to the large sum of £806,976, and it enabled them fully to maintain the average rate of bonus declared in the last three quinquennial divisions. They introduced the word "average" because they had taken another step in the modification of the scale of apportionment among the whole life policy-holders that they began five years ago under the advice of their former actuary, Mr. Smither, by allotting a rather larger, and they considered a fairer, proportion of profit to policies on younger lives; and they had done this without doing any injustice to the old policy-holders, whose interests had been carefully watched by them. The result, he was sure, would be satisfactory to all holders of the whole life policies, for they would all have a larger allotment of cash profit than they did five years ago. As regarded endowment assurance policy-holders, they had declared exactly the same bonus as before. He wished to say a word as to what the division of this large sum meant. For whole life and endowment assurance policy-holders alike, it provided for an average reversionary bonus or addition of £2 per cent. to the sum assured—(applause)—or, putting it in another way, they were returning to members over 35 per cent. of the premiums paid up during the five years under policies entitled to participate in profits. It was over 40 per cent. of the whole life with-profit premiums paid during the five years and 30 per cent. of the endowment assurance premiums. These were average percentages, and, of course, the young policy-holder got less than the old member whose policy had been on the books many years more. In conclusion, he would ask them all to give the Institution their assistance—and in these days of keen competition it must be active and not passive assistance—in making the five years they had just entered on more prosperous even than the last five years they had just ended.

Sir Peter Spokes seconded the resolution, which was carried unanimously, and the meeting terminated.

NEXT WEEK'S MEETINGS.

Monday, March 2.

British Linen Bank.—Edinburgh, 1 p.m.
Chicago Gaika Development.—Salisbury House, 2.30 p.m.
Woolcombers.—Bradford, noon.

Tuesday, March 3.

Alabama, New Orleans, Texas, and Pacific Junction Railway.—Cannon Street Hotel, 12.30 p.m.
Anglo-Argentine Tramways.—Winchester House, 2.30 p.m.
Bank of British North America.—5, Gracechurch Street, E.C., noon.
Bank of Mauritius.—Cannon Street Hotel, noon.
Colonial Securities Trust.—Winchester House, 2 p.m.
Delta Metal.—Cannon Street Hotel, 11.30 a.m.
Exploration Company.—Cannon Street Hotel, noon.
International Investment Trust.—Winchester House, noon.
Le Roi No. 2.—Salisbury House, noon.
Marbella Iron Ore.—78, Queen Victoria Street, E.C., 2 p.m.
North's Navigation Collieries (1889). — Winchester House, 12.30 p.m.
Telegraph Construction and Maintenance.—38, Old Broad Street, E.C., 1 p.m.
Yorkshire Iron and Coal.—Leeds, noon.

Wednesday, March 4.

Buffalo and Lake Huron Railway.—Liverpool, noon.
Chicago Great Western Railway.—Winchester House, 2.30 p.m.
City of Glasgow Life Assurance.—Glasgow, 2 p.m.
D. Davies and Sons.—Cardiff, noon.
Diamond Hill Gold Mines.—Glasgow, 11.30 a.m.
Edinburgh American Land Mortgage.—Edinburgh, noon.
Leeds Forge.—Leeds, noon.
Measures Brothers.—Winchester House, noon.
North Charterland Exploration.—Salisbury House, noon.
Railway Passengers Association.—64, Cornhill, E.C., noon.
Sun Life Assurance.—Threadneedle Street, E.C., 2 p.m.
United Carlo Gatti, Stevenson and Slaters.—Hotel Cecil, noon.
United States Trust and Guarantee.—Winchester House, 2 p.m.

Thursday, March 5.

Bibiani Goldfields.—Great Eastern Hotel, 2 p.m.
Buluwayo Town-Stands.—Winchester House, 2.30 p.m.
Chatham and District Light Railway.—83, Cannon Street, E.C., 2.30 p.m.
La Reina de Plata.—Winchester House, 12.30.
Law Guarantee, Trust and Accident.—49, Chancery Lane, E.C. 2 p.m.
Otis Steel.—Winchester House, 2.15 p.m.
Prudential Assurance.—Holborn Bars, E.C., 2 p.m.
R. and J. Hill.—Winchester House, noon.
River Plate Trust, Loan and Agency.—52, Moorgate Street, E.C., noon.
Scottish Amicable Life Assurance.—Glasgow, noon.
Town and County Bank.—Aberdeen, 12 30 p.m.

Friday, March 6.

Bank of Egypt.—26, Old Broad Street, E.C., noon.
Brighton Grand Hotel.—Cannon Street Hotel, 2.30 p.m.
British Natural Premium Life Assurance, Cannon Street Hotel, 2.30 p.m.
Fuller's, Limited.—209, Regent Street, W., noon.
Oxford Electric.—Oxford, 3.30 p.m.
Scottish Temperance Life Assurance, Glasgow, noon.
Star Omnibus, Cannon Street Hotel, 2 p.m.

Mr. Charles Drinkwater, secretary of the Canadian Pacific Railway Company, and assistant to the president, having asked to be relieved from some of the duties heretofore performed by him, will, on and from March 1 next, relinquish the office of secretary. He will retain the position of assistant to the president under the title of senior assistant, with office at Montreal. Mr. Walter R. Baker has been appointed secretary of the company, the appointment to take effect March 1 next.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 531. SATURDAY, MARCH 7, 1908. (Registered as a newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility of statements made therein.

The Investors' Review.

The Licensing Bill.

It is difficult to write impartially upon this subject. Humanitarian sympathies and instincts are all with the people who make war upon the drinking habits of the nation; Imperial demands are dead against any interference with the drink revenue, which has been for generations a mainstay to the entire revenue and a barrier against the reimposition of a Protectionist tariff. "Risk all and save the people" is the war cry of the temperance party, and we admire the sentiment. But will the reduction in the number of public-houses diminish drunkenness? We are not so sure. The brewers, among whom there are as many humane and enlightened men as in other walks of life, say "No," and point to the spread of other agencies than public-houses, through which an unlimited supply of intoxicants can be procured. They are often fully at one with those who demand a reduction in the number of houses licensed to sell drink, but they want that reduction to be general, and not all applied to a single source of supply. In this connection we may note, among other symptoms, the significant advertisements for shop assistants to be found every week in *The Grocer* newspaper. These are surely proof of the facilities for indulgence in secret drinking given by the "off" licences so easily procured. "Must be a good averager" is the qualification often demanded in these advertisements, and "a good averager," we are informed, means a man skilled in the art of spreading the cost of a bottle or bottles of gin, whisky, or other intoxicant, bought by the housewife, all through the prices of her tea, sugar, bacon, &c., &c., so that the purchase may be hidden from the husband. This secret drinking, in short, is facilitated by the "off" licence, by the spirit, wine, and beer licences granted to restaurants, and above all to clubs, and produces much social and individual demoralisation, the whole blame for the existence of which is thrown on the public-house and the penalised brewer.

We very much doubt in these circumstances whether a reduction in the number of licensed premises will materially lessen the drink-consuming habit in cities. In country districts it probably would do so, but in large towns and cities the people who drink now would do so almost as freely were the limit in the number of public-houses raised to 1 for every 5,000 inhabitants. Last autumn the present writer rode on the top of a tramcar from Sefton Park, Liverpool, into the heart of the city, and tried to count the number of public-houses on each side of the way. He soon lost count, so bewildering was their frequency. On both sides of the busy artery they stood, often almost cheek by jowl, not only at every side street corner on either hand, but in between; big houses and little, gaudy houses and sedate, until they stunned the mind by their multitude. And on each side of the main thoroughfare close-packed streets of working-class dwellings stretched away, swarming with people, with the population by whom these public-houses, almost all prosperous looking, and all belonging to one or other of the great Liverpool brewery companies, if one might judge by their signs, were maintained. The facilities for getting drink, and the temptations to drink were more numerous in that one long street we came through than we ever saw before, even in the mean suburban streets of Manchester, where forbidding-looking beer-

houses may be said almost to crowd out the ordinary inhabitants in working-class districts, and we could not help trying to guess what would happen were three-fourths of these Liverpool "publics" to be swept away. Would anything happen except augmented custom for the houses allowed to remain? We are very doubtful. The value of the reduced number of licences renewed might be incalculably increased, for the passers-by and the dwellers in the side streets would only have to walk a few yards further in order to be as free to slake their thirst or gratify their cravings as they are now.

That consideration suggests another, and it is hostile to the outcry about "confiscation," now so loud on the part of the brewery and public-house people. It is much to be doubted whether even a severe reduction in the number of licensed houses allowed to exist in towns and cities would involve loss either to the brewery or to its remaining tied-house tenants, so greatly would the custom of the houses left open be enhanced. In rural districts it might be different, probably would be, and were we law making we should be disposed to lengthen the "time limit" for country inns, and shorten it for town ones, if a time limit were needed at all. But the time limit and compensation problems are exceedingly difficult, and not to be rashly dogmatised upon. Has the Government, to begin with, really found out whether it will be any the more absolute master of "the trade" when its proposed limit of time is passed than it is now? Will there be no tied houses after the 14 years are over? Then on what scale is the compensation for licences abolished to be assessed—on the exaggerated valuations of the public-house "boom" days, or on the actual value of the licence as determined by the business done in each licensed house and the profits earned? If on the former we may have no great objection that the speculatively created brewery company should bear the burden; if on the latter, then it seems unfair that an already heavily taxed trade should be saddled with the whole of this extra charge. The average drink revenue of the State has been about £37,500,000 per annum for the past ten years, and the beer duty alone has given an average yield of £13,000,000 per annum in that time. Surely out of this handsome income, which successive Governments have absorbed without a murmur and used for the country's grandeur, the Exchequer might spare a small sum per annum to smooth the way for the reform of our licensing laws, if the Government really means to reform them. The Bill, as it stands, does not assure us upon that point. The true path to reform would probably be found in complete local option, with compensation, paid in part by the Exchequer, in part by the local authorities, and in part by the brewer; but the Government dare not grant that, because the resulting loss of revenue might soon be more than any British Government could afford. So a bastard kind of local option is to be bestowed upon the people, hampered by a population limit regulating the number of licensed houses that may exist, and the compensation machinery will, as far as we can see, effectively secure the brewer in the possession of his surviving tied houses, local option or no local option. He will have "compensated" himself out of his own pocket for the licences he has lost, and thereby have served himself indisputable heir to the licences he is left with.

The Bill is said by its admirers to be "logical," "statesmanlike," "just," and what not. With every desire to see the people helped to gain the mastery over their race-sapping habits of drinking, we cannot discern much, if any, of these qualities in the Bill's structure. It looks more like one more impulsive plunge towards Socialism of the confiscatory kind, and towards Protectionism. Reduce the drink revenue materially, and in our present Imperial circumstances the consequence must soon be a tax on bread, on many necessaries.

The whole attitude of the reformers and of the Government that obeys them in measures like these is needlessly irritating and minatory. We dislike the tied-house system as much as anybody, and above all the bubble company tied-house system; but the latter is in the way to abolish itself, so far as a redundancy of "pubs" is concerned, and the distress of breweries like Allsopp, Watney, Combe, Reid and Co., the Cannon Brewery, and scores of other debt-drowned and over-capitalised businesses of the kind should have been a politic Government's opportunity. It could have said to these and all other breweries: "Help us to diminish the number of the drink-shops and we will help you to bear the genuine loss, if loss there should be." The brewery companies, the brewers as a body, would, we feel sure, have been only too glad to fall in with the idea, whereas they are now treated in a way that has put their backs up and made them determined to fight to the death. In the end, therefore, the reform of the licensing laws will probably cost the nation at least twice as much as it need have done if conciliation instead of commination had been the line adopted.

And when all is said, the Government, not the brewer, is the most deeply responsible for the drink curse. For more than a century successive administrations did all they knew to encourage "the trade," so much so that a licence once granted came naturally enough to be regarded as a freehold, no matter what the law might say to the contrary. The farce of revision was like the comedy of a bishop's election. And as taxation on drink increased, the brewing business inevitably tended to become more and more a monopoly, because the rich alone could carry it on with success. An enormous vested interest was in this way created, through the tax-gathering urgencies of the Government, and that cannot be swept away with a wave of the hand; no Government circumstanced as ours is can afford to sweep it away. Is it too late yet to turn back and invite the brewing interests to a conference? Too late to say to the brewers, "Help us to diminish temptation in the shape of redundant public-houses, and whatever loss you can show as result of the reduction we will undertake to make good in a proportion to be agreed upon as soon as the amount of it has been ascertained, say within three years of the date when each licence was cancelled"? We fear it is too late, and such prudent bargaining would not look heroic in the eyes of the more zealous of the Government's supporters, to whom the brewer has become a kind of stage villain. But we shall end by having to pay for our attitudinising, of that the patient taxpayer may be quite sure, for the brewing interests are powerful, and powerfully supported by the large body of share and debenture holders now deeply alarmed for their property.

The position stands thus: By the Act of 1904 the licence-holders were given a sort of freehold right in their houses to which they were in no way entitled, and as a sop to the temperance party they were at the same time saddled with the duty of reducing the number of their licensed premises, and the obligation to provide compensation to themselves for the assumed resulting loss. The present Government wishes to restore the past, and put the surviving licences back on the footing of a nominally precarious tenure, but in doing so it makes the compensation tax more onerous than ever. It thus takes all and gives nothing, whereas it ought in equity to pay for the loss it proposes to inflict and for the endowment which it cancels.

The London and North-Western Railway.

For various reasons the time seems opportune to go through the accounts of some of our railway companies, and try to estimate where they stand. For the moment the revived agitation about State purchase of the railways has died down, but it is destined to revive again, and to gather force as bad times bring the railway companies face to face with the consequences of their past heedlessness in spending capital. In all probability 1907 was the high water-mark year in railway

earnings for many a day to come, because there is no knowing what havoc reaction may work upon the earning capacity of the lines. As their customers find the difficulty of doing profitable business increasing, there will be pressure put upon the roads to reduce their charges, and any attempt to raise them so as to compensate the companies for the increased facilities afforded will be sure to meet with strenuous opposition. Just look how the people of St. Albans are grumbling because the Midland Railway has taken the lead in putting a halfpenny on to the third-class fare between that town and London. We therefore start with the North-Western as being in several ways the greatest of our English railways. Last year this company earned gross £16,019,000, or £612,000 more than in 1906. Of this fine revenue, however, £10,145,000 disappeared in working expenses, which increased by £524,000, so that the increase in the nett revenue for the year was rather less than £90,000. Nevertheless, the year's nett income from all sources was £5,715,000, and what did the company do with all this money?

To begin with, the fixed charges for interest on the debenture stock absorbed £1,105,443, or if we include the interest paid by the company on the debenture stocks of leased lines, £1,170,250. Then chief rents and leases took away nearly £194,000, general interest charges £75,376, or £17,239 more than in the preceding year, and much of the rents burden represents capital lying outside the various debenture and preference stock issues of the North-Western Railway Company itself. Altogether, the charges for debenture and other interest, rents, &c., took £1,494,425 in 1907, or £100,333 more than in 1906. The balance, after putting aside £120,000 to the general reserve, which first made its appearance in the accounts for the second half of 1906, with a credit of £30,000, was £4,632,000, including £119,000 brought forward. The other charges upon the nett revenue for guaranteed, preference, and ordinary stock dividends absorbed £4,373,019 or only £2,033 more than in the preceding year, so that £125,294 was left to carry forward, but it is plain from this analysis that the position of the ordinary stock of the company is being impinged upon by the rapid and continuous expansion of the working and prior charges. Dividends on the ordinary stock were the same in both years, viz., 6⅞ per cent.

Let us now look into the details of the earnings as far as they are given in the revenue account. And we have continually to complain of the way this account is huddled up by all our railway companies, and by none more confusingly than by the North-Western, which keeps out of sight every trace of its revenue from its Irish steamboat services. The steamboat expenses are given under a separate abstract, but nothing is said about the revenue. From Abstract "F," however, we do learn that the Greenore service last year cost nearly £26,000 to maintain. This would seem to be written off working expenses, since the amount is deducted from the general steamboat expenses, unless, indeed, it is paid by the Great Northern Railway of Ireland or charged against the North-Western Company's Irish connecting line. Taking the accounts, however, as they stand, we find that, like most companies, the London and North-Western is losing ground with its first-class traffic, the decrease in the returns from which last year was £12,298. To some extent this decline may be made good by additional money from first-class season tickets. Anyhow, the North-Western earned £13,490 more by its first and second-class season ticket passenger business than in 1906, but the tendency of the occasional first-class traveller is to drop back into the third, and therefore it is hard to find a reasonable explanation for the increase of 71 in the number of first-class and composite passenger coaches added to the company's stock in 1907 and paid for out of capital. The second-class traffic is also dwindling, and gave the company £7,731 less last year, when, however, six new second-class coaches were added to its stock, and the cost charged to capital. All the gain in the passenger earnings, which amounted for the year to about £134,000, came from the third-class and from parcels, mails, &c., these branches of income being included with that from pasengers because the small packages go by passenger trains as well as mails, horses, carriages, and dogs. From the third-class passengers alone the increased revenue last year amounted to £110,000, but even that does not seem quite enough to warrant an addition of 30 third-class coaches to the rolling stock, and small though the capital expenditure of the company now is compared to former years, it none the less added £267,000 to the capital cost of its rolling stock last year, making its total expenditure on that wasting portion of its equipment £12,059,000.

From the analysis of the earnings as a whole it is to be inferred that the principal sources of increased gross income came last year from merchandise and minerals, and the fact that from merchandise £203,000 more came in and from minerals over £277,000 more should be taken by railway shareholders as a hint of what is to come. The goods and mineral traffic of our railways having any connection with the coal and iron districts of the kingdom have been increasingly swollen during the last few years by the great activity in our mining and manufacturing industries. These are now going to pass through a period of stagnation, and probably of contraction, which must tell severely upon what has recently been the most prolific source of revenue for the railways. Altogether the merchandise and cattle traffic of the North-Western Company brought it £5,373,000 last year, and the mineral traffic yielded £3,683,000. No such figures, we fear, are likely to be seen again for some considerable time, and when the earnings fall off, the pressure of increased fixed charges must tell with disastrous effect upon the balance available for dividend on the ordinary stocks.

Let us now look at the capital account as far as the company's own reports disclose its position. Altogether the capital expenditure of the North-Western Company amounted to about £118,000,000 up to the end of last year, the addition during that year alone having been £936,000. This, however, does not nearly represent the entire amount of money involved in the company's system, since the stocks covered by the rentals paid for leased lines are not included. This revealed capital, however, was on the 2nd inst. quoted xd. at middle market prices aggregating about £142,000,000, in spite of the fact that the 3 per cent. debenture stock stood at a discount compared with the sum realised to the company of more than £3,000,000. If a question of State purchase becomes urgent through the clamour of Socialists and railway shareholders together, we may be quite sure that the nation will be forced to buy at a fancy price. Among items of capital outlay last year was £571,000 spent on lines open for traffic, much of which money must represent waste, a lack of prudent economy in upkeep. The total amount sunk by the company in docks and steamboats is £852,000, but its subscriptions to other railways have reached no less than £3,400,000, and the total outlay of £118,000,000 has been about £10,000,000 more than the capital emitted, since nearly that amount has been received as premiums on stock issues.

In the past rather than from recent indulgence the company's capital expenditure has outstripped all its capital resources, premiums, and everything, so that on December 31 last the overdraft on this account was £3,861,000. A sum of this magnitude unprovided for would cause grave inconvenience to the strongest company, but our railway boards have protected themselves from every ordinary or immediate danger by utilising in aid the trust moneys placed in their hands or accumulated for special purposes relating to the company's business, and the total of such funds in the North-Western Company's possession at the date given was £3,707,000. Analysing this, we find that superannuation funds alone represented £1,443,000 of it, including £172,000 at the credit of a widows' and orphans' fund. The company's liability to savings bank de-

positors was £660,000, so that it altogether owed £2,100,000 to its employees, and the whole of that money has been utilised on capital account, together with £703,000 of insurance, pension, and renewal funds, of which some £266,000 belonged to insurance and provident and pension societies, presumably, all an additional liability to members of the staff. We have many times pointed out how dangerous this slipshod finance is, and are just as convinced as ever that liabilities of these descriptions, unprotected by any corresponding assets of a kind which could be realised, are certain one day to bring affliction upon the directors and proprietors of our railways. Does the board of the North-Western Company know how it stands actuarially in regard to its superannuation and pension fund accumulations? Is there a deficit on these funds, and if so what provision has been made against it?

The cost of conducting the company's business, notwithstanding the help from capital, was 63.33 per cent. of the revenue last year, and amongst the items outgoing was £178,000 paid as compensation for loss and injury to goods and passengers. Rates and taxes were also a little higher, which was an unusual experience last year, for most of the railways have succeeded in getting their rates sensibly reduced. Other leading items of expenditure were all formidably up. Maintenance of way cost £1,487,000 or £28,000 more, locomotive power £2,755,000 or £238,000 more, of which £206,000 fell in the second half of the year, and £33,000 more was spent on carriage and wagon repairs at £789,000. What are called traffic expenses also rose by £157,000 to the ominous-looking total of £3,596,000. It would carry us too far, and we are not sure that the data is available for the purpose, to compare these outgoings with those, say, of 20 years back, but there can be no doubt whatever of the fact that on an average of years the working costs of our railways are expanding, in spite of the systematic assiduity with which the revenue outgoings are supplemented by additions to the capital account. This also is ominous for the fate of the ordinary stockholder in the not distant future, and we cannot see from what quarter he is to be helped, unless to begin with the capital account is peremptorily and finally closed so far as outlay upon rolling stock and lines open for traffic is concerned, and unless the methods of conducting the business are systematised with a view to economy of a kind railway boards and managers have never hitherto dreamt of.

Economic and Financial Notes.

The "Retrenchment" Debate.

It took place on Monday, when Mr. Murray Macdonald led off with a pious opinion resolution. It was countered by Mr. Asquith, and Mr. Asquith triumphantly won on the vote by the help of the Opposition, which had a great victory. That is pretty well all there is to it, as our Yankee friends would say. Yet several things were made clear in a way by the debate, and most of all the ignorance and impotence of the House when confronted with any problem of national expenditure. The speeches were consequently vague, declamatory, sentimental and discursive; seldom had much bearing on the question at issue. Another point brought out was the complete subservience of the Parliamentary chiefs of departments to their real masters—the permanent staff. Because of this subservience the debate degenerated into a mere party wrangle over the "two Power standard" phrase. Like so much of the current coin of politicians, that phrase is merely a catchword meaning something entirely different from what it seems to mean. It is not a "two Power" standard our masters at the Admiralty are aiming at, but an absolute hegemony on the ocean. It is a case of "come one come all," and we will thrash you. The modern imperial spirit, in other words, is identical in aim and temper with the imperial spirit of all times past, and is engendered always among peoples who have become luxurious, corrupt and decadent through living upon the earnings of subject races and nations. The moral law thus revenges itself upon the wrongs done and crimes committed in the name and for the sake of empire, and our present dementia in expenditure on the navy is but the forerunner of imperial impotence. That being so every Minister is bound to play up to the popular sentiment, and in this service Mr. Edmund Robertson acquitted himself strenuously and well. So did they all these Ministers, and they defeated the vague malcontents by 320 to 73, a handsome beating which said malcontents deserved. The "imperial race" of to-day must fulfil the law of its being as like races before it have done.

And there is no denying either that popular instincts as expounded by the ebullient W. T. Stead, the dream of invasion haunted and fanatical Mr. Maxse of the *National Review* and that host of newspapers too often alien owned and to which therefore "zee Breetesh Empeer" is a mere milch cow, are in a way right. We cannot enjoy the luxury of possessing "the greatest empire the world ever saw" without paying for it, and the costs are bound to be proportionate to the grandeur. And one item in the costs must be a big navy, because we live on an island and because our empire sprawls all over the globe. Its scattered character renders it vulnerable to an unexampled degree, and the unconscious dread of calamities generated in the minds of its owners by the dubiousness of their title perhaps, and their recognised inability to hold all they have annexed of the earth's surface should the commercial rivalry of nations produce a great war, combine to egg us on to arm and build ships, to fortify, to cast guns, to pile up ever wasting stores and ammunition so as to keep our possible or imaginary foes in a permanent state of intimidation. We accordingly have never even thought of advocating a small navy; what we have striven for is a really powerful navy, designed, constructed and maintained on lines of sanity and common sense. Our masters and their naval constructors have had quite other ends in view, and will ruin us before all is over through the consequences of their megalomania. Bigness, mere mass in hulk and murder appliances is their idea of a strong navy, and they build *Dreadnoughts* and teach the people through their Press and platform disciples to clamour for more and more *Dreadnoughts* until we shall end by having a navy we can make no use of, the mere maintenance and equipment of which will reduce us to paralysis before any great war comes.

Why did not the sentimental economists raise this point on Monday? Could they not have managed among them to get together a few effective illustrations of the way the explosive has outstripped in effectiveness of attack the defensive capacity of the armour plate, of every protecting device the shipbuilders have hitherto hit upon? If there be one fact more plain than another in modern sea warfare, it is that the instruments of attack have overcome the protective means of defence—one small torpedo will sink a *Dreadnought*—and from this it follows that large, and especially monster, ships of war are a costly mistake, an unmitigated blunder from all points of view. By abandoning their construction and by concentrating our dockyard energies upon vessels of smaller size, designed with a view to give a maximum of efficiency to our means of attack, our explosives—mines, bombs, torpedoes, shells—and our artillery, we contend that the country might in a few years possess a "five Power" navy, and at probably little more than half the cost of the one we are now building and doing our best to maintain. The cost of upkeep for such a navy would assuredly be less than half what it is now. But we preach to deaf ears and common sense is routed by the prevailing fashion, the megalomania born of a boundless vanity. So what is the use of debates upon "retrenchment"? We shall go on in the way chosen for us until the crack of our doom, the more is the pity.

Mysore Gold Mining Company—A Change of Policy.

It is not usual to congratulate shareholders on the prospect of a reduced dividend, but we can do so quite sincerely in the case of the magnificent Mysore Gold Mining Company. We have long felt, and our opinion has been shared by others, that the policy of the directors in steadily adding to the capital account to meet necessary expenditures at the mine was not altogether prudent. However rich a mine may be, every ton of ore extracted from it must reduce its value, and that reduction should not be concurrent with an expanding capital account. The Mysore capital is still quite small, so far as its nominal amount is concerned, but heavy additional sums have been provided by the shareholders in the shape of premiums, and each addition to the capital must render it increasingly difficult to maintain dividends at the point which will keep the value of the shares at the figure paid for them. In fact, a time must come when the size of the capital would eventually lead to the curtailment of dividends, and the directors of this company have been giving the matter very careful consideration. They were doubtless impressed by the fact that the last issue of new shares was not fully subscribed, and also, may be, by the troubles which have overtaken the Ooregum Company, one of what may fairly be described as the Taylor Group. So in future expenditure of every kind will be charged to revenue and the capital account permanently and definitely closed. The directors say quite frankly that this must mean a reduced dividend, but the drop should not exceed 2s. per share, which would leave the distribution at 115 per cent., surely a magnificent return still.

With its usual want of logic the Stock Exchange lowered the price of the shares when the new policy was announced, but dealers always take short views, preferring the short and merry life to the profound policy which takes the far future into account. Mysore shares are a worthier holding now than when the uncertainty of new capital issues surrounded them. The position is known and prospects can be gauged by actual results without having to take into account the inevitably disturbing influence of the company's financial arrangements. In 1907 the capital expenditure amounted to £79,243 and for the past eleven years it has averaged some £60,000. The directors say there is no reason to suppose it will increase, and with the completion of Edgar's shaft, a very great work, a material reduction should be apparent. This is very satisfactory, and in view of the splendid manner in which the mine is opening up shareholders will never have cause to regret the change of policy. The sinking of Edgar's shaft has been a first-rate success and its equipment is about to be commenced. It is hoped to have the work completed within eighteen months. Then all four divisions of the mine, McTaggart's, Ribblesdale's, Edgar's, and Tennant's, will be in rich ore at the deepest points. In the three sections now working large bodies of quartz have been exposed, a considerable proportion of which is high grade. The workings at Ribblesdale's have reached a depth of 3,626 feet, where the lode continues wide and rich. Tennant's maintains its great productive capacity, the deepest points showing the lode to be of value of nearly 2 ozs. to the ton, while McTaggart's has laid open a large quantity of good ore and there is every prospect of this section becoming one of the chief centres of production.

Despite a fire at Rowse's shaft, the development record shows the substantial increase over the previous year of 3,718 feet, the total reaching the high figure of 33,608 feet. Ore reserves have increased 157,139 tons to 904,139 tons, notwithstanding the year's extraction, and the supply is now about 4½ years ahead of the mill. During 1907 the quantity of ore crushed was 194,838 tons, an increase of 8,938, yielding 186,333 ozs. of bar gold, an average of 19 dwts. 3 grs. per ton. At the cyanide works 167,529 tons of tailings were treated, producing 23,108 ozs., or 2 dwts. 18 grs. to the ton, making the total extraction 209,441 ozs., or 3,523 more, an average of 1 oz. 1 dwt. 21 grs. to the ton. After deducting £40,644 paid to the Mysore Government as royalty, the amount realised was £779,470, an advance of £10,702, which sundry other receipts raised to £786,653. Expenses, however, increased by £38,672, largely owing to repairs to buildings, machinery and plant. In view of this it has not been considered necessary to write off the customary allowance for depreciation. Total expenditure in India and England chargeable against income was £357,596, leaving a profit of £429,056. Including £5,032 brought in and £777 dividends on shares in the Kolar Power Station, the disposable sum is £434,865, and the aggregate dividend for the year will be 135 per cent. or 5 per cent. less, carrying forward £731. Premiums received on the 1906 share issue were £143,176, and this has been written off the machinery, plant, buildings, roads, &c. Operations have proceeded on the block under option from the Dharwar Reefs, and "every encouragement is afforded for the vigorous development of the reefs to a greater depth."

Measures Bros., Limited.

The directors of this unfortunate business, speaking mildly, told their shareholders a year ago that "the outlook was brighter." What they based this statement upon we cannot guess, but a year ago the nett profit shown was £15,527 and for the past year the loss brought out is £14,303, so that on a comparison of the two years 1907 was nearly £30,000 to the bad. No adequate explanation is offered for this disastrous result, but the directors say that they have appropriated about £7,972 to adjust the various items of stock and plant more effectually. Presumably this means that writing down to some extent has been ventured upon. There is also a decrease in salaries, stationery and general charges, entered at £7,255 as compared with £11,344 in the previous year. Even so the result is as we have stated, and the gross profit from trading was only £14,214. Adding in dividends from investments and transfer fees, the total gross revenue was less than £15,000 against outgoings amounting to £29,288. Directors and trustees took £4,089 of this as fees, bad debts absorbed £2,009 and only £2,276 was devoted to depreciation. The position would thus seem to be hopeless, and no wonder when goodwill remains at £210,082 or well on to half the aggregate of the balance-sheet. Depreciation, moreover, is really illusory, for capital expenditure has gone on just as before, and the nett amount written off the various properties is only £1,341 allowing for additions. We are not sure, indeed, that it is as much as this, for the figures have been shifted about and Croydon tools, stores, patterns, &c., have been transferred to stock to the amount of £859, and raw material valued at £2,284 was added to the outlay during the year. Sundry creditors of the company are owed £5,780 less at £30,346, and sundry debtors owe it only £21,096. Cash at bank is £434 down at £3,272, and bills receivable amount to only £1,247. In the debts due by the company loans on security figure for £8,500 which is a decrease of £4,692 compared with the year before, and yet the total decrease in the company's indebtedness is only the amount just stated. It held, however, £17,373 in Government and other securities taken at market value, and possibly there might be hope for the business if the vendors were to hand back their shares to the amount representing the goodwill and allow them to be cancelled. Unhappily there are unpleasant reports afloat to the effect that some of the directors have been selling out and allowing the public to take their place.

We should have been glad to think these tales unfounded. Unhappily some very interesting and disquieting revelations bearing thereon were made at the shareholders' meeting, held on Wednesday, and the explanation offered by the late chairman cannot be deemed satisfactory. No denial was given to the statement made by Mr. McKnight to the effect that an outside

stockbroking agency, in other words, the London and Paris Exchange, had been used as the medium for unloading a large number of shares held by members of the Measures family on the outside public. To facilitate the selling, the organ of this outside agency published laudatory articles to stimulate buying, and a letter written by a Mr. Scott was read by him at the meeting which seemed to show that he had been the go-between employed in these dealings. Mr. Measures denied the accuracy of the statements contained in this letter, and as regards Mr. McKnight's exhibit of the results of his investigations at Somerset House, explained that his brother's holding of 50,000 shares in the company had to be put on the market, and as this would have depreciated the price, he had arranged to buy the block for the outside brokers at par. He bought the shares for £20,000, and sold them to the outside brokers at £21,000, he himself taking one half the commission, or sixpence per share, and another gentleman the remaining sixpence per share, or a total commission of a shilling per share. He proceeded to set forth his present holding of shares, and maintained that many of the entries at Somerset House could be explained by circumstances of a personal character, and that the transactions recorded were not really sales, only transfers. The shock produced on ordinary minds by this story is not lessened by such a defence, and that the chairman of the company should have lent himself to dealings of the character he describes with the business in a state of ruinous collapse, which must have been perfectly well known to him and his colleagues, affords disquieting evidence of the trend of business morality in our day. In spite, therefore, of the defeat of the shareholders present at the meeting by the use of the board's proxies, we trust the affairs of the company and dealings of the kind confessed to will not be permitted to go unsifted.

American Business Notes.

Owing, it is understood, to the amount of credit called for, so as to make a sensational success of the New York City loans, the Associated Banks had to increase their advances in the past week by about £3,418,000, and this together with a nett increase of over £425,000 in the reserve—viz., specie up £588,600 and notes down £163,200—have caused the nett deposits to go up by £4,267,000, so that, in spite of the increase in the cash and notes, the surplus reserve fell off by £641,400 to £5,852,400. That figure, however, compares with £772,000 a year ago, so that Wall Street is still supplied with more credit than it can use, and has no present need for an emergency currency, Aldrich or other.

According to the supplementary statement issued by the non-clearing banks their deposits fell off by £51,200 to £123,883,400, notwithstanding an increase of about £200,000 in the loans, &c., which amounted to £154,000,000. Their specie average, however, was less by £20,800 at £8,495,000 and their legal tender paper money less by £26,400 at £2,123,600, and the total of these two forms of cash together amounted only to 8.57 per cent. of their liability on deposits.

Money is still easy at 2 per cent. on Wall Street, and likely to continue so if nothing happens to again drive the people to withdraw cash or paper money and hoard it, for not only is there abundance of the ever-creating credit in the hands of the banks, at any rate the Associated Banks, but the business of the country is still diminishing, and for the whole of the Republic outside New York the bank clearings of a week ago showed a decline of 25 per cent. on the corresponding week of 1907, while in New York itself the decrease was 29.4 per cent. on the comparison of weeks. For the month of February as a whole the decrease the country over was 26 per cent. compared with February, 1907.

Everywhere business is being curtailed, and the restriction of new issues compulsorily forced upon the railroad and other credit users naturally reacts upon the current banking business. For the month of February last, the New York *Journal of Commerce* says, the total output of new securities was under £16,000,000 against £27,700,000 for February, 1907, and about £25,000,000 for January of last year. The total output for the two months of this year, in fact, has only been £47,563,000 as compared with £66,030,000 in the first two months of 1907. Split up the items are railroad company notes £8.273,000, which, however, stand against £7,085,000 in February, 1907, and £9,960,000 in January last. Bond issues, however, fell to £4,420,000, and the amount of stock issued was only £200,000 last month. Taking the railroad and industrial companies together the total note issues last month were £8,273,000, which was rather more than in February, 1907, but considerably less than in January. Of bonds issued the total was under £5,000,000 as against £17,000,000 in February, 1907, but stock issues almost balanced each other at about £2,660,000. During the months of January and February five railroads working 6,259 miles have passed into the hands of receivers, being unable to pay fixed charges out of earnings, and their example will be followed by others.

Incidentally vivid illustration of the backward rush of industrial activity throughout the American Union is found in the scolding administered by such papers as the New York *Commercial Chronicle* to President Roosevelt for his interference with the railways. These, like other employers of labour, are compelled not only to reduce the numbers of men in their service but to cut down wages, and the Press is very angry that the President should call in question steps of the kind. They are right, too, because it is a choice with a good many of the roads, as the *Chronicle* admits, between curtailing outgoings on all hands and going into bankruptcy. The very strongest of the railroads are suffering as much as the weak ones, and the report of the great Pennsylvania system for the past calendar year is the most disquieting the company has issued since it began its great developments involving such unheard of demands for new capital. The company's gross revenue for the year increased no less than £3,312,600, but the nett revenue was down by £340,200. That is the return of the railroad alone, but including all sources of income the nett revenue shows a decrease of over £400,000 in spite of a small increase in the gross earnings. When it comes over the report will be interesting to study, and not least because of the company's extensive holdings in the securities of other companies. These amount to about £44,000,000, and yielded an income last year of about 4¾ per cent. to the company.

It is announced that the Baltimore and Ohio Railroad is going to issue £600,000 of one year 5 per cent. notes to effect the purchase of the minority stock of the Cleveland, Lorain and Wheeling Railway, a mere exchange we suppose. The United States Rubber Company has managed to renew its expiring 5 per cent. notes, amounting to £1,600,000 for 18 months, terms not stated.

Much has been heard lately of the improved position of the copper market, and Mr. Ryan, managing director of the Amalgamated Company, asserts that a distinct change has come. Unloading followed, and there is really nothing else in it that we can discover, nothing beyond the despairing efforts of the group that contrived and so successfully worked the copper corner to find a way of escape. But certain mines are to be started again, it is said, and the Smelting and the Calumet and Hecla companies have only cut their dividends by one-half instead of stopping them altogether, and sundry orders from consumers have been received for the metal, so the prophets have told us that business is reviving. And exports for the last seven months were certainly about 73,500 tons more than in the same period of the year before, but it does not follow that the whole accumulated stock has been anything like disposed of, and on this side the utmost scepticism prevails regarding the stories of better business. Ours is not better.

We are glad to see that the New York *Commercial Chronicle* is joining in the cry for some reduction in the naval and military expenditure now so fashionable among the nations with imperial leanings who think themselves surpassing rich. It gives suggestive figures illustrative of the way in which expenses on the fighting forces have risen in the United States during the last eight years. During the actual hostilities with Spain the cost of the United States army rose to about £46,000,000, and of the navy to £12,788,400. For the past fiscal year the army cost £24,515,300 and the navy £19,426,000, or thereby, so that peace with the United States is rapidly becoming more costly than war so far as the navy goes. It is already more costly with us.

What makes the outlook more ugly in the United States is the imminence of a heavy deficit in the Federal accounts. Last December even Mr. Cortelyou estimated for a surplus of £8,400,000 at the end of the fiscal year closed on June 30 next, and present indications point to a deficit of £5,000,000. For the coming year, moreover, the military and naval programme alone threatens to bring about a deficit of £20,000,000. Both shortages may well be larger than this if the trade of the United States does not begin to pick up, and we do not believe that it has yet touched its lowest ebb.

Some two months ago a shrewd New York correspondent warned us to look for numerous commercial and other failures in the United States when March came. March is now with us, but United States industries have not waited for its advent to reveal their weakness. The statistics compiled by Dun's agency inform us that 1,621 commercial failures took place during February against 924 in the corresponding month of last year, or an increase of 75 per cent. But liabilities have expanded considerably faster than numbers, and amounted last month to £5,413,000 against £2,056,800 in February, 1907, an increase of over 163 per cent. Of the liabilities, £2,455,000 represent those of manufacturers against £874,000 a year ago, and traders have failed for £1,732,400 against £1,090,400. The failures of brokers and transporters accounted for another £1,276,200 against only £92,000 in February, 1907. Thus the total liabilities for the month show an increase of £3,356,000 in comparison, and the figures take no account of what may be called the dividend bankruptcies. The Granby Mining Company, for instance, pays no dividend for the past quarter on its £3,000,000 of share capital. Three months before it paid 2 per cent. and 1 per cent. extra, or at the rate of 12 per cent. per annum. Then the Public Service Commission has decided that the dividends declared in scrip, *i.e.*, as an addition to the capital, declared in August last by the board of the Erie Railroad were illegal. That is a wise decision, but ominous for the future of the Erie.

Passing Events.

All the extravagant views prompted by the previous weeks' Revenue returns were destroyed by those of the past week. In spite of £2,230,000 received from income tax, the total collection for the week was only £3,975,000, and at this rate for the remainder of the fiscal year the excess of actual income over estimates would be little more than £1,000,000. In such circumstances it is quite useless to make any guesses, for the remainder of the year may falsify even the most pessimistic. The general revenue from Customs, Excise, and estate duties is sure to be adversely influenced by the recent financial strain and the consequent diminution of business, so that we must be prepared to see smaller receipts on the average than for the corresponding weeks of last year. In spite of the smaller revenue, however, bank balances were again augmented by £735,338, for although £1,000,000 was paid out on account of the National Debt, and £1,925,415 on supply, besides £300,000 handed over to local taxation authorities, the expenditure of the week did not overtake the revenue. It amounted indeed to £3,239,732 against £2,229,000 a year ago, but debt will have to be redeemed at greater speed, or some other expedient resorted to if the pressure on the money market is to be relieved.

Mr. Merriman, the new Premier of Cape Colony, has not been long in revealing the state of its finances. Speaking on Tuesday at Victoria West, he announced that the accumulated deficit of the past four years amounted to £1,900,000, and was likely to be increased by another £500,000 in the current year. Adding in the unpaid railway debt, the true deficit is brought up to about £3,000,000, and he justly added that this state of things could not continue. The Government of which he is the head is resolved to put the finances in order, and next Session of the Cape Parliament will be devoted to that arduous task. Excellent news surely, for we have been regretfully compelled to note from time to time the ravages which excessive expenditure was making on the resources of the colony. To bring its affairs into order all current expenditure must be cut down with the utmost severity, and also all resort to new loans stopped. Even much-demanded railway extensions must be forbidden until the deficit has been obliterated.

Not many weeks ago we printed a shout of defiance and scorn from Winnipeg directed against the criticisms of this journal with reference to the financial position of the Canadian West and North-West. It was interesting chiefly because of the aggressive manner in which the great strength and splendid prospects of the city of Winnipeg were insisted upon. This week, however, news comes that Winnipeg city has fallen into such financial difficulties as to be compelled to hand over its affairs to the management of the Bank of Montreal. It owes that bank over $2,000,000—that is to say, upwards of £400,000—and the bank, in order to get back its money and to help Winnipeg along, has agreed, it seems, to place in London this spring a loan for the city amounting to £1,500,000 of inscribed stock. Reuter's message, which tells us this, adds complacently that an end is thus brought to the trouble which the corporation has experienced for some months. Yes, it is the Irishman's end when he signed a bill and thanked God he had done with that debt. The population of Winnipeg is only about 100,000, if that, and its funded debts quoted here already amount to £446,000—not a large amount in the circumstances and the expectations considered, but enough to emphasise the magnitude of the proposed addition.

More and more sorrowful grows the famine news from India, and in the week ended last Saturday the Viceroy announced that the total number of persons in receipt of State relief had risen to more than 1,250,000. Rain still holds off all over India, except in Assam and Coorg as well as Burma, but in all these regions the rainfall has been slight. It is in the United Provinces where distress continues most acute, and there 826,373 persons are now on the relief works, while 280,275 more are gratuitously fed. This is exclusive of over 16,000 persons in receipt of relief in the native State of Balrampur. Very few, however, are suffering in the Punjab, but in Central India the distress area is extending and about 131,000 persons are there either on the relief works or on unconditional charity. The same story comes from the Central Provinces, and only in one district of Bombay has the small number of people on the test works diminished. How many people are dying of hunger? Will the Viceroy give us information about the death rate ravages and the plague and other afflictions attendant upon a state of famine?

Somebody has been putting up Mr. Herbert Roberts to inquire about the opium revenue drawn by the Simla Government from the consumption of the drug by its subjects within India, and Mr. Morley has answered, giving figures of a most disquieting kind. In 1895-6, he said, the total revenue drawn from opium consumed by Indian natives was £676,185, and in the year ended March 31 last it was £1,031,450. This would be a most alarming increase were the comparison made on all fours, but, as Mr. Morley was careful to point out, that was not the case. The 1895 figures did not include Berar although they do seem to have included Burma, but the Secretary of State pleads that until recently

illicit consumption prevailed in Burma to a "notorious" extent, and deducting apparently both Burma and Berar from his first totals—the answer is not so lucid on the point as it might be—he shows that the increase between the two dates named has only been £40,287, and that last year's nett total was a mere £595,147. This seems, however, rather a fanciful reduction, and does not much lessen the fears which the spread of this noxious habit is calculated to excite. If we did not manufacture opium in India, to thrust upon the Chinese principally and on other foreign buyers where we can, it is improbable that there would have been any native consumption of the drug worth speaking of. Unhappily, as with our drink revenue at home, the Simla Government is unable to do without the money, still less without a consumption yielding over £1,000,000 a year to the Simla Treasury.

So the stories recently circulated with regard to the great Russian navy which was to be built regardless of cost turns out to have been efforts of the imagination, for a semi-official denial is now given to the yarns. Instead of spending £9,000,000 or £10,000,000 per annum on building up a navy, the Russian naval shipbuilding programme is a modest one, indeed. The Government has been considering the question of rebuilding the fleet lost in the war with Japan, but does not propose to go further with this enterprise than an expenditure of about £3,000,000 per annum for the next few years. So there will be no immediate necessity to expand our naval programme still further in order to include Russia amongst the dangerous enemies we must build against, or perish.

Why is it that the area of wheat-growing land is declining so rapidly in New Zealand? Since 1904-5 the reduction in the area has been no less than 65,331 acres, and the total under wheat in the season now closing was only 192,684 acres. As it was a dry season in the grain-growing area, the probability is that New Zealand will not this year have enough grain to feed its own population, and, although its other agricultural products, butter, cheese, and the like, seem to be increasing, the Dominion cannot benefit at all in its existing circumstances by the necessity laid upon it to import cereals. Other facts seem to indicate that the long swell of our stimulated prosperity is now suffering a pause, for the declining price of wool has hit the Colony badly, as may be judged by the statement that every penny of decline in the price per lb. means a loss of nearly £700,000 to the pastoral interests. We fear Sir Joseph Ward will have to borrow a good deal more than that £1,000,000, and to borrow it soon.

An adroit explanation of the grounds upon which the H.F. Company has been granted 333,333 shares in the new capital of the East Rand Proprietary Company has been put forth, and it serves at least to emphasise the brilliant ingenuity characteristic of all South African mining finance. In reality, the H. F. Company was brought into existence to secure the profit of promoters, it being entitled to one-fourth of the nett profits of the old East Rand Proprietary Company during the whole of that company's existence after the ordinary shareholders had received 100 per cent. In other words, promotion profits were deferred, but none the less sure, with proper management. The stipulated dividend was duly made up to the ordinary shareholders, and the H. F. claim became effective, so it is now bought off, but the price is really smaller than it looks, the official explanation says, because there are so many other mining ventures now smothered up under the East Rand Proprietary Company that if the H. F. claim had not been extinguished before the fusion took place, its 25 per cent. of the profits would have covered a much larger revenue than was originally contemplated. This is beautiful and most admirable of its kind, and the H. F. Company has been bought off "cheap, dirt cheap," as the kerbstone man remarks.

Mr. G. Marconi has been appointed managing director of Marconi's Wireless Telegraph Company and the Marconi International Marine Communication Company, in succession to Mr. H. Cuthbert Hall, who has vacated these appointments.

Continental Memoranda.

The motor industry does not tend to improve on the Contin and it was stated last week that, in spite of a slight re tion in the expenses, the Mors Manufacturing Comp closed its year with a loss of £93,480, which is a la slice out of a capital of £150,000.

French adv s from Egypt point to a continuation of trouble there. Credits have been severely restricted or altogether with wn even on land adventures, and that is weighing on e whole country. The Egyptian Government, which holding back help, says that nothing is wrong, but al financial society accuses the British agent of playing r a fall, and that his policy is directed against the Eur an colonies, the natives, and the wealthy Jewish merch nts, against everything that is not English, in a wor ibly enough Sir Eldon Gorst is inclined to be over-c anded by those who have embarrassed themselves their eager over-speculation in land. not advance the £4,000,000 d

Some large figures appear in the monthly return of the Comptoir National D'Escompte, e total of whose balance-sheet on January 31 was nea y £50,000,000, and amongst its assets were £2,800,000 of guaranteed loans, £5,489,000 of acceptances, and near £26,000,000 of bills held. In bills, in fact, there was an increase of £640,000, and loans were also up about £1 -0,000, but acceptances were down about £200,000. A str grander balance-sheet totalled £84,815,560 on January 31 last, n is made by the Crédit Lyonnais, whose nd this was a decrease of £3,050,920 on the retu for the December 31. Its liabilities on current accounts t the later date were £32,739,680 or £1,777,440 down, a d its acceptances at £5,007,160 were less by about £28 000. Among the assets, cash stood at £6,183,080 or £18 680 of more, and its bill case held paper to the valu of £43,072,520 a decrease of £721,520.

Failures continue to take place all over Germany n what may be described as the ordinary course of busines contraction, but they are seldom large, and the only really sensational suspension of recent date is that o Eberbach Bros., by which it is said about £1,250,000 has been lost. The admitted debts amount to £1,030,000, and about £200,000 other liabilities have been disallowed. The list of creditors is a long one, but of little or no interest here since no English firm or company appears in it, at any rate not in the company's list showing the chief ones. The largest creditor appears to be the father-in-law of one of the Eberbachs, to whom nearly £273,500 is due. Another largish failure, but of a different type, is that of Harlech Brothers, manufacturers, Düsseldorf, with liabilities estimated at £175,000.

A certain amount of satisfaction has been given to the German finance markets by the dividend and balance-sheet of the Disconto Gesellschaft, a great German bank strenuously built up by foreign connections, which does not seem to have drawn in its horns towards the end of last year like some of its neighbours. Not only are its profits of £948,000 larger by nearly £7,000 than those of the previous year, but its commitments seem to be more extensive in several directions, and it pays its 9 per cent. dividend without the slightest difficulty. Its reserves, however, do not seem to amount to much, and the profits are absorbed in paying not only the dividend to the ordinary shareholders, but in giving the founders' shares 20 per cent. and the board 4 per cent. The gross profit, in fact, came to £1,389,300. The bank possesses shares and obligations in a long array of undertakings, including other banks and discount companies, electrical companies, municipal and other loans, and so on.

It is announced that the City of Rotterdam is coming for a 4 per cent. loan of 7,000,000 gulden, which will be offered at par.

A Bavarian loan is also announced. It will be a 4 per cent. security amounting altogether to £3,000,000, of which £1,100,000 is required for general purposes, and the other £1,900,000 will be utilised for railways. A syndicate has bought the issue, and most of the German banks are members thereof.

Critical Index to New Investments.

Metropolitan Electric Tramways, Limited.

This company only owns 11 miles of tramways, which it works in connection with 30 miles of light railways held under agreements for lease from the Middlesex and Hertfordshire County Councils. Further light railways are now being constructed by the County Councils which will bring the system up to 60 miles, but the company has to provide the electrical equipment, buildings and rolling stock. Its nominal capital is £1,500,000, of which £1,205,353 has been issued, and a further £426,200 has been raised on debenture stock. This, however, has proved insufficient for its needs, and in order to pay off temporary loans and to complete the equipment of the new extensions £173,800 4½ per cent. debenture stock was offered at the price of 96 per cent. According to the prospectus the gross revenue has increased from £113,254 in 1904 to £277,597, and the nett income available for debenture and loan interest after providing for amounts written off and reserved for reconstruction has gone up from £48,010 to £75,220. As the amount required for interest and sinking fund on the whole £600,000 debenture stock is £33,000, the issue appears to be amply covered, so far as the service is concerned, but the company's financial position is none too strong, and the security can only be regarded as second class.

Great Northern Central Railway of Colombia, Limited.

This company has been formed to acquire a charter and supplemental charter granted by the Government of the Republic of Colombia for the construction of a railway from Puerto Wilches to Bogota, estimated at about 500 kilometres. Its capital is £500,000, but only £393,993 appears to have been so far issued to the original concessionaires, and funds for the actual construction of the line are to be raised by means of first mortgage bonds. The company is authorised by the Government to issue 5½ per cent. bonds in respect of the first 54 kilometres to the total amount of £518,400, and £153,500 is now offered for subscription in £20 bonds at 77 per cent., or £15 8s. per bond. All these bonds will be secured by a first specific charge on the railway to be constructed from Puerto Wilches, and on any sums to be received in respect thereof in the event of purchase and on the Government guarantee of $2,800 gold, or £560 per kilometre per annum for 99 years. This guarantee is to be sufficient to pay the interest on all bonds issued by the company and to provide a sinking fund for their redemption in 95 years, and is itself secured by a specific hypothecation of 5 per cent. of the proceeds of the Customs on the Atlantic Ports, which on the basis of the revenues in 1906 would give £61,000. In addition the charter grants about 750 acres of freehold land for every kilometre opened for traffic, one-third of which goes to the original concessionaires, and a preferential right of acquiring and working mines, other than emeralds, discovered or claimed by the company within a distance of 40 kilometres on either side of the line. Colombia has only recently joined the ranks of the South American countries showing a desire for progress, but it has gone ahead under President Reyes, and with peace and an opened-up country the railway ought to do well.

Russian Imperial Government 4½ per cent. Railway Bonds.

An issue of 34,920,000 francs, or £1,380,324, 4½ per cent. railway bonds of the Volga Bougoulma Railway were offered in this country by Messrs. Sperling and Co. at 87½ per cent., or £17 7s. 5d. per bond of £19 17s., a simultaneous offer being made in France and St. Petersburg by various banks. The principal and interest is absolutely and directly guaranteed by the Russian Imperial Government, and the bonds will be redeemed at par by annual drawings commencing in 1911 and terminating on June 12, 1987.

Republic of Salvador 6 per cent. Bonds.

We dealt so fully with this loan in our issue of February 22 that it is hardly necessary to go over the whole ground again now. It may, however, be noted that the bonds are specifically secured by a first charge upon the special Customs duty of $3.60 United States gold upon every 100 kilogrammes of imported merchandise and upon the export tax of 40 cents United States gold per quintal on a fixed quantity of 500,000 quintals of coffee exported yearly from the Republic. The Government of Salvador has no external debt, while the interior debt, which in 1899 stood at about 8½ millions of silver dollars, has been reduced during the last two Administrations by purchases, so that the amount now outstanding for principal and interest is under 3½ millions.

Elba (Perak) Rubber Estates, Limited.

Two estates in the State of Perak, Federated Malay States, having a combined area of about 1,537 acres, of which 318 acres have been planted with rubber, are acquired by this company from the General Finance and Development Co., Limited. The purchase price is £19,000 payable £9,000 in cash and £10,000 in shares, out of which the vendor company pays £3,500 in cash and £7,500 in shares to the original grantee of the land and £3,500 in cash and £1,500 in shares to the Eastern Rubber Co., Limited, for services rendered, leaving it with £2,000 in cash and £1,000 in shares as profit on the transaction. Of the total capital of £50,000 in £1 shares 10,000 shares are held in reserve and another 10,000 will be issued as fully paid leaving 30,000 to be offered for subscription, which were underwritten for a commission of 5 per cent. and an overriding commission of 2½ per cent. At present there are approximately 40,400 trees planted, of which only 3,000 are over three years old and 25,000 are under one year, so that a considerable time must elapse before any return can be expected. The technical adviser to the company estimates that the whole area of 1,537 acres should be brought into bearing at a capital cost of only £33 per acre, and he calculates that this would allow the directors to pay dividends of over 30 per cent. "if the trees yield only 1 lb. of rubber each, and the rubber sells at a profit of only 1s. 6d. per lb." This seems a moderate enough estimate, but everything is so much in the future that the shares can only be attractive to speculators.

Italian Spare Motor Wheel, Limited.

Encouraged by the successful launching of its American subsidiary, the Stepney Spare Motor Wheel, Limited, has created this undertaking to work its patents in Italy, Spain, Portugal, Egypt, Turkey, Greece, Roumania, Bulgaria and Servia. Most of these countries apparently are thrown in to make a display, and the principal outlet would seem to be expected in Italy, but the directors talk gaily of a nett profit of £25,000 per annum being realised. Against this optimism, however, must be placed the cold fact that it has been considered necessary to pay a commission of 10 per cent. for underwriting 27,000 shares out of the total capital of £40,000. The purchase price is £29,000, and it is significant that the vendors would like the whole amount in cash, although they are willing to take £13,000 in shares if the directors wish them to do so.

The Port of Constantza, where a warehouse has recently been gutted by fire, is a notable witness to the energetic and progressive policy of the Roumanian Government. It is situated on the Black Sea, at the eastern extremity of the great railway system of Central Europe, and is, by virtue of its position, a natural centre for the distribution of the produce of the Near East. For ten years the Roumanian Government has spared no expense in the construction of the docks and harbour of Constantza, which are already open to vessels of the heaviest tonnage, and which form the chief outlet for Roumania's immense and ever-increasing production of petroleum, which has doubled during the last three years, attaining in 1907 a total of 500,000 tons. The port is provided with the most modern appliances for the storage and shipment of petroleum, and the gigantic oil reservoirs are among the largest in the world. Constantza is served by regular lines of steamships sailing to Constantinople, Smyrna, Alexandria, Rotterdam, &c., and may be regarded as one of the most important seaports in the Near East.

Mr. John Varley has been appointed a director of Callender's Cable and Construction Company, to fill the vacancy caused by the death of the late Sir D. Evans.

The Week in Mines.

Kaffir Shares.

The South African market grows worse rather than better, and we doubt if things can go on much longer as at present without bringing down one or more of the so-called finance houses or controlling groups. If they had not plundered and stripped the public absolutely clean, bankruptcy must have overtaken them long ere this, but it looks as though the punishment will not be much longer delayed. Rumour almost invariably fastens on the same people, and it cannot be denied that not a few of the alleged Kaffir millionaires are at their wits' end for money. Matters have got to such a pass that no kind of support can be given to the market, and when Paris or any other centre takes to selling, prices have to go flop. And during the past week Paris has been heaving out shares practically every day. The settlement has been in progress there, and has clearly brought a good deal of trouble to the surface. All sorts of people are supposed to be in difficulties, both commercial and financial, but the principal selling appears to be traceable to one large holder of South African things, who, sick and tired of the whole business, has decided to clear out. There will probably be a good many others engaged in the same business before long, and the more one thinks of the market's prospects the more hopeless they appear to be. The downward movement was partly assisted by bear sales, but these were not an important influence. Business has become so small and the market so exceedingly narrowed that bear operations are fraught with a certain amount of danger, especially for those not prepared for a long shot, and who take alarm the moment a price rallies sixpence. Values steadied a little towards the middle of the week, but any sustained rally seems out of the question, and we never remember a time when such a feeling of absolute dejection pervaded the Kaffir Circus. A full report of Mr. Robinson's eloquent address at the Randfontein meeting held a month ago has just come to hand, but did not help the shares in the slightest degree. Mr. Robinson is very much in love with his participating notes, and cannot understand why the shareholders did not eagerly jump at them. However, the threat of serious consequences if the proprietors did not stump up appears to have been a little thin, as temporary arrangements have been made, and later on a financial scheme will be brought forward which the chairman is quite sure the shareholders will accept.

Rhodesian Land and Diamond.

As a rule the Land and Finance things lost only small fractions, but Central Minings weakened to 11⅛, although picking up a little from the bottom. The one-time favourites like Johnnies, Anglo-French, Oceanas, and Gold Trusts were all dull, and Welgedachts stick round par. Prominent Rhodesians such as Eldorados, Rhodesian Bankets, Enterprise, and Zambesia were just the turn lower, and Rhodesia Explorations got down to the cheering price of $\frac{7}{16}$. Chartered were dull all the time, and the rights which last week were called 6d. to 9d. are only worth ½d.! Option certificates are 7s. Subscription forms have gone out to registered shareholders, and holders of share warrants to "bearer" wishing to receive allotments must deposit their warrants with the company not later than Monday next. But everything else has been overshadowed by the renewed slump in Diamond shares. The tap was turned on in Paris, and shares were sold for what they would fetch. No limits seemed to have been fixed, and every fresh offer sent prices down with a crash. The diamond industry is in a very critical condition, and as yet no arrangement with the Syndicate beyond the end of the present month has been fixed up. The Premier Company appears to be the stumbling block, and it looks as though the officials see the futility of attempting to maintain the existing monopoly. Imports into the United States have practically ceased, and it does seem rather useless to maintain a monopoly for the sale of an article which no one is in a position to buy. During the week De Beers slumped from 13⅜ to 11⅜, the preference from 14⅞ to 13⅞, Premier deferred from 5¼ to 4¼, and the preference from 7 to 6⅝. Jagers deferred got down from 3 1/16 to 3¼, and the preference, which began at the same figure, touched 3⅜. The natural rebound after such a violent fall was of very moderate dimensions, and that De Beers deferred will go to 10 seems more certain than ever.

Australasian and West African.

Broken Hill shares were decidedly flat under the influence of a severe fall in Proprietarys. Nearly all the selling was on local or provincial account, a few buying orders coming from the Colony, and was partly due to the weakness of the various metals. The main cause, however, was the statement made at the Proprietary Company's meeting that the reserves of ore had not been materially increased. On May 31, 1907, they were 2,955,000 tons, since when 312,000 tons have been raised, leaving 2,643,000 tons. Unless new developments produce fresh ore bodies, the general manager looks for only two years' full output, and after that a gradually diminishing production. However, similar statements were made in 1904, and a good deal of fresh ore has been discovered since then. In the West Australian list, Kalgurlis, Fingalls, and Associated were all lower, but Horseshoes improved on Paris buying. Lake Views also firmed up on the estimate of ore reserves at December 31 last. The quantity is put at 172,839 tons worth 27·93s. per ton against 158,321 tons averaging 28s. per ton at June 30. Lancefields went down to 6d. on the reconstruction scheme. New Zealands were dull. There was little going on in West Africans, and prices gave way.

Copper, Tin and Miscellaneous.

Copper shares were exceedingly weak, and notwithstanding a drop in the visible supply during the last fortnight of February the metal market was always flat. The best of Rio Tintos was 62¼, and they soon went back to 60½. The other things weakened in proportion, but tin shares remained pretty firm. The metal jumped smartly on a report that the Dutch Government proposes to reduce the quantity of Banca for the current year by 1,500 tons. In the miscellaneous group the Mexican things were inclined to be firmer apart from Alaska Mexicans. Le Roi II. were steady. Mysores fell severely on the new policy of the directors to charge capital outlays to revenue, involving a reduction in the dividend and Nundydroog weakened on the fears that the same course would be adopted with that company.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No buc et shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Rand Rock Drills.—The twaddle we sometimes hear talked about the Transvaal Government's alleged desire to injure the mining industry ought to be effectively answered by the handsome sum just offered as a prize for the best practical small rock drill. In January last an offer was made on behalf of the Chamber of Mines, but the Transvaal Government decided to co-operate, and an amount of £5,000 will be available for distribution in two prizes of £4,000 and £1,000 respectively. The money will be provided in equal proportions by the Government and the Chamber of Mines. The competition will be held in about twelve months, which should give all an opportunity, and conditions and details will be settled by a committee of engineers nominated jointly. A further and fuller statement will be made at an early date. The offer of £250 as prizes for the men who work the competing drills still holds good. We welcome these real and genuine efforts to introduce the best mechanical appliances into the mines, and the adoption of the present attitude and policy three or four years ago instead of bringing in the Chinese would have saved the industry millions of pounds.

Jupiter Gold Mining.—During this company's financial year ended October 31 last the property of the Simmer and Jack West was taken over in exchange for 432,000 shares, so that the Jupiter capital now consists of 1,032,000 shares, including 7,200 under option at par to the Jumpers Deep. All told the company now possesses about 500 claims, and the freehold of 188 of them, two water rights, and the right to take a certain quantity of water free of cost from the Rand Mines dam. Development has been principally carried on in the Howard section of the mine on the first, third, fourth, sixth and seventh levels with the intention of proving the ground towards the eastern boundary, whilst development work in the Catlin section of the mine was more or less suspended, as there was already a large tonnage of

ore developed and indicated in that portion. During the year a connection was made at the lowest level between the two shafts which has greatly improved the ventilation. The erection of the joint reduction plant (with the Simmer Deep) is now proceeding steadily, and it is hoped to be able to commence crushing operations during the latter part of the year. It is calculated from the widths and values as exposed by the development footage that there are some 592,000 milling tons of ore already indicated of an average assay value of 7 dwts., of which 450,000 tons may be considered as developed. In addition there are about 1,145,000 tons of a lower grade, part of which may be eventually sent to the mill. The Chinese coolies received a year ago are said to have proved very satisfactory. They have as a whole developed into very efficient workers, and have enabled the work on the mine to be carried on steadily and without the usual dislocation due to a constant variation in the numbers and efficiency of the labour supply. The company has written down its investments from £50,072 to £31,845, and after making this deduction there is an excess of outgo over income for the past year of £14,001. Balance to credit of income and expenditure is £208,093. Current price of Jupiter shares is 12s. 6d., and those who subscribed for these and Simmer and Jack Wests at £3 10s. each must be happy.

Premier Diamond.—The postponed dividend of this company looks like becoming a nuisance. The company notifies that it will issue some time next week dividend warrants to all shareholders registered on December 31, 1907. These warrants will be payable on and after a date to be notified, and will be transferable either in part or whole by presentation at the office of the company duly endorsed by the transferor. A receipt similar to a transfer receipt will be issued, and which can be split or transferred in the usual way. The warrants to be issued in Johannesburg will be transferable at the London office and *vice versâ*. Surely the whole thing is quite unnecessary. Why cannot the dividend be cancelled and redeclared when the company is in a position to pay it? No one would be a penny worse off, and just imagine the condition of these warrants after they have been handed round for goodness knows how long.

Australian Smelting Corporation.—When the directors of this enterprise last addressed the shareholders at the end of February a hope was conveyed that the proposed reconstruction might be avoided, thanks to the prospect of successful negotiations with responsible parties for the provision of the necessary capital. A circular issued at the end of last week conveys the intelligence that these negotiations have reached a more definite stage, and if the debenture holders can be induced to agree and make a sacrifice the scheme might go through. It involves the formation of a new company with a capital consisting of 140,000 10s. ordinary shares, being the same number but only half the nominal amount of the present issued ordinary shares, £125,000 7 per cent. cumulative preference shares of £1 each, and £100,000 5 per cent. first mortgage debenture stock. This new company will take over the existing undertaking for the £70,000 in ordinary shares provided the debenture holders agree to exchange their £87,000 debenture stock for £65,250 of the new issue. The remainder, £34,750, and £75,000 of the preference shares will be subscribed by those backing the scheme, thus giving the new company a cash subscription of £109,750. The remaining 50,000 preference shares will be under option to the subscribers at par until January 1, 1910. This agreement (which is subject to ratification within ten weeks after acceptance by the debenture holders) will be submitted to the shareholders on Monday.

Lancefield Gold Mining.—This Western Australian company has been in existence in some shape or other since 1900, but it has had bad luck, and now the second reconstruction stage has been reached. The change in the character of the ore from oxidised to sulphide is ancient history, but while the new dry-crushing-roasting plant proved a complete success so far as extraction was concerned, numerous other difficulties were encountered. The drying appliances and the motive power proved inadequate, the roasting furnaces had to be reconstructed, and the water supply broke down, a rare tale of misfortune. It was also found that, in order to secure the high extraction it was necessary to treat the ore more slowly than had been expected, so that instead of the capacity of the plant being 8,000 to 9,000 tons, it was only 6,000. On the smaller total working expenses could not be reduced to a reasonable figure, and steps were taken to increase the plant to a tonnage of 8,000. Bankers, general managers, and others all helped to provide funds, and efforts were made to increase current profits, by using the stamp mill on some oxidised ore discovered in the upper levels, in addition to the operation of the sulphide plant. But the power plant is insufficient to operate the mills to advantage, and matters have come to a deadlock owing to the impossibility of completing the additional works out of profits under present conditions. All means to raise enough cash to carry the programme to completion have failed, and the directors are forced back on reconstruction. It is considered desirable to increase the sulphide mill capacity to 9,000 or 10,000 tons a month in the expectation that working expenses can be reduced to 21s. per ton. The new company will have a capital of £150,000 in 300,000 shares of 10s. each, and the assessment will be 2s. a share, giving £30,000. How long since any accounts were issued? These ought to be in the hands of the shareholders before the meeting to consider the scheme is held.

Broken Hill South Silver Mining.—A circular to the shareholders contains brief particulars of the report for the half-year ended December 31 last, which has just been issued in Australia. A complete copy will be sent along in due course. During the period the mill treated 119,710 tons of crude ore compared with 101,380 for the previous half-year, which yielded 17,379 tons of concentrates, an increase of 1,610 tons. Including development expenses, the total working costs per ton of crude ore amounted to £1 1s. 5d., an increase of 1s. Development work in various sections of the mine aggregated 7,704 feet. After writing off £13,374 for depreciation, the nett profit is brought out at £63,350, but dividends paid absorbed £70,000, and the balance to credit of profit and loss carried forward is £89,256. Capital expenditure during the period under review was £64,000, leaving on December 31 total nett liquid assets of £46,130, including mine stores.

D. Davis and Son.—This is a very important colliery business, and during 1907 the nett profits were no less than £214,868, a very pleasing increase over the previous year. The way it is handled is exceedingly gratifying. Only 10 per cent. is paid on the ordinary shares absorbing £45,000, and £85,680 of the profits is utilised in redeeming the outstanding debentures, including premium. The company having spent £167,023 on capital account during the year, £96,913 will be added to the capital assets, and the balance of £67,082 is written off against profits. Even then £19,918 can be carried forward against £8,813 brought in. Of course, the financial position is first-rate. The total of debentures redeemed is £373,000, all of which has been written off the property account reducing it to £715,910, and in addition a reserve of £100,000 has been created.

North's Navigation Collieries.—We hardly needed the reports of the big colliery companies to remind us that coal was terribly dear last winter. Owing to the sale of the Wyndham Colliery the output for 1907 was over 220,000 tons less at 1,062,846 tons, yet profits sprang up from £72,955 to 35,853, and with £10,323 brought forward there is a total of £146,177 to dispose of. So the preference shares get 10 per cent. and the ordinary 5 per cent. more at 15 per cent., £7,000 is written off for depreciation, £35,000 goes to reserve, making it £100,000, and £9,177 is carried forward. The company is well supplied with liquid assets, and the finances seem in good shape. The sinking of the new pit at Caerau mentioned in the last report has been completed. Considerable progress has been made in equipping, and it is expected that the coal will shortly be worked from this pit.

J. K. Child and Co., Vizcachani Copper Mines, Corocoro, Bolivia.—This is a small but apparently well conducted concern, and in the year to November 30 the profit on sales of copper and stores was £19,010. Other items gave £55, making £19,065 altogether. Liverpool office and secretarial expenses were just £60, other expenses, including bonus to mine manager and directors' fees, came to £2,274, and £2,319 was allowed for depreciation, leaving £14,412 nett. Dividends for the year aggregate 15 per cent., a sum of £3,000 is written off the property account and £1,178 is carried out as against £266 brought in. Capital of the company is only £70,000, and the mines and property will stand at £37,000 after the writing of, while machinery and plant are entered at £23,492.

MINOR NOTICES OF COMPANY REPORTS

Alabama, New Orleans, Texas and Pacific Junction Railways Company.—Revenue from railway investments for 1907 amounted to £182,092 or £13,788 more, the increase coming from the New Orleans and North-Eastern and the South-Western Construction Company. Other investments gave £7,855 against £4,383 and the total income was £17,200 up at £180,947, of which general expenses took £11,492, interest on the "A," "B," and "C" debentures £123,875, and sinking fund to extinguish discount on debentures £6,500. With £7,619 brought in the disposable total was £55,699, and after paying a dividend of 7s. per share on the "A" preferred shares on account of arrears, £5,824 was carried forward.

Australian Joint Stock Bank.—This bank struggles on, and for the second half of 1907 a nett profit of £7,209 was brought out after paying interest on fixed deposits and inscribed deposit stock. This is added to the balance of £4,384 brought forward, making £11,594 in all, and carried to the new half-year. Current business, the directors say, is good and improving, but the old bank advances seem to represent a terrible quagmire of losses unfaced.

Brompton and Kensington Electricity Supply Company.—Revenue for the year 1907 showed a credit balance of £31,718, or including £9,146 brought forward, a total of £41,274, out of which the dividend on the ordinary shares is made up to 10 per cent. for the year, £8,000 placed to depreciation account, and £4,000 to reserve account. After giving the board £613 as additional remuneration, £10,136 remains to be carried forward. During the year £4,050 was spent on capital account. The total capital expenditure on works, depreciation of £72,023 allowed for, is now £197,562. The company owes £3,410 to sundry creditors, and debtors owe it £18,459. £11,000 is lent against security and cash amounts to £1,652. There is a reserve of £8,000, modest enough.

Commercial Gas Company.—For the six months ended December 31 nett profits were £64,037 and the balance brought forward was £23,503, or a total of £87,540, out of which the directors propose to distribute dividends at the rate of 5 1-5 per cent. on the 4 per cent. stock and 5 per cent. on the 3½ per cent. stock, or the same as a year ago. Capital expenditure amounted to £11,238 during the six months, but £38,800 additional 4 per cent. stock was issued at a premium, and the debit balance now stands at £36,270. The company has a reserve

fund of £34,696 to put against this, but as it holds investments valued at £61,649 it has had to raise £75,000 by temporary loans.

Forest Hill Brewery Company.—Gross profits for 1907 fell off by £1,101 to £23,829, and after providing for all charges, including £1,996 for depreciation and £524 reserved for bad debts, the nett balance was £1,417 down at £9,023. Balance brought forward, however, was considerably larger, and the disposable total was therefore £1,923 up at £14,860. Preference dividend having been paid, together with 10 per cent. on the ordinary shares, a bonus of 6d. per share is again given to both classes of shares, and £5,000 is put to reserve, against nothing a year ago, leaving £2,760 or £3,077 less to be carried forward. Property account is £2,804 down at £117,501, but as the paid-up capital is only £60,000 the reserve of £35,000 is employed in the business and the company has also had to borrow £22,000. Liabilities to depositors amount to £22,824 and £9,712 is due to sundry creditors, against which debtors owe £22,212, stocks are valued at £8,226 and cash comes to £3,235.

Glasgow Cotton Spinning Company.—Nett profits for the half-year to January 31 amounted to £13,471, and with £12,604 brought forward the disposable total is £26,075. Reserve is to be increased by £9,000 to £25,000, and after paying a dividend at the rate of 10 per cent. and a bonus of 5 per cent., making 15 per cent. for the past year, £6,575 is carried forward. Trade balances are very largely in the company's favour, and although cash in hand is small, the company has £10,500 out on temporary loan.

Hamburg American Steam Packet Company.—Nett profits for 1907 were £1,260,000 or about £355,000 less than for 1906, so the dividend is reduced to 6 per cent. compared with 10 per cent. for the previous year, and only about £890,000 is left to be applied to reserves and writings off. This is about £200,000 less than the balance of the previous year. Receipts collapsed principally in the second half-year owing to the financial crisis in the United States, and the rate wars between rival Atlantic steamship companies, now stopped.

Holt Brewery.—Nett profit for year £47,789. Compensation fund £3,530, brought in £7,207. Interest £13,200, preference dividend £15,000, to reserve £10,000, forward £10,265. Property, goodwill £1,164,494, lumped book debts, stocks, loans £49,016, creditors £108,771, cash £4,376.

Leeds Forge Company.—Profit for the year ended December 31 last £94,798, out of which £15,000 is placed to reserve and £25,000 written off for depreciation. After paying the preference dividend and directors' fees £2,500, the dividend on the ordinary shares is made up to 10 per cent. and a bonus of 3s. 6d. per share is added, making the total about 15.83 per cent. for the year, leaving £20,568 to be carried forward against £21,885 brought in. Property in land, buildings, machinery, &c., is now £455,109, having been increased by £43,678 on the year. Cash is short at £1,920, but £50,000 is lent on mortgage to the Leeds Corporation, and debtors at £87,797 owe about £26,000 more than the company owes its creditors.

Macdonald, Fraser and Co., Limited.—Profits for the year ended January 31, including £2,471 brought in were £19,377, and after paying preference dividend, £5,000 is written off property and goodwill account and the ordinary shares receive 6 per cent. leaving £2,177 to be carried forward. With a capital account of £220,000, the property and goodwill now stands at £161,808, but the company requires a good deal of working capital owing to the large credit it extends to its customers. Debtors amount to £148,070 against liabilities of £49,154 to creditors and £31,436 for cheques not cashed, while stocks are small at £1,555 and cash comes to no more than £8,535.

Oxford Electric Company.—Revenue from all sources in 1907 was £22,848, of which £12,728 was retained as nett profit. Including £896 brought forward and miscellaneous items, the surplus remaining after providing for debenture interest and other charges was £11,519, out of which the ordinary shares receive a dividend of 7 per cent., £2,500 is put to reserve and £978 is carried forward. Capital outlay was £13,966, and after deducting the depreciation allowances there is a debit balance of £8,759, which, however, is more than covered by the reserve of £15,000. Creditors come to £4,904 against debtors £10,577 and cash £4,726.

Pim Brothers.—With £5,271 brought forward the nett profits for the year ended January 31, after providing for all charges, amounted to £24,674. Debenture interest and preference dividend having been paid, £1,000 is added to reserve and another £1,000 is written off electric installation, after which the ordinary shares get dividends aggregating 9 per cent. and £6,174 is carried forward. Reserve now stands at £28,000 against property and goodwill valued at £160,000, but the company also has a debts insurance fund of £10,000 to put against debtors totalling £136,130. Floating liabilities come to £51,625 and bills receivable and cash to £10,069.

Simplex Conduits.—Nett profits for the year ended December 31 amounted to £13,894, and after charging directors' fees, depreciation and income-tax, the balance available, including £1,380 brought in, was £12,934. Preference dividend having been met, the ordinary shares receive a distribution of 10 per cent. and £4,000 is put to reserve, leaving £2,654 to be carried forward. Trading accounts are largely in the company's favour, while stocks are valued at £25,689 and cash comes to £3,527. The allowances for depreciation on the property and plant, however, do not seem to err on the side of liberality and goodwill stands at £25,000, against which the reserve will now amount to £5,500.

Star Life Assurance Society.—In 1907 this life company received £527,637 nett from premiums, and its total income of all sorts amounted to £778,119, including £247,758 for interest and £2,458 capital paid for annuities sold. Expenses and commissions at £75,000 were 14.2 per cent. of the premium income, and after meeting these and claims of all kinds £236,304 was added to the assurance and annuity fund, raising it to £6,838,005. The directors note the retirement of Mr. H. G. Hobson from the position of actuary and secretary with words of appreciation for his devoted and faithful services to the society over a period of forty-eight years. Mr. J. W. Watson, F.I.A., actuary and secretary of the English and Scottish Law Life Association has succeeded him.

Swiss Bankverein.—Gross profits for 1907 were £387,320, including £10,400 brought forward. Nett profits were apparently £37,320 less at £240,400, but the bank pays the same dividend of 8 per cent. on its share capital of £2,512,000, leaving about the same sum to be carried to the new year. Presumably, therefore, the reserve has been passed by this time.

Town and County Bank, Aberdeen.—This bank is now united with the North of Scotland Bank, and the report just received will be the last to appear. It shows that after paying 8s. 9d. per share, bringing up the dividend for the year ended January 31 last to 1½ per cent. for the year, £7,881 is left to be handed to the Amalgamated Bank for depreciation or whatever other purpose is decided on. Apparently the investments stand in the books at £19,558 more than their market value at the date of the balance-sheet. The bank, however, still had a guarantee or reserve fund of £135,000. Its note circulation was down to £287,782 and its deposit liabilities were up to £3,204,182. This includes interest. The balance-sheet will have some historical interest, but we have no room to detail it here.

Yorkshire Iron and Coal Company.—The report of this overweighted concern for 1907 is one long apology untempered by regrets. Trading profits, after deducting £8,711 for repairs and renewals, were £9,060, and rents gave £1,134, but after meeting debenture interest, transferring £2,675 to debenture stock redemption fund, and writing off another £9,807 for depreciation in stocks, the debit balance was increased by £15,231 to £51,125. Cost of ironworks, &c., has risen by £6,809 to £441,642, and the auditors point out that no depreciation has been provided except in so far as the debenture redemption fund, now amounting to £21,667, may be considered as such. Creditors at £65,161 exceed debtors by £43,720, and although £55,000 has been borrowed on security of debentures, cash in hand is only £27. Stocks are valued at £23,727 and £2,198 has been paid in advance for mineral rents. Several changes in the management are considered to augur well for the future, but we fear still more drastic steps will be needed to "improve the company's property, as well as its reputation in the commercial world."

Yorkshire (West Riding) Electric Tramways Company.—The third annual report shows that for the year 1907 on an increase of 2,458,099 to 8,627,247 in passengers carried, the gross receipts were £60,283. Working expenses amounted to £30,021 or 49.8 per cent. Administration charges took £3,164, and with £279 from interest and fees and £4,443 brought forward the available profit is £31,821. Of this debenture interest required £12,501, general repairs and depreciation £4,299, £5,000 goes to reserve, £358 to accident insurance, and £200 to plant insurance, leaving £9,463, which is carried forward. Capital expenditure amounted to £36,643, chiefly on the Normanton and Castleford extension, while £30,000 was raised on 6 per cent. debenture bonds. Cash assets total £12,661, creditors £2,236, against debtors for £144, and reserves aggregate £25,968, including £8,111 from profits earned prior to April 6, 1905.

Wilson's and Union Tube Company.—Gross profits for the year ended December 31, including £575 brought forward, were £15,202. Out of this the directors have written off £3,000 for depreciation, £1,620 for balance of loss on Australian stocks, and £808 for bad debts, and now propose to pay preference dividends for three half-years to June, 1906, leaving £2,274 to be carried forward. Property account now stands at £117,211, while the company, of course, has no reserves, but the current position seems fairly comfortable as debtors and bills receivable amount to £47,169 against floating liabilities of £34,928, and cash comes to the respectable figure of £11,718.

London and South-Western Bank.—The statement for February 29 shows current accounts and deposits of £14,289,579, other liabilities £321,248, and acceptances and endorsements £49,750, against assets consisting of cash in hand and at Bank of England £2,064,612, money at call and short notice £1,159,200, British Government and other securities £4,043,292, and bills discounted, loans, &c., £9,343,723.

Letters to the Editor.

"MILWAUKEES."

Dear Sir,—I see you advise a correspondent not to buy Milwaukee preferred because "too much new capital is wanted." It may interest you to know that there is a much more serious objection to this company's securities. The line has apparently been regularly starved in the past. The "maintenance of way" expenses for last year work out to the ridiculously inadequate sum of $830 per mile of road approximately, being about half what the Atchison spent, a great deal less than half of the amount spent by the Louisville, much less than the Missouri, less even than the Southern or Missouri Pacific, which carry less traffic. Even less than the East Indian, with its cheap labour and no improvements.

How the Milwaukee are carrying on beats me, the crash must surely come sooner or later. I keep up an interesting table showing earning, expenses under the different heads, train loads, rates, taxes, fixed charges per mile of road. Studying this table and taking into account the cash indebtedness of most of the lines, I have quite come round to your opinion of American Rails.

Yours faithfully,
X. E. N.

Portrush, Co. Antrim, Ireland,
February 28, 1908.

Northland.—We think you should hold on as the company's position appears to be improving. During the last 18 months it has paid off about £80,000 debt; monthly returns are fair, and there should be a chance of a dividend before the year is out. There is no immediate prospect of a recovery in price, however, and the outlook does not favour a big premium.

Dee Don.—(1) The last report was good, and the business is well managed. There may be some slackening off in trade, but the shares are good of their class. (2) This also is a good concern, and we see no reason to sell at present. (3) We are afraid this company has a difficult time before it, and we think you should clear even at a small loss. (4) This company's report is due shortly, and we think you should wait for it. Some of its competitors have done well during the past twelve months, and perhaps it has shared in the better trade.

Matthew.—(1) Financial position is bad, and these are purely a gambling counter which does not appear attractive just now. (2) This company has a difficult time before it, and we do not think the preferred should be held as an investment. (3) This company has a fair business of its own, and there are signs of some improvement. You might hold on although we fear a rise in price is a long way off. The guaranteeing company's position is not satisfactory, and this naturally does not help your concern. (4) A respectable concern, but profits fluctuate considerably. At present it should be doing well, as it got in some good orders, so we see no reason to sell just now. (5) There may be a chance for this much over-capitalised undertaking. It is in a poor condition just now, but it has some good orders on hand, so we are inclined to say keep for a little but not buy more. If any recovery occurs, however better sell out.

F.E.D.—Yes, they should be, since they not only have the security of the property they cover but are a direct obligation of the company that took the line over.

W.M.A.—There will be no genuine recovery in that part of the world for some years yet, and we think you should sell before things grow worse, if you can do so with little or no loss.

Virginia.—(1) We think this property should continue to do well, but doubt whether the time has come to average, because the reaction in that part of the world has to go a long way yet before bottom is reached. (2) These debentures have considerably over £1,000,000 of capital behind them, and the preference shares and income bonds are both receiving dividends. The purchase should, therefore, be a satisfactory investment. The sinking fund begins to operate this year.

W. P.—Shares are safe enough, but we should not be surprised to see them go lower in the present condition of business in the country.

Cardigan.—These are quite likely to recover when the new money is found. It seems a pity to sell on a half demoralised market, especially as there is a considerable "bear" account open which should help them.

Miner.—No. 2 does not promise an early rise, but No. 3 seems a decent venture. There is, however, no particular reason to sell, as No. 1 is just as likely to go up as the other. Still, if you wish to make the exchange, No. 3 is better than No. 2.

E.C.—We fear you are absolutely helpless in the matter. All you can do is to try and persuade the directors to accumulate a reserve before dividing up. What about the articles of association of the company?

P.D.E.—We fear there is not much catch in such a purchase. The margin behind the preference dividend is small, and the company may be dispossessed in about 19 years. It has not been prudently managed.

Edinburgh—In the present outlook in North America we think that, on the whole, you would be safer to place the money with Nos. 1 and 2, or split it between them.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and February 29, 1908:—

Revenue and other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Feb. 29, 1908.	Total Receipts into the Exchequer from April 1, 1906, to Mar. 2, 1907.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,451,487
Revenue.			
Customs	31,923,000	30,000,000	30,916,703

Treasury, March 3, 1908

Capital and Counties Bank.—Liabilities on February 25 consisted of £33,642,296 on simple contracts and £512,596 on bills, and assets of £5,351,724 cash in hand and at Bank of England, £4,760,092 money at call and short notice, £4,879,926 Consols and other investments, and £20,115,736 bills of exchange, promissory notes and advances to customers.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the 8 days ended Feb. 29, $3,146, decrease $187; aggregate from July 1, $164,774, increase $43,411.

Argentine North Eastern. — Traffic receipts for week ended January 31, £4,303, increase £1,330; aggregate from July 1, £93,345, decrease £5,578.

Assam Bengal.—Traffic receipts for 7 days ended February 1, Rs. 91,500, decrease Rs. 9,937; aggregate from Jan. 1, Rs. 3,73,850, decrease Rs. 93,706.

Bilbao River and Cantabrian.—Traffic returns for February, £8,522, decrease £1,085; aggregate from January 1, £16,228, decrease £4,563.

Buenos Ayres Central.—Gross receipts for December £9,952, decrease £1,355; aggregate from Jan. 1, £132,935, increase £10,966.

Canadian Northern Railway.—Traffic receipts for 8 days ended Feb. 29, $130,700, increase $28,500; total from July 1, $6,371,700, increase $1,771,000.

Egyptian Delta.—Traffic receipts for week ended February 15, £4,784, decrease £193; aggregate from January 1, £241,092, increase £16,658.

Lucknow Bareilly Railway.—Traffic receipts for 7 days ended February 1, Rs. 31,534, decrease Rs. 5,642; aggregate from January 1, Rs. 1,55,595, decrease Rs. 32,227.

Midland Uruguay.—Receipts for month of January, £5,010, decrease £2,362; aggregate from July 1, £42,157, increase £238.

North Western of Uruguay.—Traffic receipts for Jan., $18,500, decrease $6,777; aggregate from July 1, $138,364, decrease $6,752.

Quebec Central Railway.—Traffic receipts for the 4th week of February, $24,478, increase $9,936; aggregate from January 1, $139,158, increase $33,544.

Quebec and Lake St. John.—Traffic receipts for Jan. $36,275, increase $431, aggregate receipts $36,275, increase $431.

Rohilkund and Kumaon Railway.—Traffic receipts for 7 days ended February 1, Rs. 20,253, decrease Rs. 2,345; aggregate from Jan. 1, Rs. 93,627, decrease Rs. 25,366.

Uruguay Northern.—Gross receipts for month of Dec., £1,712, increase £3; aggregate from July 1, £11,422, increase £970.

White Pass and Yukon Railway.—Traffic receipts for week ended February 7, amounted to $6,150.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending February 29, £1,336, decrease £32; aggregate from January 1, £9,370, decrease £2,450.

Cockermouth and Keswick Railway.—Receipts for week ending February 29, £648, decrease £73; aggregate from January 1, £5,822, decrease £408.

East and West Yorkshire Union Railways.—Traffic receipts for week ended February 29, £468, decrease £8; aggregate from January 1, £4,052, increase £50.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending February 26, £566, decrease £38; aggregate from Jan. 1, £4,473, decrease £356.

Blessington and Poulaphouca.—Traffic receipts for week ending February 26, £6; aggregate from January 1, £47, decrease £5.

Bristol Tramways and Carriage.—Traffic receipts for week ending February 28, £4,505, decrease £86; aggregate from Jan. 1, £40,825, increase £34.

British Electric Traction.—Receipts of all the Associated Companies for the week ending February 28, £25,504; 428½ miles.

Burnley Corporation.—Traffic receipts for week ending February 29, £1,114, increase £29; aggregate from January 1, £10,282, increase £248.

Dublin and Blessington.—Traffic receipts for week ending February 26, £96, increase £12; aggregate from January 1, £777, increase £22.

Dublin and Lucan.—Traffic receipts for week ending February 28, £91, decrease £5; aggregate from Jan. 1, £777, increase £22.

Dublin United.—Traffic receipts for week ending February 28, £4,618, increase £282; aggregate from Jan. 1, £39,601, increase £1,183.

Edinburgh and District.—Traffic receipts for week ending December 28, £4,918, increase £542; aggregate from January 1, 1907, £257,110, increase £2,644.

Hastings and District.—Traffic receipts for week ending February 27, £778; increase £42.

Isle of Thanet.—Traffic receipts for week ending February 29, £240, increase nil; aggregate from Oct. 1, £5,798, increase £155.

London County Council.—Traffic receipts for week ending February 22, £29,822, increase £2,771; aggregate from April 1, £1,460,058, increase £232,773. Miles 116¾, against 115¼.

London General Omnibus.—Traffic receipts for week ending February 29, £17,398, decrease £1,099; aggregate from Jan. 1, £154,523, decrease £7,754.

London Road Car.—Traffic receipts for week ending February 29, £6,784, decrease £208; aggregate from Jan. 1, £51,978, decrease £3,950.

London United.—Traffic receipts for week ending February 29, £5,243, increase £8; aggregate from January 1, £43,579, decrease £49.

Provincial Trams.—Traffic receipts for week ending February 29, £1,337, decrease £27; aggregate from Oct. 1, £31,819, increase £1,260.

Rossendale Valley.—Traffic receipts for week ending February 28, £168, decrease £9.

Sunderland District.—Traffic receipts for week ending Feb. 26, £426, increase £22; aggregate for 17 weeks £7,609, increase £1,100.

Yorkshire (West Riding) Electric.— Traffic receipts for week ending March 1, £1,125, increase £71; aggregate from January 1, £9,498.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending February 18, £17,821, increase £1,894; aggregate from January 1, £125,102, increase £18,728.

Auckland Electric.—Traffic receipts for 28 days ending January 31, £12,187, increase £1,709; aggregate from January 1, £13,891, increase £1,673.

Brisbane. — Traffic receipts for month of Febuary, £13,390, increase £2,390.

British Columbia Electric.—Nett earnings for January $80,436, increase $24,715. Aggregate nett earnings, including income from investments from July 1 to Jan. 31, $583,042, increase $166,336.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending March 3, £7,939, increase £1,173.

Calcutta. — Traffic receipts for week ending February 29, Rs. 46,832, decrease Rs. 2,317; aggregate from January 1, Rs. 4,58,208, decrease Rs. 42,162.

Cape Electric.—Traffic revenue for month of January, Cape Town, £11,934; Port Elizabeth, £3,520.

Carthagena and Herrerias.—Traffic receipts for the month of February, £2,279, decrease £3,013; total from January 1, £4,772, decrease £6,119.

Geneva Trams.—Earnings for January 7, fr. 206,593; increase fr. 11,786.

Kalgoorlie Electric.— Gross receipts for January, £3,638; aggregate from January 1, £3,638.

Lisbon Electric.—Earnings for November, milreis 46,117.

Madras Electric.—Traffic receipts for fortnight ended February 29, Rs. 16,303, increase Rs. 1,454; aggregate from January 1, Rs. 75,769, increase Rs. 9,494.

Melbourne Tramways and Omnibus. — Traffic receipts for February, £49,000.

Mexico.—Nett earnings for month of January, $194,398, increase $65,167; aggregate nett earnings from January 1, $194,398, increase $65,167.

Monte Video United.—Gross receipts for February, £22,617, increase £3,259.

Perth (W.A.) Electric. — Gross receipts for week ended February 28, £1,451, decrease £70; aggregate from January 1, £12,510, decrease £831.

Rio de Janeiro.—Gross earnings for 7th week 1908, $25,219; increase $2,189.

Sao Paulo.—Traffic returns for January: nett earnings, $128,025, increase $8,962; aggregate from Jan. 1, $128,025, increase $8,962.

Twin City Rapid.—Traffic receipts for the month of November, $497,428, increase $38,791; aggregate from January 1, $5,552,879, increase $402,984. Nett traffic receipts, $233,018, decrease $649; aggregate from January 1, $2,852,445, increase $105,004.

* Gross. † Loss.

The Great Northern Central Railway of Colombia, Ltd., are issuing a Prospectus, which states amongst other things that

THE PROSPECTUS HAS BEEN FILED WITH THE REGISTRAR OF JOINT STOCK COMPANIES.

The SUBSCRIPTION LIST will OPEN on SATURDAY, the 7th March, 1908, and CLOSE on or before TUESDAY, 10th March, 1908.

THE GREAT NORTHERN CENTRAL RAILWAY OF COLOMBIA, LTD.

(Incorporated under the Companies Acts, 1862-1900.)

The Company have been authorised by the Colombian Government to issue First Mortgage Bonds in respect of the first 54 kilometres of the Railway to the total amount of £518,400, carrying interest at the rate of 5½ per cent. per annum, such Bonds being guaranteed by the Government as below-mentioned. Bonds of such issue to the amount of £38,500 have been applied for by the Directors and their friends, and will be issued to them.

ISSUE OF £153,500

5½ PER CENT. FIRST MORTGAGE BONDS

(part of the above-mentioned authorised issue), in 7,675 Bonds to Bearer of £20 each, and being part of a total issue of like Bonds to the amount of £9,600 per kilometre of Railway to be constructed from Puerto Wilches, on the River Magdalena, to Bucaramanga, of an estimated length of 154 kilometres, all of which will rank *pari passu*.

A full half-year's interest will be paid in London on the 1st July next, and thereafter on the 1st January and 1st July.

All these Bonds will be secured by a first specific charge on the Railway to be constructed from Puerto Wilches to Bucaramanga under the Charter granted by the Colombian Government, and which is referred to below, and on any sums to be received in respect thereof in the event of purchase by the Government, and on the Government guarantee granted in respect thereof of 2,800 Gold Dollars (£560) a kilometre per annum for 99 years in respect of such Railway, and by a first floating charge on the remainder of the Company's undertaking and assets.

The Interest and Sinking Fund in respect of these Bonds are secured by the guarantee of the Colombian Government for 99 years, which is itself secured by a special hypothecation of 5 per cent. of the proceeds of the Customs on the Atlantic Ports, such percentage being paid monthly to the Central Bank of Colombia, by whom it will be remitted quarterly to the Company's Bankers in London, for the service of the Bonds.

The revenues of the Customs on the Atlantic Ports have considerably increased in recent years. In 1906 they amounted to £1,220,000, on which sum the 5 per cent. earmarked for the service of these Bonds would be £61,000.

This Government guarantee is sufficient, after providing for the interest on the Bonds, to enable the Company to redeem 80 Bonds per kilometre within 30 years, and the balance within 95 years from the 1st of January, 1910, thus securing a return of the principal moneys secured by the Bonds by the time the Railway becomes the property of the Government.

The Company reserves the right at any time hereafter to create further Bonds at a rate not exceeding £9,600 per kilometre, in respect of each of the two further sections of the Railway, as provided by the Charter. Such Bonds may be specifically charged upon the whole or any portion of the second and third sections of the Railway, and on any sums to be received in respect thereof in the event of the purchase by the Government, and on the Government guarantee granted in respect thereof in priority to the Bonds of this series, but so far only as the floating charge is concerned will rank *pari passu* with the Bonds of this issue.

THE GREAT NORTHERN CENTRAL RAILWAY OF COLOMBIA, LTD., have authorised the London and South-Western Bank, Ltd., 170, Fenchurch Street, London, E.C., and Branches, Bankers of the Company, to receive applications for the above-mentioned Bonds, for £153,500 at the price of 77 percent. or £15 8s. per Bond, payable:—

5 p.c...£1	per Bond of £20 on application.
20 p.c...£4	per Bond of £20 on allotment.
25 p.c...£5	per Bond of £20 one month after allotment.
27 p.c...£5 8 0	per Bond of £20 three months after allotment.
77 p.c. £15 8 0	

thus yielding at the issue price 7 per cent.

Bearer Scrip will be issued to be exchanged for Bonds on payment of the final instalment.

Payment in full on Allotment or on the date fixed for payment of the next instalment can be made under discount at the rate of 5½ per cent per annum.

The Great Northern Central Railway of Colombia, Ltd., has been formed under the British Companies Acts, for the purpose of acquiring a Charter and Supplemental Charter (which it has since acquired), granted by the Government of the Republic of Colombia, for the construction, equipment, and working of a railway from Puerto Wilches to Bogotá, estimated at about 500 kilometres, the first section from Puerto Wilches to Bucaramanga being about 154 kilometres. The route proposed to be followed by the Railway is divided into three sections, namely:—

The first section from Puerto Wilches on the River Magdalena to Bucaramanga.

The second section from Bucaramanga to the boundary of the old Department of Boyacá.

The third section from thence to Bogotá, the Capital of Colombia.

The Company will, in the first instance, construct the first section, and the present issue will enable the Company to proceed with the construction of the first twenty kilometres.

This Charter, the provisions of which are most liberal, has been granted by the Colombian Government with the object of affording facilities for connecting the interior with the Atlantic Coast, and will thus enable the rich mineral resources of the country and the fertile agricultural regions through which the line will pass to be developed.

The Provinces to be served by the Railway contain a population of some 2,000,000 people, the climate for the most part is excellent, and there are everywhere plentiful supplies of good water. There is no doubt that railroad facilities are urgently needed for passenger traffic and for the transport of agricultural products, live stock, ores, and other merchandise.

On account of its exceptional situation, Colombia is able to command trade on both the Atlantic and Pacific Coasts, and being rich in natural resources is a rapidly developing country. Its credit under the able administration of President Reyes has materially improved, and is now considered to be firmly established.

Owing to its geographical position the Railway should become one of the most important trunk lines in the Southern States of America.

The principal provisions of the Charter are as follows:—

1. The period for which the Charter has been granted is 99 years (during the last 49 years of which the profits will be equally divided between the Company and the Colombian Government), subject to the right of the Government to purchase the Railway at any time after the expiration of 30 years, the price to be fixed by arbitration, but in no case is such price to be less than the amount of the value of the Bonds issued by the Company. When the traffic on any section of the railway produces during ten consecutive years a sufficient sum to cover the interest guaranteed for that section, the guarantee of interest will then terminate for that section.

2. A guarantee sufficient to pay the interest on all the Bonds to be issued by the Company, and to provide a Sinking Fund for the redemption of the Bonds in 95 years. The Government have specifically allocated 5 per cent. of the Customs Receipts of the Atlantic Ports for the payment of this guarantee. These receipts amounted in 1906 to £1,220,000.

3. A grant of 300 hectares, about 750 acres, of freehold land for every kilometre of railway built and opened for traffic. The Company retains two-thirds of this, the remaining one-third going to the original Concessionaires.

4. A preferential right of acquiring and working mines discovered or claimed by the Company, other than emerald mines, within a distance of 40 kilometres on either side of the railway.

5. Should the gross receipts from the railway prove insufficient to meet the working expenses, the Government will make up the deficiency, in addition to paying the full guaranteed interest. Any surplus up to the amount of the guarantee will belong to the Government.

The Charter exempts the Company from:—

(a) Import duties on all railway materials, rolling stock, machinery, telegraph and telephone apparatus, and all articles for the construction and maintenance of the railway.

(b) Payment of any National, Departmental, or Municipal Tax, and

(c) Registration and Annotation Duties on Deeds, Documents, and Transfers.

In the event of the Railway not being completed within the period of 12 years, such portion of the line as shall have already been built will remain the property of the Company, and the guarantee on the Bonds issued in respect of the line so constructed will continue.

In accordance with the provisions of the Charter the Company has deposited £20,000 in cash, as a guarantee for the fulfilment of its obligations.

Mr. J. Fletcher Toomer, A.M.I.C.E., who has had large experience of railway construction in Mexico, has completed the survey of the railway from Puerto Wilches to Bucaramanga, 154 kilometres; he reports that there are no serious engineering difficulties, and that the net earnings will, in his opinion, after allowing a reasonable time for the development of traffic, be sufficient to relieve the Government from payment of any interest guaranteed in respect of this section.

The Directors have received the following letter from the Special Agent of the Colombian Government in London:—

"To the Directors of the Great Northern Central Railway of Colombia, Limited.

"130, Dashwood House, London, E.C.

"Gentlemen,—I have perused the Prospectus of this date, to be issued by your Company, and I have pleasure in informing you that the statements contained therein relating to the terms of the Charter granted by my Government and held by your Company, and of the Guarantee of interest, are correct.—I am, Gentlemen, your obedient servant,

"DOMINGO ESGUERRA,

"Special Agent of the Colombian Government.

"London, 4th March, 1908."

The above Charter and Supplemental Charter, and Contracts mentioned in the Prospectus, and copies of the Memorandum and Articles of Association of the Company, and a form of the Bond to be issued by the Company, may be inspected at the offices of the Solicitors to the Company on any day before the closing of the Subscription List between the hours of 11 a.m. and 4 p.m.

Application for a special settlement in, and a quotation for, the Bonds of this issue will in due course be made to the Stock Exchange, London.

Full Prospectuses and Forms of Application may be obtained at the Offices of the Company, or from the Bankers, Solicitors, or Brokers of the Company.

4th March, 1908.

The Investors' Review.

The Week's Money Market.

Bank Rate 3½ per cent. (Reduced from 4 per cent. on Thursday, March 5.)

Norfolk House, Friday Evening.

Most people hoped on Wednesday that the Bank rate would come down, and they were not disappointed. The discount market has been playing these weeks back for a reduction, and so effectually that when it got what it had played for its rates hardly moved. Three months' bank bills could be disposed of at 3⅛ per cent., and sometimes less on Wednesday, and yesterday, after the Bank rate fell, the leading houses quoted 3 to 3⅛ per cent., but there was very little "eighth" in it. Four months' bills of the same class dropped back to 2⅞ per cent. and a formal 3 per cent., and the rate for sixes was much the same. Some people are now looking for a 3 per cent. Bank rate almost immediately. Although to-night's quotations are still at yesterday's figures, the market will only be kept up by gold exports or fears thereof.

With all this money rates have remained awkward and stiff, almost entirely because of the Treasury accumulations. It is all very well for Mr. Asquith to say, and he is quite right in saying, that no benefit would accrue to the Government or saving to the taxpayer were the old fashion of collecting the income and other direct taxes by the quarter or the half-year reverted to. That would only increase the expenditure. Just so. We fully agree, but if the whole collection of the direct taxes is to be made in one sum, and that sum hustled out of the taxpayer in the last two or three months of the fiscal year, then means ought to be found to afford a corresponding relief to the Money market, lest one day the drain of the tax collector may bring a monetary crisis upon us.

Look at last week's Bank return. It shows a reduction in the other deposits or resources of the market amounting to £2,968,000, and the total of £40,761,000 at the credit of bankers' balances and the balances of the Bank of England's own private customers is £2,095,000 less than it was a year ago, simply because £2,699,000 more lies at the credit of the Treasury and Government departments than at the same date last year. During the Bank week £1,532,000 was added to public deposits, bringing the total up to £18,710,000. That is at least £6,000,000 too much, and the market is in no position to spare this money even now, and in spite of the reduction in the Bank rate.

Accordingly, although the 3½ per cent. Bank rate permits the joint-stock banks to lower their deposit rate to 2 per cent. and the discount houses to bring their call money rate down to 2¼ per cent. and their notice money rate to 2½ per cent., day-to-day advances are still 3¼ to 3½ per cent. in the floating credit market, and money for a week still cost yesterday 3¼ to 3½ per cent. To-day call rates rose to 3½-4, but notice money could generally be had at 3¼ per cent., and the market got no appreciable relief from the release of £1,500,000 against Treasury bills redeemed. It seems the Japanese Government held most of the issue, and it may have other uses for the money than to lend it in the floating credit market. So hard up was the open market that all the amount due at the Bank had to be renewed, and a considerable amount more procured, mainly by discount of bills.

Now that the Bank rate is down here to 3½ per cent., a lower figure than it touched any time during 1907, the hidden dangers to our gold may again begin to emerge, and already Continental exchanges have begun to move against us. In Germany, moreover, renewed pressure has made its appearance, and the end-of-the-month demands upon the Reichsbank drove up its note circulation by £4,830,000, while its cash in hand fell by £2,524,000. Therefore, instead of the note circulation being about £12,000,000 below the legal maximum as it was a week before, the last return showed it to be only £3,098,000 below, and every branch of the Bank's business indicated augmented tension. Its advances on stocks rose by no less than £2,834,000 on the week, and there was an increase of nearly £3,000,000 in its other advances and sundry securities held. A demand for gold on German account is therefore a contingency by no means to be overlooked, and increased amounts are probably going to Argentina next week. Our home currency went out rather freely at the end of the month, the active circulation absorbing not only £627,000 in coin, or £41,000 more than the value of the gold in from abroad, but £401,000 in notes, so that the banking reserve is actually £442,000 lower than it was a week ago, although still £3,009,000 higher than at this date last year. Incoming gold, however, may save us still if nothing of an urgent nature drives any foreign market to rush here for the metal. For all that the danger is sufficiently pronounced to render a further reduction in the Bank rate less certain than the ever sanguine jobber for the fall in money rates would have us believe.

Bank of England profits for the six months ended February 29 indicate a dividend of 4½ per cent. or at the rate of 9 per cent. per annum, with about £25,000 over the minimum of £3,000,000, which the rest or proprietor's reserve is never allowed to go below, left to carry forward.

Silver.

Purchases of silver on this market for the bazaars during the current year have amounted to £1,400,000

or just about double the quantity taken in the corresponding period of 1907, and it is therefore not surprising that the demand has slackened off considerably of late. Small orders from that quarter have come forward almost daily this week, but the prices offered were again too low, and although China was also a moderate buyer the principal support has come from the Continent. The inquiry, however, was not strong enough to maintain quotations, and these after reaching 25 12/16d. per oz. for cash and 25 15/16d. per oz. for delivery two months forward have gradually relapsed to 25 7/16d. and 25 9/16d. per oz. To-day, however, the Continental inquiry was a little more pronounced, and a rally to 25 9/16d. and 25 11/16d. per oz. followed. Applications for Rs. 30,00,000 of India Council drafts on Wednesday were small, amounting to no more than Rs. 3,77,632 in bills and Rs. 14,00,000 in telegraphic transfers, and the bills only were allotted, tenders at 1s. 3 29-32d. per rupee receiving in full. The amount to be offered next week is further reduced to Rs. 20,00,000.

BANK OF ENGLAND.

The Stock Markets.

"Worse than last week"—"worse than any week for years and years"—"since the aftermath of the Baring crisis"—"no business, not even new issues being subscribed for." These are among the statements to be gathered from the tired waiters on a vanished *clientèle* in and around Throgmorton Street, and they doubtless represent the truth. The public is in no mood to play at bull and bear, still less in a mood to invest freely at current prices. What has been going on, indeed, is the liquidation of large accounts open for the rise by professional and amateur speculators, who bought largely some time ago in the expectation that the public would come in directly the dear money crisis began to abate. Many stories are current as to the result of this miscalculation, and everybody has been talking this week about the affairs of a millionaire industrial peer whose folly, conspicuous for years past, is said to have led to his being pretty well ruined. He has been in this gamble for the rise, and with his name are coupled those of a multi-millionaire financial peer's son and one of the heads of a prominent South African house of the upas tree species. Fabulous sums are bandied about as the amount of their losses, and although these are doubtless fancifully exaggerated, there seems to be no question that these men have been gambling in anticipation of a public demand which never came, and have been unable to wait longer paying contangoes and differences, so that their accounts have been in process of liquidation for some weeks back. As they were followed in the usual sheep fashion by many men in the market the sufferings amongst its members have also been patently increased, and although quotations are now steadying a little there can be no assurance that another crop of liquidations is not about due for the harvesting. In other words, the whole place is bolstered up by the gambling accounts of that class of speculator which goes by instinct and tradition, which reasons that because on such and such an occasion the sequence of events was so and so, therefore the same sequence is going to happen now. Add to this the large amount of unliquidated and unfaced losses hid away amongst all classes of society, and it will be obvious enough that the perplexity we have from time to time confessed as to the course of markets was only too well grounded. We cannot now assert with the least confidence that the worst is over, and even if no more millionaires are waiting to be stripped, many a day must pass before the general public is likely to come along freely and commit its savings to the tender mercies of the Stock Exchange and the financial Berserkers outside.

It is painful to have so often to say things of this kind, but it would be folly to blink facts. Business

cannot be good after what the moneyed classes in this country have passed through. The reduction in the Bank rate will do nothing appreciable to improve market circumstances. All that cheap money does is to make it more easy for those who have open accounts to carry to hold on a little longer. And we have no certainty that monetary ease will continue. Even if our market were down on bedrock, so to say, there are liquidations still to take place on foreign markets, in New York, on all German bourses and even in Paris. Any week developments there might bring us surprises that would change in a moment the whole aspect of affairs. For there is at least £350,000,000 of our banking credit locked up in advances upon Stock Exchange securities at the present time over and above the direct investments of the banks themselves, which cannot amount to much less than £200,000,000 all told and in addition.

Trustee and Other Securities.

There has been no weakness in the Consol market at any time, and yet the last settlement indicated an increase in the bull account, which may cause forced liquidation even here before all is over. Speculators for the rise, in other words, continue to pay a good deal more for the money they borrow than they get as interest, and cheap money in the general market is not going to help them much, because Government and gamblers alone buy Consols in these times. Meantime quotations have been firm and Home Municipal stocks have risen in sympathy without much impulse from the public. That is also the case with Colonial bonds, prices for most of which remain where they were a week ago.

Foreign Government Bonds.

With Foreign Government stocks it has been different, and the temper of Continental bourses is not improving. The general industrial situation, particularly in Germany, is causing no small disquietude amongst bourse operators of all classes, and whatever may be the flutter in individual securities from time to time, the tone of markets abroad is, as a whole, increasingly gloomy. No wonder, therefore, that the movements in prices for Foreign Government bonds are indicative of a most insipid and languishing state of business. South American bonds have been tolerably firm, and there has been no relapse in French or German bonds. Japanese have recovered a little, and the weakness in Russian, though again visible, has not been pronounced, while Spanish and Turkish bonds have, on the whole, been firm, but the market has no energy at all.

Home Railway Stocks.

Here the tendency has likewise been far from definite, but the market has never been strong, and in spite of jumps like that in North British prices have been disappointing. Traffic receipts give no encouragement to buyers, and the forced liquidation mentioned above has had its influence here likewise. The aggregate decline in the receipts of 21,201 miles of line in the past week was £166,990 as the *Railway News* intimates, and that is the worst thus far seen since the reaction began. The absence of end of the month ekes from season tickets and other odds and ends is given as explanation of the extent of the decline, but on any reckoning the display is poor. People are, therefore, asking how much further down gross incomes will slip before the turn comes, and the answers vary according to the varying tone of mind, but nobody knows and all are afraid of the future. Preferences, therefore, fall back as well as ordinary, and even debenture stocks have now and then suffered a little this week. No particular change, however, was caused by the Caledonian dividend, which puts the deferred stock, we hope only temporarily, in the barren list, for the reduction was expected and had been played for. Nor did the stocks of the Glasgow and South-Western Company go back, although holders of these also get no encouragement by the reduced dividend. Great Northern deferred, however, went down sharply on the decision of the Railway and Canal Commissioners, to the effect that the agreement between this company and the Great Central was *ultra vires*. The slight recovery which subsequently took place still left the stock nearly 2 down on the week, but Great Central gambling counters did not suffer, although the preference of 1881 and 1889 have fallen respectively 4 and 2. South-Western and Brighton preference, as well as Chatham second preference and South-Eastern 5 per cents., are likewise all lower.

As regards the Caledonian dividend, it should be recalled that the deferred stock did get ¾ per cent. per annum for the first half of the year, so that as the preferred gets its full 3 per cent. for the year the superior stocks are not dropped out of the trustee class.

Indian and Colonial Railways.

Even Indian Railways did not escape, and quite a number of the smaller issues are £1 down since a week ago. Bengal and North-Western ordinary has been pushed back 2, and the profit-sharing bonds of the West India Portuguese Railway have been sold as low as 92. Canadian-Pacific shares have held their price fairly well in spite of occasional dips, and the forced liquidation of the great army of bulls here may be staved off for a considerable time yet by the equally great counter host of speculators for the fall. Grand Trunk stocks, however, have been a rotten market, and the last published traffic return gave the bulls a downright blow from which they have not recovered. A little spurt has taken place since owing to profit-securing repurchases by speculators for the fall, but the second and third preference stocks are still 5 down on the week, and even the first preference has lost 2, while the ordinary stock has tumbled back to about 14¾. It is not yet worth buying for the rise.

United States and Foreign Railway Stocks.

The daily tale of business on Wall Street is the best sign that it would be waste of time and space to attempt to follow the St. Vitus sort of jumpings in the Yankee market. When a day's dealings reach 300,000 or 400,000 shares the market reporters talk as if business had been "good." It is never good over there, and cannot be all this year. Even were there no crisis, the mere fact that the turmoil of the Presidential election is to be with us from now until November would prevent the existence of anything like large and free markets. Prices on the week have sometimes risen a little, and Milwaukees are actually 2 higher, but in other instances declines have been much more common, although seldom severe. No solid reason whatever exists for the recovery in New York Central, Pennsylvania, or Baltimore shares, but the game has so ended in the space of time embraced by our review. It is the tug-of-war game between self-sacrificing professionals, nothing more. Bonds have also been wobbly without much going on.

Foreign Railway stocks have suffered in numerous instances, and the decline in United States of the Havana ordinary stock has been no less than 6 on the week, but the most interesting group is Argentine Railway stocks, for these have been slipping back in the teeth of splendid traffic returns, and everybody wonders why this should be. The explanation offered refers the weakness wholly to the misfortunes of the giant players mentioned above. They and their flocks of sheep drove up prices some time ago, in anticipation of the results of the Argentine harvest with such energy and effect that they frightened the outside public away, and now they have had to realise on a hollow market, with never a bear about to break their fall. If there is much more of this kind of clear-out to happen, the public will have a nice opportunity by and by to pick up many of these stocks at reasonable prices, and the speculative investor should keep his eye on Argentine rails market. Declines are noticeable elsewhere, but seldom mean much, except in the stocks of the old Mexican Company, where the bears have had a riotous time, driving prices down from 3 to 4½ on the week. This probably heralds some change in the current belief that Mexico is a steadily

progressive country. In a sense it is, but it cannot escape the swirl of the Yankee crisis for all that, and may have a bad year or two. So be in no haste to step in and let the weary bulls out.

Banks and Brewery Stocks.

Changes amongst the prices of Bank shares have been fairly numerous, and almost all the wrong way, Standard of South Africa having again lost 2. That bank has been romanced about in an unfavourable fashion, and the number of its shares that have changed hands has never been important. There has been no genuine business either in the Brewery group, but prices there have been marked down with a uniformity never before witnessed. If a price could be quoted at all for any of these securities, it was immediately put down. But there has been no outside selling, for the simple reason that the jobbers laid themselves out to prevent business. The prices at which they were disposed to buy were put lower, but not as a rule the prices at which they were ready to sell. That is to say the buying price might be given out at £5 or even £10 less than before Mr. Asquith's new Licensing Bill, which caps the mistakes of the Tories, made its appearance, but often the selling price was lowered no more than £1 or £2, if that. The jobbers widened the market in favour of their own pockets, in case sellers should appear, nothing more, so that although quotations are lower in a manner that must seem immensely impressive to those who examine our week's price movements, there has hardly been a bargain recorded from morning to night. So nothing would be gained by any discussion of this display, and all we need point out is that although the chance of the investor in good brewery debentures may not yet have fully come, he might keep looking around, and picking up good things when he can. The buyer's opportunity is coming here if it has not already come. Surrey Commercial Dock stock was depressed, otherwise nothing happened in that quarter.

Commercial, Electric and Other Securities.

Here we enter a desert in which the oases are extremely few, and at present very badly cultivated. The stocks of the Artizans' and Labourers' Dwellings Company, however, were put up on the report, and seem to have found a buyer or two, but generally speaking there was not energy enough to move prices up or down, and our comparative exhibit for the week is almost as barren as the brewery one used to be. Even Salt Union ordinary shares have not gone up, although a microscopic dividend is to be bestowed upon them as a sort of memento of days long gone by, but industrial debenture stocks keep tolerably steady, and the market may have its turn some day.

Electric Lighting securities were little disturbed by the simulated convulsions taking place elsewhere, and prices kept steady on the whole, the weakest debenture issue being Edmundson's 4½ per cent., which is again marked down 5. Mexican Light and Power stock was quoted 2 up, and Canadian General Electric common shares 3 down. The securities of some of our colonial mortgage companies were firm, but Hudson's Bay shares, the shares of the Canada Company, and some others of that group have been depressed. Debenture Corporation preference stock has also been marked down 2½, and the stock of the Law Reversionary Interest Society is 2 lower. Peel River Land shares, on the other hand, have been lifted 3 on the week. There is nothing to add about Financial Trusts, where the only unfavourable movement that catches the eye is a drop of 5½ in the issues of the Brewery and Commercial Trust, purely a jobber's manifestation.

Gas, Insurance, Iron and Steel, &c.

In Gas stocks the only incident to notice is a somewhat enlarged business in Gas Light ordinary, which has been offered a good deal, and closed 1½ down on the week. Insurance shares have also been heavy as a group, and nothing has happened to stimulate them, so that the prices are often fractionally lower and Northern Assurance have slipped back 2.

Changes amongst Iron, Coal and Steel shares and stocks have also been insignificant, but fairly encouraging. Cammell, Laird's share issues, however, continue weak, as well as Stewart's and Lloyd's shares, but Dunderland Iron debenture stock has been marked up 3, as well as the debentures of the Cargo Fleet Company; in fact, debentures have been firm, and shares inclined to recede, although the two share issues of the Carnegie Steel Trust have been hoisted by the Wall Street players.

Shipping things are quiet enough, and there has been no further relapse of any importance in the Tea, Coffee and Rubber group; prices, in fact, sometimes have improved a little, notably in Anglo-Malay shares, which have been in some demand, but the whole of the few changes are fractional declines. Telegraph and Telephone securities have also been flat, particularly National Telephone preferred and deferred, with considerable selling of the deferred. Anglo-American Telegraph stocks are also all lower, and Eastern Telegraph ordinary. Market langour rather than realisations is at the bottom of some of these movements. London General Omnibus stock has dropped back 2, in spite of the report that the company is to be amalgamated with the Vanguard Motor 'Bus Company, with Sir John Pound replaced by his son, and other changes, of which great good is prophesied. We have our doubts.

Friday Evening's News.

Having little to do the Stock Exchange fanned up its patriotism to-day by another good cursing fit against the Kaiser and the present Government. While the mood was on prices went back but business never attained any importance, and it would be waste of space to go through the various markets. The feeling though is deepening against the Licensing Bill, and the plain dealing brewer is undoubtedly brought in sight of ruin by its provisions.

But the Kaiser's letter to Lord Tweedmouth afforded a welcome diversion, and caught the fancy of the market immensely. It roused "the right patriotic sentiment" or, at least, the kind of sentiment those who are busy stirring up bad blood believe Germany and England want to cultivate. The moving spirits in this loathsome intrigue are mostly Semites, we are sorry to say, or at least the war-mongering Press is; but unmindful of South African experiences, and the part the *Times* played in that sinister affair, our worthy Anglo-Saxons appear to be just as ready as ever they were to swallow any maligant rubbish designed to inflame their passions and bring about bloodshed. War pays the professional usurer classes; peace might bring the emancipation of nations.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Rise: Irish Ld. Stk. ½, to 90-½, do. Acct. ½, to 90½-90⅝, Greek Guar. 1, to 87-9, Transvaal Acct. ½, to 98½-¾, Bk. of Ireland 4¼, to 312-8, India Scrip. ½, to 52-⅝.

The Stock Exchange Members' Association has convened a meeting for Monday next, in anticipation of the usual annual election of the committee.

Company Reports and Balance Sheets.

*** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

BANK OF AFRICA.

In the December half-year this company's gross profits fell off £14,191 compared with the corresponding half-year, and expenses were reduced by only £4,510. As the balance brought forward was also £1,942 down it follows that the nett profit was reduced by £11,623 to £54,402. Out of this the dividend has been made up to 7 per cent. for the entire year by the payment of 4s. 4½d. per share for the second half. Then £2,000 is added to the pension fund and £17,402 carried forward. Almost every item in the balance-sheet shows a diminution, but it does not follow that the business is worse on this account. It may really be sounder. The note circulation has fallen off by £58,162 to £210,145, but bills payable are down £94,721 to £282,728, and current account balances at £6,042,124 are lower by £562,557. Bills held for collection—a cross entry—are no less than £141,657 lower at £591,465, a clear proof of the shrinkage that has taken place in business. On the assets side cash is £396,834 down at £1,453,171, but cash, bills, &c., in transit are up £83,528 at £174,275. Investments in Government, Colonial, and other securities, including the Cape Government stock held against the note issue, show a decrease of £43,320 at £1,068,336. Bills receivable, however, are up £303,561 at £1,470,751. On the other hand, loans on security, temporary advances, &c., show a decline of £541,783 at £2,598,668. Bills discounted are down £220,568 to £817,548, and bank premises, &c., show a reduction of £6,146 at £424,662, the total of the balance-sheet being £1,013,812 lower at £8,680,863, rather a depressing exhibit altogether, but eloquent of what is going on all over South Africa.

BANK OF EGYPT, LIMITED.

Nett profit for 1907 was £1,807 down at £134,944. The balance forward came to £15,537, so that £150,301 was available for distribution. Out of this £20,000 is added to the reserve against £40,000 a year ago, and the dividend is made up to 10 per cent. with a bonus of 8 per cent. or 20s. per share added, and after writing £1,824 off bank premises £38,477 is left to carry forward, or £20,120 more than was brought in. The balance-sheet indicates a drastic reduction on both sides of the account so that one wonders how gross profits could have been increased by £680 to £172,056. Expenses rose by £2,487 to £37,112, and yet the business shows a large reduction. Bills payable, for instance, are less by £90,860 at £1,485,249. Current account balances are lower by £379,909 at £769,821 and on the assets side cash is less by £77,873 at £40,219, while bills receivable are down by £67,682 to £706,706, and there is a decrease of £320,331 in the current and other account balances. Indeed, the only item showing an increase is the investments up £38,247 to £484,880. The total of the balance-sheet is £3,390,547. It should be noted that the reserve fund is now £500,000, the same as the paid-up capital, and that doubtless partly explains why only £20,000 was added to it out of last year's profits, but more than the difference is, as has been noted, carried forward. In some instances also the decreases are only great in comparison with last year, when considerable increases took place. Current accounts, for instance, including rebate fund for doubtful debts and contingencies, was an item up £268,283 a year ago. There is a contingent liability on bills discounted amounting to £515,660 not brought into the account.

TEMISCOUATA RAILWAY BONDHOLDERS' COMMITTEE, LTD.

A long document has been issued by this committee explanatory of the position of an unfortunate Canadian railway enterprise. It is unfortunate in its situation and its history, but traffic receipts are steadily improving, and although the nett revenue for the year ended June 30, 1907, was at $20,903, the smallest of the three years covered by the accounts the committee presents, the gross revenue of $172,196 was really the largest of all, and the nett was reduced because the committee had to pay interest for the first time on the prior lien bonds together with $9,733 set aside to the redemption fund for these bonds. Proposals are now made to deal with the accumulated arrears of interest and with the old mortgages replaced by what are called consolidated mortgage income bonds, and these bonds are to be issued in amounts covering the principal of the old debt, plus interest arrears all embraced in the committee's provisional certificates. Thus a main line certificate for £1,000 represents income bonds for £1,300, a £500 certificate, income bonds for £650, and so on, the arrears of interest being thus presumably accounted for. To encourage the holders of this stagnant debt the committee proposes to distribute 1½ per cent. on the new income bonds on May 1 next, such distribution to represent the profits of three years. Fractional certificates will be issued which will be exchanged for new provisional certificates of £100 as accumulated. It is suggested that the committee's existence should be continued, and there seems good reason for this view since the original promoters and contractors hold $1,000,000 of common stock which they might utilise to swamp the income bond investors were the holders of these to let go. The company is to get £7,000 from the National Transcontinental Railway authorities for two miles of its line taken over, in addition to which two new miles will be built for the Temiscouata Company by the Transcontinental.

MEUX'S BREWERY COMPANY.

A perfect howl is uttered by the board of this company over the manner in which the drink trade is being treated. The new Licensing Bill is described as "pure unmitigated robbery," the work of the present "Socialistic Government," and with this view entertained the directors say they feel that the question of reduction of capital is a matter that "it would be useless to bring forward at the present time," adding that if the Bill passes in anything like its present shape, "the entire capital of this company, preference and ordinary, may be considered as absolutely wiped out, and in all probability a considerable proportion of the debenture stock as well." This is fine fustian, indeed, but the directors might have had the decency to recall the fact that long before the present Bill, or any Bill was heard of, they had contrived to make away with £800,000 or thereby of the capital—if not this board then some board—and to bring what was once a fine business to the verge of ruin. No bloated brewery company of them all has, within its limits, been more scandalously misfinanced than Meux's. Properties of all sorts were bought up at fancy values without regard to consequences, and now that the inevitable has overtaken the company all the board is able to do is to curse and swear at the Government. It is a contemptible attitude, and nothing in the balance-sheet or profit and loss account for the year 1907 is calculated to give comfort to the shareholders any more than the wild and foaming words of the board. Although properties represented by public-houses, loans, advances on mortgages, brewery, goodwill, and what not, were already at a much exaggerated value, the board contrived to increase that value by £20,265 last year to a total of £1,188,226, and debtors to the company have gone up by £12,826 to £54,489. Stock, too, including carts, horses, malt, hops, beer, &c., although not very excessive looking at £41,247, is also nearly £4,000 up, and the only item on the assets' side seriously down is cash, which is £28,261 lower than a year ago at £20,292. The whole of these assets together, indeed, fail to balance the account by £805,866. In other words, the ugly gap presaging ruin stands exactly where it did twelve months ago, but the company owes £9,657 more to sundry creditors at £61,598, and the entire profit left on the year's trading is only £13,478 or £833 less than the profits made in 1906. Gross profits, indeed, are down by £3,407 to £79,414 and the nett would not have been so good as it looks but for a reduction of £2,305 in the amount set aside for depreciation on leasehold properties, which is only £13,271 against a capitalisation of nearly £1,200,000. The compensation fund levy is only put at £2,475, but really it would be impossible to imagine how much money per annum would be required to "compensate" the share and debenture-holders of this company for the loss they have sustained by its gross mismanagement and originally dishonest capitalisation.

SUN LIFE ASSURANCE SOCIETY.

The total funds of this old life company were increased by £562,933 last year to £8,269,367. Of that increase £269,391 is due to the life business, £81,027 to the annuity fund and £118,032 to the leasehold, &c., accident and general fund. The directors state in their report that a valuation of the marketable securities held by the society shows a depreciation of £157,374 or £3 11s. per cent. upon their book value of £4,273,228, but they do not say whether any provision has been made for this shrinkage, and probably think none required because of the temporary character of the depression. It may be well, however, to keep in mind this book loss and deal with it in the near future. Out of the proprietors' share of the quinquennial profits, amounting to £108,737, and other revenue belonging to them, dividends and bonuses aggregating 8s. per share for the year have been declared upon the paid-up capital of £360,000. The life business was prosperous, and claims paid were well within expectation, amounting as they did to £315,888, including reversionary bonuses, premium income having been £699,305. Expenses and commissions amounted to 14.59 per cent. of this premium income. In the annuity branch £128,111 was received for annuities granted, and the leasehold and accident branch gave a premium income of £131,381 nett, claims having taken only £27,557.

THE CENTURY INSURANCE CO., LIMITED.

This Edinburgh company's premium income in the life and annuity department came to £50,702 last year and claims took £7,098 of this, so that business is still one of modest proportions, but it appears to be economically managed since expenses and commissions together in this branch took only 13.72 per cent. of the premium income. The revenue of the fire department was also small at £12,377 nett, against which claims took £3,147. At the end of the year the life fund was £48,034 up at £218,157, and the fire fund was no less than £44,215 up at £59,628. There is also a sickness branch whose premium income was £56,519, against which claims and surrenders paid drew away about £26,000 and expenses of management and commissions over £20,000, all of which, however, is not attributable to this branch, because directors' fees, the dividends to shareholders, income-tax and general expenses are included in the exhibit made. Moreover, £40,000 of the share premium was transferred to the fire account, and hence the large increase in its balance forward or fund. The sickness and general fund, however, at the end of the year was still £38,207 higher at £178,347.

PRUDENTIAL ASSURANCE COMPANY.

In 1907 this powerful insurance company gathered up a premium income of £11,142,000, of which £4,480,377 was provided by the ordinary and £6,661,631 by the industrial branch. The nett increase in the ordinary branch premium income was £189,406 and in the industrial £162,603. Claims took £4,993,207, of which £2,430,117 fell on the ordinary and £2,563,090 on the industrial branch, and after meeting every outgoing the entire assets of the company were increased by £4,119,276 to a total of £68,006,284 as the result of the year's business. The annual valuation made by Mr. Schooling, the

company's actuary, brings out a surplus of £1,466,313 in the ordinary branch, including £266,378 brought forward, and of £1,068,736 in the industrial branch, including £360,519 brought forward, or £2,535,054 in all, and the directors in pursuance of the new method introduced last year have, besides placing £50,000 to the industrial branch reserve and £200,000 to the investments reserve fund, raising the latter to £1,300,000, set aside £1,596,374 to be distributed among the participating policyholders of the ordinary branch, and the stockholders and officials and agents of the company. This leaves £688,680 to be carried forward and means a reversionary bonus of 32s. per cent. to the profit-sharing ordinary policyholders and a bonus of 5 per cent. added to the sums insured on industrial policies of over five years' duration which become claims between March 6, 1908, and March 4 next year, both days inclusive.

BRITANNIC ASSURANCE COMPANY (FORMERLY THE BRITISH WORKMAN'S AND GENERAL).

As its old name implies, the business done by this office is principally industrial, but its ordinary branch appears to be expanding, and last year gave a premium income of £191,070 against a similar income of £883,919 yielded in the industrial branch. After meeting all charges, including claims amounting to £524,457 on the two branches of the business together, funds were increased by £216,356, and about £215,000 of that was added to the accumulated funds, viz., £104,000 to the ordinary branch fund, bringing it up to £737,084, and £134,000 to the industrial branch fund, making it £1,250,660. The consulting actuary, Mr. T. G. Ackland, has reported a nett surplus on the valuation of assets and liabilities amounting to £42,953, after applying more than £100,000 in further strengthening the basis of the valuation in both branches. Of this surplus £28,100 is to be divided amongst participating policyholders and shareholders, giving the policyholders a reversionary bonus of 30s. per cent. for the year. Expenses in the ordinary branch come to 15.39 per cent. of the premium income, and to 41.17 per cent. in the industrial branch, including £92,170 set against new business and extension outgoings.

MAZAWATTEE TEA COMPANY.

We heartily sympathise with the difficulties of the present board of this company, and the deprivations of the shareholders. Of course, there can be no dividend for the past year ended on December 21. There is still too much wreckage to be disposed of, and shareholders may be thankful that the balance of £18,771 left to carry forward is £2,136 up after paying the preference share dividend. The company's trading profit for the year was £40,407, after setting aside £15,000 to the special advertising fund. The board kept down the advertising expenditure for some time, but were compelled to resume it, and the report says that in the board's experience it has cost ten times more money to get back the trade than it originally cost to obtain it. It has come back, however, and if the business of the year had not been hampered by higher prices for the products in which the company deals, notably in cocoa, which has risen from between 50s. and 60s. per cwt. to as high as 120s. to 124s., the outcome would have been much more satisfactory. Prices are now lower, and will probably for some time be in the company's favour, so that the current year ought to be more satisfactory than the past one. A long time, however, must elapse before perfect soundness is again attained, for last year the expenditure debited against capital in connection with the disastrous direct trading business abandoned was increased by £41,047 to £244,740, and the company's debts to sundry creditors and on loans against security are up by £59,145 to a total of £162,902, while the item debts to the company account shows an increase of only £10,284 at £130,281. Stocks on hand, too, are up only £4,728 at £95,628, but that probably represents prudent buying in the circumstances of the market. In the profit and loss account depreciation and income-tax took £885 more at £7,238, and interest on bank loans were £5,628 against nothing, so that the final profit balance, in spite of some reduction in the secretarial and legal charges, set off partly by a small increase in the managing director's and chairman's remuneration and directors' fees, was down £12,864 to £28,271. Cash at bankers and in hand amounted to £6,270 and the reserve remains at £51,000. Investments stood in the books at £163,331 or a decrease of £4,441, and on these there was a depreciation at market values of £10,183, but the directors state that, owing to the subsequent rise in gilt-edged securities they have been able to realise £92,678 of the holding at a loss of no more than £464.

RIVER PLATE FRESH MEAT CO., LIMITED.

The foreign fresh meat business is subject to most remarkable fluctuations and quite astounding changes take place within a few months in the position of the companies engaged in the trade. First it is a huge profit and fabulous dividends, then perhaps an equally heavy loss, to be followed possibly by a normal performance. No two successive years resemble each other in the slightest degree, and shareholders must always find it necessary to await the annual report before making their financial plans for the year. A year ago we had a report for eight months only, and in that period there was a trading loss of £19,799 and an adverse balance carried forward of £18,798. Happily the following twelve months to December 31, 1907, the date chosen for closing the accounts, found conditions more favourable thanks to good weather in the Plate. The condition of both cattle and sheep showed an improvement and suitable stock was more freely offered, and while the demand was good and prices high there was a corresponding improvement in the prices realised on this side, so that profits have displaced losses. Revenue was not startling, the trading profit was £24,392, and from it had to be deducted the deficiency of £18,789 brought in, leaving the trifle of £5,594. This provides the dividend on the £50,000 of 10 per cent. preference shares with a balance over of £594. The £400,000 of ordinary capital gets nothing. The company's balance-sheet is not crowded with information and we cannot tell the amount of capital outlay in the year or the depreciation. There is, however, a nett deduction of £7,194, leaving the total property at £531,726. Reserve and insurance accounts aggregate £130,000. Floating liabilities are large, £359,442 being due on bills payable and £53,118 under other heads, but shipments in transit represent the great sum of £278,254. Assets in the River Plate consisting of stock and produce on hand, coal, stores, and debtors come to £122,297, balances, &c., owing in London are £40,186, and cash stands at £25,492.

PRICE'S PATENT CANDLE CO., LIMITED.

We believe the directors of this fine business are old-fashioned enough to stick to the policy of giving good value for their customers' money, and have not yet condescended to try and attract business by giving away bicycles, sewing machines and suchlike in return for coupons. That their methods have so far enabled them to meet the keen competition of the present day with a fair measure of success is proved by the report for 1907 just issued. Owing to this competition and to the higher cost of raw materials it was almost inevitable that profits should show a further decrease, but the shrinkage was only £1,751 and was not a serious matter, seeing that the total is still £73,254. With £8,510 or £620 less brought in the disposable surplus was £81,764 compared with £84,135 and the directors are able to pay the regular dividends of 35s. per share and to write off another £10,000 for depreciation of buildings and plant by reducing the sum carried forward to £6,139. No additions are made to the reserve or insurance funds as these already stand at £100,000 each, a figure which the directors consider ample, but other funds have been increased, and the total accumulations now amount to £267,250. Owing to the heavy outlay on a retaining wall at Bromborough and to the provision of new buildings and plant at Belmont, which has been rendered necessary by the increase of business, the expenditure on capital account was £18,129 against £5,493 in 1906 and property and plant now stand at £270,811. Investments have been reduced by £65,107 to £351,448, but of this decrease £28,911 has gone into stocks of materials and produce now valued at £174,720 and £18,088 has been added to the cash and bills in hand at £49,727. Trade creditors are £2,760 down at £25,626, while sundry debtors owe £93,857 or £8,802 more, and altogether the position is an excellent one.

LAW LAND CO., LIMITED.

This is a rapidly growing enterprise, but its property investments seem to be of a satisfactory kind, and up to the present all capital raised has apparently been placed in remunerative structures. Past success encourages the directors to expand still further, and in addition to calling up the outstanding £8 on the 2,500 £10 ordinary shares offered and over-subscribed in November last, the capital is to be increased by £200,000 to £700,000 in equal amounts of ordinary and preference shares. Actual paid-up capital at December 31 last was £448,428, and mortgages existed for £494,797, while temporary loans outstanding were £21,205. The whole of the company's mortgage debt is now repayable on the instalment principle. Revenue last twelve months was £104,091 or £14,927 up, and practically £3,000 of this was retained in the nett revenue, which came to £35,480. Important items of outgoings were interest on mortgages and loans £22,225, ground rents £15,950, rates, taxes, insurance, &c., £24,971, and leasehold redemption £2,530. Including £1,725 brought forward the disposable sum is £37,565, and after meeting preference interest the ordinary shares again receive 8 per cent., including 1 per cent. bonus. £8,750 goes to reserve and £1,520 is carried forward. Leaseholds redemption fund is now £21,843 and the reserve £85,000, including the £1,250 of premiums on ordinary shares. Book value of the properties is £1,062,105, and it is good to note that the whole of Harley House, Regent's Park, is now let and the property promises to be in every way a satisfactory investment.

SURREY COMMERCIAL DOCK CO.

The long-continued depression in the wood trade seems to have been intensified during the past year, and the tonnage of wood-laden vessels entering this company's dock showed a further decline of no less than 97,660 tons or including firewood 101,662 tons. Grain, too, fell off by 39,876 tons owing to the unprecedented decline in imports from North Russia, whence a very large part of the company's grain business is derived, but it is somewhat surprising to find the coal traffic also showing a decrease of 2,504 tons. Miscellaneous goods improved by 102,708 tons but nevertheless the total tonnage of vessels received into the dock was 41,334 tons smaller at 1,020,607 tons. Revenue from all sources consequently dropped by £57,080 to £322,915, the principal decreases being £30,560 in the wood department and £13,140 in warehousing, and as the saving in expenses was only £32,209 at £239,701 the nett profits were £24,871 smaller at £83,214. The directors therefore find themselves compelled to reduce the dividend on the ordinary stock from 5 per cent. to 3 per cent., and on the preference stock "A" from 5 per cent. to 4 per cent., and even these entail the withdrawal of a further small amount from the balance of undivided profits brought forward.

TRADE AND PRODUCE.

Wheat.—The markets opened with an active demand and an advance on Saturday's closing prices. They have been subjected to fluctuations since, but only within narrow limits, and the general trade of the week has been better, with higher prices for almost all classes of wheat. English samples were offered at from 6d. to 1s. 6d. advance, and River Plate spot parcels, Manitobas and American winter wheats all commanded better prices. Speculation was indulged in more freely, and the position of futures improved about 2d. to 2½d. on the week. Farmers' deliveries last week were only 40,914 qrs. averaging 30s. 11d. against 64,923 qrs. averaging 26s. 9d. a year ago. Imports were 419,137 qrs. against 241,430 qrs. last year, and the quantities of wheat and flour estimated as on passage to the United Kingdom are 4,845,000 qrs. against 4,565,000 qrs. last week, and to the Continent 2,460,000 qrs. against 2,300,000 qrs. American markets have experienced several fluctuations, but prices towards the close were stronger. The visible supply showed a decrease of 1,662,000 bushels on the week.

Wool.—No improvement can be noted in markets for colonial wools this week, and dealers seem determined to do nothing now till after the London sales which open on the 17th. Transactions are confined to buying for immediate requirements, and quotations are only just maintained, while the fact that Continental demand is absolutely *nil* does not help matters. Neither in yarns or tops is anything doing, English fleeces alone showing any signs of activity. Up to the present spinners have been kept fairly busy, but now several of them are finding their looms idle for lack of new orders, and generally speaking all concerned are having a depressing time. Manufactured goods have been a very fair trade with colonial and foreign markets, but it is mostly for cheap and medium goods, the Australian tariff having decidedly checked the import there of finest materials. The United States also has been taking much less. Huddersfield returns for last month show a decrease of £19,610 in the value of exports to that country compared with February, 1907. Exports from Bradford to the United States also show a decrease for February of £136,899 at £181,324 compared with last year, principally in wools and cotton linings. Stuff dress goods show an increase of £12,160. Machinery has dropped from £17,184 to £5,028.

Cotton (from our Manchester correspondent).—The general state of our market has shown no improvement during the past week, and business has been on a comparatively small scale in all sections. Here and there small lines have been put through in piece goods for export, but many manufacturers are taking ridiculously low rates, with the result that the whole department is weakened. Yarns have not commanded much attention and spinners continue to lose ground. The changes in the price of American cotton have not been at all important. Rather more business has been done on the spot in Liverpool. Spinners are not inclined to go "short." A scattered cloth inquiry has been dealt with for various markets, but numerous offers cannot be entertained. General advices from India are poor. Goods which are late in delivery are cancelled by shippers. Calcutta is not doing at all well, and very little can be done for Bombay and Madras. China business does not develop, and although small sales in shirtings have occurred, the turnover has not been important. Recent letters from the Levant markets state that the weather has not been favourable, and clearances from the up-country districts are unsatisfactory. The heavy rains are understood to improve the outlook for later on in the year. Egypt is still dull, and the prospects unfavourable. South American markets have not been at all active. In home trade cloths a miscellaneous business has been done in various fine goods. Zephyrs have moved off to a moderate extent in both checks and stripes. Printed cloths, as made in Burnley, have met with a little more inquiry, but offers in few instances come up to the requirements of makers. Glossop goods are slow, but some makers have fair engagements. In American yarns for home consumption only a retail trade has transpired. The margin in medium twists has practically disappeared. Wefts are also fairly plentiful. Fresh yarn is coming on to the market from the new mills, and some very low rates are being taken. In export bundles a fair trade has transpired for China in doubled 32's. Bolton yarns remain depressed, and spinners, owing to low order lists, are in need of fresh contracts.

American cotton markets, say Sir Jacob Behrens and Sons, have been supported by the "bull" party during the past few days, and prices show a slight advance when compared with those of a week ago. A considerable "short" interest appears to have accumulated, and any attempt to cover brings about a rise in prices; on the other hand, it is difficult to sell without producing an opposite effect, and the market is thus kept within narrow limits. Southern holders keep very firm, and preparations for the new crop are backward. Any improvement in the general trade conditions would no doubt bring about a sharp advance. Egyptian cotton is in improved demand, and quotations in Liverpool are 1/8d dearer.

Coal.—If anything the situation has improved a little since last week, and in Welsh trade at least the outlook is regarded as more hopeful. Orders for steam are not as yet very plentiful, but inquiries are more frequent, and there has been no further drop in the price of this class of coal. Anthracites, on the other hand, are again lower in all grades, and the market for them generally sluggish. North of England trade has been stimulated by large orders for steams to be delivered over the year, at prices which, if not as high as those ruling during the boom, are at least good enough, and house coal demands have been better owing to the colder weather. Values in these are not likely to be lowered till the end of the month.

Copper.—Prices opened weak on a renewal of forward selling and the reported reduction in American cables. Several large speculative operations and restricted offerings caused a fair amount of activity and some improvement in prices, but practically there has been very little change on the week. Last night's prices closed at £57 2s. 6d. cash and £57 12s. 6d. three months; to-night's at 56½ cash and 57, 57¼ three months. Messrs. H. R. Merton and Co., Limited, give the visible supply as 20,773 tons, against 20,660 tons a month ago. The total supplies for February were 31,845 tons and the deliveries 31,732 tons, against 46,580 tons and 45,630 tons respectively for the previous month. Stocks in England and France amount to 14,473 tons, against 13,360 tons a months ago. Chili charters are 2,300 tons.

Tin.—This metal has attracted much more attention than copper this week, and from the opening on Wednesday has had an exciting time. Owing to restricted offerings values went about 15s. higher, and on a rumour that Dutch sales were likely to be reduced for the remainder of the year by over 1,500 tons there was a rush to cover, and prices sprang up to £136 for cash and £132 5s. three months. Yesterday, after cash metal rose to £137, showed some reaction, and in the afternoon a sharp setback brought quotations down to £135 7s. 6d. cash and £131 15s. three months. To-day they dropped further to 133¾-134¼ for cash and 130½-131 three months. Messrs. A. Strauss and Co. give the visible supply as 15,247 tons compared with 15,330 tons on January 31. The supplies on the spot and landing total 5,189 tons against 6,035 tons a month ago. The monthly deliveries in London were 1,192 tons and in Holland 1,509 tons, making an aggregate of 2,701 tons, against 2,536 tons for January. The Straits shipments total 5,405 tons, of which 4,050 tons are for London, 873 tons for the Continent and 482 tons for the United States.

Iron and Steel.—Pig-iron prospects seem to be looking up, in spite of the depressed condition in all other branches of iron or steel. Cleveland makers cannot supply the demands made on them, and are drawing largly from Connal's Stores in consequence. This is all chiefly due to the export trade, which is unusually brisk, Scotland also participating in the demand, and it is reported from there that makers have again advanced quotations for shipment. Hematite business shows some improvement with regard to prices, but here also any increase in demand comes from abroad, the home trade being as slack as ever. Steel in all its branches is dull, and there does not seem much chance of improvement in it or in finished iron for some time. So far prices have been maintained because, with pig-iron becoming dearer, makers cannot see their way to lower them.

Tea.—Indian offerings this week were only 28,042 packages, and this reduction had the effect of stimulating buyers and of checking the downward movement in quotations. A few of the finest grades and some good Assams are 8d. advanced in price, and the average for the sale of 27,228 packages on garden account came to 7.66d. against 9.31 a year ago. In Ceylon also a better demand was noticeable, and for the 17,643 packages brought forward prices for common and medium kinds were firm, while higher grades were slightly dearer, and for the week 7.59d. was the average obtained against 8.62 in 1907. Java's small auction of 1,539 packages sold steadily without change in values. According to Messrs. W. J. and H. Thompson's circular, last month's trade returns show a further improvement in the statistical position, inasmuch as the stocks in bond show a three million decrease against one of two millions on January 31, while imports of Indian and Ceylon were fully three millions less than last year. Continued heavy arrivals of inferior China teas counteract to some extent this healthy state of affairs, but the recent fall in values is more probably due to the general depression of trade throughout the country than to the usual cause of supply and demand.

Sugar.—The market was maintained at about 10s. 3d. for May beet, says Mr. Czarnikow, until Tuesday, when American firmness and the smaller Cuban receipts caused a gradual improvement to 10s. 5d. These receipts of 52,000 tons on March 4 compared with 62,000 tons in the same week of last year, were interpreted as the beginning of a permanent weekly decline, and as indicating a probable reduction in estimates. The demand for the higher grades of refining cane sugar in the United Kingdom is on a fair scale at advancing rates, but low brown descriptions, though steady, have not participated in the rise. Grocery crystallised is less neglected, but the trade are apparently waiting for the arrival of new crop Trinidad. The advices from cane-producing countries continue generally unfavourable, and cables from Mauritius report a hurricane which lasted several days, and has done damage, especially in the Southern districts, but the extent has not as yet been ascertained. The latest news from Porto Rico reduces the estimate of the crop to 185,000 tons, but from Australia and Fiji we hear that the crops just finished have fully come up to expectations; the exact figure is not yet to hand, but it is not likely that the Commonwealth will require any outside supplies this year. New York market has shown increased firmness, caused by the shortage in Cuba, and the official quotation for 96 per cent. centrifugals on the spot is 3.89 cents. Transactions are no longer confined to preferential sugars, but buyers are now showing an interest in non-preferential sugars for more distant arrival. Landings in the three ports of the United States for the week were 45,000 tons, and meltings 35,000 tons, increasing stocks to 173,000 tons.

MINING RETURNS.

Associated Blocks.—Milled, 3,356 tons ore; treated, 1,115 tons slimes; yield, £10,534.

Balaghat.—4,400 tons, 2,219 ozs.; cyanide slags 36 ozs.; tailings 4,368 tons, 317 ozs.; total, 2,572. ozs.

Barrett Gold.—375 ozs.; value, £1,350.

Brilliant Central.—Crushed 1,650 tons; value, including concentrates, &c., £4,500.

Broken Hill South Silver.—12,426 tons crude ore produced 2,026 tons concentrates, containing 36,498 ozs. silver and 1,499 tons lead.

Broomassie.—Crushed 1,646 tons, 1,906 ozs.; 25 tons concentrates of an assay value of £26 1s. per ton.

Champion Reef.—13,615 tons, 7,388 ozs.; tailings 18,031 tons, 2,229 ozs.; total, 9,617 ozs.

Dharwar Reefs.—Crushed, 1,120 tons, 582 ounces; tailings assay per ton, 3 dwts. 21 grs.

Duff Development.—Total for week, 107 ozs.

Ferreira Deep.—Crushed 29,900 tons, 11,900 ozs.; cyanide works, 30,670 tons, 5,364 ozs.; total, 17,264 ozs.; profit, £44,300.

Geldenhuis Deep.—Crushed, 32,000 tons, 7,528 ozs.; cyanide, 31,382 tons, 3,322 ozs.; total, 10,850 ozs.; profit, £15,150.

Giant of Rhodesia.—5,743 tons, 2,952 ozs.; profit, £7,170.

Glynn's Lydenburg.—Crushed 2,592 tons, 631 ozs.; cyanide 1,824 tons, 767 ozs.; slimes 768 tons, 346 ozs.; total, 1,744 ozs.

Hutti (Nizam's).—911 ozs. from 2,200 tons crushed; tailings, 184 ozs. from 1,900 tons.

Jumpers Deep.—Crushed 18,610 tons, 4,496 ozs.; cyanide, 19,863 tons, 1,997 ozs.; total, 6,493 ozs.; profit, £4,050.

Koffyfontein.—Output, 5,600 carats diamonds; 285,000 loads blue ground on floors.

Komata Reefs.—Crushed 2,400 tons, £2,400.

Le Roi No. 2.—Josie: Shipped 2,450 tons, net receipts £9,719, being payment for 2,462 tons shipped, and £346, for 69 tons concentrates.

Lloyd Copper.—Treated 4,125 tons for 122 tons copper.

Mount Boppy.—Clean-up from 6,600 tons gave 1,345 ozs.; cyanide 3,684 tons, 1,619 ozs.; slimes 2,844 tons, 1,008 ozs.; concentrates 25 tons, 170 ozs.; total 4,142 ozs.

Mount Lyell.—32,126 tons ore treated. In addition 1,246 tons purchased ore and metal-bearing fluxes. Converters produced 721 tons blister copper, containing copper, 712 tons; silver 56,958 ozs.; gold 1,833 ozs.

Mysore West and Mysore-Wynaad.—Cyanided 2,496 tons, 260 ozs.

Mysore.—15,430 tons, 14,726 ozs.; 15,377 tons tailings, 2,111 ozs.; total 16,837 ozs.

New Hillgrove.—Hillgrove 491 ozs. from 190 tons crushed. Eleanora 791 tons, £1,625.

Nigel.—4,438 ozs.; crushed 10,100 tons; profit £7,487.

North Broken Hill.—Treated 2,550 tons crude ore, assaying 15·9 per cent. lead and 6·7 ozs. silver per ton, producing 425 tons concentrates, containing 294 tons 6 cwts. lead and 9,052 ozs. silver.

Nundydroog.—6,760 tons, 5,929 ozs.; 5,442 tons tailings, 426 ozs.; total, 6,355 ozs.

Ooregum Gold.—10,055 tons, 5,633 ozs.; 9,266 tons tailings, 1,063 ozs.; No. 3 mill, 100 ozs.; total 6,796 ozs.

Pena Copper.—Output 13,500 tons; shipments of ore amounted to 6,958 tons; 95 tons fine copper in precipitate produced.

Pniel Diamond.—Value diamonds registered by diggers, £5,157.

Queensland Copper.—Ore treated 1,231 tons, production 251 tons of matte, containing 137 tons fine copper; shipments advised 323 tons matte, value £11,000.

Roberts Victor Diamonds.—13,615 loads washed, 5 677½ carats.

St. John Del Rey.—Gold produced £27,400; yield per ton, ·67 of an oz. troy.

Scottish Gympie.—Crushed 6,200 tons, 1,700 ozs.

Sheba Gold.—8,400 tons treated, 2,107 ozs.

Sulphide.—14,801 tons producing 2,706 tons lead concentrates, which assayed 32 ozs. silver and 63 per cent. lead per ton, together with 4,754 tons zinc concentrates, assaying 17 ozs. silver, 13 per cent. lead, and 40 per cent. zinc per ton. 6,689 tons dump tailings treated producing 2,448 tons zinc concentrates, assaying 13 ozs. silver, 9 per cent. lead, 45 per cent. zinc per ton, and 3,723 tons tailings treated by magnetic process, producing 1,257 tons zinc concentrates, assaying 11 ozs. silver, 8 per cent. lead, and 40 per cent. zinc per ton, together with 44 tons of leady concentrates, assaying 29 ozs. silver, 59 per cent. lead per ton. At Cockle Creek 2,340 tons leady concentrates and 2,303 tons purchased ores smelted, producing 1,504 tons lead bullion, containing 136,864 ozs. silver and 6,692 ozs. gold; also 180 tons zinc concentrates, producing 56 tons spelter.

Tasmania Gold.—Crushed 5,538 tons, 1,959 ozs.; concentrates, 197 tons, 174 ozs.; cyanide 2,454 tons, 204 ozs.; total, 2,337 ozs.

Tasmanian Smelting.—Silver-lead bullion shipped contained 670 tons lead, 91,000 ozs. silver, 317 ozs. gold.

Tolima.—70 tons, value £3,000.

Transvaal Gold.—Crushed 9,750 tons, 2,843 ozs.; central cyanide 4,025 tons, 1,178 ozs.; central slimes 3,798 tons, 829 ozs.; Kameel's cyanide 1,320 tons, 263 ozs.; Kameel's slimes 607 tons, 135 ozs; Elandsdrift 270 tons, 149 ozs.; total, 5,397 ozs.

Troitzk.—Treated 403 tons, 85 ozs.

Vereeniging Estates.—Output of coal, 26,530 tons.

Victoria Proprietary.—Crushed 1,364 tons, 518 ozs.

Voorspoed Diamond.—Washed 24,533 loads, yielding 4,915 carats.

Waihi Grand Junction.—3,550 tons; £4,755.

Wassau (Gold Coast).—Crushed 4,500 tons, 1,295 ozs.; cyanide 3,300 tons, 361 ozs., total, 1,676 ozs.

Whim Well Copper.—Shipment No. 19, 63 tons copper ore; sold for £717.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Caledonian.—On the ordinary stock at the rate of 3 per cent. per annum, carrying forward £7,500.

Carrizal and Cerro Blanco.—3 per cent. for half-year to Dec. 31, carrying forward $4,506.

Glasgow and South-Western.—For past half-year at the rate of 3¼ per cent. per annum on the ordinary stock, being at the rate of 2½ per cent. per annum on the preferred ordinary stock and 1 per cent. per annum on the deferred ordinary stock, carrying forward £6,842.

Highland.—For the half-year ended Jan. 31 on the ordinary stock of 1¾ per cent. per annum, carrying forward £11,124.

Piræus-Athens-Peloponnesus.—6 drachmas per share for 1907 (equal to 6 per cent. per annum).

BREWERIES.

Alton Court.—At the rate of 8 per cent. per annum for half-year ended Dec. 31, writing £1,000 off as depreciation, and carrying £886 forward.

Nottingham.—5 per cent. on the preferred ordinary shares for 1907, placing £2,040 to reserve, and carrying forward £1,974.

MINES.

Balaghat.—10 per cent. for year ended Dec. 31 on preference shares, payable March 28.

Durban-Roodepoort.—Interim on account of year ending Dec. 31, 1908, of 2s. per share.

MISCELLANEOUS.

Carl Hentschel.—At the rate of 6 per cent. per annum on the ordinary shares.

Charles Kinloch and Co.—Further on the preference shares of 3s. per share, making 6 per cent. for the year, carrying forward £1,810.

D. H. Evans and Co.—17½ per cent. on the ordinary shares, making 22½ per cent. for the year, and a final of £9 per share on the founders' shares, making £11 for the year, carrying forward £15,914 to credit of ordinary and £514 to credit of founders' shares.

D. H. Evans and Co. Founders' Shares.—Final of 3s. per share, making 3s. 8d. per share for year ended Feb. 19.

Davis and Timmins.—On the ordinary shares at the rate of 8 per cent. per annum for year ended Dec. 31.

Dickins and Jones.—For half-year at 16 per cent. on the ordinary shares, making 12½ per cent. for the year, and a bonus of 1½ per cent. on the ordinary shares.

Direct Spanish Telegraph.—At the rate of 4 per cent. on the ordinary shares for half-year ended Dec. 31.

Dresdner Bank.—For past year of 7 per cent., writing off £75,000 for depreciation of investments, £30,000 for bank premises account, adding £11,000 to the pension fund, and carrying forward £18,000.

Exploration Assets.—Further of 5 per cent. on the shares of debenture stock in respect of the capital of the said stock.

General and Commercial Investment Trust.—At the rate of 8 per cent. per annum on the deferred stock for six months ended Feb. 29, and a bonus of 1 per cent. for the year, making 7 per cent. for year.

Globe Telegraph and Trust.—Quarterly interim of 3s. per share on the preference shares, and 2s. per share on the ordinary shares.

International Sponge Importers.—Final of 3 per cent. on the ordinary shares, making 6 per cent. for the year, placing £1,185 to reserve, and carrying forward £1,868.

Jones and Higgins.—On the ordinary shares at the rate of 19 per cent. per annum for six months ended Feb. 20, making 13 per cent. for year, placing £3,400 to reserve, and carrying £1,452 3s. forward.

Pearson and Knowles Coal and Iron.—Interim at the rate of 7½ per cent. per annum on the ordinary shares.

Prince Line.—Interim for half-year ended Dec. 31, at the rate of 5 per cent. per annum.

Stewarts and Lloyds.—Ordinary division of 11 per cent., writing £70,000 off for depreciation, £30,000 to reserve, and carrying £72,000 forward.

Vickers, Sons and Maxim.—Final of 2s. per share on the ordinary shares, making 3s. per share for the year.

Wath Main Colliery.—Final of 2s. per share, making 4s. per share for the year.

Western Telegraph.—Second quarterly interim of 3s. per share for year ending June 30, 1908, being at the rate of 6 per cent. per annum.

Parr's Bank.—Liabilities on current and deposit accounts, &c., on February 27 amounted to £27,375,050, and on drafts current, acceptances on behalf of customers, &c., to £3,856,550, against which cash in hand and at Bank of England stood at £4,180,026, money at call and short notice £6,242,207, Government and other first-class securities £3,438,562, bills of exchange £2,418,250, and loans and advances to customers £14,411,427.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending February 29, 238,000 poods, equals 3,837 tons.

Baku Russian Petroleum.—Production of crude oil for week ending Feb. 29, 212,000 poods, equals 3,417 tons.

COMPANY MEETINGS.

SUN LIFE ASSURANCE.

The annual general meeting of the Sun Life Assurance Society was held on Wednesday at the chief office, 63, Threadneedle Street, E.C., Mr. Marlborough R. Pryor, the Chairman, presiding.

The Secretary and General Manager (Mr. E. Linnell) having read the notice convening the meeting,

The Chairman said: I am happy to be able to assure you that the accounts for the past year are the most satisfactory I have ever had the honour of submitting to you. As you know, it is the first year of a new quinquennium, and it seems a good omen that we should begin with a good year. In some respects, however, it does not admit of a detailed comparison with the year preceding it, and I have thought that perhaps it would be better to go back and compare with the first year of the previous quinquennium—1902. 1902 was the first year that our business got into its present regular course of progress. Our new business has not varied materially from that year to this, but our progress has been uniformly steady, and I think I may say, uniformly satisfactory. The growth has been going on all the time, but it has been rather like watching the growth of some great tree, which from year to year scarcely changes in appearance or outline, although careful measurement may show that it has added five or six cubic feet of timber to its cubic contents. I think if I go back five years you will see what the effect of the growth has really been, and it may, therefore, be an instructive comparison to make. Before doing so I will go back a little further—namely, to a previous bonus year, 1887. In 1887 our total income from all sources was £272,000 in round figures, and our total assets were £2,200,000. Five years later —in 1892—our income was £474,000 and our assets were £2,934,000—nothing very wonderful, you see, but still good, steady, healthy growth. In 1897 our total income was £658,000 nearly, and our total assets £3,957,000, which showed a growth of £200,000 a year in the assets, but that was partly due to the absorption of other companies. Between 1897 and 1902 our income grew from £657,900 to £953,000 nearly, and our assets grew to £5,549,000, so that they had grown at the rate of over £300,000 a year in that quinquennium. In 1902—I take up the comparison which I propose to make with our present conditions —our income, as I have said, was nearly £953,000. Our income for the past year was no less than £1,289,000, an increase of £336,000.

Our assets are now £8,269,000, showing a growth in those five years of £2,720,000 nearly. We took over the Patriotic and with it we took over slightly more than £200,000. Knocking off the £200,000 we are left with over £2,500,000, so that you have a growth of over £500,000 a year for the last five years. Of course, assets are only one side of the balance-sheet; the liabilities are on the other side, and, as you know, we have incurred heavy liabilities corresponding to a great degree with those assets. Still, there the assets are, so that you may feel pretty comfortable that the liabilities are provided for. It is a very odd coincidence that in 1902 our total outgo was £725,500, and this last year it is only £726,000. That, of course, is only a coincidence, because in 1902, the bonus year, any then policyholders took more of their profit in cash and a larger amount was paid away. We also paid to the proprietors the whole £66,000 in one sum—whereas this last year, as you know, we have only paid out one-tenth of the bonus, the rest having been spread over the quinquennium in half-yearly instalments. So that it is only a fluke that the figures correspond, and they would not have corresponded, making those allowances, unless it had happened that the mortality in 1902 was above our average and approaching expectation, whereas the mortality last year was extraordinarily low. That high or low mortality, although it does reflect on management from year to year, is not an element which we on this side of the table can do much to control. Coming now to the actual comparison I propose to make, in 1902 the proprietors got £77,356, last year there was carried to their credit £108,737. Their dividends in those days were 3s. 9d. per half-year, as they are now, but they took £66,000 of their share of the quinquennial profit in the form of a single cash bonus of £1 7s. 6d. per share, which, as you will see, is equal to 2s. 9d. per half-year when spread over the quinquennium, so that during that quinquennium you enjoyed the equivalent of 6s. 6d. per share per half-year. Now you are getting the same dividend of 3s. 9d. and a bonus of 4s. 3d., so that you are getting 8s.—1s. 6d. per half-year or 3s. a year more than you had in that period. The fund of the proprietors is inflated by the unpaid portions of the present bonus—£81,600—which will be drawn out half-yearly to pay that bonus, so that the comparison of its total amount with what it stood at five years before is not quite a reasonable one. Deducting that, the fund in 1902 was £424,400; now it is £447,300—a very healthy growth and a growth which I trust you proprietors will insist upon being maintained, because you will remember that that fund represents the security in hard, valuable assets which the whole of your assured have for their bargains being carried out. You leave it to us to provide adequate reserves for carrying out those bargains, but there is always the possibility of the unexpected occurring, and if you expect the public to come to you with their business they ought to be held adequately secured, and that fund is an adequate security for them. You should never allow that fund to go back, but you cannot keep it up relatively to the increasing business. Also the possible deficiency in a very, very large business over calculations made with extreme care can never be so great per cent. as in a small business; still, that fund is the pledge you offer to your customers for their absolute security in the bargains they make with you. Never let it fade away.

Coming now to the life assurance fund, our business, as I have said, has been running on an absolutely even keel. In 1902 you received 7,169 proposals for £2,523,659 assurance. Last year we had 5,904 for £2,644,595. The actual nett new business—I will not go into re-assured items—was in 1902 5,623 policies for £1,799,391. Last year there were 4,870 policies for £1,825,315—very close, indeed, as you see, but very satisfactory because we have got fewer policies for a slightly larger amount, which, on the whole, is a little more remunerative to the office. The premiums then were £68,867; last year they were £68,391 —an extraordinarily close coincidence. The single premiums then were £4,247; last year they were £3,368. That is a point to which I wish to draw your attention, that while we have been doing a nearly level business we have grown and developed in the way which the figures I first mentioned show. On your revenue account in 1902 the premium income was £524,576; last year it was £699,300. Interest, dividends and rents produced £174,730 in 1902; last year £248,455. The average rate of interest then was £4 2s. 10d., and is now £4 3s. 7d. In both cases the figure is after paying income-tax. Our total income from the life assurance business was last year £948,038 as against £699,551 five years before. The outgo consisted of several items. The bonus to policyholders was £86,306; five years before it was £90,542. That is very gratifying to me, because, on the much larger business, more of our assured have been content to accumulate their profits with the office. That is a very nice thing. Then claims were only £315,888 last year, whereas five years before on a far smaller business they exceeded £332,000. Of course, that means postponement. Policies do not confer immortality, and sooner or later we shall have a year in which the mortality will approach and possibly even exceed expectation; but meanwhile it is very satisfactory to feel that for the year our clients have prospered and have not succumbed to fate. Surrenders, on the other hand, in the first year of a quinquennium are nearly always heavy. They are exceptionally heavy because of your increasing endowment business; a great many people when they want money surrender their nearly matured endowment assurances and so meet their requirements. It is not an alarming symptom, however, and the fact is that we have paid for surrenders £57,844 and five years before we paid £33,852. That was then a relatively large amount compared with other near years; so it is this time. Commissions and expenses are £102,331; five years before, £96,834. I think the smallness of that growth must be satisfactory to every one of you. We have carried £3,000 instead of £2,000 to the superannuation fund, and the total outgo is £678,647 as against £635,926 on the assurance fund—a very small increase in outgo; and as to the other points I have explained them. The fund shows an increase of £269,391. In the previous period the one year's increase was £63,624. The fund is now £6,205,192; it was five years before £4,391,354, so that you see it has increased by £1,800,000—an enormous growth in so short a time.

At this point I had better turn to what is the most satisfactory part of the year, perhaps, and I think the most satisfactory part of the comparison. The ratio of expenses to premium income last year was 15.06; in 1902 it was 18.84; that is really a material diminution. Analysing it and assuming that new business expenses are 100 per cent. of new premium income, the renewal expenses come out at 5.35; five years before they came out at 5.69. The new business expenses to new premium income, assuming that the renewal expenses were 7½ per cent. on the renewal premium income, came out for last year at 81.2, as against 88.83. Then taking the other way of looking at it, assuming that the expenses of new business are ten times the expenses on renewals, the ratio of new and renewal expenses to new and renewal premiums is 78.31, as against 83.55, and the renewal 7.83, against 8.36—one-tenth, of course. That is very satisfactory as far as any of these analyses are really satisfactory. They are very useful for comparative purposes, but only I think, for comparison. Any way you look at the figures I have mentioned and you see the thing comes out thoroughly satisfactorily. Our general expenses ratio over the whole of our business except annuities is 14.47, against 18.73; expenses on accident and general account, 11.34, against 18.24; but on annuity account 4.17, as against 1.9, and there you will see why the general expenses come out a little low, because we have taxed annuity account, which happens to be very well able to bear rather more than the burden we have hitherto put upon it owing to the good rate of interest it is obtaining. We have granted annuities during the year for £13,495, as against £9,267, the consideration money being £128,111, against £95,322. The outgo is £65,081, against £38,905, and £5,000 for annuities surrendered, against a trivial amount in the past, the expenses being £5,339, against £1,819. The annuity fund is now £764,614, as against £455,347, the increase for the year being £81,027, whereas five years before the increase was £70,799. The leasehold, &c., accident and general account shows a premium income of £131,381; five years before £114,100. Interest, dividends, and rents are £29,100, against £9,680; claims were £27,557, against £20,725; and commissions and expenses £14,895, against £20,817. The fund is £770,629, against £278,290, the increase for the year being £118,032, against five years ago, £82,242.

Then there is a paragraph in which we say that a special valuation has been made as at December 31, 1907, of the marketable securities as set forth in the balance-sheet of the life assurance, annuity and leasehold, &c., accident and general funds,

and shows an aggregate value at middle market prices of £4,273,228, being £157,374, or £3 11s. per cent., less than their book value. Of course, you were all expecting that there would be a drop, and I trust you are all relieved to find that that drop is only about 3½ per cent. Of course, a considerable portion of that drop has been recovered. It is impossible to value your American securities up to date, so that I have not done more than satisfy myself that there is, taking our investments all round, a material improvement, and a reduction in the amount of £157,000. I cannot tell you how much better it is, because some groups of investments have been very adversely affected by the general distrust which has arisen from the slow recovery which is being made from the great financial strain at the end of last year. However, there is nothing whatever to disturb oneself about. It is hardly conceivable that the £157,000 should not have disappeared before the end of the quinquennium, and if it does not disappear, your special valuation reserves made last year will more than answer for any possible deficiency. I feel sure it would not have been reasonable to write off these amounts at the present time. It would have been a panicky, hasty action, unworthy, I think, of the Sun Life Office. Therefore, we have simply stated the fact and allowed anybody and everybody to draw their own conclusions. I now beg to move: "That the report and accounts be received and adopted."

Mr. C. A. Scott Murray (Deputy-Chairman) seconded the motion, which was carried unanimously.

Mr. E. Baumer proposed a vote of thanks to the Chairman, which was seconded by Mr. J. A. Greig, and carried, and the proceedings terminated.

PRUDENTIAL ASSURANCE.

The ordinary general meeting of the Prudential Assurance Company, Limited, was held on Thursday at the head office, Holborn Bars, Mr. H. A. Harben (the chairman) presiding.

The Secretary (Mr. D. W. Stable) read the notice convening the meeting and the auditors' report.

The Chairman, who was received with applause, said that the past year had been an eventful one in the company's history. Important changes had taken place on the board and in the management. He regretted that the president (Sir Henry Harben), although he had attended several meetings of the board, found it impossible to be in town at that season of the year. Besides the changes referred to in the *personnel* of the company, the past year had witnessed a new departure of a most interesting and far-reaching character. For the first time in the history of industrial life assurance the policyholders and the superintendents and agents had been admitted to a share of the profits, as was foreshadowed in the directors' last annual report. At their meeting a year ago he was able to state that in the ordinary branch they had during 1906 the largest amount of new business in the history of the company, and that in the industrial branch the increase of premium income for the year was greater than it had been for 20 years. But these results, remarkable as they were, had been exceeded in both branches for the year 1907. In the ordinary branch the new annual premium income was £466,357, against £424,145 for 1906; while the total premiums received—£4,480,377—showed an increase of £189,406 over those of the previous year. In the industrial branch the total premiums received amounted to £6,661,631, an increase of £162,603 over the figures for 1906. At first sight that looked as if the progress during 1907 had been less remarkable than that of the previous year, for last year's report exhibited an increase of £359,978; but eliminating the extra week of 1906 the figures would show as follows:—For 1905, £6,139,050; for 1906, £6,376,405; and for 1907, £6,661,631. In other words, there would have been an increase of £237,355 in 1906 and an increase of £285,226 in the year 1907. The increase for 1907 was the highest on record for the industrial as well as for the ordinary branch. The number of claims paid in the industrial branch was 218,308, assuring £2,563,090. This number included over 32,000 claims on free policies and 4,500 matured endowments. It was almost impossible for any great disaster to happen in these islands or even to many of their fellow-countrymen abroad which would not leave its record in the company's experience. Thus the Shrewsbury railway accident involved them in six claims, while through a railway disaster at the other side of the world—at Barberton, South Africa—they paid four claims. Of the crew of 46 of the *Nicaraguan*, which sailed on June 8 last from Norfolk, Virginia, for Dublin, and was never again heard of, 13 were assured with the company. The epidemic of cerebro-spinal meningitis in Belfast, more commonly known as "spotted fever," was, however, more fatal as far as numbers went than any accident, for in Belfast alone they paid 207 claims from deaths arising from this cause. The total amount of the claims in the ordinary branch was £2,430,117. While placing £200,000 more to the investments reserve fund of the ordinary branch and £50,000 more to the reserve fund of the industrial branch (besides increasing considerably the amount carried forward in that branch), they had distributed no less than £1,596,374 among the profit-sharers of both branches. The bonus in the ordinary branch, which was increased from 30s. to 32s. a year ago, was maintained at the higher figure; and in the industrial branch, under the new profit-sharing scheme, all policies of over five years' duration which became claims during the year, whether by death or by maturity of endowment, would become entitled to an addition of 5 per cent. to the sum assured. To provide this addition the directors had had to set aside £140,000, and they also distributed £35,000 among the outside staff of the company as their share of the year's profits. In all the concessions hitherto made to holders of policies in the industrial branch, in all the revisions of tables, and in all their dealings with their agents they had had one object chiefly in view—to increase the stability of the business by keeping down lapses and by offering every inducement and every assistance to their policyholders to keep their policies in force. The best proof that their efforts in this respect had been successful was the ever-increasing duration of the policies in the industrial branch, and the fact that, while they had 17,500,000 policies now in force in that branch, their average duration exceeded eleven years, and that, notwithstanding the enormous number of new policies issued during the past year, it was greater now than it was a year ago. One of the most noteworthy features of the year that was past had been the continuance of that depreciation in Stock Exchange securities which was so marked in the year 1906. The company were not in the habit of writing their investments down and up to the market prices of the day, but they provided for depreciation by the maintenance of sufficient reserve funds. Taking each branch separately, these funds, together with the amounts carried over undivided in the assurance funds, were more than sufficient to cover the present total depreciation in their Stock Exchange securities. Their investments stood, on the 5th ult., £297,500 higher than would have been shown by the market prices of December 31 last. The increase in the assets of the company in both branches, as compared with the figures of the previous year, was £4,119,276, but inasmuch as loans—especially loans to local authorities—were continually being repaid, and the money so repaid had to be reinvested, the investments for the year amounted, of course, to a larger figure. In fact, the total amount of the investments made during the year was £4,908,636. Owing to the prevailing state of the money market this amount had been invested so as to yield on an average a return of £4 3s. 6d. per cent. In fact, for a company which was continually investing large sums of money, the state of the money market during recent years was most favourable, and the advantage of being able to secure a high rate of interest on new investments far outweighed the amount of any depreciation upon the old. The position of the company had never been more satisfactory than it was that day. (Cheers). He concluded by moving the adoption of the report.

Mr. T. C. Dewey (the deputy-chairman), in seconding the motion, reminded the shareholders that at the meeting two years ago it was stated that £750,000 had been transferred from reserve to the industrial assurance fund to provide an increase in the sum assured on 13,000,000 policies. That action of the directors was one of the principal causes of the phenomenal increase referred to by the chairman in the industrial branch. The chairman had told them that day that out of the profits of the past year they had allocated £140,000 to policies in the industrial branch, and that they were also distributing a bonus of £35,000 to the 14,000 members of their outside staff. His long experience as manager had taught him that a generous policy in insurance business always paid.

The resolution was unanimously adopted; and on the motion of the Chairman, seconded by Sir William Lancaster, the appointment of Mr. Dewey as a director was unanimously confirmed.

Mr. Dewey, in reply, remarked that if Sir William Lancaster and he were spared until next month each of them would have been associated with the company for 50 years.

BANK OF EGYPT.

The 21st ordinary general meeting of the Bank of Egypt was held on Friday at the bank, 26, Old Broad Street, E.C., the Lord Rathmore, Chairman of the company, presiding.

The Secretary (Mr. Arthur Nichols) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report, said that the shareholders and directors alike might fairly congratulate themselves on the general result of the working of their bank during the past year, especially when they bore in mind the extraordinary difficulties through which they, in company with all other business undertakings in Egypt, had had to pass during that time. At the annual meeting last year they were told that there was no reason to question the general soundness of the great prosperity then so evident in Egypt, and that, while there was no ground for thinking that there would be any permanent setback to the further progress of that prosperity, still, at the same time, there was a certain amount of enterprise of a very different kind; in fact, there was a great deal of gambling going on, and they had pointed out at that meeting that, in the event of any sudden financial crisis to any considerable extent arising, the consequences would be very unpleasant for the gamblers, and must also more or less seriously affect all business undertakings in Egypt, no matter how healthy they might be. Unfortunately, that financial crisis was not long in coming upon Egypt, and it was greatly accentuated and prolonged by the great shortage of money and the violent shock to credit generally which prevailed throughout America and all the principal centres of Europe during the latter part of last year. The consequences of that crisis were quickly felt, not only by the persons immediately concerned in speculative business, but by all other undertakings in Egypt, and this company had not been entirely exempt from those consequences, and had passed through some disagreeable moments. However, they had come through them, not only successfully, but with great advantage, and with a most satisfactory result as regarded the profits of the business. He was glad to seize the oppor-

tunity of expressing his appreciation of the energy and skill and ability with which their general manager in Egypt, His Excellency Luzzatto Pacha, had succeeded in bringing them safely through those difficulties with such satisfactory results. (Hear, hear.) With regard to the figures, the gross earnings of the bank were a little better than they were last year by about £680, but the nett profits were a little less, by about £1,807, and that was because the expenditure was £2,487 greater than it had been in the preceding year. The expenditure was to a great extent the result of a general advance in salaries in Egypt, rendered necessary by the enhancement of the cost of living in Egypt, probably the result of the progress of prosperity and civilisation in that country. Their reserve stood at the figure of half a million sterling, which was equal to the whole of their paid-up capital, which was a very sound and satisfactory position in which to find themselves. (Hear, hear.) They were able to carry forward the very substantial sum of £38,476. Bills payable had decreased by £90,860, and current accounts showed a considerable diminution, £379,908, which was the natural result of the financial crisis of last year. As to assets, cash showed a decrease of £77,873, which was a merely accidental circumstance. Bills receivable and current account showed a considerable decrease as compared with the previous year, but then the figures for 1906 represented the height of the boom, and they were therefore comparing things which were not exactly alike. During the time of subsidence and reaction which followed the boom it was necessary to exercise great caution in making advances on such securities as shares and stocks of other companies, and especially in the case of any individuals who might be supposed to have speculative inclinations. He could perhaps best realise for them the difficulty of the situation by saying that nearly £400,000 was required to meet the exigencies of the case, because many of their clients, usually considered quite good, had under the strain and stress of the moment, to withdraw almost the whole of their credit accounts, and they were not only deprived of having the advantage of their credit accounts, but they had also had to help these customers through very often, because they would not have wished, nor would it have been wise for their clients to be pushed into a corner in the circumstances. But for the contraction of their resources for the moment, they would have done much better than they had done, and he had no doubt that they would have been able to acquire fresh, sound business. For the same reason the consignments of ivory from the Soudan had not been so large as they otherwise would have been, because they were not able to afford sufficient money to their branch at Khartoum to enable it to deal with the amount of business in ivory which they would have otherwise handled. In all other respects their bank in the Soudan was doing extremely well, and its prospects were very good. Their general manager assured them that, under favourable circumstances, they would be able to regain any clients whom they might have lost, and probably annex a good many fresh ones. With regard to investments, their investments had not depreciated, and, in fact, there was a small profit upon them, which was very satisfactory, considering the state of the markets at the end of last year. There was no doubt that their bank premises at Alexandria alone were fully worth the sum of £57,000, which represented in the balance-sheet the whole of their bank premises, including those at Cairo, Khartoum, Port Said, and other places. He had now been a director of this bank for 25 years, and when he looked back over that long period his memory presented to him a picture of the rapid, steady, and almost uninterrupted advance in prosperity and profits of their bank. When he joined the board in 1883 they had a paid-up capital of a quarter of a million, and they were paying dividends at the rate of 9 per cent., which was considered very good. For the last three years, taking dividend and bonus together, the dividends had been at the rate of 18 per cent. (Applause.) He was not going to prophesy, but one might safely say that, if their business in Egypt continued to be managed with the same ability and success as in the past, he could see no reason why the progress of the bank should not run parallel with the progress of the prosperity of Egypt. They had been considering the question of a further issue of shares, and, if such a step was approved by the shareholders, they proposed to make an issue later on. He concluded by moving the adoption of the report.

Mr. G. T. Biddulph seconded the motion, which was carried unanimously.

The usual formal business was transacted, and the meeting terminated with a vote of thanks to the chairman.

RIVER PLATE TRUST, LOAN AND AGENCY.

The 27th ordinary general meeting of the shareholders of the River Plate Trust, Loan and Agency Co., Limited, was held on Thursday at the offices, 52, Moorgate Street, E.C., Mr. James Anderson, chairman and managing director, presiding.

The Secretary (Mr. G. Proctor) having read the notice convening the meeting and the auditors' report,

The Chairman said that this was the 25th consecutive annual meeting of the company at which which he had been present in an official capacity, but it was the first occasion on which he had addressed the shareholders from the chair. The report showed a record in the company's history, both in regard to profits earned and dividends declared. The reason why the "B" shares received such a relatively small and deferred interest was that they were not originally issued for cash, or actual cash value, but for a potential and, therefore, uncertain value. Later on a further issue of "B" shares was made for cash at par, but they were joined to an issue of "A's," which stood at a large premium, so that the allotees of these new "B" shares were amply compensated for the comparatively small dividends they received on them by the large dividend received on the "A's" allotted at the same time. The company paid for its first year a dividend at the rate of 5 per cent. on the "A's"; the "B's" received their first dividend in the third year of the company's existence. From the third year the dividends rose rapidly, till in 1888, only six years from the commencement, 18½ per cent. was paid on the "A's" and 5 per cent. on the "B's." Experience had shown that, while the increase of their dividend tended to put up the market price of their shares, any reduction sent them down in much greater ratio, and from this point of view the board had been careful in recent years not to recommend an increased dividend until there was a reasonable prospect of being able to continue it even under adverse circumstances. Since 1890 they had from time to time paid a bonus in addition to the dividend, and when time had shown that the profits were in no danger of falling off, they had turned the bonus into an increase of dividend. Thus the bonus of last year appeared this year in the shape of an increase of dividend. The outstanding feature of the company's accounts that year was, he thought, the allocation of the large sum of £50,000 to the reserve. There were several very strong reasons why they should go on adding to the reserve, but the main one was that a very large reserve was necessary if they were to count with any degree of certainty on continuing the present high rate of dividend. For some years past they had had times of great prosperity in the River Plate, but it would be folly to assume that these would continue without a break. A large proportion of the company's profit was derived from the difference between the rate they got on mortgage loans and the rate they had to pay on their debentures issued on this side. The experience of all new countries such as the Argentine tended to prove that as a country increased in wealth and stability the rate of interest on mortgages came down, and there was no reason to think that it would be otherwise in the Argentine. The larger their reserve fund was the better the position they would be in both to meet competition, which yearly became more acute, and to carry on their business successfully should lower rates be forced upon them. The directors still had in mind the possibility of a reconstruction of the capital account with the view of reducing or wiping out the liability on the "A" shares, while at the same time protecting the interests of the debenture-holders; and an operation of this character would be greatly facilitated if their reserve fund, large as it was, were increased to a figure more nearly approximating the paid-up capital of the company. After dealing very briefly with the accounts, the Chairman went on to say that the country had had another excellent harvest, and the export of wheat and other cereals would constitute a record in the history of the Argentine. Trade generally was good, and the outlook for the company's business was quite satisfactory. Mr. J. H. Duncan seconded the resolution, which was carried unanimously.

CHARING CROSS, WEST END AND CITY ELECTRICITY SUPPLY CO., LTD.

In its West End undertakings this company added the equivalent of 28,375 8-c.p. lamps, making a total of 538,964, of which 391,201 are in lighting, 10,238 in heating, and 137,525 in motors. The average price per unit realised was slightly less at 2.82d., but the revenue from this source came to £128,247 or £5,339 more, and meter rents and other receipts brought the total income up to £131,921 compared with £126,146. A substantial saving of £3,974 was effected in expenses, and after providing the usual £11,000 for depreciation the nett profits showed a gain of £9,748 at £51,806, but the company had no such windfall as the £4,750 obtained from a contingency fund no longer required. Interest, too, yielded a little less, £3,472, and as the balance brought forward was £5,112 down at £4,575 the disposable surplus was actually £328 smaller at £59,853, and after paying debenture interest and preference dividend, and giving the ordinary shares 5 per cent., the sum carried out is reduced to £4,023. Expenditure on capital account for the year was £5,837, making a total of £1,011,045, but £10,500 was raised by loans, and the credit balance is now £304,591, without taking into account the depreciation fund of £70,332, or the other accumulations, amounting to £145,163. Liabilities for plant, &c., show a small decrease at £11,031, and sundry creditors are £6,230 down at £6,237, while on the other hand debtors are £1,270 up at £40,790, cash is £857 better at £5,874, and advances to the City undertaking have risen by £5,094 to £156,000.

The City branch connected 42,073 8-c.p. lamps, making 454,757 in all, of which 287,787 are in lighting, 26,770 in heating, and 140,200 in motors. Its sales rose by 6,289,929 units to 18,172,431, producing £114,748 or £12,580 more, and the revenue from all sources was £13,041 up at £118,544. Expenses, however, were £6,423 heavier at £63,748, leaving a nett profit of £54,795 against £48,178, and after providing for debenture and other interest the directors are not only able to pay the full dividend on the preference shares for the year, but also to repay to the West End undertakings the £4,407 advanced by that branch to meet the deficits in former years. Capital expenditure was £15,656, bringing the total outlay up to £1,291,278 and increasing the debit balance to £81,278, in addition to which there are still a good many dead assets disfiguring the balance-sheet, including £41,977 for cost of issues of debentures and shares, £4,042 for preliminary expenses, £6,854 for Parlia-

mentary expenses, and £6,733 for "change-over expenses." The indebtedness to the West End branch has gone up by £5,094, as noted above, and in addition floating liabilities have risen by £4,814 to £22,103, against which sundry debtors come to £40,630 or £5,371 more, but cash has been reduced by £1,645 to £4,798, and the item of £4,959 due from the West End undertakings for sundries in the last balance-sheet, has now disappeared.

CHELSEA ELECTRICITY SUPPLY CO., LTD.

With an addition of 7,430 8-c.p. lamps to the system, making a total of 240,735, the sales of current for the year ended December 31, rose by 240,914 units to 3,548,628, with a corresponding increase of £3,667 to £58,413 in receipts. Meter rents also gave a little more, but miscellaneous revenue was smaller, as on the other hand, expenses were £2,159 up at £29,039 the gain in nett profits, including £1,092 brought forward and £451 from interest, was only £1,624 at £34,643. Of this an extra £490 at £11,619 is transferred to renewals and depreciation fund, £519 is added to debenture stock premium redemption fund, and £802 is written off cost of extinction of founders' shares. Then debenture interest having been paid, the shareholders again get a dividend at the rate of 4½ per cent., to which they were reduced a year ago, and £187 less at £905 is carried forward. Expenditure on the undertaking was small at £1,576, and as the depreciation fund is now up to £69,465 the credit balance on capital account has improved by £4,901 to £4,037. Liabilities to sundry creditors amount to no more than £4,306, against £21,669 due from sundry debtors, while cash has risen by £3,607 to £5,734, and the company in addition has £6,500 out on temporary loan.

NEXT WEEK'S MEETINGS.

Monday, March 9.

Aberdeen Jute.—Aberdeen, noon.
Albert Baker and Co. (1908).—Winchester House, 3 p.m.
Anglo-Spanish Copper.—Cannon Street Hotel, noon.
Dewar (John) and Sons.—Perth, noon.
Equity and Law Life Assurance.—18, Lincoln's Inn Fields, W.C.
General Ceylon Rubber and Tea Estates.—Cannon Street Hotel, noon.
Hoare and Co.—Lower East Smithfield, E., noon.
John Wright and Eagle Range.—Birmingham, 2 p.m.
North British Locomotive.—Glasgow, noon.
Switzer and Co.—Dublin, noon.
Western Ranches.—Edinburgh, 2 30 p.m.
William Doxford and Son.—Sunderland, 10.45 a.m.

Tuesday, March 10.

Adolph Frankau and Co.—119, Queen Victoria Street, E.C.
Argentine North-Eastern Railway.—Salisbury House, 2 30 p.m.
Brompton and Kensington Electricity.—Winchester House, 3.30 p.m.
Cambrian Collieries.—Great Western Railway Hotel, 3 p.m.
Commercial Bank of Scotland.—Edinburgh, noon
Eley Bros.—Cannon Street Hotel, 2 p.m.
Law Reversionary Interest.—231, Strand, W.C., noon.
Metropolitan Electric.—Winchester House, noon.
Temi-couata Railway (Bondholders' Committee).—Winchester House, 2.30 p.m.
United States Debenture.—Winchester House, 12.30 p.m.

Wednesday, March 11.

Aberdeen Comb Works.—Aberdeen.
Artizans', Labourers', and General Dwellings.—Westminster Palace Hotel, 11.30 a m.
Australian City Investment.—Salisbury House, 11 a.m.
Chelsea Electricity Supply.—Winchester House, noon.
Eastmans.—Cannon-street Hotel, 12.30 p.m.
Hine, Parker and Co.—Institute of Chartered Accountants, 3 p.m.
Law Land.—30, Norfolk Street, W.C., 12.30 p m.
Pearson Fire Alarm.—Cannon Street Hotel, noon.
Samnuggar Jute Factory.—Dundee, noon
Star Life Assurance.—32, Moorgate Street, E C., noon.
Titaghur Jute Factory.—Dundee, 12 15 p.m.
Walkers, Parker, and Co.—Winchester House, noon.

Thursday, March 12.

Anglo-Spanish Copper.—Salisbury House, 2 p.m.
Buenos Ayres and Belgrano Tramways.—Winchester House, noon.
Cordoba Central Railway.—Winchester House, noon.
S. H. Williamson and Sons.—Worcester, 11.30 a.m.
Hove Electric Lighting.—Salisbury House, noon.
London, Paris and American Bank.—Cannon Street Hotel, noon.
Mahawale Rubber and Tea.—10, Lime Street, E.C., 2.30 p.m.
Mysore Gold Mining.—Cannon Street Hotel, 12.30 p.m.
River Plate Fresh Meat.—River Plate House, 11 a.m.
Samuel Courtauld and Co.—Winchester House, noon.
Surrey Commercial Dock.—106, Fenchurch Street, E.C., 1 p.m.
William France, Fenwick and Co.—Cannon Street Hotel, 12.30 p.m.

Friday, March 13.

Alcoy and Gandia Railway and Harbour.—Dashwood House 2.30 p.m.
British Law Fire Insurance.—Cannon Street Hotel, noon.
Davis and Timmins.—Winchester House, 2.30 p.m.
Day and Martin.—Cannon Street Hotel, noon.
Meux's Brewery.—Institute of Chartered Accountants, 3 p.m.
Plummer Roddis, Limited.—Winchester House, noon.
Price's Patent Candle.—Cannon Street Hotel, noon.
Swan, Land and Cattle.—Edinburgh, noon.

BRITANNIC ASSURANCE COMPANY,

LIMITED.

(Formerly called BRITISH WORKMAN'S & GENERAL.)

ESTABLISHED 1866.

Chief Offices:—BROAD STREET CORNER, BIRMINGHAM.

Extracts from the DIRECTORS' REPORT for the year ending December 31st, 1907.

Your Directors are pleased to report that notwithstanding the exceptionally heavy claim rate experienced during the earlier months of the year, the ACCUMULATED FUNDS have been INCREASED to £1,991,480 by the NET ADDITION of £214,725.

The PREMIUM INCOME amounted to £1,076,783, and the TOTAL INCOME to £1,157,336.

The Consulting Actuary, Mr. Thomas G. Ackland, F.I.A., reports, as the result of the Annual Valuation, that, after fully providing for all increased liabilities, and after applying an amount of over £100,000 in further strengthening the bases of the Valuation in both Branches, the net surplus of £42,953 is disclosed: and acting on his advice, the Directors are enabled to declare the sum of £28,100 divisible amongst the participating Policyholders and Shareholders. This will enable the Directors again to allot a Reversionary Bonus of 30s. per cent. for the year to all Policyholders participating in the Immediate Profit class, and also to make adequate provision for Policyholders in the Accumulated Profit classes.

CLAIMS.

The Total paid during the year amounted to £524,457, including £125,180 paid under maturing Endowment and Endowment Assurance Policies.

The TOTAL AMOUNT paid by the Company to its Assurants up to 31st December, 1907, was £5,801,258.

S. J. PORT, *Secretary.* FREDK. T. JEFFERSON, *Chairman.*

BANK RATE NOTICES.

THE LONDON JOINT STOCK BANK, LIMITED.

NOTICE IS HEREBY GIVEN that the RATE OF INTEREST allowed at the Head Office and Town Branches of this Bank on Deposits subject to seven days' notice of withdrawal is this day REDUCED to TWO per Cent. per annum.

CHARLES GOW, General Manager.

Princes Street, Mansion House,
5th March, 1908.

THE UNION DISCOUNT COMPANY OF LONDON, LIMITED,
39, Cornhill, 5th March, 1908.

Capital Subscribed	£1,500,000
Paid up	750,000
Reserve Fund	480,000

NOTICE IS HEREBY GIVEN that the RATES OF INTEREST allowed for money on Deposit are this day REDUCED, as follows:—At call, to TWO-AND-A-QUARTER per Cent.; at seven and 14 days' or longer notice to TWO-AND-A-HALF per Cent. The Company discounts approved bank and mercantile acceptances, receives money on deposit at rates advertised from time to time in the London daily papers, and grants loans on approved negotiable securities.

CHRISTOPHER R. NUGENT, Manager.

THE UNION OF LONDON & SMITHS BANK, LIMITED.

NOTICE IS HEREBY GIVEN that the RATE OF INTEREST allowed on Deposits at the Head Office and Metropolitan Branches repayable on seven days' notice will be TWO per Cent. per annum from this date until further notice, which will be given by advertisement only.

J. E. W. HOULDING, Manager.

No. 2, Princes Street, E.C.,
5th March, 1908.

THE LONDON CITY AND MIDLAND BANK, LIMITED.

NOTICE IS HEREBY GIVEN that the RATE OF INTEREST allowed on Deposits at seven days' call at the Head Office and London Branches will be TWO per Cent. until further notice.

INSURANCE.

CENTURY INSURANCE COMPANY LIMITED

LIFE BONUS just declared

is **30/- per cent. per annum** on Sums Assured and Previous Bonuses.

HOUSEHOLD POLICY in one document for one premium combines **Fire, Burglary and Domestic Servants' Insurances.**

Head Office: 18, Charlotte Square, EDINBURGH.

NOTICE.

THE STOCK EXCHANGE.

NOTICE.

MEMBERS of the STOCK EXCHANGE are NOT ALLOWED to ADVERTISE for BUSINESS PURPOSES, or to issue circulars to persons other than their own Principals. Persons who advertise as Brokers or Share Dealers are Not Members of the Stock Exchange, nor in any way under the Control of the Committee. Members issuing Contract Notes are required to use such a form as will provide that the words "Member of the Stock Exchange, London," shall immediately follow the signature. A list of Members of The Stock Exchange who are Stock and Share Brokers may be seen at the Bartholomew Lane entrance to the Bank of England, or obtained on application to

EDWARD SATTERTHWAITE
Secretary to the Committee of the Stock Exchange.

Committee Room, Stock Exchange, London, E.C.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 532. New Series. SATURDAY, MARCH 14, 1908. (Registered as a Newspaper.) Price 6d.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility of statements made therein.

The Investors' Review.

The Great Western Railway.

Although this company owns, leases or works over about 931 miles of line more than the North-Western it stands second in point of earnings, and last year its gross income was only £13,405,469, or fully £2,500,000 less than that of the North-Western. This, however, represented an increase of £682,000 on the preceding year, but it cost £562,000 more to earn this increase and the total expenditure was £8,451,000. Every item of current outlay was augmented, and locomotive power most of all, for the increase in that one item was nearly £269,000, whereas the increased cost of maintenance was less than £30,000 and in repairs little more than £60,000. Traffic expenses, however, rose by nearly £124,000, £16,429 more was absorbed by general charges and compensation cost £6,329 more. The business would thus seem to be run on most expensive lines, and that is what we should expect in a company which prides itself upon the number of long distance non-stop journeys provided by its express trains.

An analysis of the earnings shows that the passenger, parcels and mails or "coaching" branch of the business gave £291,468 more at £6,356,000, which was very little short of the earnings of the North-Western Company from like sources. There was actually an increase of nearly £22,000 in the first-class receipts, which amounted to almost £342,000. In second-class, however, the earnings from which came to £571,000, there was a decrease of £54,360, and yet the company provided 56 new composite passenger coaches and 12 new second-class coaches out of capital for the conduct of this but slightly progressive or actually diminishing traffic. Even reckoning in the receipts from season tickets which exceeded £246,000, and were nearly £18,400 more than the income from that source in 1906, there does not seem to be any warrant for such liberality in providing new rolling stock out of the capital account. Third-class traffic, which increased by nearly £245,000 to a total of £3,895,000, gave better justification for the 63 additional third-class coaches paid for out of capital to meet that elastic portion of the passenger business. Is the original cost of wasted stock always deducted before charging the new to capital account?

The merchandise and cattle traffic was £152,000 better at £3,153,000 and minerals gave £221,532 more at £3,526,000, so that the goods traffic as a whole gave not much short of as large an increase as the whole of the passenger, parcel and mail business of the company taken together. How much profit each or any branch of the traffic yields there is no means of guessing, for not one of our English railway companies has as yet followed the example of nearly all the greater railroads of the United States, whose reports in the matter of details about the business done and particulars relating to the earnings of each branch of traffic are the most admirable in existence. Let us do them that justice. But this Great Western Company, like its neighbours, tells us next to nothing; in fact, nothing at all. What, for example, can be gathered from an attempt to analyse the sum spent on carriage and wagon repairs? No classification of the different kinds of vehicles dealt with in the repairing shops is ever attempted, and it may be that in spending £11.13 per item of stock last year under this head, the

Great Western Company was no more extravagant than the North-Western which spent only £9.78. The one company may have laid out most of its money on goods wagon repairs, and the other the larger portion on the more costly passenger coaches.

Let us now come to the nett revenue which amounted to £4,954,000 from the company's own lines and to £94,000 from dependent properties, the one showing an increase of about £120,000 and the other an increase of rather more than £10,000. Out of this nett revenue aggregating about £5,250,000 the debenture stock interest required £932,585, an increase of only £418 on the year, but rents, leases, &c., drew away £26,000 more at £686,000, and the total prior charges of every description came to £1,619,000 or nearly £27,000 more. Then the preference dividends absorbed £1,491,494 showing a slight increase of £563, and the dividend on the ordinary stock which was for the year, 5⅜ per cent., drew away £125,000 more at £1,921,000. The amount of the ordinary stock was increased by about £308,000 in the second half of the year, and as the dividend was only just maintained it follows that the larger amount absorbed in paying it was due to the increased amount of capital emitted. There was not much margin left after meeting these fixed and preference charges and paying the ordinary stock dividend, for against a balance of £85,799 brought in the amount carried out was only £103,020. Still there was some improvement.

Let us come now to the capital account, which is, as usual, the most vital item of all to those who ruefully watch the slow sapping of our great railway properties by the wantonness with which capital is expended. The apparent expenditure of the Great Western Company up to the end of last year was £106,481,360, towards which it has received no less than £10,488,162 in the shape of premiums, and during the year it spent £2,061,479, of which £429,000 odd went into new works, the formidable sum of £866,000 into lines open for traffic and £492,000 into new rolling stock. This last addition brought the total capital sunk in the rolling stock of the company up to £14,224,419. In all less than £25,000 was subscribed to the capital of other companies during the year, but the total of all such subscriptions to date is £2,844,000. In spite of the recent issues of new stock, moreover, the capital account of the company is still overdrawn although only to the amount of £421,500, but the outlay of capital continues and at a greater pace than that of any other English line, the estimated outlay for the current half-year being £750,000, an amount which is only too likely to be exceeded, what with competition, Irish adventures, the new deviation of the Birmingham route, the Great Central adventure and other drains. Therefore it may not be long before the company has to again appeal to its stockholders for more money. It is, however, buttressed for the present in the fashionable way by trust funds aggregating about £1,415,000, and of these trust funds £321,000 consists of savings bank deposits, £247,000 of superannuation funds and £580,000 of guarantee, insurance, pension and renewal funds, no less than £375,000 of it being set against the company's steamboats. In reality, as we always insist, none of this money is in an available form, but the company can utilise it as necessities dictate to postpone open demands for further capital, and it is certain to do so. There is one item, however, which we suspect to be intimately connected with the capital account and with the reserves, hidden or other, as a recent intimation of the North-Eastern board let us know, and that is the vague entry on the debtor side of the balance-sheet, "sundry outstanding accounts," that is to say moneys owing by the company. The total of these debts at the end of last year was £1,982,000, which was almost as much as the similar debit item shown in the balance-sheet of the London and North-Western Company. We should like very much to see this compound analysed, so that it might be possible for shareholders to arrive at some conception of what these enormous floating debts mean. No doubt the inchoate mass is offset by other entries on the assets side, but rarely or ever do these balance the heavy debit under "sundry outstanding accounts." The Great Western, for instance, showed £805,000 due to it on traffic accounts at the end of the year, and there was also about £480,000 owing to it on "sundry outstanding accounts" in its favour. This entry accordingly appears on both sides of the sheet, darkening both, but it and the traffic debts together by no means balance the sum on the liabilities side. In no direction do the balance-sheets of our English railways want to be cleared more than here. Year after year these globular totals roll on until, for all we know to the contrary, they may have come to represent bad debts, floating debts, or lumber or all these wastages and suctions together.

Amongst minor items to be noticed is compensation, which cost the Great Western Company £101,000 in the past year, surely a heavy sum. Its rates and taxes, however, were reduced by £10,468, and it held investments of one sort or another to the amount of £173,000. The total amount of its rates and taxes, it may be added, was about £608,000, which also seems a large sum. The business as a whole was worked at a cost of 63.04 per cent. of the gross receipts, and the ratio tends to mount.

German Imperial Finance.

At a time when all classes of people are being instructed, or mis-instructed, in the affairs of Germany, a report like that just issued by the Foreign Office from the pen of Count de Salis, Councillor of his Majesty's Embassy at Berlin, is most opportune and worthy of extended analysis. We have no space to give it such, but there are one or two points well deserving of notice and which must not be left until forgotten. Take first the growth of the German Imperial debt. It is quite staggering. For about seven years after the German Empire was founded its rulers had the huge indemnity paid by France to work upon, and that maleficent windfall of money seems to have thrown them off their mental balance, tempting them to enter upon a career of extravagance the fruits of which have hardly yet begun to be reaped. Until 1877 the empire as such had no debt at all, but that year saw the first appearance of this incubus with the modest figure of £3,543,000. It stood there until 1879, when a jump was made to £6,797,000. Since that date almost every year has seen an increase, none a decrease, and by 1906 the debt of the empire had risen to £173,446,000. The lowest increase in the intervening period was .07 per cent. in 1897, but recent years have, with the exception of 1903, seen an annual jump of from about 2 per cent. to over 10½ per cent., and the expenditure still goes on, so that by the end of this year the empire will owe more than £200,000,000. Expenditure in fact must increase and debt with it, because the new naval programme of the empire cannot be met out of revenue, do what the Government may. For the current year the army and navy together will absorb £51,328,534, the navy estimates having jumped from £9,212,000 in 1905 to £12,192,000 for the current year and the total of the budget from £97,207,000 to £121,627,000.

But it will be said this, after all, is a small debt for such a great country to carry. It would be were this all, but as a matter of fact the debts of the separate States included in the federation called the German Empire amounted to nearly £610,000,000 at the beginning of April, 1906. Add these to the purely Imperial debt and we get an aggregate of £775,115,000 as the debt handicap placed upon the nation, the interest charges upon which amounts to £26,721,000 per annum, and in addition £3,903,000 is required by the sinking funds and £213,000 for cost of administration. The total debt per head of the population was £12 15s. 8d. at the date given and the total charge per head 9s. 11d. No light burden for a people still so poor as the great bulk of the Germans are. Their taxation per head in the matter of Customs,

stamp duties, and taxes on consumable articles alone averaged 18s. 3d. in 1906, having risen from 15s. 9d. in 1897, and of this amount 7s. 11d. came from articles of consumption, 9s. 6d. from Customs duties, and 10d. from stamp duties, all per head. These also may seem comparatively small figures, and it must not be overlooked that to a large extent the debts of the separate States within the Empire and to a small extent that of the Empire itself, represent money invested—principally in railways—which yields a very substantial income. Even the railway revenue, however, ought to be regarded in part as taxation. In the Imperial Budget, likewise, we have posts and telegraphs accounting for about £30,000,000 gross in the Budget receipts and for about £25,852,000 in the Budget expenses. Here the nett revenue, therefore, amounts to rather more than £4,000,000 and part of that also is merely indirect taxation.

Be this as it may, the Government and the Reichstag between them are finding the utmost difficulty in tapping fresh prolific sources of revenue. They did invent a few new taxes two or three years ago; the Government in fact asked for an increase of £12,000,000 per annum in 1904-5, but even that increase, could it be obtained, would be insufficient to cover the annual deficiency created almost entirely by the heavy and growing expenditure on the army and navy, and the receipts of the new taxes so far invented and imposed have not come up to expectations, so that in all probability further drafts will have to be made upon the revenues of the federated States, and much wrangling is likely to arise in consequence. The further new taxes proposed for the present year have not met with acceptance, but from all directions a clamour for greater expenditure arises, as witness the following extract from a recent issue of the "Berliner Tageblatt":—

> There is no hope of any improvement in industrial conditions until autumn. The payment of officials is scandalous, and as all living necessities and rents are so dear at present, it is impossible for them to make both ends meet. The bankruptcy of the State will be preceded by numerous failures of Government officials; naturally those with private incomes are not affected by the pittance that is offered to them.
>
> The prestige of the German Empire abroad will be shattered if a year passes before the State finances are reformed. The manner in which the Imperial finances are administered is incompatible with public interests. This should be said openly in the Reichstag with the greatest energy. The Reichstag should see to it that the German Empire should not sink more and more deeply into the morass merely because it is desired not to inconvenience those who govern the country. The financial desolation which reigns in the German Empire has not affected only certain classes of people, but the whole mass of people.

It is interesting to note that among the new taxes recently imposed was one upon cigarettes ranging from 1s. 2d. to 10s. per 1,000 according to quality. The brewing tax was also raised and now varies from 4s. on the first 250 double cwt. of materials used in brewing to 10s., the graduation being regulated by the total amount of material consumed, and there might be a hint in that for our Government when it comes to reorganise its scale of licences. Bills of lading were subjected to an increased stamp, and railway passengers are now obliged to pay a tax at rates varying from ½d. to 8 marks per ticket according to class and cost. This also applies to coast and inland navigation passenger traffic. Licenses on motor-cars were also instituted, varying from 10s. to £7 10s. per car according to power, with additional charges of from 2s. to 10s. for each horse-power or part of one. In addition foreign motor-cars pay 15s. for a five days' stay in the country and £2 for a stay of from five to 30 days. A tax of 8 per cent. has also been imposed on directors' fees—that surely will abate the admiration of our guinea-pigs for everything German, especially German taxes—while an inheritance duty has been imposed ranging from 4 to 10 per cent. to be levied on all inheritances except those received by direct descendants who are exempt. Indeed, the tax may go up to 25 per cent. on inheritances by collaterals or strangers on amounts exceeding £50,000. Something more, however, than all this will be required in order to balance the budget, for the chronic deficit therein is estimated at between £11,000,00 and £12,000,000, and the new taxes have only brought in between £6,800,000 and £7,300,000.

So the revenue is inelastic at the same time that the expenditure is most expansive. By the way things are going we might anticipate an annual or chronic deficiency of from £15,000,000 to £20,000,000 as the regular thing for the German Empire during the next ten years. The country thus does not seem to be quite so happy and prosperous as our alarmists would lead us to infer, and recent particulars about the condition of labour in the German centres of industry should give our admirers of everything not English food for reflection. This is what the latest official information on the unemployed in Kaiserland amounts to, and we hope our readers are unprejudiced enough to grasp its significance.

The effect of the commercial slackening is commented upon in an official publication. The statistics for Berlin alone show that for every hundred situations vacant there are 198 applications for men and 140 for woman's work, instead of 159 and 99 in 1907. The situation has become much worse since December. More than two-thirds of the working men and women have stated at the Central Bureaux that they were discharged from their factory from want of sufficient orders to keep them supplied with work. The average weekly earnings of female factory hands has fallen from M. 11.8 to 10.89. It may be said that there is an absolute holiday in the building trade. Metal industries have discharged many workers and shortened the hours of those employed; a great number of factories are shut down on Saturday.

Economic and Financial Notes.

More About the Licensing Bill.

The brewers are doing their best to ruin their case and paralyse sympathisers by overstating it. From some points of view their position is strong against the attempt of the State to confiscate privileges without paying for the liberty so to do. The Government has no more right to take away from the brewers the privileges granted to them by use and wont, and legalised by the Act of 1904, than it has to repudiate debt brought into existence by a war, to the waging of which a formidable minority of its supporters had the most determined objection. That being their moral and legal position, the brewers should, while holding on to their rights, use diligence in seeking agreement with their adversary, lest they lose all. They should cease to howl about their "over taxation," when most of them make the drink consumer pay the war-imposed part of that taxation—together with all the rest—by lowering the specific gravity of the beer they produce; and, above all, they must refrain from a more or less gross exaggeration of their prospective losses through the action of the proposed time limit. So far as we have observed, the assertions made on this head are based almost wholly on the possible experiences of the over-capitalised brewery companies. That is the height of folly, for if there be one thing more than another which Parliament and the Government will refuse to sanction, it is compensation on the basis of inflated values. Pitiable though their lot is, and must in any event be, the individuals duped by the unscrupulous and diseasedly esurient company promoter must bear their losses in brewery securities, even as they have to put up with those incurred through trusting the still more unscrupulous mine promoter, without assistance from the general body of the taxpayers. Brewery directors, owners often of the ordinary capital of their companies, are now doing their best to drive the Government towards open confiscation, and by their furious and often abusive language are inspiring the mind of the average citizen with a feeling of disgust.

The brewery interests may be quite sure of one thing—a reduction in the number of licensed houses is certain, and probably a modification and reduction of club and grocers' licences as well. If, therefore, they defeat the temperance party this session, they will have to encounter still more drastic and far-reaching proposals

within a brief period of time. At best they can only hope for a respite, and that respite may let them see emerge a scheme for the imposition of a severe and severely graduated scale of licences based upon the overturn of all drink sellers, be they publicans, clubbists, or grocers, which would force thousands of public-houses and beer-shops to close their doors without the question of compensation being so much as alluded to. If only the Government could afford to dispense with a good slice of the drink revenue, that might be the right counter move to make now, but the Government cannot, and there the underlying hypocrisy peeps out. It must have the drink revenue or obey Mr. Chaplin and tax bread, and it must also obey its temperance supporters by trying to abolish licences for the loss of which it does not possess the means wherewith to compensate the holders, having "earmarked" more money than it would probably need for that purpose to found an elaborate, corrupting system of "old-age pensions," so that yet another squad of its supporters may be kept in order and loyal.

But the uncompromising attitude of the brewers may drive the present somewhat all-things-to-all-men Ministry to make a stand, and it could say in reply to the virulent abuse and misrepresentation to which it is being treated: "Very well, gentlemen, we are ready to meet you, and will bear a proportion of your alleged loss, to be agreed upon, but you must first of all, and as a basis for agreement, supply us with a detailed account of the earnings, expenses, and nett profit of every one of the public-houses in your control covering the past five years, because we cannot for one moment take into account the price you originally gave for the houses or that they may stand at in your books. Furthermore, we shall require a detailed account, also covering five years, of the results of the entire business done by your company or privately owned brewery, to be placed alongside a similar account to be rendered five years hence, so that the real loss through abrogation of licences may be ascertained, and reliable data provided on which to base compensation." Are the brewers prepared to accept an alternative of this kind? If not, would it not be prudent on their part to try and show reasonableness?

The Kaiser-Tweedmouth Scare.

That renowned and vigilant British patriot and Protectionist, faithful guide also to such multitudes of trustful investors, Mr. Harry Hannanel Marks, M.P. for Thanet, expresses in his "great City daily" the profound opinion that there is more in the Kaiser-Tweedmouth friendly correspondence episode than Lord Rosebery allows. His lordship frankly gave it as his opinion that we are doing our best to make ourselves ridiculous by the frights we are giving ourselves on one pretext or another most weeks about the "sinister designs of Germany," and that opinion is but too well founded. The burden of empire has made us the most scare-ridden nation on earth, and no sooner has the all-pervading spirit of Blue Funk been exorcised in one direction than it bobs up in another, so that we may say the empire must perish unless its owners can be kept perpetually in a condition of mind bordering on abject terror. Both the Russian and the French bogeys have been laid for the time, in spite of the unremitting efforts of the dread obsessed *Times*, the *Morning Post*, the *Daily Telegraph*, the *Daily Mail* and "the great City daily," with a swarm of the minor *pétroleurs* of the noble British Press to promote hatred and strife; and until the United States comes to have its turn we have now no newspaper-made foe to feed insane imaginings by except Germany. Dread of Germany, hatred of everything German must therefore be stimulated by every available means if said newspapers are to continue to find readers. That is the sacred duty imposed upon them by the necessities of the *pétroleurs*, and because they are thus busy the incident of the Kaiser's private letter to Lord Tweedmouth is meanly seized upon, and twisted and magnified and distorted until its natural dimensions become unrecognisable. A most important event truly, one well calculated in such hands to inspire the taxpayer with the fear-born resolve to pawn his last shirt rather than see the firms of Armstrongs, John Browns, Cammels and Vickers go without orders or our navy yards laid under the necessity to discharge as many as half a dozen riveters. Making ourselves ridiculous! Well, what of it, so long as our money flies and the bright lights of imperial patriotism live well and grow fat.

And with all respect to Lord Rosebery, who really made a most admirable little speech in the House of Lords on Monday, there is another aspect from which this "trivial" incident can be seen to be important. It helped sundry people to deprive a good many other people of some money by what are euphemistically described as "operations" on the Stock Exchange. Habitually too little attention is paid to this side of the blue funk manufacturing industry. It is often the most important side, if the habits of most of the men by whom this kind of journalistic bomb throwing is organised and practised are taken into the reckoning. To such geniuses a "find" like the Kaiser-Tweedmouth exchange of friendly letters is of the nature of a godsend—the god being Pluto—and we may be sure either that "bears" are sold on all markets before the match is lighted or the percussion cap fitted, or that "bulls" rush in to take instant advantage of the dip in prices which always follows the explosion. The real inner ring may gamble both ways on the event and get gain, and in this way markets that might otherwise remain mostly at "dead calm" provide opportunities no other means imaginable could render so effectively available. Looked at in this light the value of "scares" is seen to be immense, and no fright begetting political lie or hoax, or betrayal of confidence or perversion of fact, is ever really insignificant. Every "incident" becomes a means to money making for some, for the prompt price scalper and the modern knights of the road or "robber barons." We are not sure, indeed, that some excuse may not be found in this direction for the Press industry in bogey manufacture. Few, except perhaps the simple-minded, unsuspecting and innocent scribes, whose volatile imaginations are so easily kindled as to make them eager tools in the hands of the rulers of the game, really believe in a war between England and Germany; and probably enough the concocters of scare bombs, the inspirers of Bedlamite language like that so habitual in our most imperial *Times*, have no desire really to bring war about. All these master spirits seek are opportunties to convey wealth out of other people's pockets into their own. They know just as well as we do or as any sane person does that there is no hatred of Germany or Germans in England, no unfriendliness even, and just as little hatred of England in Germany, and therefore they esteem the game they play a safe one, a game leading to no other or more serious consequences than frequent dips in market prices. In quiet times like these people who live by prey must do something to insure themselves against starvation. So in calmness of mind we wait for the next explosion.

Trade Returns for February.

In appearance the figures are not so very bad. Imports at £52,426,815 show a decrease of only £499,782, or less than 1 per cent. on the same month of 1907, and the decrease of £123,831, or less than ¼ per cent. in exports, whose total value is £31,949,514, seems altogether trivial, nothing to cry out about. The only serious decline, indeed, is re-exports of foreign and colonial merchandise, which have fallen off £1,928,157, or 20.5 per cent., to a total of £7,497,673 on the comparison of months. In reality, however, the position is considerably worse than this, because there were 25 working days in last month as compared with 24 only in February of last year. Now the daily average of imports for the past month was about £2,185,000 and of exports upwards of £1,350,000, while of re-exports the daily average was about £312,000, and if the extra day's movement of commerce is allowed for, it will be seen at once tha'

the exhibit would have been very much worse had both months been of the same length. It is, however, as yet little more than an appearance of reduction, so far as quantities go, because much of the decline has been caused by lower prices. We have imported a good deal more cereals of every description, thanks to uncultivated state of the Kingdom. Food of all kinds, indeed, has come to hand in larger quantities than in 1907, even allowing for the extra day this year, and prices are not generally lower for food commodities, although they have come down for the raw and half-manufactured materials used in our productive industries. The fall, however, has not yet extended to wheat or any cereal except oats or to raw cotton nor yet to flax; but these are almost the only exceptions, and copper, hemp, jute, raw silk, wood and timber, and wool are all cheaper than they were a year ago.

The same observation has to be made about the exports, but they would have shown in some instances a greater shrinkage than imports in consequence of diminishing quantities as well as diminishing prices, and had it not been for the remarkable strength of our coal trade and the higher prices still ruling for coal and coke exported the month's display would have been uglier than it is. Yet in the past month the increase in the quantity of coal and coke exported was little more than 7 per cent., or not much more than the extra day would account for, but the increase in value is nearly 21½ per cent. On the other hand, exports of copper, which increased nearly 13 per cent. in quantity, fell off over 26 per cent. in value, but the fall in the value of iron and steel exported was not so conspicuous as the reduction in quantity. For all that the tendency of prices is to slip back, and that tendency must be taken into account in estimating not only the present position of our foreign commerce, but its immediate prospects. It is scarcely worth while to go much into details at the present stage. We must wait until the year has made further progress and the effects of the American crisis have grown more visible. As yet the United States alone give important indication of what that crisis is to involve. We can only note here the broad fact because it is but too probable that "dumping," as it is called, is only commencing so far as the raw and half-manufactured metal exports of the United States are concerned, while the supplies of cereals are also likely to be accelerated for a short time owing to the pressure of credit commitments still showing its effects in the Republic. It sent us nearly 1,700,000 cwts. more wheat last month than in February, 1907, but it is doubtful how long this fulness of supply can continue because the stock of grain in the States is much less than it was a year ago. Meanwhile the Argentine supply is coming up fast, and will tell more and more in the market helping to draw prices down. Crops seem to be held up at present in all countries with surpluses, but the holders will soon have to let go, and then markets seem likely to come down.

Our export trade has not yet been affected appreciably in any part of the world except the United States, unless the heavy decline in some exports to the Argentine Republic be regarded as symptomatic of setback even there. Perhaps that is merely the result of foreign competition, although in a monetary sense the crisis in North America has hampered the business of the Southern Republic to a much greater extent than might have been supposed. Our exports to India, however, are fully maintained, famine or no famine, and the Australian and Canadian demand is also kept up with no sign of important decline, while with European countries business has so far been fairly good this year, that is taking the two months together thus far elapsed. Our foreign trade in machinery keeps up remarkably well, and the decline in the exports of linen piece goods has been due to the reduced demand from the United States, and almost to that alone, Canada, however, sharing the fortunes of its neighbour in this respect. There is consequently nothing to be discouraged about in the present trade returns, although they are considerably worse than they seem, and probably enough herald still poorer figures in the near future. That is to say foreign countries are likely enough to employ less British labour, to use the now familiar language of the Tariffite, than they have done in recent years, and the counterpart of this reduction will be found in smaller employment of foreign labour by the people of this country. The recoil is sure to be only temporary, if peace be kept among the nations most advanced in civilisation, but while it lasts we must be prepared to encounter a good many disappointments and to economise in many directions.

Imports..	113,152 063	125,579,732	117,674,986	— 7,904,746
Exports..	83,954,298	95,468,959	89,678,169	— 5,790,790
Excess value of imports over exports	29,197,765	30,110,773	27,996,817	— 2,113,956

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.

The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board values."

Financial Affairs in Cape Colony.

Until we studied some papers forwarded to us anonymously by a citizen of Cape Town, and read an article in the *South African News*, we never knew how thoroughly the party lately in power in this colony deserved the name of "Progressive." Hitherto in our ignorance we imagined that this epithet, arrogated to themselves, as it seemed, by the De Beers party and their Dr. Jameson, was simply one of those feats in dialectics to which politics has accustomed us, a name invented to disguise, burlesque, or mock the actual designs or purposes of the party using it. It turns out to be nothing of the kind. These gentlemen really were "Progressives," and in a most remarkable degree. They made the colony progress towards bankruptcy at a splendid pace; they gloried in "Progressive" deficits, so that when they departed from power, or power from them, they left the finances of the young nation in as first-class a mess as its worst enemy could desire. Exact figures do not seem to be as yet available as to how affairs really stand, but official authority puts the deficit for the past financial year at about £648,000, of which the railways will furnish over £195,000 and other sources of expenditure over £453,000. That is for the year 1906-7. What it is to be for the period now drawing to a close can hardly be guessed, but it does not look as if the figures would be lower than Mr. Merriman estimated in the speech referred to in these columns last week. And deficits breed permanent and floating debt, no matter what form the debt may take or what pretexts are put forth to cloak its real character. Apparently there was an addition of nearly £3,500,000 made to the total of the debt in 1907, and it must, therefore, now amount to about £56,000,000 on a summary computation. In other words, the "Progressive" Government of De Beers has increased the permanent debt of Cape Colony by nearly £11,000,000 and the temporary debt by £3,000,000 during its tenure of office, and so avidious was it of its passing opportunity that the unexercised borrowing powers accorded by a facile Parliament have been reduced by more than £3,500,000. Leaving out these unexercised borrowing powers, the debt a year ago would seem to have been about £52,600,000, which is almost £14,000,000 higher than it was in December, 1903. That is surely a remarkable instance of "progress," quite enough to warrant the De Beers party in taking the high-sounding name of "Progressive" to itself. The mere budget deficits of the past two years seem to be about £2,000,000, and that, too, in spite of the late Government's diligence in borrowing. Moreover, the revenue is falling off, as the state of trade would lead us to expect, so that the job before Mr. Merriman and his colleagues is one of the most formidable any body of statesmen ever had to encounter. Business is indeed poor at the present time, as Mr. J. W. Harper observed in reference to weight of goods recently brought by the *Norman*, whose whole general cargo was only 3,657 tons, or what the port of Cape Town "used to handle in a day," and we do not see how it can improve this year or next. No wonder the late Government raised £1,000,000 to set an agricultural bank going. We hope the money will be well used, and that prosperity may return some day as the fruit of economy, but at present the outlook is bad nearly all round. The official figures for 1906-7, it may be added, give the general revenue for that year at £4,039,000 and the general expenditure at £4,462,000, while the expenditure of the railway system was £3,888,000 against a revenue from them amounting to barely £3,663,000. It is in this way that the above-mentioned deficit is arrived at, and really what with the increase in the debt charges, the necessity of maintaining so many services, the clamour of the citizens, and quite a legitimate clamour it is, for help of various kinds, the problem set before the new Ministry looks almost insoluble. It will be years at the very best before the colony surmounts the evil effects of the late Administration's impulsive waste, and its only hope is in retrenchment the most rigorous.

The Transvaal Mining Commission.

We should like to be in possession of fuller details of the Mining Industry Commission's report before expressing a definite opinion upon it. Suffice it for the present to say that the Kaffir Circus regards the recommendations as the death blow to an already "sorely tried" industry, and can see a far more rapid extinction of Kaffir capital than anything likely to happen to brewery money in this country. By comparison they think the "Trade" has been most handsomely treated, and dealers vow their intention not to attend any more protest meetings with the object of frightening Mr. Asquith into giving the publican a permanent instead of an annual licence. The market has got its very existence to fight for, it is declared, on all hands, and before long operators expect to be asking the swells in the Brewery division for the price of a drink. Far better know your fate than to be subjected to slow torture and starvation they say. It has already been definitely decided that the adoption of the proposals will ultimately ruin the industry, and what would the Circus not give to be able to return to the bad old Kruger days. All which is excellent, and proof positive that the recommendations of the Commission must be much more favourable to mine shareholders than we at first thought, for we have been taught by long experience that the more positive the Kaffir market is about anything the more it is wrong. In some respects the proposals of the Commission run directly counter to the avowed policy of the Transvaal Government. It was in April last year that the Mining Industry Commission was appointed by the Government, partly as the outcome of the white miners' strike, and it originally consisted of Mr. A. Stockenstroom, M.L.A., who acted as chairman, and Messrs. P. Whiteside, M.L.A., F. H. P. Creswell, M. Francke and C. H. Spencer. Subsequently Mr. Francke resigned and Mr. J. A. Hamilton came in. It will be useful to repeat the terms of reference:—

To enquire (1) in what direction and how far the use of mechanical appliance can be extended in the mines; what would be the effect of the extended use of such appliances on the employment of whites, on the cost of production, on the demand for natives and on the industry generally.

(2) As to the means most calculated to increase the employment of whites, to secure the most efficient use of native labour and generally to secure economy and efficiency without addition to the *personnel* of the mine.

As briefly cabled, the Commission's recommendations, which are as follows, appear neither to keep within the terms of reference nor to cover all the points on which information and guidance were sought:—

(1) The gradual stoppage of the importation of Portuguese natives. It is of opinion that there is no essential difference between the importation of Chinese and Portuguese natives, both being equally undesirable.

(2) The abolition of the Pass Law, because that would make it impossible to enforce native contracts and native recruiting would stop.

(3) Legislation compelling the employment of one white miner for each machine drill.

(4) An eight hours' day.

(5) The taxation of unworked claims, no claim being considered "worked" unless a definite number of whites are to be employed upon it.

(6) Stricter measures to stop the illicit gold buying which prevails to a great extent.

There was a fine outburst of indignation in Johannesburg when the report was issued, and more choice epithets were applied to Mr. Creswell, the well-known advocate of white labour and former manager of the Village Main Reef, in the space of an hour or so than most people would care to hear in a twelvemonth. Let it be said here that a minority report was issued by Mr. Spencer, manager of the Consolidated Main Reef, who very rightly says that the majority failed to deal fully with the effect of the extended use of mechanical appliances, and totally ignored the question of how to secure greater economy and efficiency. With some proposals Mr. Spencer was in agreement, including the legislation against Portuguese and the principle of employing a certain number of whites to each drill, but he denies that whites are more efficient or more economical than coloured workers, and declaims against the exclusion of the native. In brief, Mr. Spencer voices

the opinions of the magnates, but while it does not appear to be imagined that the Government is likely to disturb the foundations on which the industry is built, it must be confessed that the Commission makes out a good case for its recommendations. It can see what we have been urging for many years, namely, that the mine magnates care not one jot for the permanent interests of the Transvaal, but have one aim only—to dig out the gold at the fastest possible rate. This accomplished, the land which has provided the wealth and the workers who have helped to extract it may go hang for all they care. The Commission desires to put some check on the too rapid exhaustion of the mineral resources, and maintains that the mines can adjust their organisation to the employment of a greater proportion of whites and a less proportion of blacks without materially increasing the cost of production prevailing at the beginning of 1907. And experience in other parts of the world, and even in the Transvaal, proves this view to be the right one. We all remember the violent outburst against the repatriation of the Chinese, but half of them are gone and the industry, as an industry, is more flourishing than ever. It is considered that cheaper and better work can be secured on the "one white man one machine" principle than by any other white labour policy, and the increased employment of whites in the mills and cyanide works is advocated. A distinct point is scored by the Commissioners when they ask why the Transvaal should not be made as attractive for the worker as Australia or California. The adoption of white labour would, the Commissioners declare, result in the establishment on the 1906-7 basis of a white industrial population of 35,000 males with an annual distribution of 10½ millions in wages and salaries as against 5¼ millions in the year mentioned. It is proposed to allow a reasonable time for the complete abandonment of coloured labour so as to prevent dislocation, and to this end the Government should fix a maximum limit to the number of natives entering the Transvaal from outside British South Africa to work at the mines, this maximum to be diminished automatically until importation ceases altogether. The report further urges the adoption of adequate measures to cope with miners' phthisis, and that miners should be enabled to acquire land for residence. Of equal importance are the suggestions that the company law should be remodelled, and that railway and Customs rates reduced. We know from recent speeches of Mr. Jacob de Villiers, Transvaal Minister of Mines, that the Government is in full sympathy with many of the recommendations, but the magnates will fight as hard for the retention of the niggers as they did to obtain and keep the Chinese, for the magnates are not enlightened or patriotic men, and have no guide in policy save their selfish instincts. If they get out the gold and are able to rig share markets by means of it, it is nothing to them if the whole white population of Johannesburg dies of starvation.

American Business Notes.

Again Wall Street was disappointed with the bank show, but it was good enough for those who are not driven by their necessities to hope for the impossible. What probably disquieted the players was the small increase of £658,000 in the loans and advances, coming as it did on an increase of £3,418,000 in the preceding week. But the holdings of specie went up by the handsome sum of £794,000, and although the decrease in notes was about £216,000, there was still nearly £579,000 nett increase in the average holdings of circulating media, and deposits rose by no less than £1,615,400. This increase diminished the effectiveness of the larger amount of gold held, for the increase in the surplus reserve was only £175,000 at a total of £6,027,000. Such total, however, compares with a surplus of only £410,400 a year ago, and is quite sufficient to maintain money on Wall Street at 2 per cent. or less. What the market suffers from is not the lack of means or the withdrawal of Government deposits now going on, but want of the securities which would give it control of the money lying idle. Its existing securities are in too many cases discredited and the discredit represses the zeal of those eager or impelled by desperation to create new ones.

Outside banks and trust companies also increased their loans and investments last week by £608,000 to £154,540,000, and their specie was £93,600 better at £8,589,000, but their notes fell off £6,000 to £2,118,000. Their deposits, however, were £55,000 better at £124,000,000, but these figures are in many ways wide of the truth and fantastic, as explanatory notes issued with the summary of averages indicate. Note "A" says, "deposits are given minus the item due from reserve depositories and other banks and trust companies in New York City." How much is thus kept out of sight, and who are the depositories of the concealed resources? Light will have to be given on these points before we can have any faith in the published figures. Note "B" goes on to say, "State banks are required by law to carry a reserve of 15 per cent. upon deposits in New York City, and of 10 per cent. outside New York City, and it need not be more than one half in cash. Trust companies in greater New York are required to hold a reserve of 15 per cent., of which 5 per cent. must be in cash, and in the rest of the State the reserve required is 10 per cent.," whether in cash or paper is not specified. Is it because of these hidden reserves that the proportion of reserve possessed by the outside banks and trusts to their liabilities is given at 30 per cent., as compared with 25.7 per cent. the week before? On the figures as published, and taking the cash and grenbacks together, we can only make a proportion of 8.6 per cent. in reserve to liabilities. No wonder, however, that money should be easy at 1½ to 2 per cent. in the open market, for the Bank clearings fell off, comparing last week with the same week a year ago, by 46.6 per cent. for New York, and by 36.1 per cent. for the entire country.

The Knickerbocker Trust is to be opened again, and when that news became public a diligent and well organised attempt was made by the Wall Street operators to work up prices. They did cause some increase in the overturn, and prices were pushed up a little by the professionals, so that people in Europe began to ask whether the crisis was not really now over and the old game about to be renewed. We had better not be in any particular haste to believe this, for another six months yet at the very least. Remember the Presidential election hubbub, and do not overlook the fact that business is going from bad to worse all over the Union and must do so. The railways are showing decreased earnings, both gross and nett, in spite of a certain amount of figure adjustment and the limitation of outlays upon repairs and upkeep, a limitation which will most likely be paid for out of capital later on when financial markets become more favourable. The Baltimore and Ohio Railroad is said to have 19,200 cars idle out of its total stock of 87,500 cars; that is, reckoning each car at £200, there is almost £4,000,000 of its capital earning nothing, wasting away.

The building trade throughout the Union is feeling the effects of last year's storm, and a return for the month of February shows that in 32 cities the permits taken out for buildings estimated to cost £2,808,000 compare with permits sanctioning an outlay of £4,799,000 in the same month of last year.

Some anxiety is expressed as to whether the Erie Railroad Company will be in a position to meet £1,100,000 of its notes falling due on the 8th of next month. These notes can be readily bought at 60 per cent. just now, and should the company be able to negotiate a renewal, holders buying on these terms would make a very handsome profit on the repayment. The very fact, however, that the discount is so great gives strength to the fear that a fault will be made, and no one need be surprised if the property once more falls into the hands of a receiver.

Talking of receivers, it is announced that the functionaries of this order who were in charge of the Ottoman Bank have been relieved of their duties by the Court, the bank being apparently about to liquidate. It will borrow money on its assets, and pay its depositors first.

Nobody will imagine that the Goulds are hard up, and yet two of their roads have within the past fortnight passed into the hands of receivers. Neither of them is important, one being the Western Maryland and the other the International and Grand Northern Railroad. The market, however, supposed that these mishaps foreshadowed a receivership for the Missouri Pacific Railway, and, as we intimated some time ago, emphatic and strenuous denials of the possibility of any such eventuality tends to obviate any surprise should it become an accomplished fact. Large Gould road obligations fall due next month.

The Chicago, Rock Island and Pacific Railroad, not the *company* bearing the same name, has arranged with Messrs. Speyer and Co. to extend for one year its £1,200,000 of 4½ per cent. gold coupon notes maturing next month, and is to pay 6 per cent. for the accommodation. Messrs. Speyer have also been appointed custodians of the Government funds in the Philippines by Mr. Taft to a maximum of £2,000,000.

It is always interesting to note the ingenuity with which the professional players on stock markets invent reports suitable to their designs. One of the latest is to the effect that Mr. Roosevelt has now turned round, and instead of pitching into the railroads for dismissing men and reducing wages become inclined to allow them to raise their freight charges by 10 per cent. As these charges are already very onerous, at least on local traffic—hence the war on the roads—his popularity would not be increased by that measure and the story is most unlikely. But it served its turn, a market "turn." It is said that the Carnegie Steel Trust spends £20,000,000 yearly on freight, and £2,000,000 added to its outgoings in that direction would be extremely inconvenient just now.

Another tale recently current has been revived to the effect that a great holding company is about to be formed to take over the investments of the Union Pacific Railroad Company, and that the shareholders of that company are to receive a 40 per cent. dividend in the form of the stock of the new Securities Company. On paper this would be a most handsome bonus, but until the suit raised by the Government against Harriman or the Standard Oil Company has been settled, we doubt if any such daring financial *coup* will be ventured upon.

The State of New York, as distinguished from the city, has issued £1,000,000 in 4 per cent. bonds with great success, the whole amount being sold at from 106⅛ to 107⅛ per cent. Money is therefore plentiful still when the things offered are really good.

Among items of news of a minor kind there is the acquisition of the Georgia Railway Company by Mr. Harriman, who it is said intends to hand over the control of the line to the Illinois Central, no doubt for a commission or at a profit. The line has been bought from the Southern Railway which is financially almost *in extremis*, along with at least half a dozen other railroads.

Another story relates to a fresh combination of steel plants, the Ohio Iron and Steel Company being absorbed by the Youngstown Steel and Tube Company. By this combination the Youngstown Company will be the largest independent concern in the republic outside the Carnegie Steel Trust. There may be interesting developments by and by in connection with this deal.

According to the Agricultural Department at Washington there were still at the beginning of this month 148,721,000 bushels of wheat in the hands of the farmers in spite of the rather free selling at declining prices recently witnessed. This compares with 206,644,000 bushels at the same date last year, 158,403,000 bushels on March 1, 1906, and only 111,000,000 bushels at the same date the year before that. Supplies of maize still in the hands of the farmers at the even date are put at 962,429,000 bushels, or a decrease of 245,571,000 bushels on the previous year. In fact we have to go back to March 1, 1905, to find a lower figure, the estimated stock at that date being 954,000,000 bushels. Farmers are not parting with their grain so readily as might have been expected in the circumstances, and the explanation suggested by their reluctance to sell is found in their greater prosperity. They have done splendidly with their crops in the past three years, and are well in funds so that they were not under any necessity to part with last year's diminished crops. It is the financiers who sold grain bills to buy gold with in the end of last year who are in urgent need of the money the farmers' sales would procure.

Passing Events.

The Civil Service estimates for the coming budget year are now issued and as a matter of course show an increase, but the amount is tiny, only £227,000 on a total of £27,609,000. The figure would have been larger but for a decrease of £128,000 in the grant to the Education Board, which is put down at £13,594,000, a decrease of £109,000 in the grants to England and Wales being partly counterbalanced by increases elsewhere, Ireland alone getting £22,458 more. The Board of Trade, the Supreme Courts, and the Home Office all get rather more money, in fact the increase in law and justice is over £109,000, and public works take £161,000 more. It may be worth mentioning that the Royal Irish Constabulary vote shows an increase of £33,403, bringing the total up to £1,355,000 as against £1,430,000 bestowed on Irish education. Unless the Chancellor of the Exchequer gets a larger revenue surplus in the current fiscal year than he looked for, these and other estimates will not allow him much elbow room in any direction.

Last week's revenue figures were better than those of the previous week, but still not particularly brilliant. Assuming, however, the same daily receipt for the twenty remaining days of the fiscal year to be accounted for, the revenue would still be about £2,500,000 above the final estimate of last April, but several leading branches of income are showing ominous declines, and the income tax alone has so far brilliantly falsified anticipations. Mr. Asquith looked for a decrease of over £1,000,000 on the year through his readjustments, and up to now there is an increase of £153,000, but the "arrears" will probably be much smaller at the year's end. He was, however, equally astray in the other direction with regard to the death duties, because he looked for a loss of only £200,000 in that quarter and up to the end of last week the loss was £1,064,000. Both Customs and Excise are likewise doing badly, especially Excise, which shows a deficiency to date of £384,000 against an estimated increase of £250,000 for the entire year. In short, the income tax and the post and telegraph services are alone helping to bring up the figures to the budget estimate, and we still incline to the view that, apart from the final sweep up in the last two or three days of the month, the revenue for the remainder of the fiscal year will drag. Some little relief, however, was given to the market by last week's movements of the Treasury balances, thanks to the repayment of £1,500,000 over-due Treasury bills. The outgoings on supply, national debt, and other accounts came to only £3,304,000, and adding in £150,000 of capital transferred to the telegraph department, the total outgoings were only £3,454,000 or about £850,000 less than the revenue gathered. Thanks, however, to the Treasury bill payments, the balances of the Exchequer in the banks were reduced by £651,000, a mere mite in the present hampered condition of the money market.

The country is very much indebted to those zealous members of the Opposition and others in Parliament

who keep Mr. Winston Churchill on the jump to furnish information about South African affairs. But for their tireless assiduity we should too readily forget the conditions under which the gold is extracted in the Transvaal and the diamonds won there and in Cape Colony. As it is, thanks to these self-sacrificing humanitarians, and likewise others, we tend to grow more ashamed of our part in the business than we are of the whisky drinking capacity of Glasgow, Dundee, or Aberdeen.

And they do good in other ways. Witness the interesting particulars furnished by Mr. Churchill about Natal at the instance of Mr. Rudolf Lehmann last Monday. On June 30 last the Under-Secretary said the debt of this very self-governing Colony was £20,597,870, it having increased by no less than £12,578,727 since June 30, 1897. The debt therefore now amounts "approximately" to £212 per head of the white population, and the annual charge imposed by it is now, also "approximately," £710,000 per annum, or not far short of the sums now and then budgeted as "deficits." For it is a case of diligent in borrowing, fruitful in deficiencies, and the admitted shortage for the three years ended June 30 last is about £800,000. What it would have been without the loans even the Government probably could not say. But £212 per head is heavy enough. We used to think an Australasian Colony pretty sure of a happy bankruptcy with a debt of £60 to £80 per head to carry, but we have learnt much from Natal. Only Australasia has no Dinuzulu or other native landowner to first plunder and then shoot.

Abounding revenue is shown by the Australian Commonwealth so far as the Customs and Excise duties collected by it are concerned. For the eight months of the financial year ended February 29 the receipts were at £8,059,000, £1,500,000 more than in the corresponding months of the previous year. The statistics, however, relating to the foreign trade of the Commonwealth are not quite so brilliant, for although imports rose by £380,000 for the month of January to £4,674,000, exports for the same month fell off by no less than £3,229,000 to £4,434,000, which was below the value of the imports. That must not continue long, else Australian finance will need many loan refreshers to keep it from betraying symptoms of distress. Gold exports were about £209,000 up at £863,000.

Distress goes on increasing in India, and at the end of last week the Viceroy's telegram, dated March 9, says the total numbers in receipt of State relief over the whole of India were 1,388,818. In the United Provinces, where the distress is most acute, 895,585 persons were on relief works and 305,308 persons in receipt of gratuitous relief. Village works have been started in three districts in the Central Provinces, where the distress is growing, and in Central India 123,988 individuals are on the works and 19,684 in receipt of gratuitous aid. Rain fell in Madras during the week and in a considerable part of northern and north-eastern India, which has done some good, but it extended to only fourteen districts in the United Provinces, and from that district and the Punjab reports come of damage from westerly winds or from drought. A dreary picture enough.

We hear that the offer of Mr. Moberley Bell of £320,000 for the *Times* newspaper properties, exclusive of the buildings, was opposed before the Judge on Monday by a body of the proprietors, and that the Judge intimated his desire for more information before he gave his decision as to whether the offer was adequate or not. This was a wise ruling, for hitherto outside bidding has been rendered impossible by the absence of proper information about the past profits and present position of the thing to be sold. Because of the secrecy maintained, only a venturesome person like Mr. Pearson alone had the courage to come forward and bid high in order to lay hold of a still valuable asset, the possession of which might, perhaps, have helped the capitalists behind him to transfer their other newspaper undertakings along with the *Times* to the public. It is alleged, for example, that one of Mr. Pearson's capitalists has dropped £200,000, or sunk it without present hope of recovery, in the *Standard* alone. Now, however, there may be a chance for outsiders who would really devote their energies and capital single-handedly to the resuscitation of the *Times*—or, failing them, a fair chance for Mr. Bell. Responsible public accountants ought to be called in and given every opportunity to investigate the books, so as to draw up a report and balance-sheet which would leave goodwill almost the only thing to be haggled over. It is understood that the Harmsworths are behind Mr. Bell.

The Court of Appeal has agreed with the Railway and Canal Commissioners in the view that the proposed agreement in virtue of which the Great Central Company's property was to be leased for 999 years to the Great Northern Company is by law barred. We have never seen how it could be possible to come to any other decision. The move was too smart altogether, and prejudice was created against the scheme, quite apart from any question of rivalry between the various railroad companies or inconvenience to the travelling and trading public, by this very smartness. The agreement was to be rushed through within what was supposed to be the time permitted by an Act, the provisions of which were about to elapse. Judgment of the Court was given yesterday, and the Master of the Rolls at once put the companies out of pain.

Always about this time of year the New York *Commercial Chronicle* sums up the world's wealth in gold—gold the stimulus and prop of industry and credit, especially credit. The figures for the past year are to some extent estimated, but statistics are available for most countries so that the estimate cannot vary much from the actual out-turn, and the figures given by this eminent authority show an output of 19,584,844 oz. for 1907 of a value of £83,192,500, or about £910,000 more than the value of the output for the preceding year. Australia, the United States, Canada, and Russia are all put down as yielding a small quantity of the metal, but the decline is seldom important, and is more than offset by increases in the South African and Mexican output, as well as the small estimated gain from miscellaneous sources. Going back over a period of 21 years the output of gold for the whole of that time is put at £600,060,000, of which about £459,000,000 is unaccounted for. Presumably it has been used in the arts, coined and put in circulation, or gone out of sight in hoards. The stock of gold in European banks is certainly much larger than it was 21 years ago, and increased in the past year compared with 1906 by £19,000,000, but it is remarkable to note the extent to which the gold seems to be utilised in other directions than as a basis for credit or as currency. Presumably, however, there is an immense amount of currency hoarded in all countries, except the three or four whose banking credit has attained to a high degree of stability.

Really those London General Omnibus people are surpassingly clever. The concern is in a most dilapidated condition and were an independent investigation made into the value of its leasehold property and stock the result would probably surprise even the most macadamised mind. It was almost at the end of its tether, in fact, and could have raised no more money on its own possessions, yet in circumstances like these the board comes valiantly forward and buys up the Vanguard Motor-bus Company. Various advantages will be gained by this stroke, but the greatest of all is the opportunity to create and issue £500,000 in "C" debentures ranking below the £300,000 first debentures all issued, and an equal amount of second or "B" debentures partly issued. And although the total amount to be given in debentures and preference shares to the Vanguard Company for its property taken over is only £160,000, the board of the London General Omnibus Company proposes to obtain powers forthwith to issue the above-mentioned £500,000,

together with £150,000 of the "B" debentures. Much more light is required upon the details of the agreement, carefully veiled in the memorandum sent round to the Omnibus Company's shareholders, but they point to considerable additions to the preference and ordinary capital. No doubt these details will be revealed at the shareholders' meeting to be held on Thursday next and impatience is out of place with such a concern. The only feeling the contemplative mind has room for is one of dazzled admiration.

"What do you think of the Cordova and North-Western Railway reorganisation scheme?" we are asked. The answer is we think nothing of it. Smart men seem to have the business in hand and it is probably too late to oppose them even were that worth while. No money is ever likely to be paid by that province on account of its guarantee and the new capital, of which £248,000 is to represent fresh money to be raised for much-needed renovations, is not unlikely to be more marketable than the old one. Here are the contrasted totals: Present capital—£39,000 prior debentures; £1,057,067 five per cent. income debentures, called that because they never received any income; £350,000 share capital; and dishonoured interest claims against the province, £1,164,000. Proposed capital of reorganised company: £600,000, of which £317,120 will go to the income debentures and £35,000 to the ordinary shareholders, leaving the other £348,000 for effective use. Over and above "claim certificates" for £1,200,000 nominal are to be handed round on the off chance that one day something may turn up!

Continental Memoranda.

Less effect than might have been looked for has been produced upon the great French banks by the American crisis yet they have suffered in various ways and a summary of their position, including the Société Marseillaise, but leaving out the Crédit Foncier, shows a diminution in the cash in hand, but only of about £1,408,000, a decline also in the amount of loans and advances and in that of sight deposits, acceptances remaining at about the same figure of £19,000,000. The commercial bill holdings of the various banks was at the end of December merely £96,500,000 that figure including the Crédit Lyonnais, the Comptoir D'Escompte, the Crédit Industriel and others.

Paris has suffered very severely by the fall in Rio Tinto and De Beers shares, and a calculation made by M. Edmond Thery yields quite gruesome results. At the beginning of March last year the market value of Rio Tinto and De Beers shares was £71,250,000 and at the beginning of this month this value was reduced by about £37,085,000, the decline in the value of Rio Tinto shares being £18,405,000, and in that of De Beers £18,680,000. M. Thery calculates that French capitalists held between 50 and 60 per cent. of the ordinary shares of both companies, and if that estimate is correct, which he thinks probable, then the depreciation in these two securities alone has exceeded £37,000,000 within a single year, more than half of it falling on Frenchmen. The wonder is that a much greater effect has not been produced upon the market. It has suffered, but the suffering has consisted more in inertia than in any active recoil.

Much attention continues to be given to Egyptian affairs in French financial circles, as is proper because we many years ago permitted the French investor to absorb the greater part of the Egyptian debt. Even after British control was established in the Nile Valley the confidence of our investors was not great enough to induce them to hold on to their Egyptian stocks. Directly the better government of the country brought a rise and tempted French buying so that a profit came in sight British holders sold. So France watches over things Egyptian and there have been rumours within the past week that an important bank failure was about to occur in Egypt. There is undoubtedly much distress in gambling circles there owing to the disastrous fall in the price of cotton, which has come upon the top of the collapse of the land craze last year. Thanks to this cotton crisis a large commission house on the Alexandria Cotton Bourse has been compelled to stop payment, and the agony of the financiers is finding expression in undiluted abuse of the Government. It has been appealed to to come to the assistance of the land and cotton speculators by providing more capital for the Agricultural Bank, which it might lend to the other mortgage manufacturing institutions or to the holders of cotton. Also the erection of the National Bank into a State bank is clamoured for, and as the Government turns a deaf ear to all such appeals it is now roundly accused in Egypt of desiring to squeeze out all private owners so that it may get complete hold of the land and everything in it for itself. This is absolute nonsense, and we mention it here merely as an indication of the state of distress into which the financier in Egypt has fallen. His wailing is echoed in Paris. There also the story originates that Sir Ernest Cassel, in conjunction with the National Bank, is about to found a new Produce Bank of Egypt is to help the cotton gamblers.

It is a 5 per cent. Russian loan now that is coming, and May is to be the chosen month, but rumour has not yet indicated the amount.

Interesting facts are being disclosed by the balance-sheets of the great German banks, and they are much on all fours with those furnished by the French banks, only more so. That is to say, the internal industrial crisis in Germany is telling upon the big German banks to a far greater degree than the American crisis has told upon the French banks. Some of them are showing diminished profits and to a certain extent diminished resources, and most of them seem to have formidable amounts locked up through their diligence in business as company promoters. The Deutsche Bank, for example, the greatest and strongest of them all—a bank whose balance-sheet foots up to £76,397,000—participated during 1907 in a swarm of miscellaneous new emissions representing demands upon capital for upwards of £200,000,000. All sorts of adventures appear to be taken up by these banks, but the Deutsche Bank's greatest activity was shown in finding capital for other banks and for municipalities. It also made an issue of £500,000 for a King William Mine, £200,000 for an enterprise called the Hagen Accumulators, £200,000 for a Dresden freehold company and £375,000 for the Upper Silesian Railway. These are samples indicative of the kind of business done, and in the total given by us we have not included £20,000,000 of 4 per cent. Prussian and German Treasury Bills, in whose sale the bank participated. The bank probably merely underwrote most of these issues, and doubtless made a profit out of each, but where risks are high, as in the case of many of these new creations they must be, it is inevitable that some portion of the new scrip should stick in the safes of the sponsoring medium. Its Stock Exchange loans, however, were less at the end of last year than at the same date in any of the preceding three years and amounted to only £7,747,000. In spite of drawbacks, moreover, the Deutsche Bank made a gross profit last year of £2,679,000 as compared with £2,498,200 the year before, and the nett profit was £1,519,000 compared with £1,457,350 for 1906, so the dividend was maintained at 12 per cent., the figure paid since 1904, which is a very good yield on a paid-up capital of £10,000,000, and its position is in other respects remarkably strong.

A good deal more interest has been excited in German financial circles by the figures of the Dresdner Bank and its dependent the Schaaffhausen Bank for the past year. This is because the Dresdner is one of the most venturesome of all German banks, and keen to take a hand in business going on in any part of the world. Thanks to its assiduity it seems to have been subjected to several nasty losses during 1907, and its participation in American railways and South African mine adventures alone seems to have brought a sensible

reduction in profits. It also lost about £70,000 by the shares of the Sovereign Bank of Canada, but all such misfortunes were balanced to some extent by the high rates of interest earned upon its credit available for lending in the market. So earnings increased by £130,000, but expenses and taxes took £35,000 more than in the previous year, and altogether the nett profit fell off by £122,500. A reduction in the dividend, therefore, became inevitable, and the bank pays 7 per cent. against 8½ per cent. in 1906, 7½ per cent. in 1904 and 6 per cent. in 1902. Its allied bank, the Schaaffhausen, shared its fortunes, and both banks show declines in their current account liabilities, but acceptances are high; still, in both instances, those of the Dresdner Bank amounting at the end of the year to about £10,475,000 and those of the allied bank to £5,227,000. The Schaaffhausen dividend has also been reduced to 7 per cent., and the worst of it is we cannot be at all sure that the crisis is over in Germany. On the contrary, very many of the adventures German banks have plunged into have still to justify their existence, and as industrial activities diminish many of the companies so diligently promoted in furtherance of German industry during the past decade or so will be put to a severe test.

The dividend of the Hamburg-American line has been brought down from 10 per cent. to 6 per cent. The company, like all lines crossing the Atlantic, has suffered from a variety of adverse conditions in the past year, and this particular one was also hurt by the strikes of seamen and dockers in Hamburg, Antwerp, Rotterdam and New York. There was, however, less decline in the number of emigrants to the United States than had been stated, and even that decline was partly counter-balanced by the numbers coming home. The exchange of goods, however, between Germany and the United States was much diminished towards the close of the year, and the company had to issue £1,500,000 more capital in order to buy eight new steamers for its West African service from the Woermann line. Only £100,000 of this, however, is to appear in the market at present, but the whole has been taken up by a syndicate of banks in the German manner. Gross profits fell from £1,850,000 to £1,500,000 and nett from £500,000 to £400,000, so that business was extremely bad for 1907.

The dividend of the Austrian Laender Bank has been reduced to 4 per cent. for the past year, which is 2½ per cent. below the rate for 1906. "Unpleasant experiences" in London, where the bank has a branch, are assigned as chief cause of this disagreeable experience.

Just at present affairs are not shaping well for the Russo-Chinese Bank, an institution created to finance the Tsar's acquisitions in Manchuria—in all further Asia in fact—and to bring the Chinese Empire into credit subjection to Russia. "Provisionally" its profits for 1907 are put at £350,000 but the situation of numerous "clients" is it seems precarious, and the bank is making ready to encounter losses which may absorb all the profits and part of the reserves as well. Happily the reserves are pretty ample, aggregating as they do £920,000, of which £450,000 is "ordinary" and £470,000 "supplementary."

The Week in Mines.

The Carry Over.

The settlement which commenced on Monday gave rise to a good deal of apprehension, owing to the severe depression which prevailed during practically the entire fortnight. One or two important failures would have caused no surprise, and serious difficulties unquestionably arose, but they were got out of sight in some way or other, and so far only one small failure has occurred. The speculative position does not show any particular change, and the account open for the fall is apparently no greater. The general South African rate was 6-7 per cent. Modders and Johnnies were arranged at 5½-6½ per cent., Gold Fields, Rand Mines, and Randfonteins at 4½-5½ per cent., and East Rands at 4-5 per cent. In the Diamond group, De Beers were continued at various figures between even and 3 per cent., Jagers at 4-5 per cent., Premiers at 4½-5½ per cent., and New Vaals at 5½-6½ per cent. On Rhodesians the usual charge was 6-8 per cent., but Tanganyikas were borrowed on at 4-6 per cent., and Chartered at ¼d.-½d. The West African and West Australian rates were 6-7 per cent., Siberians and the American group were done at 6-8 per cent., and Australian Copper shares and Broken Hills at 5-7 per cent. On Rio Tintos and Anacondas the rate was 3-4 per cent. The making-up list was most disheartening. Diamond shares, of course, suffered most during the account, and De Beers deferred were down 2⅝. The preferred fell 1⅛ and both Premier issues ⅜, while Jagers preference and deferred dropped ¼ and ⅛ respectively. Central Minings fell ⅝, Ferreiras ½, Crown Deep and Modders ⅜, Rose Deep and South African Gold Mines 5/16, Durban Roodepoorts and Eldorados ¼, Rand Mines, Apex, Glen Deep, and Rand Collieries 3/16, and East Rands 7-32. In the West African list, Abossos were 3-32 worse, while West Australians showed some irregularity. Horse Shoes rose ⅜, and Lake Views 3s., but Kalgurlis were ⅜ down, and Great Fingalls 7-32 lower. The most conspicuous movement in Broken Hills was a loss of 11-32 in Proprietarys and the Copper division, Utahs were ½ up and Spasskys as much easier. Anacondas put on 7/16 in the fortnight, but Cape ordinary lost ⅜, and Mount Elliotts 3/16. Rio Tintos made up as before. Tin shares gave a fall of 7-32 in Kledangs, and among Miscellaneous, Waihis rose and Progress of New Zealand fell ¼, and Mysores showed a loss of 7/16.

South African Gold.

Any hopes that the new account would see things in better shape had soon to be abandoned. The Kaffir Circus has been flat and miserable, and shows no resisting power to the small but steady sales. Any support that comes consists entirely of bear closing, and ordinary business may be said to have come absolutely to an end. The output and labour returns for February were exceedingly satisfactory, but if the figures did not provoke sales, they certainly did nothing to prevent them. The market seems to be without a friend, and no one ever has a good word to say for it. People are sick and tired of standing up in defence of the mine bosses in face of the almost daily records of some fresh misdeeds, and no matter how far prices drop, not a soul comes forward to buy shares. Paris has been in a muddle, and has thrown over a good deal of stuff in the course of the week, whether in connection with a deceased estate, as some said, or on account of people in difficulties it is hard to say. Probably both statements were true. Then came the report of the Mining Industry Commission, and the bears set out to have a high old time, but their calculations were a little upset by a turn round on the part of French operators. The bourse was by no means alarmed by the Commission's recommendations, and as there was no precipitate rush to sell, the banging tactics did not meet with great success. Prices were quite flat enough, but great pains were taken to fill the market with the idea that the proposals were altogether too revolutionary for serious consideration. The speech of General Smuts on the day previous to the issue of the Commission's report, in which he said that "while favouring the greater employment of whites in the mines, they are not prepared to upset the economic foundations on which the mining industry has been built up, and will not take away what it has until a substitute has been found" was considered quite reassuring. Moreover, the fact that the Transvaal Government is, in spite of denial, negotiating for the importation of Malagasy labour was taken as a clear indication that the abolition of coloured labour is not dreamed of in official circles. Some low prices were touched during the week, Rand Mines being down to 4⅞, East Rands to 3⅛ (the amalgamation basis was 3⅛), Gold Fields to 2 23-32, and Modders to 5⅜.

Land, Finance and Diamond.

Diamond shares have again had a very bad week, and at times the market has been quite wild. It is impossible to describe all the ups and downs, but De Beers were lowered to 10⅞, and vigorous efforts were necessary to get them over 11 again. The support given frightened in a few "bears," and Paris suddenly and unexpectedly becoming a buyer the price rose rapidly to 11¾. But the improvement was too good to last and bang it went again to 11⅛. The round figure was soon reached and, while another reaction took the shares up again, the market is thoroughly unsettled and the outlook as obscure as ever. The long drawn out negotiations for the revenue of the diamond agreement create an ever-increasing fear that the parties cannot come to terms and rumour credits the Premier with constant threats to break away and go off on its own. A rupture now would probably shatter the monopoly for all time, and artificial values would pass away for ever. Premiers have touched extremes of 5 1/16 and 4¾, this being comparatively steady, and Jagers have hung round 3¼-3⅜ all the week. The small rubbish attracted no attention. Central mining shares were got back to 10⅞, Gold Trusts touched 1 1/16 and the general run of Land and Finance things, such as General Mining, Goerz, Johnnies, Hendersons, and Oceanas lost pence. On a rumour that the Chartered shareholders were actually taking up the new issue the old shares were pushed up to 14s. 4½d., but this kind of thing could not last and on the day the lists were closed the price receded to 13s. 4½d., say 13s. above their value as a "spec." Letters were unsaleable, option certificates 6s. 9d., and the new shares 6d. premium for special settlement to buyers.

Australasian and West African.

In the West Australian list the tendency was fairly good at first but the market developed irregularity after a time and a few things went back. Broken Hills have been exceptionally quiet, but prices were inclined to improve. The Colony sent a few buying orders and although silver was dull the other metals hardened a little. Zincs were nearly 5s., and the preference picked up to 1 1/16. The market is awaiting with a good deal of interest the first results from the new plant. West Africans did not show up very well and nearly all the leading shares lost the turn. Akrokerris were easier on the circular referred to elsewhere.

Copper, Tin and Miscellaneous.

Sensational rumours have been in circulation as to the state of affairs at the Rio Tinto mine. It was declared that the subsidences were so serious as to entail the suspension of operations for a time. This is hardly believable because if matters had reached such a serious pass the directors would assuredly have made some communication to the shareholders. The metal has fluctuated somewhat narrowly after an opening spurt, but Tintos have been as high as 61¾ and down to 59¾. Anacondas, Amalgamated, and Bostons were influenced chiefly by the movements in Yankees, but Cape Preference dropped sharply on the refusal of the shareholders to sanction their conversion into ordinary shares. Great Cobars went over 6 but did not quite hold the price, and Spasskys slumped on the new capital proposals. Mount Elliotts hardened and Lyells were pretty firm on good 1,000 ft. developments. Tin shares were steady as a rule and Dolcoaths advanced. The American things moved within small limits. Esperanzas were a poor market and Camp Birds were down to 13s. El Oros however were a trifle up. Apart from Nundydroogs, which were a little affected by fears of what the report might contain in the matter of future capital outlays, the Indian things had a good tendency. Waihis continued firm but Progress of New Zealands and Talismans were a little easier.

National Provincial Bank of England.—The statement for February 26 shows liabilities on notes or bills of £723,036, and on simple contracts of £55,437,028, against assets consisting of cash on hand and at Bank of England £8,418,237, money at call and short notice £3,579,740, British Government and other securities £14,661,691, and bills of exchange £34,850,396.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Transvaal Gold Returns.—For the month of February the gold output from the Witwatersrand and outside districts was 541,930 ozs. valued at £2,301,971, being a decrease of 18,399 ozs. and £78,153 in value, compared with the preceding month. This decline, however, is much less than might have been expected as February contained two days less than the first month of the year, and also included the Chinese New Year. The daily average was 18,687 ozs., against 18,075 ozs., a notable advance.

Native and Coolie Labour.—The returns are again highly satisfactory. There is an increase in the number of natives of 7,641, bringing up the total employed to 125,845, and the Chinese have declined rather more than 3,000, leaving 28,400 in the country on February 29. It is satisfactory to learn from official statistics that the mortality from disease among the natives during 1907 was the lowest ever touched, being at the rate of 28 per 1,000. The number of deaths from accidents was 4.42 per 1,000.

Buluwayo Town-Stands Syndicate.—This is a small and not exactly flourishing affair, but it is not much use looking to Rhodesia for profitable enterprises. Rentals in the year to August 31 last were £1,044 against which rates, insurance, and light took £247, and repairs £128, leaving £668 nett. A few pounds came in from other sources, but administration charges

and directors' fees, &c., took £758, and there is a deficiency of £64 to be added to that brought forward, making £3,117 in all. No addition has been made to the reserve for depreciation of the properties, and the directors say the auditors agree with this policy, but in their certificate the latter seem to throw the responsibility on the board. However, the agents in Bulawayo seem satisfied with the condition of affairs and think the "general improvement in the country" must in time "have a beneficial effect by bringing business and population to the various centres of which Bulawayo is the largest."

Witwatersrand Deep.—As we showed when outlining the scheme recently, only a portion of the Driefontein Deep property is embraced in the East Rand fusion, the remainder being acquired by the Witwatersrand Deep. The claims number 125 and are situated immediately to the south of the latter company's property and the purchase price for these and about £40,000 cash is 36,623 shares ranking for dividend after June 30, 1908. A circular will be issued to shareholders giving full particulars of the scheme, but it is to be assumed that the Witwatersrand Deep shares are the sole property of the Driefontein Deep and have nothing to do with the East Rand.

Spassky Copper Mine.—It will come as a keen disappointment to those interested in this Russian enterprise to find that before all the high hopes hitherto held out can be realised a goodly sum of money must be put up. Hints have already been conveyed of the necessity of railway extension, and the board is now advised that in order to obtain the full benefit of the larger plant now virtually completed it is desirable to continue the railway from the smelters to the Yuspenssky mine, to build sufficient coke ovens to provide coke instead of coal for the furnaces, thus to smelt far more economically and efficiently, and to erect concentrating works. By concentration large quantities of low grade ore can be profitably utilised, and the smelting of the higher grades will be easier and more economical. The railway line has already been surveyed, and if orders for rails and sleepers are given at once the first section, which includes the most difficult portion of the country for carting, can be constructed and open for traffic by the end of this summer, after which haulage by the present means of traction over the remainder of the road can be provided with certainty for all requirements. The financial proposal takes the form of a debenture issue to the amount of £170,700 at 6 per cent., bringing up the total issue to £300,000, and to be redeemable at par on July 1, 1918, or at 105 at any time after January 1, 1912. Up to the latter date the debentures will be convertible at the option of the holders into ordinary shares at the rate of £3 per share. Share capital is to be increased by 200,000 new shares, of which 100,000 will be required for the conversion. It is considered probable that certain railways projected and already surveyed by the Russian Government may have an important bearing upon the company's interests, and may justify the further extensive equipment of the Karagandy collieries and other works. It is largely in view of this contingency that the directors recommend raising the nominal capital to £500,000.

No. 2 South Great Eastern Gold Mining.—Something like a crisis appears to have been reached in the affairs of this once flourishing mining company. Time was when the company paid extraordinary dividends on its tiny capital of £2,400, but lately the quantity and value of the ore have been falling off, and for 1907 there is no distribution. In the previous year £37,800 was paid, and high-water mark was reached in 1903 with £115,200. Only 8,077 tons were crushed in the half-year to January 7 yielding 3,119 ozs., and the profit made was something like £48. Total credit to profit and loss is £36,960, but this is chiefly represented by machinery, plant, and buildings. Efforts to lease a portion of the property on tribute have come to nothing, the shareholders not showing sufficient interest to make up a quorum at the confirmatory meeting held in connection with the matter. Shareholders are asked to reconsider the question, and meanwhile a resolution is to be brought forward to place the company in voluntary liquidation, sell the property, and divide the proceeds among the shareholders. Assuming that £20,000 nett is realised, the amount divisible would be about 2s. 6d. per share, but the directors are not in favour of winding up, and strongly advise the continuance of operations.

Akrokerri (Ashanti) Mines.—Things have not been altogether satisfactory with this company's mine for some little time, and in view of the decreased value of the reef in the lower levels the directors have had the property examined by an independent expert who was requested to report upon the pay ore available for extraction and the prospects of the future development of the mine. The gentleman sent out was Mr. A. Davies-Evans, and his conclusions are of a most gloomy character. There appeared to be less than 12,000 tons of pay ore available for stoping on January 1, which at the present rate of extraction would be exhausted in four months; but there was a reasonable supposition that some portion of the reef immediately below the 4th level of the southern workings would furnish enough pay ore to last a further two or three months. It is considered quite clear that the life of the mine is very limited unless another body of good ore is soon discovered. Unhappily the prospects at depth by the present indications are distinctly discouraging, and it seems that the only chance is the possible discovery of another pay chute to the south at a higher elevation. In the circumstances the directors have cabled instructions to the manager to endeavour to locate the extension of the reef by means of small native shafts along the probable projection of the line of reef as indicated by the existing workings and also to continue in a southerly direction one of the levels of the southern workings where the formation can still be followed. Altogether a pretty dismal outlook.

Hall Mining and Smelting.—This company's report for the 18 months to December 31 [illegible] affairs. It may be recalled that the company [illegible] the Hunter's-Hope mine, but [illegible] finally completed and operations [illegible] later, began [illegible] month's working was most disappointing, the costs being about $3 in excess of those under the old conditions, and in December Mr. R. R. Hedley, the [illegible] manager costs were reduced about $4 per ton, but [illegible] evident that a [illegible] contents, the values and quantities of the stock [illegible] made. Subsequent reports showed that the [illegible] fee, with far [illegible] there is to [illegible] was impossible to carry on operations without them negotiations were opened for leasing the mines. This might have succeeded, but the financial crisis in America, which soon extended to Canada, upset calculations. The [illegible] on the 18 months' operations of £24,172, making the total [illegible] £40,859, and there are floating liabilities, including £51,[illegible] due to the bank, of £56,776. The cash balance is £300, and a proposal to raise funds on prior lien debentures was not finally accepted. Subject to the approval of the debenture trustees negotiations are pending to lease the Silver King mine and smelter, with the option of purchase on terms that it is hoped may conserve the shareholders' interest in the property. These terms were explained fully at the meeting held on Thursday, and seem reasonable in all the circumstances.

Famatina Development Corporation.—It is with the greatest pleasure that the secretary informs the shareholders that a satisfactory trial run of the smelting plant has been made, but as is usually the case with a new and extensive plant, some slight adjustments are necessary. Continuous smelting operations should be in full operation next week. Mail advices from the mine superintendent are to the effect that as soon as the smelter has had a satisfactory run for one month a second furnace should be ordered. This would enable the company at a very small cost largely to increase the present smelting capacity of 150 tons per diem. The directors are giving the question consideration, as the quantity of ore now developed in the mine is said to fully justify this early extension to the smelting plant.

White Well Copper Mines.—Shareholders of this West Australian copper company ought to be encouraged by a circular just issued by the directors, containing some details of the present position and future policy. That the property is well situated from the transport point of view admits of no question, and quite a number of people are unanimous in regarding the mine as highly payable and likely to show rich developments. In November, 1906, the ore available above water level was estimated at 200,000 tons giving high averages, and the mine manager in his latest report puts the figure at 250,000 tons. Samples recently taken from 60 faces having an average width of 6 ft. gave 12.87 per cent. of copper, a wonderful return. The ore is unusually free from deleterious matter, suitable fluxes are readily obtainable, ample water supplies have been secured and mining and other timber is available in the district. Quite a mining paradise. Active development operations have been going on at the mine since September, 1906, and a considerable amount has already been expended in proving and developing the property. Up to the present 2,617 tons of high grade ore (20 per cent. to 32 per cent.) have been shipped to Europe, where contracts have been made for the sale of the ore over a period. A large profit has already been made on the shipments realised, and the mine manager reports that there will be no difficulty in maintaining and increasing the monthly shipments. Later on the cost of transport will be materially reduced, owing to the completion of the railway. It is the directors' intention to erect a smelter capable of treating in the first instance 100 to 150 tons of ore per day, which is calculated to yield a monthly profit of £6,000 to £7,000. Sufficient ore has already been developed and blocked out to supply the smelter for some time to come, in addition to which there are some 20,000 tons of smelting ore now lying at grass.

Despard Coal Company.—This is a small Leicester colliery company, but it did well enough in the year to December 31 last. Revenue was £22,292, and from it £5,000 is placed to reserve, £5,507 is applied to writing off the purchase and formation expenses and £1,500 is allowed for depreciation. Sum left is £10,285, and after meeting debenture interest a dividend of 10 per cent. is declared with £3,855 carried forward against £1,569 brought in. The present is the first contribution to reserve, but none of the balance-sheet items look inflated, and while liquid resources are substantial there is little to meet in the way of floating liabilities.

Messrs J. Henry Schroder and Co. have received a cable from their Santos agents, advising them that they have further encashed £14,650 in respect of the surtax collected weekly, for the service of the State of San Paulo 5 per cent Exchequer Bonds, making a total of £675,000 encashed since August 1.

Mr. Colin Mackenzie Black, W.S., has been appointed to a seat upon the board of the Scottish Union and National Insurance Office, rendered vacant by the retirement of Mr. A. D. M. Black, W.S.

Mr. B. Lazarus, who retired some time ago from the jobber firm of Lazarus Brothers, returns to business at end of March, joining the firm of Spielmann, Ansbacher, and Co., brokers, of 20, Copthall Avenue, E.C.

Letters to the Editor.

GROCERS' LICENCES.

Sir,—The attention of my executive has been called to the article which appeared in your issue of the 7th inst. on "The Licensing Bill," and in which you say that there are "significant advertisements in the *Grocer* newspaper which give proof of the facilities for indulgence in secret drinking given by the off licences so easily procured. 'Must be a good averager' is the qualification often demanded in these advertisements, and a 'good averager,' we are informed, means a man skilled in the art of spreading the cost of a bottle or bottles of gin, whisky or other intoxicants bought by the housewife all through the prices of her tea, sugar, bacon, &c., so that the purchase may be hidden from the husband."

Evidently, Sir, the writer of the article knows a very great deal more about our trade than we know ourselves, for both the expression "good averager" and the practice which you state it indicates are unknown amongst us. Indeed, may I point out that if any person holding a licence is found doing this sort of thing the offence is one punishable with the loss of the licence under Sub-section 4 of Section 10 of the Act of 1902. It was owing to innuendoes of this description, which we were sure were baseless, being so freely passed around by writers in newspapers and speakers on platforms, that this federation got that section put into the Act of 1902, and when you have realised that, Sir, perhaps you will see your way to withdrawing the statement which we can assure you is absolutely without foundation.

You also say "the off licence so easily procured." Are you aware, Sir, that no wine and spirit licence can be procured without the certificate of the justices, and are you aware, Sir, that in the latest statistics published on the subject, off licences have fallen in the proportion per 10,000 of the population from 7.4 to 7.06. Are you also aware, Sir, that in the period over which the latest statistics are given for 1907 there was a reduction of no fewer than 200 off licences, and that this reduction is steadily increasing? We hope you will forgive our saying that so far from these licences being easily procured they are very difficult to obtain.

We feel sure that you would not knowingly misrepresent any trade, and therefore confidently ask the favour of your insertion of the foregoing.—Yours truly,

Arthur J. Giles;
Secretary, National Federation of "Off"-License Holders' Associations.
49-51, Eastcheap, E.C., March 10, 1908.

ELEY BROTHERS.

Sir,—The affairs of Eley Brothers, Limited, seem to be going from bad to worse, and those who purchased their shares at £40 and upwards are indeed to be pitied. Every year the dividends are on a diminishing scale, and the last one declared works out at but a few pence per cent. per annum as the yield on the high prices which only a few years ago people were prepared to pay for the shares in this most unsatisfactory of industrial undertakings.

Only ten years ago, the £10 shares were quoted at 40¾: now they are at a tremendous discount! Surely there is something wanting in the management to account for a fall which is almost unprecedented.

It is surprising that the directors of the company can square it with their consciences to draw £2,000 for remuneration when, as a result of their efforts, some, at least, of the proprietors are only getting a yield of a few coppers per cent. per annum on their investments!

Yours, &c.,
Almost Zero.

Baku Russian Petroleum.—Production of crude oil for week ending March 7, 213,000 poods, equals 3,434 tons.

The Bank of Adelaide has been instructed by the Government of South Australia to give holders of the Colony's issue of 4 per cent. bonds to the amount of £1,440,000, maturing July 1 next the option to surrender these bonds for cash, with accrued interest to date of surrender (principal and interest payable three days after lodgment of bonds with the Bank of Adelaide), or of converting not exceeding £500,000 of the bonds into 3½ per cent. inscribed stock, on the terms set forth in the advertisement to be found in another column.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and March 7, 1908:—

Revenue and other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Mar. 7, 1908.	Total Receipts into the Exchequer from April 1, 1906, to Mar. 9, 1907.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,333,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,451,487
Revenue.			
Customs	31,923,000	30,508,000	31,567,763
Excise	35,965,000	33,271,000	33,694,089
Estate, &c., Duties	18,697,000	16,994,000	18,057,745
Stamps	8,000,000	7,465,000	7,480,000
Land Tax	700,000	2,330,000	2,260,000
House Duty	1,900,000		
Property and Income Tax	30,500,000	27,212,000	27,059,000
Post Office	17,600,000	15,420,000	15,320,000
Telegraph Service	4,400,000	4,115,000	3,995,000
Crown Lands	500,000	470,000	480,000
Receipts from Suez Canal Shares and Sundry Loans	1,100,000	1,145,995	1,076,747
Miscellaneous	1,550,000	2,051,504	1,819,030
Revenue	152,835,000	140,982,499	142,769,882
Total, including balance		147,914,922	153,221,369
Other Receipts.			
Repayment of Advances for Bullion		1,250,000	1,200,000
Repayment of Advances for Interest on Exchequer Bonds under the Capital Expenditure (Money) Act, 1904		180,000	180,000
For Treasury Bills (nett amount)		2,500,000	—
Under Telegraph Acts, 1892 to 1907		670,000	1,205,000
Under Naval Works Acts, 1895 to 1905		400,000	2,462,000
Under Military Works Acts, 1897 to 1901		150,000	300,000
Under Public Buildings Expenses Act, 1903		231,000	165,000
Under Public Offices Site (Dublin) Act, 1903		—	10,000
By issue of Exchequer Bonds under the Cunard Agreement (Money) Act, 1904		400,000	1,200,000
Suez Canal Drawn Shares		7,029	7,575
China Indemnity		311,822	507,081
Temporary Advances, Deficiency		4,500,000	2,500,000
Temporary Advances, Ways and Means (including Treasury Bills, £500,000 in 1906-1907)		1,500,000	3,500,000
Total		160,014,773	166,458,025

Expenditure and Other Issues.

—	Estimate for the year 1907-1908 (including Supplementary Estimates).	Total Issues out of the Exchequer to meet payments from April 1, 1907, to Mar. 7, 1908.	Total Issues out of the Exchequer to meet payments from April 1, 1906, to Mar. 9, 1907.
Expenditure.	£	£	£
National Debt Services	29,500,000	25,110,836	25,951,376
Other Consolidated Fund Services	1,685,000	1,522,122	1,534,719
Payments to Local Taxation Accounts, &c.	11,205,000	9,492,482	10,251,388

Surplus Revenue applied to reduce Debt		5,398,822	3,465,020
Suez Canal Drawn Shares applied to reduce Debt under the Finance Act, 1898		7,029	7,575
China Indemnity, applied to reduce Debt under the Finance Act, 1906		311,822	507,081
Deficiency Advances repaid		4,500,000	2,500,000
Ways and Means Advances repaid		1,500,000	3,500,000
		147,475,538	153,350,857

Balances in Exchequer:—	1908. Mar. 7.	1907. Mar. 9.		
	£	£		
Bank of England	11,457,424	11,881,696		
Bank of Ireland	1,082,011	1,225,472		
			12,539,435	13,107,168
Total			160,014,773	166,458,025

Note.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

Mem.—Treasury Bills outstanding on March 7, 1908:—

Bills issued by Public Tender	£10,713,000
Bills otherwise issued	1,500,000
Total	£12,213,000

Treasury, March 10, 1908.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending March 7, 198,000 poods, equals 3,192 tons.

London City and Midland Bank.—The statement for period to February 27 showed current, deposit and other accounts of £51,647,276, and acceptances on account of customers £3,311,147 against assets consisting of cash in hand and at Bank of England £9,748,358, money at call and short notice £6,498,919, investments £6,628,735, bills of exchange £5,155,670, and advances on current accounts, &c., £28,692,815.

TRADE AND PRODUCE.

Wheat.—The activity of the markets has not been kept up, and business generally has been very quiet, with prices lower. American winters and River Plate both being in good supply dropped about 2d. under last week's currency, other spot parcels from 1d. to 1½d. Futures also fell a little each day, but recovered again yesterday, and only show a loss on the week of about 1½d. for July. Prices of English samples favoured buyers about 6d. per quarter, and supplies were moderate. Farmers' deliveries for last week came to 31,459 quarters averaging 30s. 5d. against 71,183 quarters averaging 26s. 8d. in the same week of last year. Imports are again higher this week than last at 475,393 quarters against 537,207 last year, but the quantities of wheat and flour estimated to be on passage to the United Kingdom is down a little at 4,750,000 quarters against 4,815,000, but to the Continent the estimate is 2,705,000 quarters against 2,460,000 last week. American markets have fluctuated considerably each day, and dealers have not had much confidence in them nor in the very conflicting rumours that have manipulated them. The visible supply has decreased 1,544,000 bushels on the week.

Wool.—This week's trade in colonial wools is exactly the same as last, nothing doing and prices mostly lower. Next week's London sales will have to come down fully 1½d. per lb. in crossbreds to meet Bradford quotations, but it is considered very doubtful if they will do that, and the situation is extremely difficult. Business in yarns continues very irregular, spinners at last are getting short of orders, and are beginning to cut prices to try and get them, so far without much success, and the uncertainty everywhere seems great. English and Scotch wools also are lower, both for home and export trade, and in some cases the loss is considerable. Yarn exports are better, but with little new business coming forward. Manufacturers also are not regarding the future very confidently, and it is generally expected that a bad season is coming throughout the country. Any business of a speculative order is avoided.

Cotton (from our Manchester correspondent).—Although no real improvement has transpired in our market during the past week, the prospects in some directions seem to be a little better. Rather more business has been offering in both yarn and cloth. Sales, however, have given very little satisfaction, as transactions have occurred at low rates owing to pressure for fresh orders. The American cotton situation shows very little change, but the crop is making slow progress, and it does not look as though the yield will be more than 11,500,000 bales. There is a fear in quarters of a shortage in supply owing to the Egyptian and Indian growths being less than last season. Users, however, will not require so large a quantity owing to the slackness in trade. The all-round demand for piece goods has been a little more extensive, but the total sales have not been at all important. The market is looking for greater activity on the part of Indian shippers, and until this comes about there is little prospect of a better feeling throughout the whole market. The smaller outlets of Madras and Karachee are relatively better than the large consuming markets of Bombay and Calcutta. Reports from the latter place are very discouraging. Our shipments continue on a free scale to India, and merchants on the other side are not hungry for fresh supplies. China is fairly healthy, and buyers operate to a moderate extent in shirtings and sheetings. Most exporters are over-bought in fancies and specialities, and very little fresh business has been done. From the Levant and Egypt reports are not of a favourable character, and business is confined to small sorting up lots. Rumours have been current of financial difficulties in manufacturing circles, and a grey cloth agent in Manchester has suspended payment. Large stocks held by merchants and manufacturers result in a tightness of money, and other difficulties are feared. Quite a feature of the cloth section is the irregularity in prices. In goods worth 20s. a piece it is not unusual tor quotations to vary to the extent of over a shilling. In home trade fabrics buying is continued from hand to mouth. Traders are still anticipating lower rates. In American yarns for home use there has been rather more inquiry, but spinners have had to accept low prices. The production is increasing, and supplies are not being cleared at the present time. Stocks lead to weakness on the part of sellers. The export demand has not been important, but rather more offers have come through for our Eastern markets. Bolton spinnings remain in slack demand, and spinners scarcely know which way to turn to secure fresh business at remunerative rates. In spite of the fact that there will probably be a decided shortage in supplies, the "bull" party in America, say Sir Jacob Behrens and Sons, find it very difficult to maintain values, let alone to bring about an advance. Mr. Price has issued a budget of circulars prophesying a marked rise in the immediate future, but business in America is sufficiently bad to prevent any outside speculation, and the short time movement in the States is on the increase.

Coal.—There is nothing very special to report in this trade. North of England demand and prices have improved again. Orders for gas coals from there, both for home consumption and abroad, have stimulated business for the time being, and collieries are trying to get about 9d. per ton more than the gas companies are willing to give. House coals are without change. The steam trade of Hull shows a considerable falling off during last month as regards exports, but the trade done in that port altogether for the two months of the year compares very favourably with that to the end of February, 1907. In spite of the slump Welsh ports continue to send heavy shipments abroad, and this week there has been no further fall in prices.

Copper.—Quotations opened higher, and under the influence of more cheerful reports from America have kept pretty firm all the week. Some bear sales and realisations caused slight fluctuations, but never any serious drop, and yesterday cash metal closed at £58¼ and three months at £58¼, and to-day, although the market braced up a little, closing prices were only 58⅜ to 58⅝ for cash and 59 to 59¼ three months.

Tin.—Cash and three months' metal both opened higher than Friday's closing prices, but soon reacted, forward delivery declining to £130. Bear covering and market manipulation managed to keep quotations up fairly well, except on Wednesday, when realisations and poor American advices caused a drop of over £2 for cash and £2 10s. for three months. But yesterday values rallied a little again, and closed at £134¾ and £132¼ respectively. To-night's final prices were:—Cash £136¼ to £136¾, three months £133 to £133½.

Iron and Steel.—Prices of West Coast hematite are being kept up chiefly through production being kept down and stocks not increased, but trade is as slack as ever. East Coasts are having a better time as Continental requirements from that quarter are large enough to prevent the slackness of home trade being felt very much, and makers have sufficient orders booked to keep them going for some time. Cleveland pig-iron makers also are well booked up and can take no more orders for delivery within the next few weeks. There are no stocks except in Connal's Stores, and these are getting rapidly depleted. On Wednesday they were down to 84,025 tons. Manufactured iron and steel trade is dull, orders are scarce and prices are falling. Scotch plate and angle makers have reduced their quotations 5s. per ton this week, thus bringing them lower than those ruling in England, but they also will probably drop within the next few days.

Tea.—A further improvement was noticeable at this week's sales. Indian offerings were 34,772 packages, and of these 32,453 packages sold on garden account at an average of 7.78d. against 32,248 packages averaging 9.30d. in the same week of last year. Demand was more general. Medium and fine grades sold at rather better rates, and common varieties remained firm. The same tendency appeared in Ceylon auctions, where any teas showing good useful quality advanced in price, the average on the 21,089 packages brought forward being 7.62d. against 8.58d. in 1907. Java sales amounted to 2,575 packages, and they were taken at fully last week's prices. Messrs Gow, Wilson, and Stanton, Limited, give an interesting statement as to the increase in the quantity of British-grown tea consumed abroad since 1900, an increase of no less than 88 million lbs. Markets outside the United Kingdom took 8 million lbs. more of Indian and Ceylon last year than in 1906, and 40 millions more than in 1905.

Sugar.—The market improved further on better reports from America, where, according to Mr. Czarnikow, April Cubas were sold up to the parity of 4.11 cents, duty paid, though spot is still quoted 4.05 cents. Javas are held for 4.16 cents, and August Beets for 4.26 cents. Here May Beets moved between 10s. 5d. and 10s. 8¼d., thus keeping well ahead of New York, and also ahead of cane sugar for same arrival, of which a large quantity will have to be sold before beet comes into question, and it still remains to be seen whether beet will be wanted, or whether cane will suffice to cover requirements. It depends largely on the Cuban crop, which so far shows a considerable reduction from last year's figures. One feature of the market this week, Mr. Czarnikow notes, is that top prices were reached before the American rise and lower receipts were published, and when this was done the market seemed disappointed, as 50,000 tons for only 168 factories is looked upon as a fair figure. Some holders were evidently inclined to realise, as the price of 10s. 10½d. August, constituting a premium of 11½d. over the following crop, can hardly be called low. At such premiums the buying of the trade has sometimes lagged behind, waiting for the cheaper sugars, which this year come six weeks earlier in the shape of Russians. But since then fresh rumours pointing to still lower crop estimates led to renewed operations, and if America had to buy a good quantity of beet here, the above premium and more would be justified; therefore the news from Cuba, Porto Rico, and Java is eagerly watched. A certain quantity of sugar is always kept out of the market in Cuba towards the end of the season, particularly when prices are below European parity, and the future is not a question of statistics alone.

Landings in the three United States ports this week were 56,000 tons, meltings were 35,000, leaving stocks at 194,000.

Books Received.

The Modern Balance-Sheet. By V. St. Clair Mackenzie. (London: Effingham Wilson, 54, Threadneedle Street, E.C.) Price, 2s. 6d. nett.

All About the New Companies Act By E. Gibbs Kimber. (London: Curtis, Lardner and Co., King's House, King Street, E.C. Price, 1s. 6d.

Lloyds Bank.—The balance-sheet for February shows liabilities consisting of current and deposit accounts £69,051,572, and bills accepted or endorsed £3,048,883, and assets of cash in hand and at Bank of England £11,245,491, cash at call and short notice £5,194,303, bills of exchange £6,646,370. Consols and other investments £11,753,546, and advances to customers and other securities £39,536,327.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for the 7 days ended March 7, $3,312, decrease $228; aggregate from July 1, $168,086, increase $43,183.

Argentine North Eastern. — Traffic receipts for week ended February 7, £3,473, increase £207; aggregate from July 1, £96,818, decrease £5,371.

Assam Bengal.—Traffic receipts for 7 days ended February 8, Rs. 83,600, decrease Rs. 15,065; aggregate from Jan. 1, Rs. 4,57,450, decrease Rs. 1,08,771.

Bilbao River and Cantabrian.—Traffic returns for February, £8,522, decrease £1,085; aggregate from January 1, £16,228, decrease £4,563.

Buenos Ayres Central.—Gross receipts for February £9,865, decrease £3,555; aggregate from Jan. 1, £81,976, decrease £2,531.

Canadian Northern Railway.—Traffic receipts for 7 days ended March 7, $133,300, increase $26,200; total from July 1, $6,505,000, increase $1,797,200.

Egyptian Delta.—Traffic receipts for week ended February 22, £5,369, increase £218; aggregate from January 1, £246,461, increase £16,876.

Lucknow Bareilly Railway.—Traffic receipts for 7 days ended February 8, Rs. 34,566, decrease Rs. 2,373; aggregate from January 1, Rs. 1,90,161, decrease Rs. 34,600.

Midland Uruguay.—Receipts for month of February, £3,000, decrease £3,573; aggregate from July 1, £45,157, decrease £3,335.

North Western of Uruguay.—Traffic receipts for Feb., $14,400, decrease $7,277; aggregate from July 1, $154,129, decrease $12,666.

Quebec Central Railway.—Traffic receipts for the 1st week of March, $18,821, increase $6,465; aggregate from January 1, $157,979, increase $40,009.

Quebec and Lake St. John.—Traffic receipts for Jan. $36,275, increase $431, aggregate receipts $36,275, increase $431.

Rohilkund and Kumaon Railway.—Traffic receipts for 7 days ended February 8, Rs. 20,693, increase Rs. 1,009; aggregate from Jan. 1, Rs. 1,14,320, decrease Rs. 24,357.

Uruguay Northern.—Gross receipts for month of Dec., £1,712, increase £3; aggregate from July 1, £11,422, increase £970.

White Pass and Yukon Railway.—Traffic receipts for week ended February 29, amounted to $6,450.

English.

Cleator and Workington Junction.—Receipts for week ending March 7, £1,046, decrease £314; aggregate from January 1, £10,416, decrease £2,764.

Cockermouth and Keswick Railway.—Receipts for week ending March 7, £673, decrease £63; aggregate from January 1, £6,495, decrease £471.

East and West Yorkshire Union Railways.—Traffic receipts for week ended March 7, £454, decrease £1; aggregate from January 1, £4,506, increase £49.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending March 4 £551, decrease £62; aggregate from Jan. 1, £5,024, decrease £417.

Blessington and Poulaphouca.—Traffic receipts for week ending March 4, £6, decrease £1; aggregate from January 1, £53, decrease £7.

Bristol Tramways and Carriage.—Traffic receipts for week ending March 6, £4,473, decrease £152; aggregate from Jan. 1, £45,298, decrease £118.

British Electric Traction.—Receipts of all the Associated Companies for the week ending March 6, £25,431; 428½ miles.

Burnley Corporation.—Traffic receipts for week ending March 7, £1,214, increase £40; aggregate from January 1, £11,496, increase £288.

Dublin and Blessington.—Traffic receipts for week ending March 4, £82, decrease £13; aggregate from January 1, £860, increase £8.

Dublin and Lucan.—Traffic receipts for week ending March 6, £88, decrease £7; aggregate from Jan. 1, £865, increase £15.

Dublin United.—Traffic receipts for week ending March 6, £4,626, increase £54; aggregate from Jan. 1, £44,227, increase £1,835.

Hastings and District.—Traffic receipts for week ending March 5, £824; increase £70.

Isle of Thanet.—Traffic receipts for week ending March 7, £224, decrease £23; aggregate from Oct. 1, £6,022, increase £132.

London County Council.—Traffic receipts for week ending February 29, £30,195, increase £2,809; aggregate from April 1, £1,490,253, increase £235,582. Miles 116¾, against 115¼.

London General Omnibus.—Traffic receipts for week ending March 7, £17,365, decrease £1,325; aggregate from Jan. 1, £171,888, decrease £9,079.

London Road Car.—Traffic receipts for week ending March 7, £6,805, decrease £307; aggregate from Jan. 1, £58,783, decrease £4,350

London United.—Traffic receipts for week ending March 7, £5,192, increase £27; aggregate from January 1, £48,771, decrease £22.

Provincial Trams.—Traffic receipts for week ending March 7, £1,351, decrease £23; aggregate from Oct. 1, £33,170, increase £1,237.

Rossendale Valley.—Traffic receipts for week ending March 6, £174, decrease £16.

Sunderland District.—Traffic receipts for week ending Mar. 4, £386, decrease £24; aggregate for 18 weeks £7,995, increase £1,076.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending March 8, £1,083, increase £84; aggregate from January 1, £10,581.

Foreign.

Anglo-Argentine.—Traffic receipts for 8 days ending March 4, £20,479, increase £3,520; aggregate from January 1, £163,593, increase £23,990.

Auckland Electric. — Traffic receipts for 28 days ending February 28, £11,997, increase £1,909; aggregate from January 1, £25,888, increase £3,582.

Brisbane. — Traffic receipts for month of Febuary, £13,390, increase £2,390.

British Columbia Electric.—Nett earnings for January $80,436, increase $24,715. Aggregate nett earnings, including income from investments from July 1 to Jan. 31, $583,042, increase $166 336.

Buenos Ayres Grand National and New Tramways.—Traffic receipts for 7 days ending March 10, £7,738, increase £1,095.

Calcutta. — Traffic receipts for week ending March 7, Rs. 50,586, increase Rs. 1,266; aggregate from January 1, Rs. 5,08,794, decrease Rs. 40,896.

Cape Electric.—Traffic revenue for month of February, Cape Town, £10,497.

Carthagena and Herrerias.—Traffic receipts for the month of February, £2,279, decrease £3,013; total from January 1, £4,772, decrease £6,119.

Geneva Trams.—Earnings for January 7, fr. 206,593; increase fr. 11,786.

Kalgoorlie Electric.—Gross receipts for February, £3,417; aggregate from January 1, £7,055.

Lisbon Electric.—Earnings for January, milreis 119,627

Madras Electric.—Traffic receipts for fortnight ended February 29, Rs. 16,303, increase Rs. 1,454; aggregate from January 1, Rs. 75,769, increase Rs. 9,494.

Melbourne Tramways and Omnibus. — Traffic receipts for February, £49,000.

Mexico.—Nett earnings for month of January, $194,398, increase $65,167; aggregate nett earnings from January 1, $194,398, increase $65,167.

Monte Video United.—Gross receipts for February, £22,617, increase £3,259.

Perth. (W.A.) Electric. — Gross receipts for week ended March 6, £1,505, aggregate from January 1, £14,015, decrease £643.

Rio de Janeiro.—Gross earnings for 9th week 1908, $29,046; increase $6,791.

Sao Paulo.—Traffic returns for January: nett earnings, $128,025, increase $8,962; aggregate from Jan. 1, $128,025, increase $8,962.

Twin City Rapid.—Traffic receipts for the month of November, $497,428, increase $38,791; aggregate from January 1, $5,552,879, increase $402,984. Nett traffic receipts, $233,018, decrease $649; aggregate from January 1, $2,852,445, increase $105,004.

Critical Index to New Investments.

New South Wales 3½ per Cent. Stock, 1930-1950.

Under instructions from the New South Wales Government, the London and Westminster Bank is offering for subscription £3,000,000 of this stock, principal repayable at par on July 1, 1950, and the first six months' interest due July 1. Half the money is to be applied in reduction of New South Wales 4 per cent. debentures, maturing also on July 1, and the remainder will be devoted to railway construction and equipment and other public works. The stock is to rank *pari passu* with the existing £2,000,000 of 3½ per cent. New South Wales stock, and the price at which it is offered is par, the whole to be paid up by June 25, when the final 50 per cent. becomes due. As the full dividend is payable a week after, there is really a small discount to subscribers. Holders of maturing debentures can exchange for an equal amount of new stock and an immediate cash payment of 32s. 6d., less income-tax, being the half-year's coupon, due July 1, less 7s. 6d. for interest on instalments to that date.

Grand Trunk Pacific Railway Company.

An issue of £2,000,000 in 4 per cent. sterling mortgage bonds, due in 1955, is announced for this company by Messrs. Speyer Brothers, who have bought the bonds from it. The bonds are unconditionally guaranteed both as to principal and interest by the Grand Trunk Railway Company of Canada, and Messrs. Speyer offer them at 94½, payable 10 per cent. on application and the balance in four instalments, the last of which falls due on July 8, as detailed in the prospectus on another page. The bonds are further secured on three sections of the Grand Trunk Pacific system as follows:—£1,354,000, series "B," on the mountain section (total authorised amount £2,050,000); £454,000, series "A," on the prairie section (total authorised £2,000,000); and £192,000 first mortgage sterling bonds on the Lake Superior branch, out of a total authorised not to exceed £1,550,000. Full particulars of the progress already made with the undertaking will be found in the letter of the Grand Trunk president, Mr. Hayes, accompanying the prospectus. The Pacific Company itself has undertaken not to create any charge ranking in priority to or *pari passu* with the security for these bonds, with the exception of the charge to secure the bonds to be guaranteed by the Government, which should not count. Nett receipts show continued progress and amounted to £842,495 for 1907, while the amount required for the whole of the present and previous issues of bonds is only £200,160. Interest is paid out of capital during construction under provision of the mortgage deeds.

City of Regina (Province of Saskatchewan).

Subscriptions will be received by the Bank of Montreal for an issue of £113,700 made on behalf of this new city in sterling 5 per cent. debentures of £100 each, redeemable at par by series between 1923 and 1938. The price asked is 101 per cent., and the bank is acting for the contractors for the loan. A sinking fund is to be provided to redeem it on due dates as mentioned in the prospectus, which also gives information illustrative of the position of this city. It is on the main line of the Canadian Pacific Railway, and will be made a central point over the Southern system of the Grand Trunk Pacific Railway. Its estimated revenue for 1908 is £52,000 and its expenditure £50,000.

City of Dunedin 4 per Cent. 1908 Redemption Loan.

The Bank of New Zealand has bought this issue of £250,000 and offers it at par payable, so far as cash subscriptions go, 5 per cent. on application and 95 per cent. on April 10. All the money is to be applied in redemption of £435,800 of existing bonds of the municipality, and the balance will be paid off out of sinking funds amounting to over £193,000. Dunedin is the capital of the provincial district of Otago, a flourishing New Zealand city possessing assets valued at £861,000, including waterworks, gasworks, and electric tramways, &c.

Manchester Ship Canal Company.

An issue of £350,000 4 per cent. perpetual debenture stock made this week by the above company offers an excellent opportunity for investors. Under its 1904 Act the company has authority to raise £2,000,000, of which £950,000 is for the purpose of redeeming the Warehouse and Dock Company's leases and will only be raised when a material saving of interest can be effected, and another £500,000 can only be issued with the consent of the Manchester Corporation. The present amount is the balance of the remaining £550,000 specially authorised for deepening the Canal and other capital purposes, and is offered for subscription at 95 per cent., payable in quarterly instalments ending on December 31. During the past eight years the nett revenue available as interest on the debentures held by the Corporation of Manchester after payment of all prior charges has risen steadily until for 1907 it amounted to £160,000 or sufficient to pay the full interest, and as the new stock ranks in priority to that £5,000,000 there is abundant security for it.

Cardiff Railway Company.

An issue of £500,000 3 per cent. debenture stock is offered by this company nominally at the price of 80 per cent., payable in instalments of 10 per cent. on application, 20 per cent. on April 7 and 25 per cent. each on May 2 and June 2, but as a full half-year's interest will be paid on July 1 the actual cost is a little less. With this addition the total debenture debt will amount to £2,033,300, requiring £60,999 per annum to meet the interest charges, but the revenue for the past three years has been £149,287, £172,253 and £167,395 respectively, so that the margin is ample. This revenue is the actual profit of working the existing docks, and should be considerably increased by the profits from the Queen Alexandra Dock opened in July last and from the railway now under construction. The stock is a trustee security, and as it yields 3¾ per cent. should prove an attractive investment.

Maple and Co., Limited.

This well-known Tottenham Court Road business has a share capital of £1,620,200, consisting of 870,000 6 per cent. cumulative preference and 750,000 ordinary shares of £1 each and 1,000 management shares of 4s. each, and a debenture debt of £1,000,000. It has, however, spent a considerable amount on the development of its subsidiary companies in Paris and Buenos Aires, and the directors have offered the remaining 130,000 6 per cent. shares, out of the authorised total of £1,000,000, for subscription at a premium of 5s. per share. This is practically the market value of the existing shares, so that there is nothing to be gained by applying for the new issue. Profits, however, for 1907 after payment of debenture interest were sufficient to cover the whole of the preference dividend three and a-half times over, and the shares should be a safe enough investment, but not cheap.

William Hollins and Co., Limited.

The business of spinners and manufacturers acquired by this company dates back to 1784, and has since been carried on continuously by the vendors and their predecessors. It was converted into a private company in 1882, and in 1894 introduced the yarn and fabric known as "Viyella," the business in which, it is said, has become so extensive as to require further capital. So the business is once more converted, this time into a public company with a capital of £800,000 divided equally into ordinary and 5 per cent. cumulative preference shares of £1 each, and 360,000 shares of each class form the present issue. Of these the vendors take £240,000, half in ordinary and half in preference, but ask for the balance of the purchase price of £702,000 in cash, so that all the fresh capital brought in is only £18,000. The assets consist of properties, machinery, &c., valued at £341,126, but transferred to the company for £315,000, stocks at cost £245,153, book debts £110,994, trade investments £20,580, cash £4,817 and goodwill £50,000 or a total of £746,545 less £44,545 for current liabilities. Profits are given

for the nine years and two months ended November, 1907, and show an average for this period of £48,115, but they have been fairly progressive during the more recent years, the averages for six years and two months and three years and two months respectively being £49,984 and £58,450. In estimating results the directors take the second of these figures as a basis and on them show a surplus, after providing for the preference dividend and paying 7 per cent. on the ordinary shares, of £6,784, of which one-third would go to the managers. The business may be all that is claimed for it, but the vendors' desire for so much of their price in cash and the smallness of the fresh capital brought into the company are not altogether reassuring.

Newcastle-upon-Tyne Electric Supply Co., Limited.

This progressive undertaking is making an issue of a further 50,000 preference and 50,000 ordinary shares of £5 each, out of which it will redeem a third mortgage debenture for £300,000 deposited as security for temporary borrowings of about £145,000, and the balance will be applied to the building and equipment of a new power station at Dunston and other purposes. The shares having been purchased by Lloyds Bank and others at a premium, are now offered for subscription at the price of £5 each for the preference and £6 for the ordinary shares, and should be excellent investments of their class. In addition to paying a regular dividend of 8 per cent. per annum on the ordinary shares for the past ten years the company has entirely replaced its original system by a high tension system of the most approved and modern type out of the appropriations for reserve and depreciation. Its business has expanded very rapidly during the past few years, the increase in 1907 amounting to 22,704 h.p., and is still increasing at a very satisfactory rate. At the present time the company has contracts for the supply of power to a further 27,000 h.p., which should result in an increase of the nett profits considerably above that required to maintain the present rate of dividend on the larger capital, and the directors state that the actual sales for January and February exceed by 24 per cent. those of the corresponding period of 1907.

South Atlantic Trading Co., Limited.

This company has been formed to acquire the rights of an exclusive licence granted by H.M. Government in 1904 for developing the natural resources, consisting mainly of guano deposits, of three islands in the South Atlantic Ocean. It purchases the licence through an intermediary, and in the customary fashion pays pretty sweetly for his intervention, as the price for the licence and for an auxiliary 424-ton steamship is swollen out from £20,000 in cash and a like amount in shares to £21,000 in cash and £54,000 in shares. The total capital is £100,000 in £1 shares, of which 25,000 are reserved for working capital and 46,000 were offered for subscription. In estimating probable results the directors seem to have let their imaginations run riot and talk of an annual export of 100,000 tons of guano at a profit of £3 per ton or £300,000, exclusive of any gain to be derived from sealskins. Had the picture drawn been on a more moderate scale we might have had more faith in the prospects of the enterprise, but under any circumstances the shares would be at best a pure speculation.

Felicidad Gold Co., Limited.

The Montefurado Gold Syndicate, a tiny affair with an issued capital of £2,825, has got hold of mining concessions of 407 acres in the Province of Lugo, Spain, in the description of which they wax very enthusiastic. One of the properties consists of about three and a-half miles of the bed of the Rio Sil, and its banks and a tunnel about 400 ft. long and 50 ft. wide said to have been cut by the Romans to divert the course of the river. The other property consists of the ancient bed over which the river flowed previous to the construction of the tunnel, and the two together are estimated to be worth over £500,000. Funds are needed for the purchase of machinery, including a powerful Californian sand suction pump, so the present company has been formed with a capital of £120,000, of which the vendors take 100,000 shares, with £5,000 in cash. It is estimated that on a basis of 600 tons of sand being treated per diem for 250 days per annum, with a recovery of only 1 dwt. per ton, the profits should amount to £23,800 as a minimum. Many of the local people are said to be applying for shares after seeing the wonderful results obtained, and if that is so it is difficult to see why the vendors should trouble to come to the London market for a paltry £20,000.

Partington Pneumatic Wheel Co., Limited.

The patents acquired by this company are for a resilient wheel for motor-cars, omnibuses, &c., in which the pneumatic tube is placed round the hub instead of in the tyre, thereby, it is claimed, avoiding all risk of puncture. For this and Mr. Partington's works at Shipley, near Bradford, the company pays £60,000, of which £6,000 is in 5 per cent. first mortgage debentures, redeemable at par on or before November 15, 1909, £50,000 is in shares, and £4,000 in cash, but the original inventor only receives the debentures, half the shares, and £2,500 in cash. A number of experts' opinions are quoted, all so laudatory that we were rather surprised at the modesty of the directors in fixing the capital at £75,000 until we found that they had not ventured to give any estimate of probable profits. This omission seems to prove that the invention has not yet been tried commercially, and under those circumstances the shares can only be considered as a blind speculation.

Water and Gas Debenture and Share Investment Trust, Limited.

Having rubbed along since some time in 1905 with a capital of £2,000 divided into 1,000 6 per cent. preference, 800 ordinary and 200 founders' shares of £1 each, the directors now sigh for larger worlds to conquer. They have therefore taken powers to create another 24,000 preference and a like number of ordinary shares, and offer 10,000 of each class for subscription at par. So confident are they of making the company a success that they announce that the balance of the capital will be issued at a premium except to shareholders on the register at the end of this month. If our memory serves us the company has been engaged in the promotion of various insignificant undertakings, and evidently proposes to continue to dabble in this class of business. The directors claim that between 1905 and December 31 last a profit of £1,665 was earned, but this figure is subject to the realisation of the assets, a matter which may prove to be one of considerable difficulty. No inkling is given of the quality of these assets, and, on the whole, the company seems one to be left alone.

Midland Insurance Co., Limited.

This latest recruit to the ranks of non-tariff insurance companies hails from Birmingham, and proposes to carry on a business of fire, personal accident, fidelity guarantee, burglary and other general insurance. At present it has no power to carry on either life or employers' liability and workmen's compensation insurance, but the directors intend in the future to apply to the Court for its sanction to the alteration of the memorandum of association with a view to including these branches. The nominal capital is £250,000 in £1 shares, but only 150,000 are to be issued, and on these the directors do not anticipate having to call up more than 5s. per share. There is a monotonous sameness in all new projects of this kind, and the directors have not gone off the beaten track in any way, except that they point to the absorption of the Central Insurance Company by the Liverpool and London and Globe as a proof of the field open to a non-tariff company in the Midlands. All the old familiar references to the market value of shares in other companies, tariff and non-tariff, crop up again, and the directors state that as they have been promised the support of intending shareholders, insurance brokers and others in a position to place business, they feel justified in anticipating that a considerable amount of profitable business will be offered as soon as the company is in a position to accept it. There is nothing like being hopeful, but optimism does not always command success, and it might be as well to leave the shares to local enterprise.

MINOR NOTICES OF COMPANY REPORTS.

Adolph Frankau and Co.—Trading profits for the twelve months ended December 31 rose by £2,208 to £15,103, but outgoings were also larger and the nett profit was only £1,712 up at £11,785. With £797 or £598 more brought forward the surplus amounted to £12,582, and as the directors do not repeat last year's appropriation of £500 towards cost of additions to the Homerton works they have an additional £2,810 more at their disposal. Out of this they put an extra £500 at £1,000 to general reserve and add £250 against £100 to special buildings reserve, after which they raise the dividend on the ordinary shares from 4 to 6 per cent. and the balance carried forward by £660 to £1,457. Goodwill, trade marks, &c., stand at the old figure of £58,988, against which the reserves all told come to no more than £8,350. Sundry creditors and bills payable amount to £57,994, but debtors owe £73,624, stocks are valued at £82,983 or an increase of £18,882. Cash, however, is very small at £2,062, although the company has had to borrow £3,000 from its bankers.

Aplin and Barrett and the Western Counties Creameries, Limited.—Profits for 1907 amounted to £26,246 and £29,063 was brought forward making a total of £55,309. Preference dividend having been paid, the ordinary shares get 20 per cent. and a special bonus of 10s. per share or another 50 per cent. leaving £23,420 to be carried forward. An issue of 25,000 preference shares was offered to the holders of existing preference shares at a premium of 1s. 6d. per share, and it is now proposed to issue the remaining 10,250 ordinary shares at a premium of 20s. per share, of which 9,937 will be offered to existing ordinary shareholders in the proportion of one for every four held. The premium on this issue, together with that on the preference shares, will be added to reserve bringing that fund up to over £51,000, against the goodwill of £48,961 and property valued at £88,798. Trading balances are largely in favour of the company, and cash comes to £21,650, including £12,343 of the fresh capital raised.

Bank of Peru and London.—This bank was established in 1897 by the London Bank of Mexico and South America after the amalgamation of its Lima branch with the Banco del Callao. Since then it has made steady progress and the dividends have risen correspondingly with the nett profits from 7 per cent. paid in 1899 to 17 per cent. distributed for 1906. Current and deposit accounts at the latest date amounted to £P1,604,000 and the nett profits to £P64,465.

Barker Brothers, Silversmiths.—Trading profits for the year ended December 31 amounted to £10,562, and after providing for depreciation on plant, &c., and meeting other charges the nett balance was £7,927. Of this £2,840 goes to the vendors in lieu of profits for the first six months, and out of the balance the ordinary shares get 10 per cent, £744 is written off formation expenses, and £424 is carried forward. Leasehold works stand at the prospectus valuation of £29,500, all that the directors apparently consider necessary being the creation of a sinking fund with £62, while plant, &c., is only £675 down at £20,579, although £1,048 was written off. Creditors are light at £5,060 against book debts of £23,084, stock valued at £26,677, and £7,068 in cash. Formation expenses after deducting the sum now written off will stand at £1,489.

Barnet District Gas and Water Company.—Both departments of this company showed improvements in gross receipts for second half of 1907, but working expenses were higher, and the nett result is a shrinkage of slightly over £100. Dividends are maintained at the same rates on the various issues of ordinary stock and £10,000 of the balance remaining is placed to contingency fund account, making it £11,000 in all. Expenditure on capital account for the six months was only £3,395, but the debit balance is comparatively heavy at £32,242.

Baxter's Leather Company.—Gross profits for 1907 were £29,024, and nett, after paying directors' fees, &c., £9,828, out of which a dividend of 9 per cent. is paid and £1,250 is added to reserve, leaving £422 to be carried forward against £394 brought in. Reserve, including £1,750 from share premiums, is now £14,000 against goodwill, patents, &c., £15,150, and Vienna business £4,056. Liabilities to creditors, with £21,000 borrowed from bank, amount to £60,931, while debtors owe £47,137, and cash and bills come to £4,657, but stocks are large at £107,978.

Bristol Waterworks Company.—Total income up £1,218 to £159,091. Expenses generally higher, but at the pumping stations coal and gas cost £641 less at £4,082, and repairs were down £57 at £1,278, a total saving of £862, so that the available balance of £68,273 was £1,397 better. Total dividends of £7 17s. 6d. and £5 10s. 3d. are paid on the ordinary shares and 7 per cent. maximum stock respectively leaving £3,240 to go forward. On capital account £20,731 was spent raising the total to £2,361,688, and making the debt to that account, including £44,456 temporary loans, £60,943, of which £16,593 is carried to the balance-sheet.

Campbell, Johnstone, and Co., Limited.—Gross profits of this brewery for 1907, including rents, &c., amounted to £27,717, of which expenses took £13,360 and £3,039 was written off for depreciation and leasehold redemption, with £332 brought in the nett surplus was £10,750, and after meeting debenture interest and preference dividend the ordinary shares get 4 per cent. and £411 is carried forward. Properties and goodwill, less the depreciation fund of £31,514, are valued at £256,934, against which there is a reserve of £12,000. The company owes £15,841 on deposits and £5,889 to sundry creditors, to meet which it has £10,176 due to it, £2,987 in stocks and £4,023 in cash, so that its position is not altogether a comfortable one.

Canada Permanent Mortgage Corporation.—With a paid-up capital of £1,232,877 this company owes £2,703,468 on debentures and debenture stock and accrued interest and £681,440 on deposits. A reserve fund of £565,068 has been accumulated, and with various small items the aggregate of the balance-sheet is brought up to £5,297,016. Of this large total £4,728,729 has been lent on mortgage on real estate and £265,175 on bonds and stocks, £103,458 is invested in municipal debentures, &c., £132,872 is held in cash and £66,781 is represented by office premises. Nett profits for 1907, including £14,128 brought forward, were £155,144, out of which dividends of 6 per cent. have been paid, £61,644 is put to reserve, and £5,060 written off premises, leaving £14,468 to be carried forward.

Canada North-West Land Company.—In consequence of the severe winter of last year and of the recent financial stringency sales of land during 1907 were only 15,471 acres against 60,342 acres in the previous year. The average price rose by $1.51 to $11.33, but receipts with the smaller sales dropped from $592,650 to $175,362, of which $169,442 was transferred to profit and loss. Miscellaneous receipts, less expenses, brought the total of this account up to $1,495,503 or an increase of $263,735. The liquidation of the company is progressing satisfactorily. A year ago $12.50 per share was repaid, and another repayment of $7.50 was made on January 15 last, reducing the amount outstanding to $294,074 or $5 per share. It is hoped to make a further repayment of $4 per share during the current year, and the directors intend to provide a special reserve fund for the ultimate repayment of the remaining $1.00 per share. When that has been done shareholders will receive dividends as warranted by receipts from new sales and from old land contracts which now amount to $1,615,793.

Cannock and Company.—This Limerick business of wholesale and retail drapers made a nett profit for the twelve months ended January 31 of £9,310 and £7,093 was brought forward giving a total of £16,403. Of this dividends aggregating 9 per cent. per annum absorb £7,650 and £1,397 is written off buildings and fixtures, leaving £7,356 to be carried to the new account. Premises, goodwill, &c., are valued at £47,397 against which the reserves of £6,200 seem small, but otherwise the position is favourable. Nothing is due to trade creditors and the only current liability is £7,767 to employees for deposits and salaries, while stocks and debtors come to £51,720, cash and bills to £11,227, and investments to £1,200.

Cockermouth, Keswick and Penrith Railway.—Gross receipts for the six months ended December 31 amounted to £26,757 or an increase of £1,291, of which £610 was contributed by minerals and £432 came from merchandise traffic. Working expenses were £627 up at £16,745, leaving a nett revenue of £10,012 or £664 more, to which were added £50 brought forward and £131 from interest. After providing for debenture and other interest and transferring £268 or 1 per cent. of the gross receipts to reserve the ordinary stock gets a dividend at the rate of 4¼ per cent. against 4 per cent. a year ago, and £225 is carried forward. Debit balance on capital account on December 31 was £35,315, and in addition to using the reserve of £20,458, the company has borrowed £6,610 from its bankers.

Edinburgh American Land Mortgage Company.—Revenue for year ended December 31, including £390 brought in, was £24,230, and after providing for interest and all outgoings, £9,375 was left. Of this £2,500 is put to accrued interest sinking fund and ordinary shares receive a dividend of 7 per cent., leaving £965 to be carried forward. Assets consist of mortgages £346,603, country bonds £2,434, real estate £18,092, and accrued interest £7,411. During the year 2,615 new shares were issued, making the paid-up capital £100,000, but the company, so far from having any cash, owes £19,734 on balance to its bankers. Reserves amounting to £47,500 are invested in unspecified, but "carefully chosen" securities.

General and Commercial Investment Trust.—Revenue from interest, dividends, &c., for the year ended February 29 dropped by £1,523 to £51,065, and after meeting debenture interest and other outgoings the nett profit came to £33,660 or £1,638 less. The dividend and bonus on the deferred stock, however, are repeated at last year's rate of 7 per cent. per annum by reducing the sum carried forward from £14,392 to £13,852. Profit on securities sold during the year was only £11,123 compared with £25,068 from this source in 1906-7, and as £10,984 was written off to provide for depreciation on some of the securities held the nett addition to the reserve fund was no more than £139, making it £87,170. Investments have been increased by £5,819 to £1,010,574, but loans against security are £12,225 down at £10,775.

General Reversionary and Investment Company.—Receipts from reversions and policies fallen in during 1907 amounted to £93,499, and the directors state that the profit from this source has been satisfactory. Loans repaid gave £49,035 and interest and other receipts £30,160, and after providing for outgoings the revenue account showed a balance of £48,820. Adding £27,621 brought forward and deducting dividends and interest paid and administration charges the nett surplus was £34,621, out of which £5,000 is put to reserve and the usual dividend of 5 per cent. is paid. With a paid-up capital of £500,000, a debenture debt of £120,268 and temporary loans of £10,000 the company has reversions and other assets valued by the actuary at £784,648 and investments worth another £34,102 against which the reserve fund now amounts to £95,000.

Isle of Wight Central Railway.—Traffic receipts for the second half of 1907 amounted to £20,084 or an increase of £74,

and working expenses were £44 up at £12,286. Nett revenue, including £1,929 from interest and balance brought forward, was £9,727, out of which the directors have paid the rent charges, the half-year's interest on the "A" and "B" debenture stocks, six months' interest on account of arrears on the "C" debenture stock, and the minimum guarantee to the Newport, Godshill, and St. Lawrence Railway, with an increase of £418 to £3,574 in the sum carried forward. Debit balance on capital account is £7,914, of which £1,000 has been provided by Lloyd's bonds, £2,533 out of reserves, and £2,362 is carried in suspense account.

John Oakey and Sons, Limited.—Gross profits £1,333 up at £29,665, nett £1,473 up at £30,852; with £5,209 brought in £30,852 is available. Appropriations: 10 per cent. and 5 per cent. bonus, despite the warning that it was not to be expected again; £3,000 to reserve as before, making it £80,000. Cash £18,546, investments £52,869, goodwill £82,455, debtors £42,425, creditors £12,645. The business progresses steadily and financial position is strong.

John Wright and Eagle Range.—Profits for the year ended December 31 after augmenting the contingent reserve and charging directors' fees, depreciation, &c., amounted to £54,438. Adding £8,382 brought forward the disposable total was £62,820, out of which the ordinary shares receive dividends aggregating 20 per cent. and £8,000 is transferred to reserve, leaving £8,575 to be carried forward. Property and goodwill account stands at £184,173 and stock is valued at £45,521, and as in addition to a paid-up capital of £292,000 the company has a reserve of £33,000, employment has had to be found for a good deal of surplus money. Much of this has been invested in securities which appear in the balance-sheet at £88,610, and with regard to these the directors state that full provision for depreciation has been made specifically out of the contingent reserve. Including that fund the current liabilities amount to £45,085 against which debtors owe £65,450 and cash comes to £31,202.

Leeds and Liverpool Canal.—Gross receipts for the second half of 1907 dropped by £84 to £87,839, while expenses rose by £1,478 to £63,825, mainly because hire of boats, repairs, &c., cost more. Nett revenue was consequently £1,562 down, but £2,316 more at £11,907 was brought forward, and with £142 from interest the disposable total was £798 up at £36,064. After providing for interest, &c., and transferring another £4,500 to "subsidences, &c.," account and paying preference dividend the ordinary stock again receives a dividend at the rate of 1 per cent per annum and £6,230 or £775 more is carried forward. Expenditure on the property for the half-year amounting to £6,291 has been charged to "subsidences" account, leaving the credit to capital account unaltered at £14,827.

Maiawale Rubber and Tea Company.—The tea crop for 1907 was 484,970 lbs. or nearly 95,000 in excess of the estimates, the average per acre having risen from 578 lbs. to 746 lbs., while one field of 60 acres yielded no less than 1,113 lbs. per acre. Values for the class of tea produced ruled high throughout the year and the average price realised was 6.40 cents better at 37.29 cents, and with a little help from the crop of 136 lbs. of rubber the gross income rose by £3,068 to £11,536. Expenditure was not much heavier and nett profits, including £146 brought in, amounted to £3,996, out of which a dividend of 10 per cent. is paid, £159 is written off buildings account and £222 off machinery account. Secretaries' commission then takes £101 compared with £66 a year ago, and the balance carried out is increased to £1,266. Block account, including expenditure on account of new rubber cultivation and cost of new land for rubber extensions, is only £23,587, while buildings and machinery are valued at £6,680, but the auditors draw attention to the fact that nothing has yet been written off this last item for depreciation. Coast advances are heavy at £1,329, and regarding these the auditors seem uncertain whether or not the reserve of £55 for doubtful advances is adequate.

Neath and Brecon Railway.—Gross receipts up £5,395 at £38,235 and equally proportionate increases in passengers, merchandise and minerals. Nett profits £4,014 better at £13,915, and with £498 or £28 less from rents and interest, and £2,874 brought in, there is £17,288 to deal with. Of this £500 goes to reserve, raising it to £4,500, and first "A 1" and "A 2" debenture stocks, having been provided for, interest at the rate of 5 per cent. is paid on the "B" debenture stock, making the full 4 per cent. for year, and the preference stock gets a dividend at the rate of 1 per cent. per annum.

O. C. Hawkes.—Nett profits for the year ended December 31 amounted to £9,428 and £3,721 was brought forward, making £13,149. Deducting directors' fees and income tax the surplus was £12,048, out of which the ordinary shares receive 5 per cent. and £3,584 is carried forward. Nothing appears to have been written off goodwill, leases, plant, &c., valued at £126,074, and the reserve of £33,000 is not particularly liberal especially as it is all in the business. Debtors at £35,493 exceed floating liabilities by £8,546, and cash and bills come to £5,962.

Pearson Fire Alarm.—Profits on sundry sales for the year ended December 31 increased by £975 to £2,404 and with £2,371 from rents and £48 from interest, &c., the total income was £4,823. Expenses, however, took £4,213 and another £1,138 was written off for depreciation, leaving a deficit of £528, which brings the debit balance to date up to £12,168. A year ago £5,647 of the expenditure was charged to development account, whereas this time only £3,347 is so charged, and as the deficiency on working is even then £420 smaller the company is making a little progress. Patent rights and goodwill still stand at £110,821, while development account now amounts to £25,872, and further resources are needed. The directors have therefore authorised the creation of £50,000 5 per cent debentures, of which half will be issued immediately.

Peradeniya Rubber Co. (1906).—Sales of rubber and rubber seed during the year ended December 31 only produced £336, so that the company is still dependent for its revenue on its tea estates. The crop from these, however, rose by 70,198 lbs. to 243,610 lbs., and the average price was about 1d. up, so that the total revenue showed an improvement of £3,211 at £12,752. Expenses, including a tithe of £150 for the year, took £2,529 more at £8,772, and nett profits, assisted by a smaller balance of £390 brought in, were £3,482 against £1,242, out of which a dividend of 4 per cent. is paid and £2,476 is carried forward. Expenditure on the rubber estates for the year was £7,091, making a total of £34,054, and as the paid-up capital is only £30,069, it follows that floating liabilities are fairly heavy. The directors, however, have decided to limit the rubber planting to 114 acres in the current year, but propose to plant 500 acres with tea during this and next year, and as they will have to raise further funds for this work they will doubtless take care to strengthen the position materially

Plummer Roddis.—An improvement of £3,000 has occurred in trading profits for the twelve months ended February 7 and with £1,564 more brought in the disposable total, after providing for directors' fees and preference dividend, was £4,664 better at £12,381. Last year a very heavy amount had to be provided for the loss occasioned by the experiment of a London establishment, and most of the nett profits were consequently transferred to reserve, but there is fortunately no occasion for a repetition of this step. The ordinary shareholders therefore are made happy by a return to the dividend list with a distribution of 5 per cent., and after putting £3,000 to reserve against £5,207 the sum carried out is reduced to £1,068. Premises are £1,332 up at £175,528, but plant is valued at £26,759 or £580 less, while the reserve now amounts to £10,000. Debtors at £32,218 exceed creditors by £9,440, but stocks are £1,952 lower at £68,717, and cash is down by £1,848 to £15,916.

Property and Estates Company.—Gross receipts from all sources for 1907, including £1,956 for increased value of reversions and ground rents, were £9,421, of which £3,964 was retained as nett profit. Adding £40 brought in the total available was £4,004, and after making sundry provisions for depreciation, &c., amounting to £652, and paying the preference dividend, the ordinary shares receive 5½ per cent., leaving about £160 to be carried forward. Shares to the value of £13,392 were issued during the year, making the paid up capital £75,652, in addition to which £62,101 has been raised by permanent mortgages and loans, £1,550 has been borrowed from the bank, and £10,210 is due to depositors. Assets, consisting of freehold houses, lands and ground rents, leaseholds, and reversions, &c., are valued at £144,246, and a further £8,810 has been lent on mortgage. Creditors exceed debtors by a substantial amount, and cash balances are small at £868.

Rhondda Valley Breweries.—Nett profits for 1907 rose by £1,205 to £40,785 and £14,399 or £4,120 more was brought forward, making a total of £55,184 against £49,853. Debenture interest, preference dividend and administration charges took £15,584, and in addition to transferring another £10,000 to reserve £2,000 is added to the bad debt reserve, after which the ordinary shares again get 10 per cent. and £14,400 is carried forward. Freehold and leasehold properties have been reduced by £11,727 to £406,945, and leasehold breweries, bottling department and goodwill also show a small decrease at £119,723 against which the reserve now stands at £100,000. Loans from bankers are £12,980 down at £89,000, but liabilities to sundry creditors are heavy at £68,200, while debtors owe no more than £41,439, stocks are valued at £10,138, and cash comes to £13,890.

Swan Land and Cattle Company.—A dividend at the rate of 2½ per cent. is paid by this company for its year ended December 31 last, leaving £1,308 to carry forward. The profit after paying preference dividend, &c., was £5,058. The gross profit was £6,859 up at £43,220, including £813 brought forward. Nothing is put aside to reserve, but the value of the stock, land, implements, furnishings, &c., is put at £255,122. Last season was good in the spring and bad in the summer and the number of calves decreased 366.

S. Hildesheimer and Co.—Including £1,852 or £53 more brought in the nett profits for 1907 were £1,094 down at £5,389 owing, the directors say, to depression in the "Fine Arts" trade. As a result of this decrease the ordinary shares only get 6 per cent. against 8 per cent, and the preference shares which a year ago received an extra 2 per cent. have now to be content with their fixed dividend of 6 per cent. Reserve, too, gets nothing compared with £500, and even then the balance carried out is reduced by £242 to £1,030. Floating liabilities are 2,000 heavier at £10,530, while debtors owe £1,091 less at £21,753, and cash and bills have shrunk by £500 to £5,960.

Western Ranches.—Nett receipts for cattle sold during the year ended December 15 were £[illegible] 31, and after providing for estimated losses by death and for the purchase of cattle to replace those sold, the income, including £2,550 brought in, was £30,078. Deducting expenses and interest and £[illegible] on Consols sold the nett profits amounted to £[illegible], out of which a dividend and bonus aggregating 20 per cent are paid and £6,140 is carried forward. The cattle herd is valued at £[illegible], and land equipments, &c., bring the total assets up to £[illegible], and the company has a debt of £[illegible] on temporary loans secured by mortgages on live stock, against which the reserve stands at £21,010. Credit is amount to no more than £1,963, while cash comes to £8,640.

NEW SOUTH WALES 3½% STOCK 1930-1950.

ISSUE OF £3,000,000.

PRICE OF ISSUE, £100 PER CENT.

Interest payable 1st January and 1st July. Six months' Interest payable 1st July, 1908.

Principal repayable at par on the 1st July, 1950, the Government of New South Wales having the option to redeem the Stock at par on or after the 1st July, 1930, on giving six calendar months' notice.

The holders of Debentures maturing 1st July, 1908, can exchange them for an equal amount of this Stock on the terms stated below.

The Government of New South Wales having complied with the requirements of the Colonial Stock Act, 1900, as announced in the "London Gazette" of the 6th September, 1901, Trustees are authorised to invest in this Stock, subject to the provisions set forth in the Trustee Act, 1893.

The London and Westminster Bank, Limited, are instructed by the Government of New South Wales to offer for subscription the above amount of Stock, being a portion of the amount authorised under Act of the Parliament of the State of New South Wales, No. 19 of 1907.

The Loan is raised for the purpose of Railway Construction and Equipment and other Public Works, and for the redemption of £1,500,000 New South Wales 4 per Cent. Debentures maturing 1st July, 1908.

The State Debt and Sinking Fund Act, 1904, of the State of New South Wales provides that appropriation shall be made during each financial year from the Consolidated Revenue Fund, to be placed to the credit of the General Sinking Fund, of the amount of £350,000, and such further amount as Parliament may provide.

The Stock offered will be in addition to, and rank pari passu with, the existing £2,000,000 New South Wales 3½ per Cent. Stock, 1930-1950, and will be inscribed in accordance with the provision of "The Colonial Stock Act, 1877," 40 and 41 Vict., cap. 59, in the books kept by the London and Westminster Bank, Limited, and will be transferable without charge and free of stamp duty at that Bank, either by the Stockholders personally or by their Attorneys. The interest, at the rate of 3½ per cent. per annum, will be payable on behalf of the Government of New South Wales at the London and Westminster Bank, Limited, Lothbury, on the 1st January and 1st July in each year, by Dividend Warrants, which, if desired, can be sent by post at the Stockholder's risk. The principal will be payable in London on the 1st July, 1950, but the Government of New South Wales have the option of redemption at par in London on or after the 1st July, 1930, on giving six calendar months' notice by advertisement in the "London Gazette" and in the "Times" Newspaper, or by post to the then Stockholders at their registered addresses.

Stock Certificates to Bearer, of the denominations of £100, £500, and £1,000, with Coupons for the Half-yearly Dividends attached, will be obtainable in exchange for Inscribed Stock at the London and Westminster Bank, Limited, Lothbury, on payment of the prescribed fees, and such Certificates can be re-inscribed as Stock at the will of the holder.

The revenues of the State of New South Wales alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict., cap. 59, sec. 19.

Cash applications on the form prescribed will be received at the London and Westminster Bank, Limited, Lothbury, and must be for even hundreds of Stock, and be accompanied by a deposit of £5 per cent. on the nominal amount applied for.

The list for Cash applications will be closed on or before Wednesday, the 18th March, 1908.

In case of partial allotment, the surplus of the amount paid as deposit will be appropriated towards the payment of the instalment due on allotment.

Payments will be required as follows, viz.:—

£5 per cent. on Application.
£20 per cent. on 30th March, 1908.
£25 per cent. on 12th May, 1908.
£50 per cent. on 25th June, 1908.

£100

Payment may be made in full on the 30th March, 1908, or on any subsequent day, under discount at the rate of 3 per cent. per annum.

In case of default in the payment of any instalment at its due date the deposit and instalments previously paid will be liable to forfeiture.

Scrip Certificates will be issued after payment of the amount due on allotment, and such Certificates, when paid up in full, will be convertible into Inscribed Stock on presentation at the London and Westminster Bank, Limited, Lothbury.

Holders of Debentures maturing 1st July, 1908, can exchange them for an equal amount of 3½ per cent. Stock, and an immediate Cash payment of £1 12s. 6d. per cent. (less Income-tax), being £2 per cent. for the Coupon due 1st July, 1908, less 7s. 6d. for interest on the instalments to 1st July. The Debentures must be surrendered with the Coupon due 1st July, 1908, attached, and must be lodged at the London and Westminster Bank, Limited, Lothbury, not later than Monday, 23rd March, 1908.

Applications by holders of maturing Debentures will receive preferential allotment.

Forms of Application, and for listing the Debentures, can be obtained at the London and Westminster Bank, Limited, Lothbury, or at any of its Branches, and of Messrs. R. Nivison and Co., 76, Cornhill, London, E.C.

London and Westminster Bank, Limited,
Lothbury, London, E.C., 14th March, 1908.

DOMINION OF NEW ZEALAND.

CITY OF DUNEDIN 4% (1908) REDEMPTION LOAN of £250,000,

IN DEBENTURES TO BEARER OF £100 EACH, Repayable 1st April, 1933.

Issued under the Authority of an Act of the New Zealand Legislature intituled "The Local Bodies' Loans Act, 1901," and Amending Acts.

Interest payable half-yearly on 1st April and 1st October, at the Office of the Bank of New Zealand, London, the first Coupon for six months' interest being payable on 1st October, 1908.

The Debentures are repayable at par, on 1st April, 1933, at the Office of the Bank of New Zealand, London, but on giving three months' notice to the Town Clerk, Dunedin, holders may have both Principal and Interest made payable at the Office of the Bank of New Zealand at Melbourne, Sydney, Auckland, Wellington, Christchurch, or Dunedin, but such alteration in the place of payment can only be made once.

Holders of the £435,800 Bonds of the Municipality of Dunedin, maturing on 1st April, 1908, can apply to exchange them (ex the Coupon due 1st April, 1908) for an equal nominal amount (in multiples of £100) of the above issue, and applications from such holders will, as far as possible, receive preferential allotment.

The Bank of New Zealand, having acquired the whole of this issue, offer the same for Sale at par, payable, as to cash applications, as under:—

£5 per cent. on Application.
95 per cent. on 10th April, 1908.

£100

The proceeds of the Loan will be applied towards the redemption of Debentures amounting in all to £435,800, maturing 1st April, 1908, and Sinking Funds amounting to over £193,000 will be available for the redemption of the balance.

Dunedin is the chief city of the Provincial District of Otago, with a population, according to the Census of 1906, of 36,070, and a suburban population of 19,950.

The Corporation own the Water Works, Gas Works, Electric Tramways, Electric Light and Power Undertakings and Abattoirs, which represent an expenditure of approximately £860,934, as follows:—

Waterworks	£277,434
Gas Works	100,000
Electric Tramways	360,000
Electric Light and Power	172,500
Abattoirs	11,000
	£860,934

In addition to the General Rates, which are limited to 2s. in the £, the Council is empowered in case of necessity to levy, for the payment of Interest and Annual Sinking Fund of ½ per cent. on this loan, a Special Rate, which at present stands at 9d.

The following shows the Rateable Value of the City for the last ten years:—

1898-1899	£235,024	1903-1904	£284,556
1899-1900	239,812	1904-1905	296,239
1900-1901	246,600	1905-1906	*360,386
1901-1902	260,602	1906-1907	*374,397
1902-1903	268,965	1907-1908	*385,421

*Includes Caversham and South Dunedin Wards now amalgamated with the City.

Cash applications on Form A, with a deposit of £5 per cent. on amount applied for, will be received at the Bank of New Zealand, 1, Queen Victoria Street, London, E.C.

Holders of the Bonds due 1st April, 1908, should apply on the Form B, and lodge it at the Bank at the above address, together with the maturing Bonds (ex the 1st April Coupon).

The Lists will close for cash applications on or before 19th March, 1908, and for conversion applications on or before 26th March, 1908.

In case of partial allotment in respect of cash applications the surplus application money will be applied towards payment of the instalment due on 10th April, 1908. Any default in payment of this instalment will render the application money liable to forfeiture.

A quotation on the Stock Exchange will be applied for in due course, and notice will be given by advertisement when the Debentures are ready for delivery.

Prospectuses and Forms of Application may be obtained from the Bank of New Zealand, 1, Queen Victoria Street, E.C., where prints of the above Acts and a Statement of the financial position of the Corporation of the City of Dunedin, endorsed by the Mayor, Chairman of the Finance Committee, Town Clerk and City Treasurer, can be inspected.

Bank of New Zealand,
1, Queen Victoria Street, London, E.C., 14th March, 1908.

The SUBSCRIPTION LIST will CLOSE on or before 18th March, 1908

DOMINION OF CANADA.

CITY OF REGINA

(Province of Saskatchewan).

OFFER OF £113,700 STERLING 5 PER CENT. DEBENTURES OF £100 EACH.

Redeemable in London at par by series between 1923 and 1938.

Interest will be paid by Coupons half-yearly on the 1st March and 1st September, the first Coupon for six months' Interest being payable on the 1st September, 1908.

The Debentures are for £100 each, payable Principal and Interest at the Bank of Montreal, London.

The Bank of Montreal, 47, Threadneedle Street, London, E.C., is authorised by the Contractors for the Loan to receive subscriptions for the above-mentioned Debentures at the price of £101 per Debenture, payable as follows:—

£5 on Application.
£45 on Allotment.
£51 on the 10th April, 1908.

£101

These Debentures have been created under the authority of the Charter of the City of Regina (Statutes of the Province of Saskatchewan, 1906, cap. 46), and of By-laws passed in pursuance thereof, and are charged upon the general rates and revenues of the City.

The above By-laws make provision for a sinking fund to redeem the Debentures at the due dates.

The dates of maturity of the several series of the Debentures are as follows:—

1st March, 1923	£52,300
1st March, 1928	£10,200
1st March, 1938	£51,200
	£113,700

Prospectuses and Forms of Application may be obtained from the Bank of Montreal, 47, Threadneedle Street, London, or from Messrs. J. and A. Scrimgeour, Southsea House, Threadneedle Street, London, E.C.

London, 14th March 1908.

Principal and Interest payable in London, also in New York and Montreal at the fixed rate of exchange of 4.86 dols. to the £.

Principal and Interest unconditionally Guaranteed by the Grand Trunk Railway Company of Canada.

The Bonds will be issued to Bearer in denominations of £100 and £200, with Coupons attached, payable 1st April and 1st October (the first half-yearly Coupon maturing 1st October, 1908), and will contain provisions for registration at the option of the holder.

Messrs. Speyer Brothers, having purchased from the Company, offer for Sale:—

£1,354,000	4 per Cent. Mortgage Sterling Bonds due 1955, Series "B" (Mountain Section), part of a total authorised amount of £2,050,000.
£454,000	4 per Cent. Mortgage Sterling Bonds due 1955 Series "A" (Prairie Section), the balance of a total authorised amount of £2,100,000.
£192,000	Lake Superior Branch 4 per Cent. 1st Mortgage Sterling Bonds due 1955, the balance of an authorised issue not to exceed £1,550,000.
£2,000,000	

The price is 94½ per cent., payable as follows:—

10 per cent. payable on Application.
15 per cent., payable on Allotment.
25 per cent., payable May 8th, 1908.
25 per cent., payable June 9th, 1908.
19½ per cent., payable July 8th, 1908.

94½ per cent.

Payment in full may be made under discount at the rate of 2½ per cent. per annum on Allotment or on May 8th or June 9th.

In default of payment of any instalment, the allotment will be subject to cancellation and the amount previously paid to forfeiture.

Upon payment of the instalment due on allotment, Scrip Certificates to Bearer will be issued against the allotment letter, and, when fully paid, will be exchanged as soon as possible for Definitive Bonds carrying interest on the face value of the Bonds, from April 1st, 1908, payable principal and interest at the office of the Company in London, or at the option of the holder at the office or agency of the Company in New York or Montreal as above stated.

Full particulars of the progress already made with construction, and of the prospects of the Grand Trunk Pacific Railway will be found in the letter, dated the 13th day of March, 1908, and annexed to the Prospectus, from Charles M. Hays, Esq., President of the Grand Trunk Pacific Railway Company and second Vice-President and General Manager of the Grand Trunk Railway Company of Canada

The Grand Trunk Pacific Railway Company undertakes to pay all Canadian taxes now or hereafter to be imposed in respect of the principal or interest of the Bonds.

The Western Division, Series "A" (Prairie Section Bonds), and Series "B" (Mountain Section Bonds) are for an aggregate amount not to exceed £4,150,000, whereof not exceeding £2,100,000 is issuable in respect of the Prairie Section, and not exceeding £2,050,000 in respect of the Mountain Section. This amount of £4,150,000 is secured by a Mortgage dated March 15th, 1905, on the Railway, undertaking, equipment, property and tolls of the Grand Trunk Pacific Railway Company, including its leasehold interest in the Eastern Division of such Railway, but with the exception of branch lines of the Railway exceeding six miles in length, ships, Municipal and Provincial grants of land by way of bonus or subsidy other than for Railway purposes, and the rolling stock constituting the equipment of the Eastern Division or of any of the above-mentioned branch lines. Such Mortgage ranks next after the Mortgage securing the Three per Cent. Bonds guaranteed by the Canadian Government hereinafter referred to.

On condition that the Grand Trunk Railway Company guarantees Bonds to provide the balance for the construction of the Western Division of the line, the Canadian Government undertakes to guarantee Bonds bearing interest at 3 per cent. for an amount up to 75 per cent. of the cost of construction of that Division, such amount in the case of the Prairie Section not to exceed $13,000 per mile.

Although the Mortgage securing the Three per Cent. Bonds guaranteed by the Government ranks before the above-mentioned Mortgage securing the Bonds guaranteed by the Grand Trunk Railway Company of Canada, yet an Agreement scheduled to an Act of 1904 provides to the effect that, in the event of default by the Company, "to the extent in the whole of a sum equal to five years of such interest," on the Three per Cent. Bonds the remedy of the Government shall be to put in a Manager, with the concurrence of the Company, to operate the Western Division, and to collect and distribute net earnings *pari passu* between the holders of the Bonds guaranteed by the Government and the holders of the Bonds guaranteed by the Grand Trunk Railway Company of Canada, in the proportion of 75 per cent. of such earnings to the holders of the Bonds guaranteed by the Government, and 25 per cent. to the holders of the Bonds of the Western Division guaranteed by the Grand Trunk Railway Company of Canada

The above-mentioned Mortgage Deed for the Western Division Bonds provides that separate accounts shall be kept of the tolls, earnings, incomes, rents, and profits of the Prairie Section and the Mountain Section, and that in the event of the Trustee exercising the right of entry or sale thereby given in case of default by the Company, the moneys arising from each particular Section and available for the purpose shall, subject to the payment of the working expenditure of the Section, be applied first in payment of any interest or principal due on the Bonds issued in respect of such Section.

The Lake Superior Branch Bonds, the total issue of which is limited to £1,550,000, are secured by a first Mortgage, also dated March 15th, 1905, on all the property and rights of the Company on what is known as the Lake Superior Division of the Company's Railway, with the exception of the Land Grants of the Lake Superior Branch Line.

The Guarantee of the Grand Trunk Railway Company of Canada will be printed and signed on each Bond in the form or to the effect given in the Prospectus.

This Guarantee of the Grand Trunk Railway Company of Canada shall constitute a liability of the said Company in priority to all Share Capital of the Grand Trunk Railway Company of Canada, whether the Four per Cent. Guaranteed Stock, Preference or Ordinary Stocks.

The following table as to net revenue has been furnished by the Grand Trunk Railway Company of Canada, for the years ending 31st December:—

	1903	1904	1905	1906	1707
	£	£	£	£	£
Net Receipts after payment of Working Expenses ..	1,707,433	1,588,470	1,748,847	1,860,210	1,947,028
Rents of Leased Lines and Interest and Debenture Stock and Bonds	1,040,159	1,026,948	1,023,964	985,347	951,184
Payments in respect of guarantee of Interest on Bonds of Controlled Lines .	13,901	4,807	11,070	41,567	153,349
Balance available for dividend on 4 per Cent. Guaranteed and Preference Stocks..	653,373	556,714	713,813	833,326	842,495

The annual amount required for the whole interest of the Bonds of the previous and present Issues is £200,160.

Under the provisions of the Mortgage Deeds, interest during construction is payable out of Capital.

In addition to the above Guarantee of the Grand Trunk Railway Company of Canada, the Bonds under the Mortgages above mentioned constitute a direct obligation of the Grand Trunk Pacific Railway Company, and are not liable to be drawn or compulsorily redeemed prior to their maturity in 1955.

Copies of the full Prospectus and application forms may be obtained at the Office of Speyer Brothers, 7, Lothbury, London, E.C. Applications may also be made on the annexed form.

The allotment of the Bonds will be made as early as possible after the subscription list is closed.

A certified copy of the Act of the Parliament of Canada, 4-5 Edward VII., chapter 98, to which are scheduled the above-mentioned Mortgages, and the original of the letter can be inspected by intending subscribers at the Offices of Messrs. Speyer Brothers aforesaid during business hours prior to the closing of the list.

7, Lothbury, London, E.C., 13th March, 1908.

No.....

THE GRAND TRUNK PACIFIC RAILWAY COMPANY.
£2,000,000 Four Per Cent. Mortgage Sterling Bonds.

To Messrs. SPEYER BROTHERS,
7, Lothbury, London, E.C.

I (We) request you to allot me (us) £..... of the Four per Cent. Bonds of the above Company upon the terms of the Prospectus issued by you dated 13th March, 1908.

I (We) enclose £..... being a deposit of £10 per cent. and I (we) engage to accept the above or any less amount you may allot to me (us), and to make the further payments thereon in accordance with the said Prospectus.

Signature .....

Name in full .....
(Add whether Mr., Mrs., or Miss, and Title, if any).

Address in full .....
.....
.....

Date .....1908.

Please write distinctly.

NOTE.—So far as practicable allotments will be made in proportionate amounts of the Series "A" (Prairie Section), Series "B" (Mountain Section) and Lake Superior Branch Bonds.

Cheques to be made payable to "Bearer."

SIR HUBERT VON HERKOMER
AND
PUBLIC OPINION.

Sir Hubert Herkomer, the distinguished artist, writing from Bushey to the Editor of PUBLIC OPINION, says, on February 11, 1908:—

"Dear Sir,—It gives me great pleasure to tell you how your paper, PUBLIC OPINION, answers a purpose in my life. Although I read a great deal, I find it impossible to keep abreast of the trend of higher thoughts that is going on around me, which can only be gathered from various articles and letters in newspapers, and articles in magazines. But your paper gives me the assurance that I miss nothing which would be of use to me in the train of thought upon which I may be engaged, and seldom does a weekly issue of PUBLIC OPINION appear from which I cannot cull some useful suggestion. As a leeturer of art, I need all the suggestions on life that I can get into my hands, for I treat art in all its phases popularly. From PUBLIC OPINION I get to know certain modern authors with whose methods of thinking I am in sympathy, and those I follow up further. Your paper does me the service to point to them.

Your selection of current thought is worthy of all praise, for it gives one the wholesome feeling that the world is, after all, not going to the devil, but contains thinkers and good men and women.

I wish you with all my heart continuous success with your paper

Yours very truly,
(Sgd.) HUBERT VON HERKOMER

Percy L. Parker, Esq.

PUBLIC OPINION.

A weekly Review of Current Thought and Activity.

EVERY FRIDAY. TWO-PENCE.

Edited by Percy L. Parker.

The purpose of PUBLIC OPINION is to provide information by means of a weekly review of current thought and activity as they are expressed in the world's newspapers, magazines and books, and to put on record the ideas and activities which make for religious, political and social progress.

PUBLIC OPINION can be obtained from any Newsagent or Bookstall, or will be sent Post Free for one year to any address in the United Kingdom for 10s. 10d.; and to any place abroad for 13s. per annum. Orders should be addressed to—

PUBLIC OPINION, 30 & 31, Temple House, Tallis Street, London, E.C

The Investors' Review.

The Week's Money Market.

Bank Rate 3½ per cent. (Reduced from 4 per cent. on Thursday, March 5.)

Norfolk House, Friday Evening.

Our dealers in banking credit are again becoming impatient with the Bank of England. It ought to reduce its rate to 3 per cent., they say, and no doubt it ought, if it had only the superficial aspect of the money markets to consider. The Bank's own position is strong, decidedly stronger than it was a year ago, and the demands upon its resources are diminishing. In its past week it received £668,000 nett in gold from abroad and £50,000 in coin and £254,000 in notes came back from the internal circulation, increasing the reserve by £972,000 to a total of nearly £30,491,000, or £3,803,000 more than that of the same week last year. Figures and contrasts like these ought to insure ease, and they probably will do so next month if nothing goes wrong with domestic banking or commercial credit. But this is an important "if," because the strain is increasing upon our banks through the inconvenience industrial and trading contractions are bringing upon nearly all branches of the country's business. Already important failures are understood to have taken place, and the area of credit discomfort seems much more likely to widen than to contract throughout the whole of the present year.

For all that, we should have a 3 per cent. Bank rate almost immediately, because the money of the market is now cheapening everywhere. For day loans it is now often less than 2 per cent. in New York; the German Reichsbank has brought its official rate down from 6 per cent. to 5½, and the German open markets are working a good 1 per cent. below the Bank; lower rates are also coming to prevail on all other markets of Western Europe and in Paris, the richest of them all, money is barely 2½ per cent., much cheaper than here. All these markets may have their troubles, and in some the position of credit may be delicate in the extreme, but that uneasiness or fear contributes to cheapen floating balances wherever it exists, helps to lessen demands upon bankers' credit at the same time that the supply of cash increases. The note circulation of the Reichsbank is now £5,895,400 below the untaxed legal maximum, and the note circulation of the Bank of France has diminished so as to raise its proportion of bullion—silver and gold—to circulation from 74.81 per cent. a week ago to 76.01 per cent. now.

All visible indications thus point to lower rates and stagnating markets, so that our bill brokers continue to speculate boldly for the fall. They called their rates on three months' bank bills 3 to 3⅛ per cent. on Monday, and yesterday confessed to "something under 3 per cent.," although for the most part keeping to that as their lowest acknowledged figure. One important trader told us that mixed three, four, and six months' bills had been disposed of at 2¾ per cent. for payment next week the threes being taken rather below current rates, in order that the buyers might secure the fours and sixes. Nothing could better illustrate the strength of the conviction of the market that cheap money will prevail for many months to come.

Bills were in better supply this morning, but rates were no firmer, although one leading house put 3⅛ per cent. in as a practicable three months' rate. Bills, however, were done at 2⅞ per cent. and 3 per cent. was quite the best of it, longer dated paper being equally easy.

But all the week short loans have been scarce and dear at 3¼ to 3¾ and even 4 per cent. on call and 3¼ per cent. on seven-day time, because the supply of credit has been scarce. Most days the market has been at the Bank for help, and on the week it has added £1,040,000 to its debt there. This is purely the result of Exchequer accumulations which keep all bankers short of means. The total of public, or Government, balances is now £19,263,000 which is £553,000 up on the week and £2,000,000 more than this time a year ago, and all the help the market got this week from its borrowing and from the gold in and currency back did not help to increase its resources as revealed in the other deposits by much more than £886,000. The market is therefore hard up and must remain so to all appearances until after April 5. Not even the redemption last week of £1,500,000 of expired Treasury Bills did anything appreciable to help the credit trader, and the only consoling reflection he has is that the damming up now should cause a flood of cheap money when the mass is released. Perhaps. What we are most concerned about is the danger and loss to which the collection of the taxes always subjects the Money market at this period of the year.

About half the moderate amount due at the Bank this morning was renewed in loans and short discounts. At first call money was scarce and cost 3½ to 4 per cent., but the Treasury let some balances free, it was guessed, and the market closed easier—probably on the conclusion of the Stock Exchange settlement payments yesterday.

A commercial failure, believed to be heavy, has occurred in Liverpool as a consequence of default by a Brazilian debtor, and there was talk this afternoon of further mischief in Hamburg.

Silver.

Nothing of interest has transpired in the market for bars this week, and prices have only varied to the extent of 1/16d. per oz. from day to day. Supplies have been small owing partly to the Mexican requirements for coinage purposes; but on the other hand the bazaar demand has been mainly met by sales from China, and the buying here for that quarter has consequently been restricted. The highest points touched have been 25⅝d. per oz. for cash and 25¾d. per oz. for future delivery on Saturday, and since then quotations have, for the most part, alternated between 25½d. and 25 9/16d. for spot, and 25⅝d. and 25 11/16d. for forward metal. To-day, however, they rose to 25¾d. and 25⅞d. per oz. on "bear" closing, but eased off again and closed weak at 1/16d. below these figures. Tenders for the Rs. 20,00,000 of Council drafts on India offered this week amounted to no more than Rs. 6,26,325, all in bills, and applicants at 1s. 3 29-32d. per rupee received allotments in full. Next Wednesday another Rs. 20,00,000 will be offered.

Bank of England.

The Stock Markets.

Markets welter along and make no progress. Investment business does not improve and cannot do so in present circumstances. Probably when the Government dividends are disbursed next month there will be a dribble of money towards the Stock Exchange, but at present the business done consists to a large extent of liquidation, and unpleasant reports about the condition of trade as well as the weekly exhibit of our railway earnings combine with the absence of means to check any tendency to speculation for the rise. With great courage and no small skill, New York financiers are working their market up and trying their utmost to get Europe to absorb their discredited shares, but as yet with very little success. On the Continent a certain amount of buying has been indulged in, but the example has not been followed to any extent on this side. On the contrary, we hear that every advance has so far brought in sellers, and that is well, because the speculative share, whether domestic or American, is not a commodity to touch, still less to invest in much at present. Those who may have money to put away or to play with should never lose sight of the fact that the present year is certain to be far more trying than the past one was. The American crisis of last year's end was only a commencement of the trouble, and what all markets have now to encounter is the settling down of prices for commodities, the restriction of output in almost all industries, and the want of means with which to launch into fresh undertakings. It may be said that the industry of the loan issuer and company promoter is becoming so much in evidence that we may soon see a change in this last respect, but we really do not know where the new things are finding lodgment. They must be held by intermediaries, because the best firms of investment brokers are getting scarcely any response from their clients to the invitations of prospectuses. This does not merely refer to such speculative adventures as the Salvador loan, of which about 96 per cent. went to the underwriters, for the very best classes of securities are given the go-by, and the insurance companies, usually large consumers of good things, are among the most conspicuous absentees from the market. Many of them, indeed, have their own troubles to face in the shape of depreciation upon the stocks they already hold, which has hitherto been systematically ignored. They can pursue this inert policy no longer, and we hear that some of the forthcoming insurance reports will contain unpleasant surprises both for the policyholders and, in the case of proprietary companies, for the shareholders. Bonuses will have to be curtailed or will disappear, and if the situation created by market depression is faced with courage dividends will also have to be cut down. In these circumstances, we must be prepared to see markets irresolute, prone to flinch and in many ways treacherous.

On no class of security will the pressure of adversity have more unpleasant consequences than upon the great multitude of over-capitalised joint-stock companies brought into existence since 1890, to go no further back. Not only have we this mass of diseased finance to deal with, but the consequences of systematic foolhardiness, as it may justly be called, in dealing with the revenues of solidly constituted undertakings is also going to produce trouble. One has but to look at the actual condition of our railway property to understand why this must be so. In familiar language, the strongest company on earth cannot go on prospering by the system of eating its cake and acting as if it had that cake still to consume.

Contangoes.

Bankers charged 3¾ per cent. to the Stock Exchange for advances to the end of the month, except where money brokers were concerned, and they, as a rule, paid 3½ per cent., but were occasionally able to pick up free balances at 3¼ per cent. Inside the Exchange rates were stiffer, though differing little on the whole from those ruling at the end of February. On Home Railways the charge was sometimes rather higher, notably on Great Western. As a rule, however, 4 to 5 per cent. may be called the inside quotations, and on American Railroad shares the rate was only about ½ per cent. above that of a fortnight ago, in spite of the larger speculation open for the rise. That is to say borrowers still got their wants met at 4½ per cent. as an outside figure. Rates, however, were distinctly harder on Grand Trunk ordinary and preference stocks, Mexican Railway ordinary stock and Hudson's Bay shares. Money was also dearer on Argentine Railway shares by about ½ per cent., some borrowers paying 6 per cent. and very few less than 5½ per cent. There was no change at all in the Foreign

market, except perhaps on Rio Tinto shares, where a little more was demanded.

Trustee and Other Securities.

Consols have not been a very lively market, as might be supposed, but the price is maintained and the bulls are full of courage, buoyed up by the calculation that the Chancellor of the Exchequer will soon be coming in to relieve them of their speculative purchase at a good profit. We trust they will not be disappointed, but the market for trustee stocks of all descriptions is none the less flabby and day after day goes by with hardly a transaction in either the Home Municipal or the Colonial market, while amongst trustee securities in other directions the business is just as wretched.

Foreign Government Bonds.

Nor is there any animation amongst Foreign Government stocks. Continental Bourses are in much the same plight as our own Stock Exchange and Paris, as we note elsewhere, has had several nasty blows lately, one of the worst being in De Beers shares, the French selling of which has been enormous. One block of some 13,000 shares is said to have been flung out by the trustees of the Pasteur Institute because no dividend was paid. How that security came to be in its possession we cannot guess. The Russian loan also hangs over Paris, and there seems to be as great a lack of money provided by investors there as here. In Berlin and Frankfort, notwithstanding the reduction in the Reichsbank rate to 5½ per cent., grumbling predominates, and anxiety is increasing as to what will happen with regard to many of the industrial and trading companies brought into existence by the zeal of the German banks. Day by day the tale of insolvencies mounts up throughout the Empire, and it is obvious that abroad as at home, 1908 is going to be the most trying year finance has encountered for many a day. The wonder therefore is that prices keep up as they do, but that is perhaps because professionals alone are as a rule endeavouring to maintain a show of play. They will not wound each other over much if they can help it. Amongst the list quoted here Argentine securities show strength, the belief being that the present Government of the republic is strong enough to maintain internal order notwithstanding the rivalry between groups of politicians and the permanent antagonism existing between the province of Buenos Ayres and the up-country provinces, its suckers. The market for Brazilian bonds is colourless. Chilian are heavy for that country has a most trying time to weather through. Japanese are steady and most Continental stocks without movement of any kind. Russian bonds, though, have been weaker and need much propping.

Home Railway Stocks.

Here all is gloom and disgust. Even the tiny ¼ per cent. rate of dividend squeezed out by the North British board on its deferred stock did nothing whatever to stimulate buying in that quarter. Why the board took the trouble to make a distribution of this kind we cannot imagine. It would have been better for the permanent interests of the company if the directors had followed the example of the Caledonian board and frankly defaulted. Our very best Home Railway stocks are amongst the weakest and the heaviest fall of all this week has been in North-Western which is down 2½. After that there is nothing to be said. The few movements even amongst debenture, guaranteed and preference stocks are downwards with scarcely an exception, and naturally Great Central preferences, as they are ironically named, continue the weakest of all. What can we expect when the traffic receipts for the past week display a shrinkage of £95,630, bringing the total falling-off to date up to £262,026, according to the *Railway News*.

Colonial Railways.

No security in all this group has any vigour of play around it except the ordinary shares of the Canadian Pacific Company, and these are sustained with great vigour by the immensity of the account open for the fall. On the week the price has been pushed up $5 and even Grand Trunk ordinary and third preference stocks, in which the selling was free yesterday on the news that another issue of the company's Pacific line debt was coming off, rather gained than lost on the week. The whole fortune of this market, however, depends upon the ability of the "bears" to hold out. Naturally the debentures of the railways guaranteed by the Chartered Company have been flat, and it would be difficult to sell any one of them for the dread is shown that these new shares, offered with such daring by the Chartered board, may not have found a sufficient number of subscribers. The board brooded long yesterday over the plight it finds itself in.

American Railroads.

As noted above, there has been a sort of campaign for the rise going on in these shares. It is an effort to admire at a distance and prices are going up in the teeth of declining traffic receipts, as well as of bad news about industrial affairs from one end of the republic to the other. The gamble in Union Pacific has been as great as in Canadian Pacific shares and yet the public here has not been stirred up to join. As long therefore as the professional gamesters have all the play in their own hands and plenty of credit to back it with, they can put prices higher and higher, ignoring failures, the inability to raise fresh money, every consideration that might weigh with people of sense. Keep away from the market. Bonds have been influenced by the rally in shares but there also, although prices are better, business of a solid kind would be difficult to discover with the aid of the most powerful microscope.

Foreign Railways.

A tendency to harden has been displayed in the Argentina Railway market, partly because the liquidation of swollen accounts open for the rise has been for the present completed. That process has nearly destroyed business and dealings even in popular stocks like B.A. and Pacific, Rosario and Great Southern have been insignificant. All that has happened to change the tendency of the market has been a cessation of forced selling. Antofagasta stocks have been flat on the general outlook in Chili, and the gamble in Mexican Railway stocks has subsided as quickly as it rose, leaving prices depressed. No recovery has taken place in the securities of Cuban Railways and none seems likely to take place while their traffic receipts continue so disappointing, and even Brazilian Railways have begun to slither back in a disagreeable fashion owing to the news of banking and other failures in that republic and here, failures connected with the coffee and rubber industries, and the anything but favourable outlook for that coffee valorisation adventure.

Banks, Breweries, etc.

Very few changes have occurred amongst Bank shares this week for the reason that business has been absent in most of them. The market may be called steady. In Brewery securities, too, the contrast presented by our week's comparison of prices with the array of falls displayed last week is eloquent of the fictitious character of the demonstration against the Licensing Bill then recorded. Most Brewery securities have not been touched the whole week through, and as we pointed out a week ago the smash of prices then made by the combined action of the dealers was so arranged as to fend off selling. The result is that business is dead. Nobody wants to buy and those who would sell cannot. Among Docks the only noticeable change has been a fall of 4½d. in Surrey Commercial ordinary owing to rather persistent selling. It has been in some degree inspired by the remarks of the chairman at the shareholders' meeting.

Commercial and Industrial and Other Securities.

A severe relapse has taken place in Portland Cement debenture stock which was dealt in yesterday as low as 78 and could not be sold at that price. The preference shares are also down but not the ordinary, but what the fall is produced by has not yet transpired. The securities of Russian Petroleum companies are

also weaker and we regret to say with what looks like good reason. Most other securities in the enormous industrial agglomerate have either not changed at all or moved so lightly as to make no demands on our space. Gramophone shares have been bought. Fine Cotton Spinners are rather better, and the shares of some of the big shop companies have also shown some disposition to improve. Altogether therefore this big market, although idle enough in all conscience, does not look so pitifully gloomy as some of the others. Nitrate shares though are still going down and we fear the bottom there is a good way off yet. Shorts preferred is another share which has been noticeably flat. In the Electric Lighting group Domestic things are still left alone and therefore mostly steady, but the shares of the Canadian General Electric Company have been put down 4 on the reduced dividend, only this has been balanced somewhat by recoveries in the shares of the Mexican Light and Power and the Montreal Light and Power Companies.

Financial Land, Financial Trusts, Gas and Insurance Shares.

On the week the bears have a minute advantage in Hudson's Bay shares, but they had better not venture too far because there are, we fear, more than enough of them already. Were there not such a multitude the price would not stand where it does. Pekin Syndicate and Peruvian Corporation things are rather better, but on the whole, the dearth of business has prevented anything of interest from transpiring. Conspicuously flat amongst Financial Trusts are the issues of the Bankers' Trust whose deferred stock has dropped 6 within the week. Many others are also quoted lower, mainly because of the alarm excited amongst the holders of their various issues by a circular some of them have sent out denouncing the Licensing Bill. "Oh! they hold brewery shares and debentures, do they?" a proportion of the recipients of this missive have exclaimed, and some of them promptly threw away their holdings. Too much zeal always does mischief, and the boards of these trusts would have done better to keep quiet.

Gas stocks are steady and the selling of Gas Light ordinary has ceased. It was not due to anything about the company, so far as we can discover, but only to special circumstances affecting particular holdings. Insurance shares have been firm on the whole, especially the debenture stocks of the Commercial Union Company, and of the Law Union and Crown. Such changes as have occurred amongst shares are not always favourable, but few movements of any kind are to be seen. Nor are there any particular changes in prices for Iron, Coal and Steel emissions, the largest indeed, is a rise of 8 in Dunderland Iron Ore debenture stock, and next comes Carnegie Steel Trust shares which have gained with the other Wall Street articles. It is said the common are being speculatively bought on the Continent. None of our Home Iron and Steel manufacturing companies' shares have gone back to any appreciable extent except Cammell, Laird's ordinary, down ¼. Pearson and Knowles shares are that fraction up, and Stewarts and Lloyd's ordinary have rallied ¾. A few ups and downs of 2s. 6d. to 5s. are noticeable amongst Tea, Coffee and Rubber securities, in which, however, there is hardly any business. Anglo-American Telegraph deferred has improved, otherwise the Telegraph and Telephone assortment offers nothing to note. In the Tramways group the news that the London General Omnibus Company is boldly going to absorb the Vanguard Motor Bus Company, has had a depressing influence on its 4 per cent. debentures and preference shares. Other movements are of no importance.

Friday Evening.

To-day's event is the decision of the Chartered Company's board not to go to allotment with that 1,000,000 of new shares which it offered at par. The official notice, posted in the Stock Exchange, says that applications have been received for "the greater proportion" of the proposed issue, but as the total did not come up to the 900,000 which the directors pledged themselves to regard as the minimum number upon which they would proceed to allotment, the attempt has been abandoned. The report last night was that only 380,000 shares in all had been applied for, but that must surely be the number in excess of the 200,000 which were subscribed with a flourish as a sort of encouragement to the others by a market syndicate, for if not the directors are again wandering from the truth in their notice, and that is really not worth their while doing in present circumstances. So far as we can make out the general public, so long beguiled on and on by the mirages this concern has been surrounded by from the first, have made no response worth speaking of. Fresh proposals, however, are to be made with a view to find the money. They should be curious.

Nothing further can be reported about stock markets. Prices have been heavy throughout to-day, and the majority of the changes adverse. German things are flat on the report that a big new loan is soon to be launched, and that is probably true, because both Prussia and the Empire want money. Consols closed easier, and Canadian Pacific shares and Grand Trunk stocks were also depressed, and Yankees limp, but Foreign Government things kept pretty steady.

Railway Finance.—The Futility of Railway Audit.

"The dividends proposed to be declared on the several stocks and shares are *bona fide* due thereon, after charging the revenue of the half-year with all expenses, which, in our judgment, ought to be paid thereout."

That is the regulation form of certificate to be found at the foot of all railway reports. The companies differ, the auditors differ, the dividends differ, but, for the comfortable assurance of the shareholders, these words are always to be found above the signatures of eminent accountants, whose election and re-election have been proposed, seconded, and carried unanimously by shareholders at their half-yearly meetings.

Railway accounts are full and detailed—more so, I think, than those of any other class of company—but the matters they deal with are so special and technical than an ordinary person finds difficulty in extracting any useful information from a perusal of their figures. Hence, railway shareholders depend greatly on their auditors, and as quite a respectable-sized rumour now challenges the soundness of railway finance, it behoves the proprietors to see what they can make out for themselves.

Most of the companies have definite characteristics to the popular mind. For instance, the London and North-Western has managed to get itself regarded as the premier line—ranking with the Bank of England, the *Times*, and the Established Church as a sort of British institution. It is suspected of sometimes trading upon this reputation. The North-Eastern is the speedy and enterprising line. The Midland is prehensile, bold, and ambitious. The Great Central, under its old name, the Manchester, Sheffield, and Lincoln, was the pirate omnibus, or the pariah of the railway world. The South-Eastern is—but perhaps I had better get on.

Try taking the half-yearly accounts of half-a-dozen of these railways (they are all cast in the same form). Extract comparative figures from them, and you will find curious light thrown upon their reputations, and you will, at the same time, become sceptical as to the value of the services rendered by the auditors.

Take the question of the maintenance of permanent way. Here are some figures, taken from half-yearly reports of 1906. The London and North-Western Railway, with 1,943 miles of permanent way, expends £434,588, or an average of £223 per mile. The Lancashire and Yorkshire, with 585 miles, spends £92,367, or £157 per mile. The North-Eastern, with 1,696 miles, spends £231,155, or £136 per mile. Now, no one would suggest that the North-Eastern permanent way is not maintained as well as that of the other two systems mentioned. The explanation probably is that the North-Eastern is at present enjoying the fruits of liberal expenditure on this head in the past, that the North-Western is out of revenue improving the quality of its permanent way, and that the Lancashire and Yorkshire is paying the penalty of a starvation policy in other years. These are, of course, speculations. The point is, Do the auditors concern themselves with disparities of this sort? Do they regard it as within their province to consider whether the expenditure on this head suggests neglect or extravagance on the part of the company? It is believed they do not, and that they rely upon the certificate of the engineers printed with the report. Yet the whole question involved in their certificate depends upon a right solution of this difficult matter of maintenance. There must be some standard of normal expenditure, based on reliable averages, but no sign of its application is to be seen.

Now compare the items relating to repairs and renewals of carriages and wagons. Upon this head, according to the reports before me, the North-Eastern Railway spends in the half-year a sum equal to £36 a coach, the London and North-Western £31 a coach, the Lancashire and Yorkshire £18 a coach, and the South-Eastern and Chatham Railway—don't laugh!—£17 a coach. One ought not to digress, but really in this context the South-Eastern deserves special dishonourable mention. From the year 1890 to the year 1900 this company paid on its ordinary stock dividends averaging over 4 per cent. During all that time it was wasting its substance in riotous litigation and ruinous extensions. At the end of that period, Chislehurst Tunnel fell in, Charing Cross station fell down, so did the dividends, the beggared litigants were united in an unholy alliance, amid the execrations of Rochester, Chatham, and the other Kentish towns dependent on their mercies, and the directors woke to the fact that the whole joint system was within measurable distance of being condemned by the Board of Trade.

It is to be emphasised that during the whole time alluded to eminent accountants were signing certificates at the foot of the South-Eastern reports that the dividends declared were *bona fide* due after charging revenue with all expenses which in their judgment ought to be paid thereout.

To resume, £17 a half-year may suffice for the upkeep of a coach, but it scarcely leaves margin for replacing it with a new one, and, obviously, it will not allow of additions to the number of coaches. The practice of railway companies in this respect is remarkable. The word "depreciation" is not to be found in their reports. When a coach is worn out, they throw it away and issue fresh capital in order to buy or build a new one. I state this amazing fact baldly, and in order that I may be believed I will quote instances.

On December 31, 1905, the Lancashire and Yorkshire had a coaching stock of 4,584. During the following six months the capital expenditure on that head was £8,260, and yet on June 30, 1906, the coaching stock was 4,578. The next six months saw a further capital expenditure of £4,997, and a further decrease of 11 coaches—£13,257 extra to rank for dividend and 17 fewer coaches in stock. The auditors, however, are satisfied with the chief mechanical engineer's certificate, and give their usual consolatory assurance.

The Midland report for June 30, 1906, shows £3,567 capital expended on wagons, coupled with a reduction of 118 in the number of those vehicles, and the South-Eastern and Chatham report for the same period shows a capital expenditure on coaches of £16,667, and a disappearance of 26 coaches unfit for further use even upon that shameless system. I have not, therefore, hit upon an isolated instance of this curious finance.

I do not go so far as to say that there may not be an explanation of these facts; coaches and wagons may improve in quality as they decrease in quantity. My point is that the report and accounts afford no clue to the solution, and that *prima facie* it would seem to be no one's concern to raise the question.

There is a good deal of tradition about railway service. "Why do you do that?" once inquired a passenger at Crewe of a man who was industriously "clanking" the wheels with a long hammer. "I dunno, I'm sure, sir," replied the honest fellow; "it's always done." So, perhaps, is petrified custom to be found in the audit department.

The auditorship of a railway should from time to time pass into fresh hands. The post should not be entailed upon one firm, no matter how eminent. Many of the auditors have literally grown up with the railways they audit. From youth, through manhood, and now in old age their clerks have checked, accurately enough, the columns of figures, and they have appended their distinguished signatures to the stereotyped form in which have long crystallised the defects of their methods. They have cordial relations with the directors, and meet the chairman with an easy eye.

What is wanted for the assurance of shareholders is a change of auditors, so that railway finance should meet with the impact of fresh minds. Some of the men accustomed to handle the figures of the great private firms, who know the importance of "writing off" and the meaning of depreciation, who can distinguish between a sound growth and the false increase that follows upon the unhealthy stimulus of easily acquired capital—these are the auditors who might throw much-needed light upon the position of English railways.

Geo. A. Macdonald.

Switzer and Co., Limited.—Total distributable profits for year ending January 31 £14,695, including £2,555 brought forward. From this £3,000 is added to the reserve, and £2,000 written off premises account, dividend on the ordinary shares being made up to 8 per cent. with a bonus of 2s. per share in addition, both preference and ordinary shares being of £5 denomination. The reserve fund is £36,000. Debtors owe the company £41,707, and it owes trade creditors £24,354. Cash amounts to £7,224 and investments are entered at £5,971. Stock-in-trade is £1,623 and premises and goodwill £84,919.

Deposits against future queries may be lodged with the Publisher.

F. E. D.—It would be a pity to sell just at present as some recovery is not improbable on various grounds, possibilities of combination for one. The business outlook gives little hope of better business.

Timothy.—(1) There is frequently a set back about this time, but we hear the company is doing well. It is a powerful concern, and we see no reason to sell at present. (2) They ought to be worth their present price, but in averaging you naturally increase your risk. More capital will, no doubt, be wanted, and the failure of the recent issue has not helped the company.

H. D. R.—The rate referred to is the highest that can be considered safe, and the institution mentioned is one of the strongest, has, indeed, but one rival. By agreeing to fix the money for three years certain a higher rate might, perhaps, be got.

R. L.—(1) In time this company ought to do well, but its financial position is a little difficult. Some of its properties should be good, and as a speculative lock-up they have chances. (2) There may be some improvement in these, but we have not a high opinion of the concern. (3) This is a doubtful purchase, and one we should not recommend. (4) Traffics are bad owing to poor and late crops. (5) This also has been doing less business. Generally the country is not doing so well, and it is possible this may continue for a time. It is, therefore, not possible to suggest prices for averaging at present; dividends may probably be reduced.

Ludwig H. (Bayreuth).—Present holders wish Europe to buy these shares, and are putting the price up to tempt you. When they have unloaded the price will go down again, for the shares have no real value. If you buy, therefore, it must be for a quick profit, for the trade slackness has not nearly been fully discounted yet. We hold 4 marks to your credit.

S. S. R.—Powerful interests may drive the price up again, so you might hold on since you have stuck to the shares so long, but they are not intrinsically worth their present figure.

Chester.—(1) No, certainly not. (2) The quality is not affected by the channel, but you probably paid more than you would have done in the regular market. (3) On the whole Paris or any great French city.

L. S. M. O.—No, keep out of it through the channel offering. (2) We are sorry we cannot be sure of fulfilling this engagement even for double fees.

J. G. M.—(1) Hardly. We are afraid it will go lower. (2) We are afraid these shares will also go down further, but for a long hold they ought to be good. (3) Very difficult to answer, but the company has great properties, and if you are not afraid of the speculative risk your holding may ultimately pay you.

Company Reports and Balance Sheets.

**** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

CALEDONIAN RAILWAY.

In the August-January half-year this company's gross revenue amounted to £2,229,902, including £77,908, the receipts of the Forth and Clyde Navigation Company, being an increase of £12,843. Working expenses, including £30,118 of navigation expenses, came to £1,263,638 or £78,282 more, and in their report the directors give the proportion of working expenses to receipts at £58 17s. for the railway and £38 12s. 7d. for the canal against respectively £55 5s. 10d. and £37 15s. 10d. in the corresponding half-year ended January 31, 1907, all these Scotch railways still making up their accounts a month after the close of the calendar half-year. Nett revenue amounted to £966,264 against £1,031,714, a decrease of £65,450, and after meeting the fixed charges, which so far as debenture and other interest goes show an increase of £13,031, £650,667 is left or £59,163 less than in the corresponding half-year. It follows that when the guaranteed and preference stock dividends have been met absorbing £366,168, the balance over is only sufficient to provide a 3 per cent. rate of dividend on the company's ordinary stock with £7,509 left to carry forward against £15,923 brought in. A year ago the dividend was at the rate of 3½ per cent. per annum, so that the preferred stock got its full 3 per cent. and the deferred ½ per cent. This time the deferred gets nothing. Economy in working, however, seems to have been carefully looked after, for we find maintenance of way, &c., down £5,879 on the comparison of half-years at £107,008. Carriage and wagon repairs also show a decrease of over £1,000 at £131,420, and general charges are less by £1,509 at £44,805. And even traffic expenses which have been mounting so rapidly in the case of English railways show an increase of no more than £5,823 at £85,236. Had it not been for an increase of £65,783 in the cost of locomotive power, which was £425,488, the half-year's results would have been sensibly better in spite of an increase of £3,024 in rates and taxes, and of rather less than £1,000 in the cost of compensation. Since the report was issued the announcement has been made that the directors have resolved to cut down the staff, and although this must involve hardship, we fear the step could not be avoided, because traffic has shrunk in all directions. Capital

expenditure during the half-year amounted to only £229,895, of which £50,628 went into new working stock and another £30,399 was absorbed by the Grangemouth Harbour extension. On lines open for traffic £138,156 was laid out. For the current half-year ended July 31 next the estimated capital expenditure is £205,000, and no doubt the end of the outlay on open lines is approaching. We may at least hope so, now that a better spirit is animating the boards of the Caledonian and North British companies leading them to work together instead of in rivalry. At the date of the report the capital account was overdrawn by £1,723,490, and the company had about £1,340,000 of trust funds in its keeping, including £870,706 of savings bank deposits and about £334 000 of superannuation fund money. Up to date the nominal capital expenditure has been £60,833,569, but of this £6,438,767 represents nominal additions to capital on consolidation, and the company has received £3,938,971 as premiums on stocks and shares issued. The dividends are payable on April 1.

GLASGOW AND SOUTH-WESTERN RAILWAY.

In the half-year closed January 31 last this company earned gross £911,177, including £24,038 of miscellaneous receipts, and working expenses came to £549,326. Traffic receipts of the railway proper showed an increase of £7,263, but the aggregate increase after deducting the cost of collection and delivery is only £1,097 and working expenses were larger by £16,219, the proportion of expenses to receipts, taking the railway figures alone, being 61.92 per cent. In this case also expenses seem to have been kept down as much as possible, for maintenance is less by £2,063, carriage and wagon repairs £280 less and even traffic expenses £646 down, the only heavy increase being in locomotive power up £26,140, against which, however, compensation demanded only £4,493 or £13,553 less than a year ago. Rates and taxes were also slightly down and steamboat expenses cost £1,700 less, but for all that the entire cost of working, including the steamboat figures, was £8,168 more than in the half-year ended January 31, 1907. The nett revenue of £361,851 was therefore £6,475 less, and after meeting the slightly increased interest charges and the rentals and guarantees payable £238,183 was left for the lower stocks or £7,643 less, so the dividend on the consolidated stock is reduced by ¼ per cent. per annum to 3½ per cent., leaving about £700 less to be carried forward at £6,842. Capital expenditure during the half-year amounted to £38,278 bringing the total outlay on capital account up to £19,373,917, and the capital account is overdrawn by £740,834 against which about £441,000 of trust and insurance and depreciation funds is held. In the current half-year the estimated capital expenditure is £34,264 almost entirely on lines open for traffic, and it was on this line that the bulk of the expenditure took place last half-year, no less than £22,908 of it being on new working stock. The dividend is payable on March 31.

HIGHLAND RAILWAY.

Gross receipts for the half-year ended January 31 amounted to £270,960 or an increase of £4,840, of which £3,189 came from goods and minerals, £1,599 from parcels, &c., and £326 from live stock, passenger traffic showing a small falling off. Miscellaneous receipts were £1,592 lower at £7,839 reducing the gain to £3,248 at £278,799. A very heavy increase of £13,914 in locomotive power, due to greater expenditure on coal and materials, was partly offset by a reduction of £4,154 in carriage and wagon repairs, but working expenses nevertheless took £9,940 more at £152,705. Last year £1,360 was charged for Petty Customs abolition, £1,200 was written off electric power installation and £1,000 was put to bridge renewal fund, none of which items appear this time, but, on the other hand, there is nothing to correspond to the £2,002 received for working the Invergarry and Fort Augustus Railway. Including £7,684 or £3,814 more brought in the disposable total after providing for debenture and other interest was therefore £2,248 smaller at £78,999, and the dividend on the ordinary stock has to be reduced from 2 per cent. per annum to 1¾, leaving £11,124 or £957 more to be carried forward. Outlay on capital account was again comparatively small at £10,161, but the debit balance creeps up steadily and now amounts to £164,145.

GREAT NORTH OF SCOTLAND RAILWAY COMPANY.

Owing to the disappointing harvest the gross receipts for the half-year ended January 31 only rose by £235 to £253,789 while the high cost of fuel sent working expenses up by £4,088 to £129,778, the ratio to receipts being 52.88 per cent. against 51.57. Nett revenue was consequently £3,853 down, and as the balance of £2,223 brought forward was smaller while nothing came in from interest against £274 a year ago the disposable total showed a decrease of £6,002 at £126,234. Fixed charges and interest on temporary loans and bank overdrafts required an extra £566, and after providing for the guaranteed and preference dividends and the regular 3 per cent. per annum on the preferred ordinary stock the directors are only able to pay a dividend at the rate of ½ per cent. per annum on the deferred ordinary stock compared with 1 per cent. by cutting down the sum carried forward by £3,651 to £2,311. Capital expenditure for the six months was £11,488, of which £7,888 was met by debentures and debenture stock issued, but the debit balance is now £268,755 and in addition to utilising various accumulations totalling £136,679 the company has had to raise £96.000 by temporary loans.

BILBAO RIVER AND CANTABRIAN RAILWAY CO., LIMITED.

In view of the marked decline in the demand for and price of iron ore since the autumn, the directors consider that the results shown for 1907 must be regarded as very satisfactory, and certainly shareholders have little cause to grumble. The total shipments of ore from Bilbao River fell off by 484,983 tons to 3,569,729 tons, but the decrease in this company's traffic was only 130,891 tons at 840,499 tons. Gross receipts dropped by £15,921 to £108,725 and working expenses were £6,495 lower at £47,778, the decrease including a reduction of £1,432 to £6,361 in loss on exchange due to smaller remittances. With £6,394 brought in, the nett revenue was £8,077 down at £66,125, but the dividends and bonus on both preference and ordinary shares are maintained at 18s. per share, as the amount put to reserve is £10,000 smaller at £7,500, and after writing £3,500 or £2,000 more off investments for repayment of capital £6,318 is left to be carried forward. This reduction in the appropriation to reserve is of no consequence, as the whole cost of the property was written off some time ago, and the investments for repayment of the capital of £164,025 stand at £152,607. The addition to reserve brings that fund up to £55,000, of which £28,210 is invested, while the company has a further £40,000 in cash on deposit awaiting a favourable opportunity for investment. Creditors amount to £18,990, against debtors £9,220, stores £7,234 and cash and bills £42,874, and in every respect the company's position is an enviable one.

ANGLO-CALIFORNIAN BANK, LIMITED.

After the extraordinary activity consequent on the destruction and rebuilding of San Francisco, the business of this bank seems to have resumed its normal condition, and the gross profits for the year ended December 31 are back to the level of 1905 at £83,990, a decrease of £9,740 on the previous figures. Current expenses at both ends were £688 lower at £38,745, while State and other taxes absorbed an extra £573, but with 4,982 more at £15,214 brought in the sum available for appropriation is only £3,688 less. A dividend of 12s. and a bonus of 4s. per share are paid, making 8 per cent. for the year, a rate which has been regularly maintained since 1902, £15,000 or £5,000 less is added to reserve and £15,526 is carried out. A decline of £683,259 in deposits, bills payable, and current accounts is reflected in each item of assets. Cash is down £224,269 to £747,035, bullion £37,119 to £22,939, bills receivable, current and other accounts £385,871 to £1,507,676, real estate £1,071 to £17,844, and stocks and bonds £22,907 to £216,610, while bank buildings alone are unchanged at £14,629. Reserves with the years addition amount to £235,000, against a paid-up capital of £299,700. The balance-sheet totals £2,526,743.

INDUSTRIAL BANK OF JAPAN.

Gross profits for the December half-year, including a larger balance of yen 61,398 brought in, rose by yen 61,633 to yen 2,024,836, but there seems to have been a considerable saving in expenses as nett profits were yen 235,259 up at yen 930,981. The reserve against losses, therefore, gets rather more at yen 112,000, and in addition to putting yen 27,800 to dividend equalisation fund yen 100,000 is transferred to the special reserve, after which the shares again receive 7½ per cent. and yen 61,731 is carried forward. Compared with a year ago further capital to the extent of yen 2,500,000 was paid up and the debenture debt was increased by yen 4,460,000 to yen 14,055,000, while the reserves are yen 350,200 up at yen 863,000, but deposits have fallen off by yen 5,427,547 to yen 14,884,911. On the credit side cash is yen 263,201 up at yen 897,731, money at call has risen by yen 1,170,514 to yen 2,353,206 and loans come to yen 1,243,508 more at yen 13,617,338. Bills discounted are also higher by yen 1,388,605 at yen 4,688,678, but investments in Government securities, &c., have been reduced by yen 1,530,748 to yen 21,509,056 and debentures of industrial companies are yen 353,592 down at yen 3,886,969.

CITY OF LONDON ELECTRIC LIGHTING COMPANY.

In the year ended December 31 last this company earned £19,854 more than in the preceding year at £280,861, the amount including £1,719 entered as interest on investments and discounts. Current expenses took £122,111 or £5,316 more, leaving the free balance £14,538 to the good at £158,750, to which a balance of £20,621 brought forward has to be added bringing the entire free revenue up to £179,371 or £11,162 more, and after meeting the current charges and adding £45,000 or the same as a year ago to the reserve account, £83,513 remains available for dividend, out of which the ordinary shares again get 12s. per share, of which 5s. was paid in July last, leaving 7s. to be distributed now. This makes 6 per cent. for the year, the same as before, and leaves £20,474 to be carried forward. Capital expenditure is still heavy and probably inevitably so, at any rate the nett addition for the past year was £39,711, bringing the entire capital invelved in the undertaking up to £2,091,671 nett. The gross capital expenditure indeed was £87,069, but of this £47,358 was provided by the amounts written off in respect of buildings, plant and other works dismantled during the past year and by £8,400 applied in reduction of sundry items in the capital account. The price obtained by the company for its private supplies of electricity has fallen steadily year after year from 4.54d. per unit in 1901 to 2.63d. per unit in the past year, but the business continues to expand although slowly, the nett increase in customers supplied last year being 226 implying an increase in the power furnished of 110,160 eight-candle power lamps, this including supplies of current for power and heating purposes; and the demand for these two utilities continues to show a steady increase, being now equal to 27.19 per cent. of the total units sold for private supply.

METROPOLITAN ELECTRIC SUPPLY CO.

Capital expenditure during 1907 amounted to £38,493 but the capital account is still in funds to the amount of £30,357, the total outlay to date being £1,840,877. Gross revenue for the year showed an increase of £3,048 at £178,684, but inasmuch as the figures for 1906 included £5,178 for the remainder of the Marylebone business transferred on March 31, 1906, the real increase in last year's revenue was £8,226, and working expenses

took only £396 more at £83,334. After providing for depreciation the revenue credit balance is £95,350, out of which £20,000 has again been set aside to the depreciation and reserve fund, leaving £75,350 to be dealt with or adding in the balance brought forward and other receipts including a transfer of £21,000 from the depreciation and reserve fund, £88,767 in all. Thanks to the money brought from the reserve, and which represents an undistributed balance of the Marylebone purchase money, the directors are able to pay 3s. 6d. per share as a final dividend for the year, making with the interim 3s. paid six months before 6½ per cent. for the year. This leaves £879 to be carried forward. The general balance-sheet shows that the company owes £190,000 to its bankers in spite of a reserve and depreciation fund of £220,355. Its investments all taken at cost, and including a variety of securities from Consols to American railway debentures and £133,644 worth of miscellaneous securities including additional freehold land in London and Middlesex, are entered at £408,723, which is slightly higher than a year back, when, however, a depreciation of £18,812 was admitted but not allowed for, and the cash was £8,405 on December 31. Stores amounted to £25,594 and sundry debtors owe the company £62,350 besides £2,545 representing amounts paid on account of contracts. Suspense accounts of various kinds figure for £9,982. In 1906 77,596 8-c.p. lamps were added to the system and last year 49,758. The total is now 735,116. A year ago the dividend was 8 per cent. Depreciation of investments reserve is £4,040.

COUNTY OF LONDON ELECTRIC SUPPLY CO., LIMITED.

A further substantial addition to the motors supplied with energy sent the sales for the past year up by 3,214,755 units to 13,970,179 units and the revenue therefrom rose by £19,953 to £162,297. Meter rents also improved, but other receipts fell off a little notwithstanding that the company again increased its interest in kindred undertakings, leaving the total income £19,561 larger at £175,780. Expenses, after deducting £7,413 or £215 more charged to reserve for repairs, &c., were £9,737 heavier at £71,626, and the nett profits with £4,936 brought in amounted to £109,089 compared with £98,511. Interest on debentures and temporary loans having been met the ordinary shares again get 5 per cent., and after putting an extra £7,000 at £23,000 to reserve for repairs, &c., the sum carried out is reduced to £4,381. In addition to this transfer from revenue the reserve was credited with £2,000 from premiums on new shares, but £12,935 was written off machinery, leaving a nett increase of £4,652 at £64,332. Capital expenditure amounted to £37,991, making a total of £1,571,777, and the company has again advanced money to or purchased securities of the Bournemouth and Poole Electricity Supply Company and the Coatbridge and Airdrie Electric Supply Company, the latter being an undertaking which has arisen out of the ashes of the Scottish House-to-House Electricity Company, with the result that its interest in these now stands at £157,560 against £135,288. The money for the company's own expenditure was apparently raised by an issue of 6 per cent. preference shares, but this policy of lending a helping hand to others has necessitated an increase of £24,500 to £102,000 in the temporary loans on securities. Creditors are £10,755 up at £61,202 against an increase of £10,619 to £92,668 in sundry debtors, and cash is £15,203 higher at £22,544, probably as the outcome of the borrowing. Preliminary expenses are still decidedly heavy at £24,715, and although provisional orders not yet allocated are down to £912 the costs of the company's Power Bill 1905 figure as an asset for £3,454.

NEWCASTLE-UPON-TYNE ELECTRIC SUPPLY CO., LIMITED.

Excellent progress was made by this company during the year ended December 31, when it added no less than 22,764 h.p. to its system compared with an increase of 16,700 h.p. in 1906. As the result of this the sales of current produced £57,108 more at £216,782, and with £6,551 more from rents and miscellaneous receipts the total gain in revenue was £63,659 at £240,469. In normal conditions this should have meant a correspondingly big improvement in nett profits, but unfortunately the coal bill rose to an extent out of all proportion to the growth of the business, and practically the whole of the improvement was wiped out. Coal alone cost an extra £38,009, and with increases of £15,274 in wages, maintenance, and repairs, £4,886 in rents, &c., and smaller advances in other items the expenses were £03,353 heavier at £158,897, leaving the nett income only £306 better at £81,572. The balance brought forward was £791 up at £2,145, and with £3,680 or £554 more from interest on loans and investments the disposable surplus came to £87,397 against £85,747, but, on the other hand debenture and other interest required an extra £6,985 at £25,471, so the directors transfer £5,000 or £10,000 less to depreciation fund. This leaves £56,926 to be dealt with against £52,261, out of which the ordinary shares receive a dividend of 8 per cent. and £2,025 is carried forward. The reserve is credited with premiums received on shares issued during 1906 amounting to £14,612 and also with £13,078 from suspense account, being the balance of the £50,000 received from the County of Durham Electrical Power Distribution Co., but £25,000 is transferred to depreciation account making a nett addition of £2,690 at £26,984. With the depreciation fund the accumulations now amount to £85,484, exclusive of the £150,000 written off capital expenditure in 1906, and against these there are investments valued at £87,102. Sundry debtors come to £106,203 against £95,607, due to sundry creditors, but cash is small at £2,233. Expenditure on capital account for extensions to meet the demands of certain large consumers and on the system generally was £218,934, while £114,105 was received. The debit balance is now £290,390, to meet which £182,593 has been raised by temporary loans, but, as noted in our "Critical Index," the company is now making a further issue of £500,000 in preference and ordinary shares.

NEWCASTLE AND DISTRICT ELECTRIC LIGHTING CO., LIMITED.

The increase of 1,205,600 units to 9,282,370 units in sales for the year ended December 31 was smaller than the directors expected, and they explain that the demand for energy fell off owing to lessened work in the engineering and other trades. At the same time, the heavier cost of coal had a depreciatory effect upon nett profits, and these only amounted to £21,616. After providing for administration charges, debenture, and other interest and £300 for leasehold redemption, the nett balance, including £2,248 brought forward, was £8,935, and in order to pay a dividend of 4 per cent. on the [illegible] capital £1,222 has to be taken from reserve. The directors justify this step on the grounds that the price of coal was abnormal, that the return of £857 from the Newburn undertaking was so small and that the position of the company will be much improved during the current year by possible economies now being effected in various ways. None of these arguments, however, seem adequate justification for discounting the future in this manner, especially as the financial situation is far from satisfactory. No depreciation was allowed for last year on properties valued at £537,673, and the amount written off in the past is only £7,500, while the reserve fund, after deducting the sum now withdrawn, will stand at the comparatively trifling figure of £8,778, and even that is sunk in the business. Then £20,040 is due to sundry creditors against £16,573 to come in from sundry debtors, and, although the company has borrowed £80,771 from its bankers on security of second mortgage debentures and another £12,135, the cash in hand is a mere £57.

HOVE ELECTRIC LIGHTING CO., LIMITED.

With an increase of 88,927 units in the sales of current the revenue from this source was £1,539 larger at £22,035, and as other items showed small gains the total income rose by £1,697 to £23,321. Of this improvement, however, no less than £1,677 was swept away in expenses owing to the high cost of coal and the additional outlay found necessary on repairs and maintenance, and the nett income was a mere £20 better at £12,693. Balance brought in was £526 or £166 less, making the disposable surplus £13,219 against £13,365, but the amount appropriated to renewals and depreciation account is wisely maintained at £4,000, although this involves a reduction of ½ per cent. to 8½ in the dividend on the ordinary shares and a small decrease to £780 in the sum carried forward. With a view of replacing the capital expenditure taken from reserve the directors offered 5,000 £5 preference shares in November last and 2,559 were taken up. Total receipts from these and a few stray ordinary shares amounted to £9,469 against an expenditure of £2,893, leaving the debit balance at £15,557. Reserve is now £47,500, of which £11,482 or £10,488 more is separately invested. Creditors are light at £2,600 while debtors owe £8,324 or £292 more, but cash has dwindled from £1,114 to £386.

WILLIAM DOXFORD AND SONS, LIMITED.

An excellent business seems to have been done by this Sunderland shipbuilding business during the past year, and profits showed a satisfactory improvement of £16,777 at £98,961. The balance brought forward was also larger at £5,628, giving an available total of £104,589 compared with £84,128, and after meeting debenture interest and preference dividend the ordinary shares received a distribution at the fine rate of 20 per cent. A year ago £20,000 was transferred to reserves, but the directors apparently fear that the current year will be much less prosperous and have therefore decided not to make any additions to those funds on this occasion. The omission, however, is more a matter of form than anything else, as the whole of the surplus amounting to £46,089 is carried forward and in a way constitutes an additional reserve. Outlay on capital account was £14,079, but £24,107 was written off for depreciation so that on balance this item is £10,028 down at £457,446 against which the reserves amount to £120,000. Work in progress less amounts received on account is £35,779 less at £01,982, and it is this drop which has largely influenced the directors in coming to the decision noted above. Sundry debtors have been reduced by £83,608 to £3,109 and stores and materials are £4,307 lower at £47,047, but cash has risen by no less than £112,810 to £192,603 and at the same time liabilities to sundry creditors show a decrease of £51,642 at £36,803. Investments in shipping and other companies have no market quotations to guide the directors as to their present value but they have written off another £1,500, bringing the total down to £37,750. The contingent liability for bills discounted has risen by £46,372 and now reaches what seems a very heavy figure of £986,774.

BELL BROTHERS, LIMITED.

Although the increase was less pronounced the revenue of this company was still on the upgrade in 1907, with an improvement of £10,805 at £151,332, and as the balance brought forward was £5,330 larger at £8,654 the disposal total came to £159,986 or £10,225 more. Debenture interest and preference dividend required £1,140 less at £47,720, but an additional £11,825 at £14,710 was transferred to reserve and a further £54,704 was written off extensions and improvements, of which £40,070 represented the expenditure of the year. Then [illegible] tax took an extra £2,802 at £6,127 leaving £30,725, out of which dividends aggregating 11 per cent are again paid on the ordinary shares, and £9,725 or £1071 more is carried to the new account. Expenditure on property for the year amounted to £83,326, so that on balance this account is £28,722 up at £1,227,087, against which the reserve including £6,181 from interest on investments has risen by £20,891 to £172,404. Investments now reach a

total of £154,995, of which £113,901 are on account of the reserve, the remaining £57,000 of that fund being represented by debentures paid off. Trade creditors are down by £2,971 to £125,736 against decreases of £6,697 to £29,592 in sundry debtors and £3,145 to £11,535 in cash and bills, while stocks have gone up by £18,844 to £208,283.

BARROW HÆMATITE STEEL CO., LIMITED.

This company's output of coal and coke during 1907 was practically the same as in the previous year, but the production of pig-iron and finished steel fell off towards the end, and the nett income from all sources came to £17,660 less at £78,952. Directors' and auditors' fees and debenture interest having been provided, £1,548 or £1,013 more is written off for extensions and improvements at colliery, but £4,500 less at £24,700 is allowed for depreciation, leaving a balance of £34,451 compared with £49,182. Adding £5,925 from the previous account the total available was £12,498 smaller at £40,376, and the distribution on the ordinary shares is cut down from 2½ per cent. to 2, automatically reducing the additional non-cumulative dividend on the second preference shares by ¼ per cent. to 1. Then the reserve, which a year ago received £10,000, this time gets nothing, with the result that the sum carried forward is £1,439 larger at £7,364. Expenditure on the new gas blowing-engines and power plant amounted to £68,469, and after deducting £5,000 transferred to "freehold coal account" and the depreciation above noted the property account shows an increase of £39,137 at £850,628 against which the reserve is only £50,000. Liabilities to creditors have been reduced by £19,598 to £103,561, while sundry debtors owe £7,831 less at £113,523, stocks are valued at £245,203 or £2,481 less, and cash and bills have dropped by £62,714 to £155,741. The directors report that no new discovery has been made in the company's royalty nor has success attended the operations in searching for ore in the Cumberland district, and further explorations in the latter area have been abandoned. On the other hand, the company has taken up debentures and shares in a new undertaking formed to develop an iron-ore mine in Algeria, from which it is hoped that shipments will be made during the latter part of the current year.

NORTH BRITISH LOCOMOTIVE COMPANY.

A very fine year's business seems to have been done by this big Glasgow locomotive works in 1907, and the directors have utilised their prosperity in a commendable fashion by writing £60,000 off for depreciation and placing £80,000 to reserve. This brings the reserve up to £300,000, and the value of the land, buildings, machinery, plant, &c., &c., down to £840,124, notwithstanding additions amounting to £20,259 made during the year. Depreciations are also allowed for, the report intimates, in other directions, on some of the company's investments in particular, and after all the directors are able to pay 10 per cent. on the ordinary shares with a balance of £31,911 left to carry forward against £14,621 brought in. Sundry debtors owe the company £149,400 more than the company owes sundry creditors, the debts due to it being £288,834, and the debts due by it £139,434. Investments, shares in companies and loans outstanding amount to the formidable-looking total of £732,401, and the value of the amount of work in progress, loose tools and stock on hand is put at £421,823, which is also large. Bills receivable are entered at £55,093 and cash at £10,946. The company has no debenture debt and appears to be altogether in an excellent position assuming the loans and investments to be good and remunerative.

LEVER BROS.

We have always regarded this company as excessively capitalised and its accounts for the year 1907 do not induce us to alter that opinion. The balance at the credit of profit and loss is £405,331, in appearance an excellent revenue, but to make the total up the £50,000 received from the Harmsworths as damages paid to Mr. Lever in the libel action is included. And even so the figure is £3,000 or thereby below that for 1906. However the directors are able to continue the dividend on the ordinary shares at 8 per cent. per annum after meeting the 5 and 6 per cent. preference share requirements, and in addition £36,069 is set aside for repairs, renewals, and alterations, £40,073 assigned to the depreciation fund, and £5,857 to the insurance reserve, besides which £32,246 is allocated to "prosperity" sharing with employees including the "village institutions account," so that altogether over £110,000 of the profit is in one way or another put aside and still £4,554 is left to be carried to the reserve, so that on the whole prudent use is made of the money. And yet the balance-sheet does not look particularly strong. The company owes £386,216 to sundry creditors and on bills payable. Debtors to it however owe £509,467, so that there is a margin to go by. Even so stock at £787,815 seems very large, and freehold works, premises and plant have been increased by £264,419 during the year to a total of £2,018,968 in spite of writings off. Trade marks and goodwill, moreover, stand at £750,000 notwithstanding the transfer of the price of the Monkey Brand soap business, amounting to £225,000, to "shares in associated companies," an item higher by £407,542 at £1,581,373. Leasehold premises and plant, too, are £4,407 up at £97,395, and cash is down £19,507 to £139,471. The additions to the "shares in associated companies" apart from the Monkey Brand transfer seems to have been £182,542 in the past year, and although the reserve, depreciation and insurance reserve funds now amount altogether to about £553,000, none of that money has been invested apart from the business, the total of whose balance-sheet now amounts to £6,110,306. No profit and loss account is shown, the statement as to the allocation of profits given in the report being merely repeated in the balance-sheet. Unless we are mistaken cash resources have been diminishing for at least two years back at the same time that reserves have apparently been increasing. But is there no financing going on of which the progress and actual state cannot be traced in the published accounts?

CASSELL AND CO.

Further improvement is shown in the position of this old company's financial position, and we are glad to see the directors adhering to the resolution they came to a year ago to apply profits in reduction of the overgrown item of copyrights, which stand in the balance sheet at £174,860. For the year 1907 the business gave a profit of £20,152, and after deducting debenture interest and income tax there was £15,771 left, exclusive of £654 brought forward. The whole of this money, except £1,565 carried forward, together with the reserve fund of £20,000, is applied in reduction of the copyrights item, bringing it down to £140,000, a sum that the directors consider to be a fair and equitable valuation. In this view they are probably over sanguine, but there can be no doubt whatever that the writing down contributes much to strengthen the company's position, and we hope the policy will be continued, even although it may deprive the shareholders of dividends for another year or two. The items in the balance sheet are not always clear, but we notice that sundry creditors and bills payable amount together to £79,148 against about £90,000 due to the company by sundry debtors and on bills receivable. What we do not quite grasp is the position of the company's branches in Melbourne, New York, and Toronto. Apparently they all owe the parent company considerable amounts, that is to say, the stock, book debts, and other assets in Melbourne are taken into the balance-sheet at £15,610, those of the New York branch at £5,481, and those of the Toronto branch at £3,233, in each case after deducting the local liabilities, and we should like to know what the real position of these branches is in regard to the value of the stock, the character of the book debts, and other assets they show, because the whole of this money is obviously due to Cassell and Co. in London. The leases of premises have been further written down by £3,094 to £135,625, but the stock of type, engines, boilers, etc., is up nearly £7,000 to £42,445, an increase no doubt rendered necessary by the requirements of the business in new up-to-date machinery and appliances. Stock in hand stands at £87,265, including literary matter apparently not yet utilised, and the managers certify to this valuation. Owing to the difficulty of the money market, as explained in a circular accompanying the report, the company has had to borrow £10,000 from its bankers, and at the date of the balance-sheet cash in hand and at the banks came to but £6,091.

JUNIOR ARMY AND NAVY STORES, LIMITED.

The results obtained by this company during recent years have seemingly not been satisfactory to some of the shareholders, and in the end of 1907 a demand was made for a meeting to inquire into the condition and management. This was refused as prejudicial to the interests of the company, but the directors compromised by calling in Messrs. Deloitte, Plender, Griffiths and Co. to examine the accounts, and a copy of their report accompanies the annual statement. Before, however, referring to that it may be as well to deal with the results for the twelve months ended December 31. The total sales, notwithstanding an increase of £17,600 in the retail trade, were £1,257 lower at £649,692, and the directors give a variety of reasons for the decline. First of all, they say that there was a considerable shrinkage in naval and regimental trade, resulting in the case of the former mainly from the reduction in the number of ships in commission, and the fact that contracts hitherto carried out by the Stores are now retained by the Admiralty. In the next paragraph they try to throw the blame on to the shoulders of the malcontents by asserting that during the latter half of the year sales went down as the effect of the "agitation." The special investigation, however, proved that there was sufficient ground for such agitation, and the directors not only admit that such was the case, but have called for the resignation of the managing director. While gross receipts were £1,257 down the nett profits showed a reduction of no less than £6,685 at £7,556 owing to increased rates and taxes, advertising and other expenses, including improved facilities in the delivery of goods. The directors, however, feel that the shareholders ought to receive a 5 per cent. dividend, and in order to pay it they take £6,000 or £1,806 more than is required from reserve. They justify their action by the statement that the fund was created mainly out of profits for the equalisation of dividends and for the lease of York House, and that this and other leases have now been provided for by means of insurance policies for £95,000. Properties, less the sums written off in the past, are valued at £128,467, out of a total share and debenture capital of £360,300, while stocks amount to £187,215, and investments at cost, other than the £32,410 on account of the reserve of £39,000, come to £10,425. Trading accounts are decidedly adverse, £73,338 being due to sundry creditors, and £19,214 on deposit order account against £43,641 to come in from sundry debtors and £34,461 held in cash, while there is a further liability of £35,860 on deposit interest account. Turning now to Messrs. Deloitte and Co.'s report, we find that these gentlemen deem it advisable not to express the conclusions they have come to otherwise than in general terms, but even so they say quite enough to show that the shareholders had very good grounds for complaint. It is not, however, to be inferred that the business of the company is bad, but rather that there has been slackness in the management. For one thing, the accountants point out that general expenses have been much larger than the turnover would appear to warrant. In 1907 these amounted to £100,875 or 15½ per cent. of the turn-

over, and it is suggested that if the charges were restricted to what is usually regarded as a reasonable percentage the nett profit available for distribution should be increased to no inconsiderable extent. Last year's results are not regarded as satisfactory for the reasons given above, and because expenses were increased through the necessity of making good the neglect of former years by outlays on special repairs and renewals of fittings. Messrs. Deloitte and Co. wind up their report with the remark that the business management appears to call for investigation. They find excuse for the directors as not being able to exercise the constant expert supervision and control in every detail required by so large an undertaking, but the shareholders had the right to expect that at least they would realise their responsibilities sufficiently to appoint the necessary expert assistance, and that they do not seem to have done.

CIVIL SERVICE SUPPLY ASSOCIATION, LIMITED.

Sales for the year have risen by £33,850 to £1,695,489 and show a gross profit of £271,267, which is an advance of £1,304 only. To this is added sundry receipts amounting to £3,095, making gross revenue £274,361. Working expenses were £5,071 higher at £179,500, carriage cost £34,210, lift repairs £2,519. A new account to provide for the expiration of leaseholds in about 44 years hence is opened with £1,000, the first of annual allocations of that amount, and nett profit remains at £46,547, an increase of £1,348. With £5,830 brought in, £52,377 is available. The usual contributions to reserve, pension and provident funds absorb £3,000 and 24s. is again paid on every 10 shares, leaving £6,853 to go forward. The balance-sheet shows stock increased by £4,191 to £345,170, premises little altered at £190,492, and investments still £38,155, with a depreciation as at December 31 of £2,937. Cash considerably reduced by £21,681 to £40,565—not forgetting the odd halfpenny. Debtors are £3,184 up at £12,970, but floating liabilities are still heavy, though £7,107 lower at £141,801, including depositors £32,888 and trade creditors £106,690. The reserve with the year's addition will amount to £103,769 and ticket reserve to £7,330.

W. T. HENLEY'S TELEGRAPH WORKS CO.

An increase of £1,316 at £65,302 is shown in the trading profit of this company for 1907. A balance of £22,320 was brought forward and after meeting the dividends on the preference and ordinary shares, the ordinary dividend being made up to 15 per cent. per annum, £23,650 will remain to be carried forward or £1,330 more than was brought in. As usual no particulars at all are given about the business, and there is not much to be inferred from the balance-sheet except that the company seems to have done an excellent business. We infer this from the fact that its cash and bills receivable aggregating £72,775 show an increase of £27,608 on the year at the same time that the company owes creditors and contingent reserve £27,000 less. Stock, moreover, is down by £24,580 to £181,745, but there is also a decrease of £48,798 in debtors who owed the company at the date of the balance-sheet £140,097. Debentures and shares held in other companies were of an estimated value of £12,267, which is £6,472 less. Apparently the nett allowance for depreciation on the main property was £8,807, since the value of the freehold land, buildings, machinery, plant, &c., is put at £357,097, which is only £5,327 up on the year, notwithstanding that £14,139 was spent on additions. Consols and India three per cent. stock to the amount of £30,000 are taken into the balance-sheet at cost. Machinery and plant renewals cost £1,356 less than the year before at £3,644, and the total allowance for depreciation on machinery, &c., shown in the profit and loss account is £6,762 or £1,378 less.

PERRY AND CO., LIMITED.

Although this company now has a cycle chain and accessories department, which has grown to such an extent as to require larger works, the benefits derived therefrom during 1907 would appear to have been small. At any rate, trading profits fell off by no less than £5,349 to £51,330, and in spite of an increase of £348 at £2,883 in receipts from dividends, &c., and a considerably larger balance of £4,659 brought forward, the total revenue was £2,046 smaller at £58,872. Of this directors' fees took £2,000, income-tax required £1,504 or £352 more, and £1,398 was written off for loss on investments, leaving £53,970 or £3,706 less to be dealt with. The dividend on the ordinary shares, however, is maintained at 15 per cent. and a bonus of 2½ per cent. is again paid, but in order to do this and raise the sum carried forward to £7,119 the directors can only appropriate £3,743 to write down investments to market value against £10,000 written off goodwill a year ago. Freehold and leasehold land, buildings, plant, &c., are valued at £127,503 or £13,178 more, the increase seemingly being due to the extension of the works mentioned above, while goodwill and trade marks still stand at the fairly high figure of £115,000. Sundry debtors owe £59,215, bills receivable and cash amount to £47,089, investments are valued at £78,372, or together £184,676 compared with over £194,000 a year ago, but in spite of this decrease the position is an excellent one, as the company has no debenture debt, and its floating liabilities are comparatively small at £21,589, against which stocks amount to £90,242 or £1,172 more.

HOULDER LINE, LIMITED.

It is to be hoped that very few of our shipping companies are in the unfortunate position this one occupies. The report says that for the year 1906, for it goes a long way back, the profit was £12,173, to which £7,023 brought forward had to be added, making £19,196 in all, out of which debenture interest and directors' and other fees made a big hole of £9,803, leaving only £9,388, which the directors carry forward. They had no other course to take for the real profit for the year 1906 was only £2,395, because the sum carried forward is only that amount larger than the amount brought in and no light can be thrown from the report on the question when a better state of affairs will arise. The business seems to be in a quite waterlogged condition, and besides a debt of £200,000 on debenture stock, the floating debts due by the company, including bills payable, amount to £165,680 against which, however, the debts due to it, including balances on pending voyages, amount to £187,076. But there is a paid-up share capital of £474,445 which is earning nothing at all, and the business of 1906 did very little more than meet the debenture interest and other fixed charges. There is a depreciation and reserve fund of £170,000 and an insurance fund of £5,000, but these are all in the steamships or in the working account, and the cost of steamships was raised by £3,246 in the past year to £746, 609, which seems an appalling figure to place against such results. Moreover, only £3,287 was charged against the insurance fund last year, and against this draft only £1,587 has been credited to it, being "a proportion of the premiums on the company's 1906 underwriting." It is a pitiful exhibit.

HOARE AND CO., LIMITED (RED LION BREWERY).

In spite of all drawbacks, depression in the London trade, heavy taxation, the war tax alone being equivalent to nearly 1¾ per cent. on the company's "A" preference shares the board says, and a loss suffered through the failure of a country brewery, this company's profits for the past year came to £105,818, and after meeting directors' fees, £3,500, and all charges for interest, enough remains to pay the full 5 per cent. dividend on the first preference shares and to give the "A" preference shares 2½ per cent. for the year with £4,774 left to carry forward against £3,451 brought in. The small ordinary share capital of £4,000 gets nothing, but that does not matter. In other respects, however, the company is very heavily burdened, for freehold and leasehold properties and goodwill, less reserve for depreciation on leases, nowhere stated, stand at £1,799,172, and besides this £56,312 represents the balance-sheet value of fixed plant, &c., and £70,818 is placed against stock of beer, malt, hops, casks, horses, vans, &c. Investments, cash in hand and at banks are lumped in one item of £78,542, which is not a good way of stating the facts. Equally confusing is the entry "book debts, rents and interest receivable less reserve for discount and bad and doubtful accounts," which is entered at £34,664. Loans to the company's tied houses amount to £802,632 less reserve for bad and doubtful advances. Why cannot these reserves be set forth plainly so that the preference shareholders may have some idea of how the business is going? At present they can have none. The advances, however, less all reserves, amount to £2,632 more than the total of the company's two issues of debenture stocks, and in addition it owes £174,025 on mortgages and £78,585 to depositors as well as £134,475 to sundry creditors, an item exclusive of a contingent liability on first mortgages amounting to £42,000. The concern may thus be described as a quagmire of debts, and there is no reserve visible anywhere.

NEW LONDON BREWERY CO., LIMITED.

Trading profits for the year ended December 31 amounted to £43,558 and with £20,427 from rents, interest, &c., and £1,472 profit on houses sold the total income was £65,457. Of this £15,991 was written off for repairs and depreciation and £12,630 was reserved on loans and other accounts, and after providing for interest and other charges the nett surplus, including £1,903 brought forward, was £22,400. Debenture interest and preference dividend took £18,000, compensation charge £1,201, and income tax £1,013, leaving a balance of £2,186 to be carried forward. The directors state that the loans and other accounts required on the usual basis a reserve of £7,130, but that having regard to the uncertainty of future legislation affecting the trade they had decided to place an additional £5,500 to this fund. Had it not been for that they would have paid a dividend of 5 per cent., they say, but apparently the auditor does not see quite eye to eye with them and is doubtful about the adequacy of the allowance for depreciation, so that there may be other reasons for this prudence than uncertainty as to the future. Freehold brewery, freehold and leasehold premises, plant, interest in trade values of leasehold premises sub-leased and goodwill amount altogether to £571,110, and it is impossible to say from the wording of the balance-sheet whether any portion of the "reserve on loans and other accounts" is intended as a set-off against this big item. The reserve was debited with £2,020 transferred to depreciation fund in respect of premises not sub-leased and £8,018 for losses during the year and now stands at £04,250. If this went against property it might perhaps be considered adequate, but apparently it does not, and its very size makes us wonder whether another item, that of debtors on trade and loan accounts £221,286, contains any very large proportion of debts regarded as doubtful. Liabilities to creditors, including £157,535 due to depositors, come to £157,010, while stocks seem unduly small for the business done at £12,585, and cash is none too grand at £8,444.

JOHN DEWAR AND SONS, LIMITED.

It almost intoxicates one to think of the whisky consumption necessary to produce this company's annual profits. Last year's amount was £125,153 and to it is added £22,450 brought forward, making £147,612. It is disposed of as follows: Preference dividend £12,500, directors' fees and income-tax £7,445, reserve £5,000, dividend and bonus (27½ per cent.) £90,250, and carried forward £20,250. Reserve is now £125,000, a pretty good figure, and it is just as well to have something substantial

to fortify the item of stock-in-trade and debts due to the company £917,630. Floating liabilities are equally imposing at £531,422. Cash and bills stand at £58,050, and the only other entry on the credit side of the balance-sheet is property, plant, and goodwill £398,409. Share capital is £600,000, and there is no debenture debt.

EASTMANS, LIMITED.

The very wet summer and the higher average cost price of meat interfered considerably with this company's retail business during 1907, and trading profits fell off by £14,204 to £91,085. Interest and transfer fees also gave a few hundreds less at £2,288, but the balance brought forward was £2,875 up at £11,189, and the nett decrease in the amount available was, theretore, £11,695 at £104,562. Administration expenses and income-tax having been provided on a slightly larger scale than a year ago, the directors write off £10,000 or £5,000 less for depreciation, but repeat the dividend on the ordinary shares at 6 per cent. and add another £10,000 to reserve, leaving the considerably smaller sum of £4,061 to be carried forward. Expenditure on properties for the year just about balanced the allowance for depreciation, leaving this item at £988,360, against which the reserve now comes to £30,000, not an over generous provision to represent the accumulations of 19 years. Sundry creditors are £1,129 lower at £16,518, and against these stocks have risen by £5,155 to £39,161 and trade debtors are practically unaltered at £51,440. Balance in this company's favour on current accounts with New York business has increased by £7,718 to £57,246 and cash is £1,668 up at £38,568, but loans against securities have been reduced from £70,000 to £57,000.

ELEY BROS., LIMITED.

This once prosperous sporting ammunition business again experienced an unsatisfactory year which the directors attribute to unreasonable competition resulting in a reduction of prices in the face of an abnormal advance in the cost of all raw materials. In addition the shooting season has been below the average owing to the great destruction of young birds by the inclement weather. No profit and loss account is issued but the balance of profit for the year is returned at £11,263, making, with £4,348 brought in, a total of £15,611. Interest on loans and debentures and directors' remuneration absorb £4,256, and an aggregate sum of £7,058 is allowed for depreciation, leaving £4,297. The directors express the hope that the exceptional conditions have now ceased to exist and in the circumstances propose to take £3,000 from the reserve fund in order to provide a dividend of 5s. per share or 2½ per cent., carrying forward £1,047. Last year the dividend was 5 per cent., and for quite a long time 15 per cent. was regularly paid. Happily the balance-sheet has a wholesome appearance although it would be better if some part of the £60,000 reserve were invested outside the business. Capital outlays during the year were not perhaps excessive in the circumstances, and cash, bills and debtors make up a good total. Stocks are valued at £112,597 but this embraces materials, stores and loose tools. There must be room for drastic, not to say revolutionary improvements here and in other directions, or the business will be in danger of foundering altogether.

SPRATT'S PATENT, LIMITED.

The unprecedentedly high prices of flour and other raw materials during the second half of last year more than neutralised the benefits derived from the increased business done, and nett trading profits for the twelve months were £2,737 down at £32,479. Most of the investments being in kindred securities the revenue from this source was also reduced by £2,158 to £5,184, and the total income including £7,002 brought forward amounted to £44,665 or £5,257 less. Of this £2,000 was reserved for doubtful debts against £3,000 a year ago, and after writing off £396 for loss on Consols sold the disposable surplus was £4,653 down at £35,099. The directors, however, write off only £4,000 from property and goodwill account, or half last year's appropriation, and cut down the sum carried out by £653 to £6,349 in order to repeat the dividend of 11 per cent. Capital outlay was £9,487 leaving this item £5,487 higher at £318,687 against which the reserves remain at the old figure of £151,402 of which just about half at £76,046 is invested. Floating liabilities are £8,182 higher at £46,119, while stocks and debtors show very little change at £80,524 and £78,091 respectively, and cash has risen by £5,802 to £24,392.

ALBERT BAKER AND CO. (1898), LIMITED.

The abandonment of the stalls at the District Railway stations may have helped this tobacco company, but the relief is not very apparent in the accounts for the past year. Two new branches were opened, one at London Bridge, and the other in the Brompton Road, yet the gross profits dropped by no less than £4,388 to £58,310. This, however, was accompanied by a reduction of £4,234 to £43,283 in outgoings, of which £907 represented a saving in advertising charges, and after providing £2,000 each for repairs and depreciation the nett balance was only £154 down at £11,027. With £387 or £182 more brought in, the directors had £11,414 at their disposal, and are therefore able to repeat the dividend of 5½ per cent. and to carry forward a slightly larger balance of £414. Property account is £840 down at £133,323, the outlay during the year having been £1,160, and against this there is a reserve of £14,000 all in the business. A reduction of £10,580 to £23,499 in floating liabilities has been effected at a cost of decreases of £4,443 to £94,740 in stocks and £6,264 to £14,763 in cash, while sundry debtors are practically unaltered at £1,087.

DAY AND MARTIN, LIMITED.

A very serious state of affairs is disclosed in the report for the year ended December 31, and the explanations put forward by the board for the almost complete disappearance of profits seem far from adequate. Sales of blacking again fell off, but it is admitted that this diminution was almost made up by the increased business done in the new boot polishes and sundries, and yet the trading profits were only £871 compared with £6,070 a year ago and £10,232 in 1905. Part of the decrease is accounted for by the expenditure of an extra £2,500 in advertising and by the expenses of a journey made by the late managing director to America, Japan and Australasia, but even allowing for these the results is deplorable. Dividends, interest, &c., produced a few pounds more at £511, but directors' and auditors' fees were likewise heavier, leaving the nett surplus £5,167 down at £759, so the shareholders get nothing and the balance carried forward is raised to £4,531. The directors state that the nett profits were arrived at after providing for items requiring depreciation, but the only visible proof of anything of the kind is a small addition of £289 to the leasehold sinking fund, bringing it up to £2,361 against a property and goodwill account of £116,970. Liabilities to sundry creditors have risen by £4,723, but are still moderate enough at £9,159, while debtors owe £15,645 and in addition to £2,116 in cash and bills the company has £5,070 out on loan, £6,038 invested in British Government securities and £19,391 in stocks

LIBERTY AND CO., LIMITED.

For some reason or other the directors have chosen to make an alteration in their methods of presenting the accounts for the twelve months ended January 31. Hitherto the gross profits have been set out together with the amounts allowed for repairs; renewals, and depreciation, but this time only nett profits are given, after deducting these allowances. The change is the more to be regretted because nett profits, including £1,623 from interest, show a rather sharp decrease of £8,247 at £55,733, but the reduction does not prevent the payment of the usual dividend and bonus at the handsome rate of 20 per cent. After meeting these payments, £3,000 is again set aside for other bonuses and another £6,000 is put to reserve, leaving £18,192 or £8,247 less to go to the "rest" account. In spite of the drop in revenue, there is nothing to grumble about in the position of this famous firm. Its total accumulations in the shape of "rest" and reserve accounts now aggregate £225,110, a figure still very much in excess of the property and goodwill account, although that has been increased during the year by £19,648 to £165,008. Part of the reserve fund is separately invested, and the securities representing it would appear to have been written down to market values at £60,300. Liabilities to creditors and on bills payable have risen to £21,509, but stocks are £22,175 larger at £173,037 and sundry debtors owe £63,328. Cash, however, has dropped by £16,731 to £9,846.

DEBENHAMS, LIMITED.

In its year closed January 31 last this company earned nett £74,493, "after providing for depreciation, directors' fees and all other expenses." This is £14,908 more than the earnings of the previous year, and the ordinary shareholders therefore get 6 per cent. for the year with £19,316 left as compared with £14,585 in January, 1907. Of this £2,500 is placed to reserve in accordance with the company's articles and the balance of £16,816 is divisible between the deferred ordinary shares and the participation fund. No profit and loss account is issued, but the balance-sheet values aggregate £1,430,304 exclusive of a contingent liability of £69,160 in respect of bills under discount and guarantees. The amount due to creditors is £376,973 and by sundry debtors £256,418, but the stocks are valued at £388,352 and the capital invested in branch businesses amounts to £241,705. Leasehold properties and all thereon and therein stand at £409,239 "after writing off depreciation," and cash in hand is £15,081, goodwill £100,000 and balance of preliminary expenses £7,186.

SAMUEL COURTAULD AND CO., LIMITED.

Exceptional losses incurred towards the close of the year 1907 render this company's annual report and accounts comparatively unsatisfactory. Except for this the result would have been exceedingly good. Until quite late in the twelve months the trading was everything that could be desired, but in the final months a very severe and most rapid fall in the price of raw silk took place and buyers of silk fabrics restricted their purchases. Happily stocks were unusually low, but writing them down to market value meant a loss of £18,600. A fall of £1,532 also occurred in the value of the investments. Despite these drawbacks the profits come out at £26,740 or £8,957 less than in 1906. Deducting income-tax, debenture interest, and sinking fund the balance over is £14,493, to which is added £4,295 brought in, making £18,788. Dividend on the preference shares absorbs £11,000, and £6,000 is required to pay the proposed dividend of 3 per cent. on the ordinary shares, being half as much as last year, leaving £1,788 to be carried forward. Additions to property account were quite important at £44,537, and after deducting the moderate allowance of £12,204 for depreciation the book value stands at £259,850. Goodwill naturally remains at £115,143, and stock-in-trade and sundry stores, although written down, are slightly higher at £194,932. The investments have been a good deal reduced, thanks to capital outlays, and the cash £9,891 is scarcely altered. Reserve is not very great at £10,000, but the debenture sinking fund is £10,336.

PEEK, FREAN AND CO., LIMITED.

The display made by this firm of biscuit makers for the year ended December 31 was less brilliant than that for the preceding year, but whether the falling off in profits was due to the severe competition, the high cost of materials, or to any other cause, the directors do not say. After charging £12,436 or

£852 less for renewal and maintenance of plant, machinery and buildings, writing off an additional £447 at £5,325 for depreciation and meeting directors' fees, the nett profits were £9,562 down at £51,512. The balance brought in, however, was £14,075 larger at £31,737, giving £83,249 to be dealt with against £78,737, out of which the dividend of 7½ per cent. on the ordinary shares is repeated and another £5,000 is transferred to reserve, leaving £36,249 to be carried forward. With this addition the reserve will now stand at £30,000 against a goodwill account of £21,416, and happily for the company most of this is separately invested in gilt-edged securities valued at £23,725. Freehold property, after deducting a mortgage of £17,851, appears in the balance-sheet at £477,450 or £533 more, and plant and machinery, less £5,325 written off, is £3,858 up at £96,571. Trading accounts are well in favour of the company, only £32,612 being due to creditors and £13,828 to depositors against no less than £104,153 owing by sundry debtors, and cash and bills seem ample at £23,756, while stocks have risen by £7,978 to £117,713.

CANADIAN AND AMERICAN MORTGAGE AND TRUST CO., LIMITED.

The assets in this company's balance-sheet described as "mortgages, properties foreclosed, liens on properties, and bonds and shares" went up by £22,953 to £460,396 during the past year, and it would be interesting to know in which of these varied items the increase occurred. No light is thrown on the matter by the directors, but possibly enough it was due to purchases, as the debenture debt is £2,855 higher at £358,587 and cash and loans have been reduced by £21,748 to £24,116. Whatever the extra property consists of, it did not bring in very much additional revenue, the total income having risen by £1,304 only to £31,764. Adding £2,514 or £345 less from the previous account and deducting debenture and other interest and all charges, the available total was £15,074 compared with £14,959, and out of this the directors, after transferring another £5,000 to reserve, raise the dividend on the ordinary and "A" shares by 1 per cent. to 7 and carry forward £2,553. The reserve now stands at £49,000, and is represented by £44,159 invested in railway and other first-class securities, on which, however, there was a depreciation of about £1,650 at the date of the balance-sheet.

UNITED STATES DEBENTURE CORPORATION, LIMITED.

We have been compelled to devote a good deal of space to this company's affairs during the last year or so, but capital tinkering has come to an end, for the present at any rate, and our notice this time can be brief. Under all heads and including the sum brought forward the company raked in a revenue of £114,623 during the year to January 31 last, dividends, interest, &c., producing £96,088, commissions £2,628, and profits on sales of securities £13,161. After deducting general charges and debenture interest there remains a sum of £61,429, from which £18,000 is taken and placed to reserve. Dividends on the two preference issues absorb £18,520, 7½ per cent. goes to the ordinary shareholders, and £2,409 is carried forward. All the capital and reserve fund are intact—last year there was some excess—and the balance-sheet shows total investments of £1,744,548. These are distributed over a variety of countries, the United States, South America, and Great Britain being the principal, and they number 314, by far the larger proportion being quoted. Of the total 69 per cent. consists of debentures, debenture stock and bonds, 24 per cent. of preference shares and stock, and 7 per cent. of ordinary or deferred stock.

BRITISH AND AMERICAN MORTGAGE CO., LIMITED.

The directors report that the demand for money in the company's field of operations during 1907 was active and that considering the financial stringency in America collections of both principal and interest have been well met. A small loss of £314 was made on foreclosures instead of a profit of £1,972, but in spite of that the total revenue was £1,072 up at £96,990. Expenses, however, were higher and the nett surplus, including £1,718 or £548 more brought forward was only £42,311 compared with £43,234. Out of this a dividend and bonus aggregating 10 per cent. are again paid and another £15,000 is put to reserve, but nothing goes to contingency fund against £1,817, and the balance forward is therefore slightly larger at £1,994. Loans on freehold mortgages in the United States now amount to £1,203,496 or an increase of £24,973, but debtors for real estate sold under contract owe £4,183 less at £11,994, and temporary loans show a reduction of £10,309 at £41,237. Debtors for interest are £1,987 up at £22,704, but cash is £8,925 lower at £29,297. The reserves now total £190,000 and are represented by £175,000 in high-class securities, on which, however, the depreciation comes to £17,678.

LAW REVERSIONARY INTEREST SOCIETY.

Purchases of reversions during the year 1907 amounted to £32,048 and £20,528 was lent on mortgages of reversions, in all £52,576. Insurance on reversions amounted to £1,425, and on life interests £1,330. General expenses absorbed £4,054. Temporary advances were repaid to the amount of £36,501, including interest against receipts of £29,550. Sales of stocks produced £13,693 and of house property £27,641. Reversions realised £24,844 and mortgages repaid brought in £12,845. The total receipts, with £3,712 from last account, aggregated £150,737, and disbursements, including £21,994 dividends paid, £132,421, leaving a balance of cash £18,317. Profit from reversions and life interests, based on the quinquennial valuation of December, 1904, was £22,466, and from house property, land, mortgages, stocks and shares and deposits £8,593; £3,000 was transferred from equalisation of dividends fund and £12,272 was brought in from last year, making a gross credit of £46,331. Interest paid took £11,652, expenses £4,115, income-tax £1,147, leaving a balance of profit of £29,417, and this has been dealt with as follows: 5 per cent. for the year absorbs £[illegible], and £[illegible] Assets comprise reversions £[illegible], house property £3,710 and [illegible], Stocks, &c., £16,556, [illegible], £18,317. During the year additional £[illegible] ordinary stock has been issued, raising it to £[illegible]. The annuity and endowment fund account to £[illegible], and after deducting the transfer to profit and loss account stands at £30,000. Having regard to the [illegible] securities, the directors deem it prudent to [illegible] capital stock to 5 per cent.

ARTIZANS', LABOURERS' AND GENERAL DWELLINGS CO.

The total revenue for 1907 amounted to £[illegible], all but £1,788 of which came from rents, and after meeting the current expenditure on the various properties and paying head office expenses, together with £3,267 as directors' and auditors' fees, interest £6,021 and income-tax £7,184, there was a balance of £133,045 to be dealt with. Out of this the preference capital received its 4½ per cent. and the ordinary stock dividend is made up to 5 per cent. for the year. This will leave £1,455 to be carried forward, and on the surface looks a fairly comfortable position. The balance-sheet, however, does not indicate strength, and several circumstances [illegible] dividends being maintained in future years. Only £13,890 of additional capital was spent last year, bringing the total up to £2,900,740, but expenditure upon the Noel Park, Wood Green, Estate has been stopped and that is just as well, for the company has undoubtedly been over-building. Against this great capital the reserves altogether are only £246,054 or about £2,600 up on the year. This is exclusive, however, of the leasehold redemption fund of £24,620 and the fire insurance fund of £5,000. In the balance-sheet the capital expenditure on the various estates has amounted to £51,523 during the year, and of this nearly £46,000 nett was laid out on the Noel Park, Wood Green, Estate as against £88,116 a year ago. It was time this capital expenditure was shortened for the company's resources are not increasing, and a loan of £49,500 has had to be obtained from its bankers, partly because the money deposited with it by shareholders has been reduced from £114,745 a year ago to £96,282 now, a decrease of £18,463. There is also on the assets' side of the account a reduction of over £700 in the rents due and accrued less paid in advance, and cash is down by £769 to £7,825. Two years ago the total cash was £13,180, and we really do not see whence the money to pay the dividends on the 12th inst. is to come since presumably many of the rents for the current quarter are not due until after the 25th inst. It seems to us that the directors would have been well advised to have cut down the dividend on the ordinary stock many years ago to 4 per cent. and devoted the money thus retained to writing down the value of their properties and increasing the amount of the reserve. Of the total reserves only £55,108 has been invested outside the building and land developing business of the company, and there is no mention in the report of any allowance for depreciation even on this small investment. In reality the company is in a manner hard up, and bids fair to grow more so as time passes.

WALKERS, PARKER AND CO., LIMITED.

A little further headway was made by this company during 1907 in spite of the continued depression in the building trade, and trading profits increased by £7,372 to £41,218. Expenses were only £772 heavier at £24,444 and with £10,175 more at £20,492 brought forward the disposable total was £16,775 better at £37,266. During the year the reorganisation of the capital was carried through, by which the preference and ordinary shares were converted into "A" and "B" ordinary shares, and the huge accumulations of dividend arrears were wiped out. Thanks to this the directors consider themselves at liberty to distribute some of the profits, and although the auditors point out that no depreciation has been written off the property, they appropriate £12,223 to this purpose. This sum provides 6 per cent. on the "A" ordinary shares, being 54-55ths of the amount, and 1 7-9d. per share on the "B" shares. Land and buildings and plant show decreases of £1,092 and £582 respectively at £311,940 and £65,687, but the company, of course, has nothing in the shape of a reserve. Liabilities to sundry creditors and on bills payable have risen by £9,664 to £53,080, but loans against security have been reduced by £9,891 to £7,354, while on the other hand stocks are £15,731 up at £155,443, surely a very heavy total, and debtors owe £5,210 more at £129,368, but cash and bills in hand have dropped by £2,718 to £19,877.

THE TITAGHUR JUTE FACTORY COMPANY.

This Dundee-Indian company seems to have had a fine year in 1907 and nett profits, including £13,581 brought forward, amounted to £113,528, out of which £20,000 has been put to depreciation of plant, raising the total thus assigned to £120,500, and £20,000 added to the reserve, making it £130,000, besides which £2,834 has been written off against depreciation on launch and boats and special replacements. Out of the balance the preference dividend has been met, and 10 per cent. paid on the ordinary shares, viz., 4 per cent. in July and 6 per cent. now, and £33,194 remains to be carried forward. During the year £8,071 was spent on repairs and replacements, and everything in India is said to be "in all respects satisfactory," according to the report of Mr. John Smith, one of the directors who visited India towards the end of last year. The directors say that there have been considerable fluctuations in prices both

for the company's productions and for the raw material and that in the end of last year business fell off owing to the American crisis. But the effect of that is expected to pass off before long, and meantime the company's order book is in a fair position and prospects moderately good. The balance-sheet shows a large liability of £237,500 on bills payable and £37,861 due to sundry creditors besides £4,475 owing to bankers, but stocks in hand and afloat amount to £436,993, sundry debtors owe the company £68,430, and it has cash balances to the amount of £13,644 besides an asset of £3,657 in the form of an exchange suspense account, so that altogether the assets in these forms amount to nearly £34,000 more than the entire liabilities to the public, including £209,021 raised on debentures, temporary loans and deposit accounts.

THE SAMNUGGUR JUTE FACTORY COMPANY.

This is another mill managed by the same body of Scotchmen as the Titaghur Mill and its gross profits for the past year came to £85,499, and the nett, after meeting all charges, to £82,308, including £15,432 brought forward. From this £20,000 has been taken to add to the reserve raising it to £100,000, and £10,000 assigned to plant depreciation raising that credit to £104,317. Also £6,655 was written off cost of special replacements and £894 off as depreciation on launch and boats. Out of the balance the ordinary shares get 10 per cent. for the year, paid in the same way as by the Titaghur Company and £22,260 is left to carry forward. Precisely the same statements are made about this company's business as about the other so that there need be no repetition. In this case also stocks in hand and afloat look heavy at £259,465 against which there is a liability on bills payable amounting to £145,000, but the total due by the company on loans of all descriptions and to sundry creditors and Dundee bankers is only £287,838 against £361,862 owing to it, including about £39,000 in cash and £61,207 due by sundry debtors.

GENERAL CEYLON RUBBER AND TEA ESTATES, LIMITED.

The output of rubber for the year ended December 31 amounted to 19,815 lbs. or an increase of 9,241 lbs. over 1906 and 8,015 lbs. more than the estimate, but the price realised showed a further heavy shrinkage of 1s. 3¼d. at 4s. 1¼d. per lb Thanks, however, to an increase of 79,022 lbs. to 2,790,420 lbs. in the tea crop, accompanied by a gain of 1.11d. to 7.29d. in the average price, the nett profits from the estates were £4,794 up at £15,752. Adding £1,865 brought forward the disposable balance was £17,617 compared with £12,773, of which £2,000 is written off for depreciation and £9,000 is applied to debenture redemption against £3,000 appropriated a year ago. The directors state that the amount of debentures due to be paid off annually having now been brought up to date they are empowered to deal with the balance of the year's profits in the interests of the shareholders, and they accordingly recommend the payment of a dividend of 5 per cent. on the six per cent. cumulative shares, which will leave £286 to be carried forward. Expenditure on properties in the twelve months was £1,407, bringing the book value after deducting depreciation to £258,442 or over £39 10s. per cultivated acre, and against this the reserve —all in the business—is only £17,000. Sundry creditors and bills payable have been reduced by £564 to £15,138, but on the other hand increases of £2,531 to £7,597 in sundry debtors and £1,073 to £18,625 in stocks are accompanied by a decrease of £2,185 to £2,316 in cash. Coast advances have risen by £192 to £7,619, and the reserve against these is slightly smaller at £879, leaving the item £211 up at £6,740.

LANCASHIRE UNITED TRAMWAYS, LIMITED.

The first report of this "holding" company, as the Americans would call it, has only just been issued, for the period ended December 31, 1906, although it has been for some time in existence. It owns all the issued share capital of the South Lancashire Tramways Company and the Lancashire Light Railways Company, together with over 80 per cent. of the shares of the new St. Helens and District Tramways Company. The separate companies, however, are the actual owners or lessees and work the tramways, publishing their receipts, this company being only a dividend receiver and also a supplier of electricity to customers. It earned between March 1, 1906, and December 31 of that year, for the figures come down to no later date, £12,611 by the sale of electrical energy to the South Lancashire Tramways Company and others, and will no doubt much develop this branch of its business as time goes on. The nett profits for the period came to £7,693, and after meeting prior lien debenture interest the balance left was £317. These prior lien debentures to the amount of £250,000 were successfully issued and paid up. The share capital paid up is £192,878 and the total debenture debt including deferred debenture stock ranking after the ordinary shares as to capital and income amounts to £629,830. The cost of the shares, &c., purchased has been £783,282 exclusive of £16,642 invested in the New St. Helens Company. The only other investment is £17,040 in Consols, forming the South Lancashire Tramways Company's Parliamentary deposits, taken into the balance-sheet at £14,675. Cash stands at £9,061. The total track now controlled by the company is 74 miles in length.

NEWCASTLE AND GATESHEAD WATER CO.

Gross receipts for the year ended February 1 amounted to £192,291 or an increase of £6,751, while expenses only rose by £1,476 to £43,657, leaving the nett income £5,275 better at £148,634. Adding £2,149 brought forward and deducting £30,637 for debenture and other interest and £50,088 for preference dividend, the disposable surplus was £70,058, out of which dividends are paid of £7 17s. 6d. per cent. on the original stock and £5 10s. 3d. per cent. on the ordinary stock, with £2,950 carried to the new account. Capital expenditure for the year amounted to £30,421, and debit balance is now £197,487, apart from £54,251 spent on sundry estates and £1,000 invested in the Redheugh Bridge Company. As the renewal and contingency fund stands at £40,240, the company has had to resort pretty freely to the moneylender, and has borrowed £189,684. Creditors are light at £6,682, while debtors owe £22,126, and there is £9,785 in cash, but £60,415 is needed for the balance dividends, and further borrowing is, therefore, inevitable. The directors state that a portion of the district at present being supplied by the Blaydon and Ryton Urban District Councils is included in this company's Parliamentary area, but hitherto it has delivered the water in bulk. Now, however, the Councils are willing to dispose of their interests in the works and pipes, in order that the company should supply in detail, and a satisfactory agreement has been arrived at for the purchase of the respective undertakings.

ALHAMBRA CO., LIMITED.

Gross receipts during the past year from entertainments, &c., amounted to £88,517 and with sundry dividends and fees the total credit of revenue account reached £88,608. Expenses were £79,028, including entertainment £56,219, advertising £4,323 and interest on debentures £2,360, leaving £9,580 nett profit. The balance brought in was £9,633, so that £19,213 is available this year. Of this £6,000 is to be appropriated for alterations, £1,000 for freehold and buildings account and £6,000 for a dividend of 10 per cent., leaving £6,213 to go forward. The theatre figures for £120,072 less £1,000 depreciation, and alterations, &c., account is £11,741 from which £6,000 from year's profit has to be deducted, cash £3,078 is hardly sufficient for requirements with debtors £658 against creditors £6,630 and loan from bankers £7,000. Reserve fund of £1,218 is represented by Consols at 85 £927 and war stock at cost £250. A profit of £1,443 made in 1898 by sale of property is merged in general assets. Of the amount of £15,000 required to be spent to comply with the demands of the London County Council over £14,000 has already been paid out, and the directors regret that finality in this direction does not appear to be attainable.

Callander and Oban Railway Company.—Traffic receipts for the six months ended January 31 were £222 up at £44,626, while there was a saving of £937 at £24,771 in working expenses, mainly due to a reduction in rates and taxes. Including miscellaneous receipts and £49 brought forward the disposable total was £20,698 or an increase of £1,042, but interest on debenture stock and temporary loans took more, and after providing for preference dividends £29 was carried forward against £63 a year ago. Capital overdraft is now £108,237, and the company has raised £114,000 on temporary loans.

Bon Marche.—Nett profits for the twelve months ended February 15 amounted to £26,390 or a small increase of £136 only, but £2,565 more at £5,192 was brought in and the disposable total was £2,690 up at £24,965. Out of this dividends and bonus aggregating 14 per cent. are again paid and another £2,000 is written off machinery account, and after paying directors' additional remuneration of £3,924 the sum carried forward is raised to £7,841. Property, including the modest sum of £4,594 for goodwill, is valued at £165,682, machinery stands at £9,978 and fixtures, &c., come to £33,481, against which the reserve totals £60,000. Stocks amount to £43,484 and debtors considerably exceed creditors, while cash reaches the comfortable total of £12,270.

Edwin Woodhouse and Co.—Profits of this woollen and worsted manufacturing business for the year ended January 31 amounted to £15,169 and £1,432 was brought forward making £16,601. Debenture interest and preference dividend having been met £4,000 is put to reserve and the ordinary shares get 10 per cent., leaving £2,200 to be carried out. Properties, less depreciation at 2½ per cent., are valued at £38,195, loose machinery less 5 per cent. written off stands at £31,625 and goodwill at £25,245 against which the reserve will now amount to £23,000. Debtors at £55,616 exceed creditors by £24,754, stocks come to £64,012 and cash and bills to £16,992.

Travancore Tea Estates Company.—This company was exceptionally fortunate during the year ended September 30 as not only was its crop larger by 97,647 lbs. at 1,745,560 lbs., but the average price realised jumped from 5.63d. to 7.41d. per lb. Gross receipts were £47,637 and nett profits improved by no less than £12,638 to £20,343, and with £1,380 brought in gave a total of £21,723. Advantage is taken of this prosperity to wipe out the arrears of preference dividend amounting to 45 per cent., and after providing £2,000 for depreciation £188 is carried forward. Estates stand at £132,558 or about £40 per cultivated acre, and the company's lack of success in the past has, of course, prevented it from accumulating any reserve. Current liabilities come to £10,354 against stocks worth £17,522, debtors £911 and cash £862, but the balance of the dividend payment will take £12,816, and it is doubtful whether the directors have not been rather too hasty in deciding to clear off all arrears at once

G. H. Williamson and Sons, Limited.—In 1907 the profits, after allowing for management expenses, directors' fees, depreciation, discounts, &c., came to £12,478, and adding £1,562 brought forward, the disposable balance was £14,040, out of which £3,000 is carried to the reserve fund, raising it to £28,000, and a dividend of 6 per cent. paid on the ordinary shares, leaving £2,790 to be carried forward. Goodwill remains at £81,868, and the balance-sheet seems quite clean.

MINING RETURNS.

Abosso.—Crushed 4,519 tons, 2,274 ozs.; tailings, 2,970 tons, 5 9 ozs.; old tailings, 1,102 tons, 149 ozs.; total, 2,932 ozs.

Akrokerri (Ashanti).—Crushed 3,360 tons, 1,194 ozs.; tailings, 1,690 tons, 191 ozs.; total, 1,385 ozs.

Alaska Treadwell.—Crushed 30,072 tons, value $51,070; saved 620 tons sulphurets, value $35,267.

Angelo.—Milled 29,500 tons, 12,501 ozs.; profit, £25,925.

Ashanti Rivers and Concessions.—404 ozs., value £1,616.

Bibiani.—Crushed 3,115 tons, value £5,539; cyanide, 2,250 tons, £1,413.

Broken Hill South Blocks.—Treated 7,620 tons, produced 1,296 tons concentrates, containing 841 tons lead and 11,664 ozs. silver.

Buffelsdoorn Estate.—Slimes 4,000 tons, 536 ozs.; profit, £759.

Burbank's Main Lode (1904).—Crushed 1,280 tons, 601 ozs.; cyanide 985 tons, 165 ozs.

Burma Ruby.—78,000 loads washed, producing rubies valued Rs.41,000; royalties, Rs.13,000.

Cape Copper.—Ookiep: 1,206 net tons 14 per cent. = 169 tons fine copper. Nababeep: 4,632 net tons, 3.9 per cent. = 180 tons fine copper; total, 349 tons fine copper.

Cason.—Milled 31,300 tons, 12,527 ozs.; profit, £24,865.

Chillagoe.—Chillagoe: 429 tons copper ore, 43 tons lead ore; Mungana: 124 tons copper ore, 1,736 tons lead ore; purchased 140 tons copper ore, 564 tons lead ore; totals, 693 tons copper ore, 2,343 tons lead ore; producing 38 tons blister copper, 77 tons copper matte, and 416 tons lead bullion; containing 65 tons copper, 416 tons lead, and 35,543 ozs. silver; 687 tons of fluxing ore treated produced 58 tons lead, and 2,927 ozs. silver.

Chinese Engineering.—Output of coal, 17,590 tons; sales, 20,500 tons; consumption, 800 tons.

City and Suburban.—7,563 ozs., crushed 24,200 tons; profit, £9,273.

Consolidated Gold Fields of New Zealand.—Progress: Crushed 4,710 tons, value £7,667, profit £3,711. Wealth of Nations: Crushed 1,075 tons, value £2,473; profit, £1,530.

Consolidated Langlaagte.—21,893 tons, 8,040 ozs.; profit, £10,217.

Consolidated Main Reef.—Crushed 13,728 tons, 2,889 ozs.; sands and concentrates 13,728 tons, 2,063 ozs.; total, 4,952 ozs.; profit, £5,649.

Crown Deep.—Crushed 35,520 tons, 10,764 ozs.; cyanide 34,706 tons, 5,184 ozs.; total, 15,948 ozs.; profit, £36,000.

Crown Reef.—Crushed 22,703 tons, 6,486 ozs.; secondary treatment 24,324 tons, 3,152 ozs.; total, 9,638 ozs.; profit, £21,005.

Day Dawn Block and Wyndham.—Treated 1,036 tons, total value £2,550.

Driefontein.—Milled 28,300 tons, 10,743 ozs.; profit, £19,451.

Duff Development.—Total for Feb., 531 ozs.

Durban-Roodepoort.—Milled 12,080 tons, 2,679 ozs.; tailings 8,175 tons, 959 ozs.; slimes 3,585 tons, 178 ozs.; total, 3,816 ozs.

Durban Roodepoort Deep.—Crushed 11,750 tons, 3,184 ozs.; cyanide 11,756 tons, 1,335 ozs.; total, 4,519 ozs.; profit, £4,500.

Eldorado Banket.—Crushed 2,475 tons, 1,430 ozs.; cyanided 2,475 tons, 199 ozs.; total, 1,630 ozs.; profit, £3,600.

Ferreira Gold.—Crushed 21,400 tons, 9,003 ozs.; by secondary treatment 23,720 tons, 3,552 ozs.; total, 12,555 ozs.; profit, £30,552.

French Rand.—Crushed 16,100 tons, 2,688 ozs.; by secondary treatment 17,920 tons, 1,816 ozs.; total, 4,504 ozs.; profit, £2,028.

Gaika.—Crushed 2,381 tons, 917 ozs.; tailings 2,281 tons, 235 ozs.

Geldenhuis Estate.—Crushed 18,265 tons, 3,876 ozs.; tailings, 1,725 ozs.; slimes, 424 ozs.; total, 6,025 ozs.; profit, £12,181.

Ginsberg.—3,921 ozs. from 10,527 tons; profit, £4,768.

Glen Deep.—Crushed 20,600 tons, 4,573 ozs.; by cyanide 19,875 tons, 2,456 ozs.; total, 7,029 ozs.; profit, £8,500.

Glencairn Main Reef.—20,700 tons, 4,603 ozs.; profit, £4,112.

Globe and Phœnix.—Crushed 6,306 tons, total 2,684 ozs.; tailings average assay value per ton, 3·68 dwts.; cyanide 4,500 tons, 356 ozs.; slimes 2,096 tons, 123 ozs.; total, 3,163 ozs.

Golden Horse Shoe.—Ore treated 22,763 tons, 11,873 ozs.

Golden Pole.—Crushed 1,356 tons, 522 ozs.; sands 1,350 tons, 166 ozs.; total, 688 ozs.

Great Boulder Perseverance.—Treated 17,612 tons for 5,577 ozs. gold and 849 ozs. silver.

Great Boulder Proprietary.—Treated at sulphide mill 12,721 tons, 11,955 ozs.; tailings (old) 9,798 tons, 1,245 ozs.; total, 13,200 ozs.

Great Cobar.—Tonnage treated 15,690 tons; output matte 976 tons; contents 385 tons copper, 857 ozs. gold, 5,717 ozs. silver. Ingot copper made at Lithgow works 448 tons; despatched 469 tons.

Great Fingall.—20,071 tons, 5,631 ozs.; tailings 19,734 tons, 1,184 ozs.; concentrates 337 tons, 1,464 ozs.; total, 8,279 ozs.

Great Fitzroy.—Treated 803 tons ore for 124 tons matte, containing 36 tons copper and 155 ozs. gold, the average recovery being 4·48 per cent. copper and 3 dwts. 20½ grains gold per ton.

Hainault.—Crushed 6,150 tons, 1,793 ozs.

Hannan's Reward.—Crushed 3,575 tons, 496 ozs.; royalties, £318.

Ida H.—Crushed 850 tons, 600 ozs.; profit, £92.

Ivanhoe.—Crushed 18,370 tons, 3,413 ozs.; sands, 8,360 tons, 2,049 ozs.; slimes, 8,470 tons, 2,126 ozs.; concentrates, 1,540 tons, 2,334 ozs.; total, 9,922 ozs.

Jubilee.—Mill crushed 4,445 tons, 1,165 ozs.; cyanide, 3,483 tons, 435 ozs.

Jumpers.—Crushed 9,400 tons, 2,843 ozs.; tailings, 1,224 ozs.; current slimes, 281 ozs.; accumulated slimes, 330 ozs.; total, 4,678 ozs.; profit, £4,245.

Kalgurli.—10,250 short tons, 6,638 ozs.

Killarney Hibernia.—Crushed 1,060 tons, 277 ozs.

Lancefield.—Treated 5,252 tons, 1,851 ozs.

Lake View Consols.—Treated 10,566 tons, 2,959 ozs.; profit, £1,249.

Knight's Deep.—Operations for February—40,350 tons; 12,587 ozs.; value £53,466; profit, £20,947, including sundry revenues.

Lancaster.—Crushed 14,200 tons, 1,528 ozs.; cyanide, 10,196 tons, 1,224 ozs.; total, 2,752 ozs.

Lancaster West.—Crushed 6,220 tons, 1,138 ozs.; cyanide 4,961 tons, 869 ozs.; total 2,007 ozs.; profit £2,060.

Langlaagte Deep.—Crushed 33,000 tons, 8,407 ozs.; cyanide 32,537 tons, 2,820 ozs.; total, 11,227 ozs.; profit £12,550.

Langlaagte Estate.—Ore crushed 43,910 tons, 9,672 ozs.; tailings 24,800 tons, 3,162 ozs.; slimes 22,054 tons, 1,682 ozs.; total, 14,516 ozs.; profit, £22,750.

Le Roi.—5,723 tons ore, containing 1,869 ozs. gold, 3,585 ozs. silver, 135,300 lbs. copper.

Luipaards Vlei Estate.—Crushed 15,424 tons, 2,309 ozs.; tube mills, 1,031 ozs.; cyanide, 1,416 ozs.; slimes, 293 ozs.; profit, £7,089.

Main Reef West.—Crushed 4,309 tons, 1,131 ozs.; sands and concentrates 4,309 tons, 634 ozs.; total, 1,785 ozs.

May Consolidated.—Crushed 11,890 tons, 1,888 ozs.; cyanide 9,215 tons, 1,606 ozs.; slimes, 4,152 tons, 285 ozs.; total, 3,779 ozs.; profit, £4,316.

Messina (Transvaal) Development.—420 tons copper ore; of this 80 tons is shipping ore, assaying 54 per cent. copper, 340 tons remaining for future treatment.

Meyer and Charlton.—Crushed 12,421 tons, 1,851 ozs.; 2,999 ozs. cyanide; total, 4,850 ozs.; profit, £8,172.

Mills' Day Dawn United.—2,018 tons of quartz, total value, £6,500.

Montana.—Lucky Girl Group—Nevada.—Crushed 1,900 tons ore, producing 320 ozs. gold, and 160 ozs. silver, value $6,600.

Mount Morgan (Queensland).—20,378 tons of ore, produced 6,400 ozs. fine gold; copper rejection works, 15,398 tons ore and metalliferous flux, and produced 453 tons blister copper, containing approximately 448 tons copper and 5,152 ozs. gold.

Mount Zeehan.—500 tons silver-lead ore, containing 275 tons lead and 33,500 ozs. silver.

Myalls and Peak Hill.—2,994 tons treated, 476 ozs. cyanide.

New Comet.—21,900 tons milled, 7,605 ozs.; profit, £10,919.

New Goch.—Crushed 22,112 tons, 4,714 ozs.; cyanide, 2,374 ozs.; total, 7,088 ozs.; profit, £11,002.

New Heriot.—Crushed 9,000 tons, 4,407 ozs.; profit, £7,811.

New Kleinfontein.—Milled 32,612 tons, 8,204 ozs.; sands, 22,452 tons, 2,693 ozs.; slimes, 10,147 tons, 726 ozs.; total, 11,623 ozs.; profit, £16,796.

New Modderfontein.—Crushed 21,659 tons, 7,097 ozs.; secondary treatment, 25,267 tons, 3,287 ozs.; total, 10,384 ozs.; profit, £17,536.

New Primrose.—7,432 ozs. from 18,316 tons; profit, £13,143.

New Rietfontein.—8,579 ozs. from 16,500 tons; profit, £15,005.

New Unified Main Reef.—3,189 ozs. from 9,466 tons; profit, £3,413.

Nigel Deep.—3,714 tons, 1,639 ozs.; profit, £1,304.

North Broken Hill.—2,500 tons crude ore, assaying 15·9 per cent. lead and 6·7 ozs. of silver per ton, producing 417 tons concentrates, containing 289 tons 12 cwt. lead and 8,924 ozs. silver.

New Zealand Crown.—Crushed 1,891 tons, value £3,640.

North Randfontein.—Ore crushed 16,340 tons, 3,958 ozs.; tailings 10,560 tons, 1,752 ozs.; slimes 5,910 tons, 494 ozs.; total, 6,204 ozs.; profit, £9,600.

North White Feather.—Crushed 1,840 tons, 824 ozs.; total bullion, 590 ozs. fine gold; assay value of tailings, 51 grs.

Nourse.—Crushed 31,322 tons, 8,098 ozs.; by cyanide 31,190 tons, 4,018 ozs.; total, 12,116 ozs.; profit, £17,250.

Oroya Black Range.—Crushed 4,010 tons, 2,389 ozs. fine gold.

Oroya Brownhill.—Crushed 11,225 tons, 3,776 ozs.

Penhalonga Proprietary.—Crushed 7,700 tons, total 1,680 ozs.; profit, £2,641.

Porges Randfontein.—Crushed 14,655 tons, 3,862 ozs.; concentrates 1,634 tons, 525 ozs.; tailings 8,820 tons, 1,273 ozs.; slimes 4,017 tons, 441 ozs.; total, 6,101 ozs.; profit, £9,400.

Princess Estate.—Crushed 8,640 tons, 2,779 ozs.; cyanide 5,740 tons, 1,285 ozs.; total, 4,064 ozs.; profit, £6,188.

Rezende.—Crushed 2,600 tons, total 843 ozs.; profit, £359.

Rhodesia Consolidated.—Crushed 1,700 tons, 893 ozs.; cyanided 815 tons, 286 ozs.

Robinson Central Deep.—Crushed 2,090 tons, 9,128 ozs.; by secondary treatment, 21,614 tons, 34,987 ozs.; total, 13,115 ozs.; profit, £36,562.

Robinson Deep.—47,586 tons, 19,672 ozs.; profit, £37,107.

Robinson Gold.—Crushed 38,300 tons, 17,250 ozs.; by secondary treatment, 38,605 tons, 7,650 ozs.; total, 24,900 ozs.; profit, £77,578.

Robinson Randfontein.—Ore crushed 14,266 tons, 2,807 ozs.; concentrates 1,700 tons, 539 ozs.; tailings 9,000 tons, 1,606 ozs.; slimes 4,110 tons, 579 ozs.; total, 5,531 ozs.; profit, £6,100.

Roodepoort Central Deep.—Crushed 8,103 tons, 1,989 ozs.; cyanide 6,030 tons, 1,075 ozs.; total, 3,064 ozs.; profit, £2,676.

Roodepoort United.—Crushed 16,000 tons, 3,946 ozs.; cyanide 2,318 ozs.; total 6,264 ozs.; profit £9,648.

Rose Deep.—Crushed 34,450 tons, 7,171 ozs.; cyanide 33,639 tons, 3,348 ozs.; total 10,519 ozs.; profit £15,900.

Salisbury.—Crushed 5,050 tons, 1,820 ozs.; profit £2,350.

Selukwe Gold.—Crushed 4,087 tons, 914 ozs.; cyanide 2,774 tons, 331 ozs.; total 1,245 ozs.

Simmer and Jack East.—33,710 tons, 8,645 ozs.; profit £7,756.
Simmer and Jack Proprietary.—64,000 tons, 24,972 ozs.; profit £57,706.
Sons of Gwalia.—Crushed 12,320 tons, 2,987 ozs.; tailings 7,165 tons, 1,039 ozs.; concentrates 188 tons, 486 ozs.; slimes 5,016 tons, 442 ozs.; total 4,054 ozs.
South Kalgurli.—Crushed 9,020 short tons, 2,950 ozs.
South Randfontein.—Ore crushed, 14,460 tons, 3,051 ozs.; concentrates, 1,575 tons, 389 ozs.; tailings, 8,750 tons, 1,538 ozs.; slimes, 4,293 tons, 553 ozs.; total, 5,531 ozs.; profit, £6,200.
Talisman Consolidated.—3,638 tons, value £16,662; profit, £9,878.
Taquah.—Crushed 5,210 tons, 4,236 ozs.; tailings, 4,570 tons, 600 ozs.; total, 4,836 ozs.
Tingha Consolidated.—Production of tin amounted to 20 tons.
Tomboy.—Crushed 8,100 tons, value $50,000; concentrates shipped 860 tons, value $33,000; profit, $39,000.
Treasury.—Crushed 8,960 tons, 1,599 ozs.; sands and concentrates 10,163 tons, 1,288 ozs.; total, 2,887 ozs.; profit, £1,744.
Van Ryn.—Crushed 22,240 tons, 7,584 ozs.; sands 14,530 tons, 831 ozs.; slimes 7,710 tons, 696 ozs.; total, 10,111 ozs.; profit, £19,876.
Village Deep.—Crushed 25,800 tons, 4,938 ozs.; secondary treatment 25,865 tons, 3,919 ozs.; total, 8,857 ozs.; profit, £9,000.
Village Main Reef.—Crushed 39,500 tons, 9,250 ozs.; sands and concentrates 29,202 tons, 4,189 ozs.: slimes 13,376 tons, 1,219 ozs.; total, 14,658 ozs.; profit, £27,508.
Vivien.—Milled 2,797 tons, 604 ozs.; tailings 2,100 tons, 215 ozs.; concentrates 26 tons, 19 ozs.; current slimes 671 tons, 86 ozs.; accumulated slimes 246 tons, 62 ozs.
Vogelstruis Estates.—7,580 tons, 1,863 ozs.; tailings 5,335 tons, 508 ozs.; total, 2,371 ozs.
Waihi Gold.—Crushed 29,837 tons, and £68,860 gold and silver produced.
Wanderer (Selukwe).—Cyanide 12,090 tons, 955 ozs.; value, £3,398.
West Rand Central.—Crushed 2,416 tons, 382 ozs.; cyanided 1,880 tons, 316 ozs.; slimes 1,116 tons, 162 ozs.; bye products, 74 ozs.; total, 934 ozs.
Windsor Gold.—Crushed 4,979 tons, 1,058 ozs.; cyanide 3,642 tons, 769 ozs.; total, 1,827 ozs.
Witwatersrand.—9,727 ozs. from 32,200 tons; profit, £13,014.
Witswatersrand Deep.—Crushed 31,820 tons, 9,747 ozs.; sands and concentrates 31,940 tons, 4,431 ozs.; total, 14,178 ozs.; profit, £27,730.
Wolhuter.—Crushed 20,500 mill tons; sands and slimes treated 20,500 tons; from mill, 3,426 ozs.; from sands, 2,746 ozs.; total, 6,172 ozs.; profit, £6,305.
Zeehan-Montana.—360 tons silver-lead ore containing 230 tons lead and 27,000 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

North British.—For half-year ended Jan. 31 full dividend on ordinary preference stock, and at the rate of ½ per cent. per annum on the ordinary stock, carrying forward £11,000.

MINES.

Esperanza.—Interim of 6d. per share and an additional interim of 4s. per share, for quarter ending March 31, payable April 18.
Great Fingall.—Quarterly interim 2s. 6d. per share, payable April 10.
Kalgurli.—Interim 7s. 6d. per share, payable April 6.
Mount Boppy.—Balance of 3s. 6d. per share for year ended Dec. 31, payable April 16, making at the rate of 47½ per cent. for the year.
Oroville Dredging.—12½c. per share (10 per cent. per annum).
Transvaal Gold Mining Estates.—10 per cent.

MISCELLANEOUS.

A. and F. Pears.—Interim for six months ended Dec. 31 on the ordinary shares at the rate of 8 per cent. per annum.
African Steam Ship.—8s. a share for six months ended Dec. 31, making 16s. a share for the year.
Danish Gas.—8s. per share on the ordinary shares.
Hannans Land.—Final for 1907 of 2½ per cent.
Harvey United Steel.—On the ordinary shares at the rate of 15 per cent. per annum.
Ibbotson Brothers and Co.—Interim at the rate of 5 per cent. per annum for half-year ended Dec. 31.
J. Mandleberg and Co.—12½ per cent. on the ordinary shares for year ended Dec. 19.
King Line.—At the rate of 7 per cent.
Nicholson's.—On the ordinary shares for six months ended Feb. 12 at the rate of 8 per cent. per annum, making 7 per cent. for the year.

London General Omnibus.—Salisbury House, 2.30 p.m.
Metropolitan Life Assurance.—Cannon Street Hotel, 12.30 p.m.
Swan and Edgar.—Regent Street, W., noon.
Spassky Copper Mine.—Cannon Street Hotel, 2 p.m.
Vanguard Motor Bus.—Holborn Restaurant, noon.

Friday, March 20.

Falcon (Rhodesia) Development.—8, Old Jewry, E.C., 11.30 a.m.
Lancefield Gold Mining.—Salisbury House, 12.30 p.m.
Leeds and Liverpool Canal.—Bradford, 11 a.m.
Licences Insurance.—Institute of Chartered Accountants, 2.30 p.m.
New Spanish Iron Iro.—56, Bishopsgate Street, E.C., 3 p.m.
Penrikyber Navigation Collieries.—Noon.

We are informed that Mr. Arthur T. Keen, of Harborne Park, Harborne, Birmingham, has been elected to a seat at the board of the London City and Midland Bank, Limited.

Aberdeen Combworks Co., Limited.—In spite of the higher price for coal and other stores this company made a profit of £12,000 last year after meeting directors' salaries and fees, providing £1,400 for abatements and placing £3,399 to depreciation reserve. Out of the profits the ordinary shareholders get 6 per cent. and £418 is left to carry forward against £312 brought in. The depreciation reserve account is now up to £9,000 after writing £1,394 off cost of machinery against the £3,999 brought from revenue to depreciation. A sum of £3,573, stated a year ago to be the balance remaining due the contributories of the amount advanced by them to buy the Scottish Comb Works has been repaid. Debts due to the company at £23,018 are £7,818 higher than debts due by the company. Cash, investments and undiscounted bills stand at £16,441, and stock at £71,027.

Rivet, Bolt and Nut Company.—After providing £10,214 or £827 less for depreciation the nett profits for 1907 were £4,972 down at £31,628, so the dividend is reduced from 6 per cent. to 5, and by putting nothing to reserve against £5,000 the sum carried forward is increased from £6,159 to £7,483. This balance, however, is subject to the payment of income-tax, directors' and auditors' fees which a year ago absorbed £2,804. Property account is only a trifle down at £380,521, the depreciation allowance being little larger than the outlay for the year, and apart from the preference shareholders' special fund of £20,000 the reserves stand at no more than £5,000. Debtors at £63,760 exceed creditors by £34,331, stocks are £4,437 up at £110,321 and investments are valued at £82,141. Part of this last item, however, would appear to be pledged, as the directors deduct £11,084 for a loan at short call less £916 cash in hand.

Western Mansions.—This company has three buildings containing in all 221 flats and another let out as offices, which have cost it altogether £335,865. The gross income for 1907 was £28,735, and the nett after providing for debenture interest and all charges £6,211. With £628 brought in the total to be dealt with was £6,839, out of which dividends aggregating 2¾ per cent. are paid and £1,484 is carried forward. The leasehold redemption fund now stands at £10,074, and this with £3,628 from premiums represents the total reserves against the above noted capital outlay, not a brilliant achievement for a company 19 years old. Current balances are favourable, £3,840 being due to creditors against £5,675 to come in, while cash is good at £12,428.

COMPANY MEETINGS.

THE NEWCASTLE-UPON-TYNE ELECTRIC SUPPLY COMPANY, LIMITED.

Abridged Report of Proceedings at the Twentieth Annual General Meeting of the Newcastle-upon-Tyne Electric Supply Company, Limited, held at the Station Hotel, Newcastle-upon-Tyne, on Tuesday, the 10th day of March, 1908.

The Chairman (Dr. J. T. Merz), in moving the adoption of the Report and Accounts referred to the horse power connected to the Company's system, which had increased from 70,000 H.P. to 92,764 H.P. This corresponded to an increase in revenue of from £176,810 to £240,469, which was a greater increase than that of the year before. The increased horse power was nearly all used for mechanical and chemical purposes. The lighting parts of the business had also increased, the units rising from 3,125,000 to 3,423,000. The total profit was, however, only slightly larger than the year before, the principal reason for this being the large amount which the Company had had to spend on coal compared with last year. Of the increased amount spent on coal, nearly £13,000 had been occasioned by the higher price. Some of the Shareholders present who had experience in the matter would no doubt agree with him that £13,000 was not an excessive increase considering the large quantity used and the prevailing high price of coal. They had been fortunate in the arrangements of their purchase contracts. The increase in the price this year had been over 2s. per ton.

After providing for interest and dividends, amounting to £80,372, the Directors had transferred to Depreciation Account the sum of £5,000, which, together with the amount transferred from Reserve Account, made a total addition for the year of £30,000 to Depreciation Account.

The mileage of cables was 201, an increase of 30 miles over last year.

The Horse Power installed at the Carville Works was now 44,000 H.P., which, together with that at other stations, made 55,800 H.P. This, it would be observed, was a considerably smaller amount than the Horse Power connected to the Company's system, viz., 92,764 H.P., but of this the maximum simultaneous demand was only 42,000 H.P. (the difference between this demand and the 55,800 H.P. mentioned above represented "spare plant"). This, he stated, illustrated the advantage of consumers getting their power from a central power station. The consumers connected to the system represented 92,764 H.P. and if these had had to supply themselves they would have been compelled to have installed plant to at least this amount, but as they got their supply from a central power station they benefited by the fact that it was not necessary for the company to instal as much Horse Power as was connected to the system, having regard to the great diversity factor. This might be likened to the conditions which existed in Banking and Insurance Companies.

The Company had now 4,814 customers against 4,350 the year before.

CAPITAL EXPENDITURE.

The total capital expenditure of the company on works, &c., was £1,602,899. Of this amount in round numbers £50,000 was sunk in Land, £890,000 on Works, £460,000 on Mains, £160,000 on hired out apparatus, and £36,000 had been spent on Provisional Orders and Acts under which the Company operated. In addition, £64,000 had been expended in Stores and £87,000 in Investments, representing a total of £1,754,899. This amount has been supplied as follows:—£875,000 from shares, £437,500 from debentures, £182,000 from temporary loans, £176,000 from premiums on issues of shares and £80,000 out of profits. The item of Loans was a heavy one, but it was accounted for by the fact that the Company could not make the share issue which they had intended last year.

INVESTMENTS.

With regard to the £87,000 which was invested in different shares, &c., in other companies, the Chairman said that he had been asked a question in a letter by a shareholder as to whether those investments were valued at the market price of the day. His answer was that they were valued at what they paid for them. If they wanted to value them at the market price of the day every year, they would have a continually fluctuating amount, and as they did not intend to dispose of them, but had taken them in order to get certain trade connections, it was not desirable that they should alter the figure. If, however, anybody thought that £87,000 was too large a figure to put them in at, they had on the other side of the account £85,000 unappropriated reserve for depreciation and other purposes. If they began once to value their assets which were saleable they must take other assets into consideration. They had a very valuable asset, which was worth a great deal more than they paid for it. That was the saleable land they had at Pandon Dene. Its value was increasing and they hoped to sell it some day. They had got a number of smaller lots, which they could sell at their works down the river. The increased value of these assets was more than equal to any possible decrease in the value of shares held by them.

DEPRECIATION.

Dealing next with the item of Depreciation, the Chairman stated that the sum of £150,000 had been appropriated for the depreciation of Works and nearly £5,000 for stocks and other smaller items. The amount so set aside represented a good deal more than the whole cost of the Original System, and he was sure that, taking this into account, there was no reason why the new plant should be stated at any less money than that at which it was shown in the Accounts. It was certainly no less efficient now than it was when put down, and if anything it was improved, as all the inevitable little faults in new machinery had now been rectified out of Revenue, while a certain proportion of the plant had hardly been used at all—the oldest of it had only been completed three years ago.

COUNTY OF DURHAM COMPANY.

The Chairman then referred to the issue of the County of Durham Company's Debentures, the interest of which the Company had guaranteed. The Directors had, as that Company took all their electric power from them, felt themselves justified in entering into this guarantee and in assisting the Durham Company as far as possible to float their issue. The interest they guaranteed amounted to £12,500 a year, and the net revenue of the Durham Company available to meet this would, at the end of the present year, be about three times as much as was required.

TUNNEL UNDER THE RIVER TYNE.

Referring to the improvements and extensions of the Company's system, he mentioned the Tunnel which the Company were constructing to carry cables under the River Tyne between Carville and Hebburn—this Tunnel was necessary in order to meet the constantly increasing demand on the south bank of the Tyne—the cost would be about £20,000 and would be borne jointly by this and the Durham Companies. By the use of the Tunnel 18,960 yards route of cable would be saved as compared with the present and longer route over the High Level Bridge which necessitated first of all going several miles up the River and then down again on the other side and in addition would avoid the necessity of "stepping up" and "stepping down" in the voltage necessary to save the amount of copper required for dealing with the greater distance. The Tunnel, due to the shorter route, would also save the loss in Transmission, which, in itself represented a sum of about £2,000 per annum even with the present load.

WORKS AT DUNSTON.

The next paragraph in the report referred to the proposed New Station—this was at Dunston. This was necessary, as although the present stations could supply the whole of Northumberland and Newcastle and also a portion of the South side of the river Tyne, they could not economically supply the outlying districts of the Durham area and for that reason another station was required. A lease for 99 years had therefore been taken of 30½ acres of land at Dunston, having 900 ft. of river frontage and 2,500 ft. of railway line. Consumers would have the opportunity of placing their works on the Company's land immediately adjoining this Generating Station in a similar manner as had been done by the Castner Kellner Company on the Carville Power Station site where no further land was now available. They intended to instal at the Dunston Station 30,000 H.P. to commence with and the capital cost of the station would be somewhat less than the present cost per horse power at Carville.

FINALITY NOT YET REACHED.

The Chairman proceeded to point out that the Company had not by any means reached finality in the cost of producing electricity, even with their present plant. They hoped to be able to effect considerable economies in the Coal Bill and in the amount spent for Repairs, as the construction work at their principal existing station, namely Carville, would be completed this summer, and the staff would be able to devote their whole attention to effecting economies in working.

NEW CAPITAL.

In referring to the proposed increase of the Company's Capital, the Chairman stated that the cost of the new station was estimated at £250,000, and, in addition there were temporary loans from Bankers and others which had to be provided for. The capital would not all be required at once, but it was necessary to make provision for the Company's requirements over the next two or three years. For this purpose the Directors had decided to make an issue at once of £500,000, divided equally between Preference and Ordinary Shares. This would be done as soon as they obtained the consent of the Shareholders to the necessary increase of the Capital of the Company. The method of issue would be explained at the Extraordinary General Meeting that was to follow, but he would like to add that as they had already Contracts for the supply of power for about 27,000 additional Horse Power, the revenue that they would get from this increased business should fully cover the additional amount required to pay interest on the increased capital.

INCREASE OF CAPITAL.

An Extraordinary General Meeting was then held for the purpose of obtaining powers to create additional Capital to the extent of £500,000 apportioned as the Chairman had described, when the following Resolutions were carried unanimously:—

"That this General Meeting of the Newcastle-upon-Tyne Electric Supply Company, Limited, sanctions the creation by the Directors of £500,000 additional Capital to be divided into 50,000 Preference Shares of £5 each and 50,000 Ordinary Shares of £5 each."

"That the said additional Preference Shares shall rank *pari passu* in all respects with the existing Preference Shares, and shall accordingly be entitled *pari passu* with such shares to a preferential dividend of 5 per cent. and also to any surplus profits available for dividend after 8 per cent. has been paid on the Ordinary Shares until all the Preference Shares shall have received 8 per cent., when such shares will rank *pari passu* with the Ordinary Shares for any further dividends which

may be declared exceeding 8 per cent. The Preference Shares will be preferential as to dividends only."

"That the Directors may, instead of offering such shares to the members, as provided by the Articles of Association of the Company, dispose of the same at such time in such manner and upon such terms and conditions as, in their discretion, they may consider to be in the best interests of the Company."

LAW LAND.

The twenty-fifth annual general meeting of the Law Land Company, Limited, was held on Wednesday at the offices of the company, Norfolk Street, Strand, Mr. T. C. T. Warner, M.P., presiding.

The manager and secretary (Mr. E. H. Cousens) having read the notice convening the meeting,

The Chairman read the report of the auditors. He proceeded: In moving the adoption of the report and statement of accounts, there are several things that I should like to call attention to. In round figures, the gross rental for the past year was £104,000, nearly £16,000 more than it was for the preceding year. The increase is, of course, mainly due to the purchase of Harley House, made towards the close of the year 1906. The rents of the properties owned by the company on the Norfolk estate and in other parts of London have been well maintained, and the properties generally—especially those on the Norfolk estate—are steadily increasing in value. Taking the principal items on the other side of the account, ground rents were £15,050, against £14,730, an increase of about £1,200. This is due to a full year's ground rent having been paid upon the new property. The item of rates, taxes, insurance, repairs, gas, water, and electric light, which for last year amounted to £19,617, stands for this year at £24,971, an increase of about £5,350. The major part of this increase is also due to the new property, but a portion of it—something between £700 and £750—is due to an increase of rates on the Norfolk estate. In all other parts of London where the company own properties—except in Chelsea, where the rates are the same as they were last year—there has been a slight fall in the percentage of rating. Interest on mortgages and loans, which was last year £16,730, stands this year at £22,225, an increase of about £5,500. This, as all other large increases, is due to the new property, which, you will remember, was bought subject to a mortgage of about £147,000; and the increase set apart for the leaseholds redemption fund, which last year was 2,307 and this year £2,529, is due to the same cause. The balance available for dividend is £35,840, against £32,806, an increase of about £3,000. This has enabled us, after paying the interim dividend on the ordinary shares and dividend on the preference shares to December 31, 1907, to add £2,529 to the leaseholds redemption fund and £8,750 to the reserve account. This last account has been further increased by the addition of £1,250, representing the premiums on the recent issue of ordinary shares, so that altogether we have been able to add £10,000 to the reserve account. This account now stands at £85,000, and the leaseholds redemption fund at £21,843, making a total of nearly £107,000 standing to reserve.

Turning to the balance-sheet, properties at cost stand at £1,062,104 against £1,053,592, an increase this year of nearly £9,000. This represents the expenditure on the new property during the year. Part of this expenditure was necessary in order to complete the new blocks—that is, of Harley House—and a part was employed in making certain additions and improvements to the entire building. The capital account of it is now closed, and, with the exception of about one flat, the whole building is let. Taking the other side of the account, the amount called up on the capital stands at £448,228 against £407,650, an increase of nearly £41,000. The mortgages are £494,797 against £502,876, or about £8,000 lower than last year. This difference represents the instalments of capital which have been paid off the various mortgages during the year. The temporary loans amount to £21,205 against £68,305 for last year, a reduction of about £47,000. The dividend we recommend is the same as last year, namely, 8 per cent. for the half-year ended December 31, making, with the interim dividend, 7 per cent. for the year, and a bonus of 1 per cent. We are this year paying dividend on a larger share capital, which accounts for the fact that the payment of the final dividend will absorb £11,500 instead of £9,550, which was the case last year.

With regard to the issue of the balance of the ordinary capital, amounting to £25,000, this was applied for nearly twice over, and as shareholders will remember that the issue was made when the Bank rate was 7 per cent. and when there was something very like a panic on the Stock Exchange, the result must be regarded as highly satisfactory. The issue of 5,000 ordinary shares made immediately previous to the last issue was called up in full during the year, and a quotation on the Stock Exchange obtained for them, and it is proposed during the current year to call up the last issue and to apply for a quotation for that. The first call will be made payable on May 1st next, and there will be subsequent calls of £2 per share at intervals of two months. The mortgage for £50,000, which was rearranged during the year, now bears interest at the rate of 4½ per cent. The money had in the first instance been advanced to the company at 4 per cent. for a term of ten years, but it is a matter of common knowledge that the rate of interest payable at that period was considerably lower than it is now, and under the circumstances the rearrangement, including as it does the repayment of the loan by half-yearly instalments extending over 50 years, must be considered satisfactory. It is, of course, an immense advantage to a company of this kind to have its mortgage debt repayable on the instalment principle, and the whole of the company's debt is now repayable in this manner. We cannot be called upon suddenly to pay off a mortgage. We know exactly what we have to pay off year by year, and can, therefore, make our arrangements with greater ease. With regard to the increase of capital, the directors do not anticipate issuing any considerable amount of the additional capital during the present year, but the increase is necessary to the development of the company's business, and they believe that opportunities for such development are likely to arise in the near future. I may say that we do not in the future propose to take any more risks than we have in the past. We have always looked upon the company's business as being of a purely investment character. We do not buy to sell; we buy to keep, and live on the income of the properties, and we do not go in for building speculations. Before closing my remarks, I should like to say something on the question of the rates. Of course, we suffer from heavy rates, like every other owner of real property in the country, but there is one point at which the rates hit us especially. As a general rule, the rates are calculated on the rent of the house—the real value of the house—but in our case, in these large blocks of buildings, we charge as rent a certain amount that is really not rent. For instance, in addition to the wages and food of the servants, there is the expense of a manager, clerks, and so forth; staircases and landings must be kept well cleaned and lighted; the lift service must be prompt and efficient; porters must be intelligent and polite; halls and staircases must be well furnished and carpeted, and all the buildings must be kept in thorough repair and up to date. In our case the whole of the service arrangements are controlled from this office. The office is open day and night, and is in telephone communication with every building owned by the company. It is connected by private wire with the Whitefriars Fire Station, so that should a fire occur at any of the company's premises the fact could be immediately communicated to the fire brigade. Lifts in office blocks are repaired at night, so as not to interfere with business during the day, and in all the company's principal buildings the Magneta system of regulated clocks has been adopted, and the halls fitted with postal boxes under control of the General Post Office. A considerable amount of money has to be expended on this, and is charged to the rent—the tenants pay a little extra for having all these things. As you will see at once, this is not strictly rent—it is payment for services—and yet we are only allowed a small amount, the same amount as would be allowed in any house where these things were not done. It is certainly rather hard upon us that what is not actually rent should be rated, and that we should have to pay upon it as if it were part of the annual value of the house. That is really the only thing we have to grumble about. On the whole, I think the report shows that the company is in a good, sound financial condition, and that it is prospering. Our properties are keeping up in value, and even increasing in some cases; none of them depreciate. The company has made no bad bargains in the past, and I hope we shall make nothing but good bargains in the future. (Applause.)

Mr Clement E. Lloyd seconded the motion.

In reply to Sir William Dunn, the Chairman said the arrangement to which he had referred of charging an amount as rent to include extra services was much appreciated by the tenants. In practically all cases the company had by mutual arrangement with their lessees provided that if after a certain period the rates and taxes increased either by poundage or assessment beyond those chargeable at the agreed date, a proportion of such increase was borne by the tenant. Replying to Mr. Quayle, he said that as long as the directors could obtain good bargains in the immediate neighbourhood of the Law Courts they confined their purchases to that area, but after a time they found they had no further opportunity of increasing their business there to any large extent, and, recognising that the success of a company such as this depended to a great extent upon its size, they made acquisitions in other parts of London, which he thought he might claim had turned out well for the company.

The motion was carried unanimously, and the dividend and bonus recommended were declared.

The retiring directors and auditors were reappointed, and the following resolutions were unanimously adopted:—

"That the capital of the company be increased to £700,000 by the creation of (*a*) 20,000 preference shares of £5 each and (*b*) 10,000 ordinary shares of £10 each. That the said preference shares shall rank *pari passu* with and be in all respects entitled to such rights and subject to such conditions as are the now existing preference shares, and that the said ordinary shares shall rank *pari passu* with and be in all respects entitled to such rights and subject to such conditions as are the now existing ordinary shares. That the directors be and they are hereby authorised to issue the said new shares at such time or times and to such amount as they may from time to time think fit, but so nevertheless that the amount in nominal value of preference shares issued shall never without the sanction of a general meeting exceed the amount in nominal value of the ordinary shares for the time being subscribed, whether fully paid up or not."

A vote of thanks to the chairman and directors closed the meeting.

STAR LIFE ASSURANCE.

The 64th annual meeting of the members of the Star Life Assurance Society was held on Wednesday at the offices, No. 32, Moorgate Street, E.C., Mr. Edward Spicer (Chairman) presiding.

The Actuary and Secretary (Mr. Henry Gamble Hobson) having read the notice convening the meeting,

The Chairman said: I cannot but refer to the death of our late colleague, Mr. George Lidgett, who faithfully served the society for many years and acted as its chairman for some three years. Among the many interests of his busy life the welfare of the Star took a foremost place. Mr. Josiah Gunton, of the firm of Gordon and Gunton, the well-known architects and surveyors, has taken Mr. Lidgett's place. I am glad to say that we have already found his services of great advantage to the board. I have also to mention the loss that the directors have sustained in the retirement of their old friend and colleague, Mr. Alexander M. McArthur. His name and that of his late brother, Sir William, have been so long associated, not only with the Star, but with the denomination to which so many of you belong, that I am sure you will cordially join with the directors in wishing him continued health and peaceful leisure. Mr. Francis Arthur Holman, of John Holman and Sons, of Lime Street, has been elected Mr. McArthur's successor. You will be pleased to hear that for the year 1907 there is an increase in new business over that of 1906 of about £90,000. I am glad to say that the mortality actually experienced is only 74 per cent. of the policies which were expected to have become claims. The sum received for annuities is £9,000 less than last year. This reduces our income, but at the same time it is a class of business in which there is very little profit and which, therefore, we do not encourage. We merely grant such annuities as are applied for. The interest on our invested funds has increased by £6,000. After allowance for all expenses and claims the balance of income over expenditure has augmented the assurance and annuity funds by the sum of £230,303 15s. 11d. The average rate of interest earned this year is £3 15s. 1d., against £3 15s. 11d. last year. The Chairman last year drew attention to the steady increase of the amount of interest earned during the last few years. I am glad to say this progressive rate has not really ceased, for in looking into the interest figures for the last three years, it became evident that the apparent decrease was due to exceptional circumstances in the treatment of interest at the end of two consecutive years. Our quinquennial period closes at the end of the current year. You will remember that Mr. Ryan was requested by the board to make an estimate of the position of the society for the first three years of the period. That estimate you, in common with the board, considered satisfactory. Though I personally am not given to forecasting the future, nor do I consider it the duty of the Chairman of the Star Life Assurance Society to prophesy, I may say I see no reason why the result for the five years should not prove at least as satisfactory as Mr. Ryan's estimate of the three. I am assuming, of course, that we shall not, at the end of the present year, have such another financial crisis, American or other, as depressed values of all Stock Exchange securities at the close of the year 1907, and that the recovery which set in at the commencement of this year will continue. You will be gratified to hear that the amount of new business for the first two months of 1908 is 50 per cent. more than that done in the same two months of the previous year. Before closing you will forgive me, I am sure, making a personal reference. Mr. Hobson, our actuary and secretary, this week retires from his official connection with this society. He has been for 48 years, ever since April, 1859, in the service of this institution, and for the last 18 years he has occupied the post of its first executive officer. He entered its service as a youth of 15, and by his energy and assiduous industry he has worked his way up to the position that he will transfer this week to another. You and we, I am confident, share with him those feelings of regret and sadness which must accompany the severance of the ties of a lifetime. I am only speaking the opinion of my co-directors and myself when I bear testimony to the entire devotion and loyalty which he has shown in the service of the society. I am pleased to tell you that Mr. J. Douglas Watson, F.I.A., of the English and Scottish Law Life Society, has been appointed Mr. Hobson's successor, and will, in that capacity, act as the manager of the Star Life Assurance Society. Mr. Watson has been highly recommended to the directors, and though he has attained in the office to which he has hitherto belonged the responsible position of actuary and secretary, he is still in the prime of life, with energies unimpaired, and we look forward with confidence to the progress of the society under his management. I now beg to move: "That the report of the directors for the year ended December 31, 1907, and the financial statement and balance-sheet for the same period, be received and adopted and recorded in the minute book of the society."

Mr. William Newburn seconded the resolution, which was agreed to without discussion.

Mr. T. R. Ferens, M.P., then moved the election as directors of Lieut.-Colonel Alexander Miller Arthur, Mr. Francis Arthur Holman, Sir Clarence Smith, and Mr. Josiah Gunton. He said that in these four gentlemen they had men of long and wide experience in connection with the society. In two of them they had services extending jointly over a period of 35 and 40 years, and their great knowledge of the society and their ripe experience could not fail to be of great service to them. The other two directors, Mr. Gunton and Mr. Holman, had also rendered great assistance to the society—Mr. Gunton by his technical knowledge of property in which their money might be invested, while Mr. Holman was a man of great experience in business matters. The society was indeed fortunate in having such gentlemen upon their board.

Mr. T. Morgan Harvey seconded the motion, which was adopted, and the proceedings terminated with the usual votes of thanks.

WM. FRANCE FENWICK AND CO.

The seventh annual meeting of Wm. France Fenwick and Co., Limited, was held on Thursday at the Cannon Street Hotel, E.C., Mr. C. F. H. Leslie presiding.

The Secretary (Mr. S. G. Higgins) having read the notice convening the meeting and the auditors' report,

The Chairman said: The trading profit for 1907 amounts to £51,435, and this figure, added to the carry forward from 1906, makes a total of £55,975 to be dealt with. After providing for various charges and transferring £6,000 to the reserve fund we are left with £26,635 applicable to preference and ordinary dividend. It is satisfactory to note that this forms the largest sum available for distribution in any one year since the formation of the company. The directors have paid the full preference dividend at the rate of 5½ per cent. for the year, amounting to £8,250, and we now propose to pay a dividend of 6 per cent., together with a bonus of 2 per cent. on the ordinary shares, absorbing £12,000, and to carry forward a balance of £6,385. To turn to the balance-sheet, the first item on the credit side—namely, £319,476—compares with £330,049 last year, the difference being that the fixed sinking fund is shown for the first time on the debit side of the account. Other investments at cost are about £21,000 more than last year; this increased figure mainly represents new steamship tonnage. Our profits from steamship property mainly depend upon the possession of the most modern vessels, an asset which this company has always owned, and I think will continue to own. The special attribute of our fleet of steamers is its ability to load and discharge cargoes with economy and rapidity, but this attribute is severely prejudiced, from the profit-earning point of view, when the congestion of the loading and discharging ports prevents the quick dispatch and creates circumstances which shipowners are powerless to control. This has been the condition of affairs which has prevailed during the period under review. To put our position during the year 1907 shortly, our efforts have been devoted mainly to keeping our trade together, to developing new trade on conservative lines, and to avoid business which, seemingly very attractive on paper, has nevertheless meant to many shipowners a good deal of trouble, litigation and loss. Such circumstances are always with us, in a greater or less degree; and there is one which in particular is occupying our attention at the present moment, I allude to the proposal to enforce by statute an eight hours' day on all colliery workers. If this Eight Hours' Bill becomes law, it will, in my opinion, largely increase the cost of producing coal; it will make steamers more expensive to work, and thereby raise the cost of transport and adversely affect all consumers of coal. During the year under review, we have purchased three new steamers; two of the steamers have for some time been running, and one has been sold at a profit on the purchase price. Owing to the disturbed and depressed conditions of the shipbuilding industry, it seemed wise to dispose of this steamer with a view to replacing it at a later date on the more favourable terms which are already obtainable. We have at the present time no steamers on the stocks, and are quite satisfied for the moment to remain in this position. There are indications that we may look forward to a period of cheaper money, and in this event your directors will consider the advisability of exercising the powers they possess under the trust deed of issuing further debenture stock against the security of the free assets of the company. At the moment the price of our debenture stocks is between 102 and 103, and although the redemption of debentures at a premium is not a very exhilarating process to the directors of any company, it is satisfactory to know that the debenture stock of our company has a higher market value than that of any other shipping company paying a similar rate of interest on its debentures. This position possibly results from the fact, which is pretty generally known among our debenture holders, that the interests of this company are by no means confined to ships and shipping. With regard to the proposed dividend and bonus, which together amount to 8 per cent. on the ordinary capital, I cannot tell you whether this bonus is likely to be a permanent feature in the annual distribution of profit. I can only tell you that your directors will do their best to effect this very desirable end.

Mr. H. C. Pelly seconded the adoption of the report, which was carried unanimously, and a vote of thanks to the chairman terminated the proceedings.

ALBERT BAKER AND CO.

The tenth ordinary annual general meeting of the shareholders of Albert Baker and Co. (1898), Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Mr. Nathaniel de Meza (Chairman and managing director) presiding.

The Secretary (Mr. F. P. Freeman) having read the notice convening the meeting and the report of the auditors,

The Chairman said: As it is now ten years since the company was established, I think a few words dealing with the career of the undertaking since its commencement will not be out of place. First, as to the dividends we have paid. This year the dividend is only 5½ per cent., but taking all the dividends we have paid, I find that they work out on the average to exactly 6 per cent. per annum for the ten years the company

has been established. This, of course, is not a brilliant dividend, but it is a respectable one, and nothing that the management need be ashamed of. (Hear, hear.) Then as to the size, strength and importance of the business. I think we can fairly claim that it is far superior in each of these respects to what it was ten years ago. We have now 50 branches in London and one in Brighton, all of them in very prominent positions in the most important business thoroughfares. Ten years ago we had only 22 branches against the 51 we have now. Then we have also during this time established very many new manufacturing departments and are now makers of nearly every article connected with our business that it is possible for us to make. In addition to paying an average dividend of 6 per cent. per annum, we have also established a reserve fund of £14,000 and have written over £21,000 off our leases, fixtures and goodwill account. These results, as I said before, are not brilliant, but they are fairly satisfactory, and I have no doubt that when business in this great City improves and the spending power of its inhabitants increases, we will participate in this increased prosperity, and will be able to show better results in the next ten years than we have been able to do in the past. Turning to the accounts, the Chairman continued, profit for the year, £11,027 5s. 5d., is the nett profit after the payment of all expenses and writing off £2,000 for depreciation, and is £154 less than the nett profit of 1906; but, as in 1906, we paid out of profits £678, being the loss on the stalls, the actual netf profit of 1907 is £832 less than in 1906. As to the cause of this diminution of nett profit, it was simply bad business during the second half of the year. The first half of the year was fairly good, and we hoped to greatly improve upon 1906, but the second half of the year was very disappointing. The spending power of our customers appeared to diminish considerably. We had as many customers, or more, than in 1906, but they spent less, and that, in my opinion, is the chief cause of the falling off in the nett profits during the past year. Expenses, on the whole, show a diminution of £3,598, as compared with 1906. Practically the whole of this saving is caused by the fact that early last year we closed up 26 kiosks which we had on the District Railway because they were not paying. Against this diminution of expenses, however, there is on the other side a diminution in our gross profit of £4,415. This diminution in gross profits is almost entirely due to the closing of these kiosks, but some portion of it is also due to the bad business I told you of during the second half of last year. We think we have done fairly well in paying a dividend of 5½ per cent. under the conditions that prevailed. For several years past business in the City of London proper has been very depressed. The course of things on the Stock Exchange, I think, is clear evidence of how bad business in the City is. Of the 51 branches we have, 20 of the best of them are situated within the boundaries of the City of London, and it is these 20 branches that have felt the effect of the bad business in the City. I have every hope that when there is a revival of business in the City—and I do not think this revival can be much longer postponed—these 20 important branches will greatly improve in consequence of this revival, and that we will then be able to show much better results than we have done heretofore. (Applause.)

Mr. H. W. Price seconded the adoption of the report, and after some discussion the motion was carried unanimously, a vote of thanks to the Chairman terminating the proceedings.

Mount Vernon (Ceylon) Tea Company.—The yield for the past season was 16,995 lbs. up at 365,401 lbs., but the average price barely came up to that of the previous year at 7.86d., and while sales in London rose by £1,303 to £5,642, those in Ceylon fell off by £833 to £6,333. Nett profits, including miscellaneous receipts and £118 brought in, were consequently only £421 better at £3,289, but the dividend is increased by 1 per cent. to 7, and after transferring £200 to reserve and a similar sum to factory extension account, £89 is carried forward. Debtors at £1,219 are slightly in excess of creditors, while stocks are valued at £1,262 and cash is £945. Block account remains at £40,000, and reserve at £1,200 seems small.

London Street Tramways Company.—Revenue for 1907, £4,129. A dividend of 2s. 6d. per share is paid out of this, leaving £254 to go forward. The loss stands at £108,570 without allowing for the annuity payable under arrangement with the North Metropolitan Tramways Company, an arrangement not carried out. The concern, indeed, has very little left beyond £6,896 in investments and £4,129 in cash.

Hine, Parker and Co., Limited.—A profit of £6,341 resulted from the business of the year ended January 31 last made up to £10,241 by £3,900 brought forward. The ordinary share dividend is made up to 7 per cent. for the year by a final payment at the rate of 9 per cent. and £2,000 is put to reserve, while next year the £1,500 held against book debts will also be carried to reserve. In the balance-sheet the total of the reserve is put at £2,500, presumably without reckoning either of these additions. Debtors owe the company £58,626, cash amounts to £7,093, and bills receivable to £2,314, while the company owes £17,970 to creditors on open account.

SWISS BANKVEREIN,

SCHWEIZERISCHER BANKVEREIN. BANKVEREIN SUISSE.

BASLE, ZURICH, ST. GALL, GENEVA, LONDON.

London Office: 43, LOTHBURY, E.C.

CAPITAL AUTHORISED - - - - - - £3,000,000
CAPITAL ISSUED AND FULLY PAID UP - - - £2,512,000
RESERVE FUNDS - - - - - - - £653,200

EXTRACT from the THIRTY-SIXTH ANNUAL REPORT, to be presented to the Shareholders at the Ordinary General Meeting, to be held at Basle, on Friday, 20th March, 1908.

The gross profit for the year ending 31st December, 1907, amounts to £376,537, exclusive of £10,821 brought forward from last year.

After deduction of all expenses and taxes, and after writing off bad and doubtful debts, there remains a net profit of £240,420, to be dealt with by the meeting of shareholders.

The Board proposes to appropriate this net profit as follows:—

£200,960 for 8 per cent. Dividend to Shareholders (8 per cent. for 1906).
£28,700 for Directors and Managers.
£10,760 to be carried forward to New Account.

The Board further proposes to apply the surplus available from the liquidation of the "Bank in Basel," amounting to .. .. £112,894 as follows:—

For endowment of a fund entitled "Bank in Basel. Foundation, instituted by the Swiss Bankverein" (to be devoted to the encouragement of higher commercial education in Basle)	£4,000	
Contribution to Pension Fund (thereby increased to £40,000)	13,511	
To defray the expenses of organisation of the Agency in Rorschach and the sub-offices in Basle and Zurich, and of structural alterations	13,476	£30,987
And to carry .. .. to the Special Reserve, which is thereby increased to £402,000.		£81,907

The ordinary and special reserves now amount to £653,200 equal to 26 % of the paid-up share capital.—On behalf of the Board,

Basle, March, 1908. A. SIMONIUS, Chairman.

AUDITORS.—Price, Waterhouse, and Co., 3, Frederick's Place, Old Jewry, London, E.C.

SECRETARY (pro tem).—Marcus L. T. Hare.

REGISTERED OFFICE.—Pleasley Works, Mansfield, Notts.

The original business of Wm. Hollins and Co. was that of spinners of merino and cotton yarns, and this manufacture is still successfully carried on, forming a substantial and lucrative part of the business. In the year 1894 the yarn and fabric now widely known as "Viyella" were introduced by the Company. The name "Viyella" was registered as a trade mark in Great Britain and abroad, and, since that date, very large sums have been spent on advertising the goods and protecting the marks, with the result that "Viyella" is now a household word, and both the yarn and the manufactured cloth and made-up garments enjoy everywhere a very extensive sale.

There are several thousand accounts on the books.

The business will be taken over by the New Company as a going concern as from the 1st December, 1907, and will comprise the following items:—

(1) The freehold works, mills, and properties at Mansfield, Nottingham, Huddersfield, and Cromford; the heritable premises at Glasgow; the Freehold Warehouse in Nottingham; the Leasehold Warehouses in London and Berlin, with the entire plant, machinery, and effects therein, which (not including goodwill, stock-in-trade, or stores) have been valued by Messrs. Edward Rushton, Son, and Kenyon, Valuers, of Manchester, at £341,126, but are to be taken over by the New Company at	£315,000	0	0
(2) Stock of Raw and Finished Materials at cost or under..	245,153	1	0
(3) Book Debts	110,994	8	11
(4) Trade Investments (as valued)	20,580	0	0
(5) Cash	4,817	8	1
(6) Goodwill, the price of which has been fixed at ..... Being approximately equal to one year's net profits on the average for the last six years, and which includes the Company's very valuable trade marks and registered name "Viyella," as well as the difference between Messrs. Rushton, Son, and Kenyon's valuation of Item 1 above, and the sum at which the same is being taken over by the New Company, and certain reserves amounting to about £8,000 not included in the above items....	50,000	0	0
	£746,544	18	0
Less—Current liabilities taken over by the New Company	44,544	18	0
	£702,000	0	0

The great bulk of the book debts has been already collected.

Messrs. Price, Waterhouse, and Co. have given the following certificate:—

3, Frederick's Place, Old Jewry, E.C., 21st February, 1908.

To the Directors of William Hollins and Co., Limited.

Gentlemen,—Having acted as Auditors of your Company since its formation, we are enabled to certify the profits earned for the past nine years and two months.

We have adjusted the profits shown in the audited accounts by charging in place of the remuneration paid to the Directors and Managers sums equal to the fixed annual amounts which will be payable to them under the arrangements entered into with the New Company, but we have not charged any sums in respect of th commission which will only be payable to the Managers out of surplus profits remaining after providing for the dividend on the Preference Shares, and 7 per cent. on the Ordinary Shares.

The profits, after charging all expenses, including depreciation, have been, on this basis, as follows:—

For the year ending September, 1899	£59,000	1	0
For the year ending September, 1900	43,029	9	6
For the year ending September, 1901	29,889	12	1
For the year ending September, 1902	54,529	10	3
For the year ending September, 1903	49,090	7	3
For the year ending September, 1904	19,526	4	7
For the 14 months ending November, 1905	43,339	7	0
For the year ending November, 1906	63,855	3	7
For the year ending November, 1907	77,896	3	0

The average annual profits have been as under:—

Based on the last nine years and two months....	£48,115	3	2
Based on the last six years and two months....	49,284	6	10
Based on the last three years and two months..	58,449	13	9

We are, Gentlemen, your obedient Servants,

(Signed) PRICE, WATERHOUSE, and Co

Agreements have been made with the Managers of the Vendor Company, by which their services will be retained for a period of not less than 5 years, if the New Company so desire, at fixed salaries and Commissions, during the term of their present agreements, amounting to one-third of the net profits, after providing for all Preference Dividends and a minimum of 7 per cent. on the Ordinary Shares.

The average annual profits of the business on the basis of the last six years and two months, as appears from the above Certificate of Messrs. Price, Waterhouse, and Co., are	£49,284	6	10
The annual dividend on £360,000 5 per cent. Preference Shares is	18,000	0	0
	31,284	6	10
7 per cent. on £360,000 Ordinary Shares is	25,200	0	0
Leaving	6,084	6	10
Of which the present Managers are to receive during the term of their existing agreements 33 1-3 per cent.	2,261	6	10
Leaving	£4,522	18	0

Equal to a further 1¼ per cent on the Ordinary Shares. It will be observed from the figures given by Messrs. Price, Waterhouse, and Co., that the average annual profits for the last three years and two months would have been sufficient to provide a substantially larger dividend than this.

The purchase price is £702,000, payable as to £240,000 in fully paid Shares, and as to the balance in cash.

The Memorandum and Articles of Association contain special provisions for the protection of the Preference Shareholders as regards the issue of further capital or of Debentures.

The minimum subscription on which the Directors may go to allotment is 300,000 Shares. The qualification of a Director is £3,000 of Ordinary Shares.

Copies of the Memorandum and Articles of Association of the Company, of the several material contracts, and of the Accountants' and Valuers' Certificates, may be inspected by intending applicants at the Offices of the Company's Solicitors.

Application will be made to the Stock Exchange, London, and the Glasgow Stock Exchange for a settlement and quotation for both classes of Shares.

Prospectuses (upon the terms of which alone applications will be entertained) and Application Forms may be obtained from the Bankers, Brokers, or Solicitors of the Company; at the Registered Office of the Company; and at any of its Branches in the United Kingdom. This notice is not to be regarded as an invitation to the public to subscribe for Shares.

NOTICES.

D. H. EVANS & CO., LIMITED.

NOTICE IS HEREBY GIVEN that the Fourteenth Annual General Meeting of the Shareholders of the Company will be held on the Company's premises, Oxford Street, London, W., on Monday, the 30th March, 1908, at 12 noon.

The Transfer Books will be closed from the 16th March to 30th March, both days inclusive.

"THE INVESTORS' REVIEW" Office,
NORFOLK HOUSE, NORFOLK STREET STRAND, W.C.

Hongkong and Shanghai Banking CORPORATION.

EIGHTY-FIFTH REPORT OF THE COURT OF DIRECTORS TO THE Ordinary Half-Yearly General Meeting of Shareholders, Held at THE CITY HALL, HONGKONG, on the 15th FEBRUARY, 1908.

To the Proprietors of the

HONGKONG AND SHANGHAI BANKING CORPORATION.

Gentlemen.—The Directors have now to submit to you a General Statement of the affairs of the Bank, and Balance-sheet for the half-year ending December 31, 1907.

The net profits for that period, including $1,797,167.54, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts, amount to $4,942,974.06.

The Directors recommend the transfer of $500,000 from the Profit and Loss Account to credit of the Silver Reserve Fund, which Fund, with the addition from the premium on the New Shares, will then stand at $13,500,000.

After making this Transfer and deducting Remuneration to Directors there remains for appropriation $4,427,974.06, out of which the Directors recommend the payment of a Dividend of Two Pounds Sterling per Share on the Old Shares, and a proportionate Dividend, or One Pound and Ten Shillings Sterling per Share on the New Shares, viz.: £220,000—which at 1/9¾, the rate of the day, will absorb $2,427,586.21.

The Balance $2,000,387.85 to be carried to New Profit and Loss Account.

Capital.

The Shares of the new issue have all been allotted and paid for in full; the Capital now stands at $15,000,000, and from the premium on the New Shares the Sterling Reserve Fund has been increased by £500,000 and the Silver Reserve Fund by $1,250,000.

Directors.

The Honourable Mr. H. Keswick has been elected Chairman for the year 1908, and Mr. E. Joetz Deputy-Chairman.

Mr. A. Haupt, having resigned his seat on leaving the Colony, Mr. G. Friesland has been invited to fill the vacancy; the appointment requires confirmation at this meeting.

Mr. G. H. Medhurst, Mr. C. R. Lenzmann, and Mr. H. E. Tomkins retire in rotation, but being eligible for re-election, offer themselves accordingly.

Auditors.

The accounts have been audited by Mr. W. Hutton Potts and Mr. A. G. Wood, who offer themselves for re-election.

G. H. MEDHURST, Chairman.

Hongkong, 4th February, 1908.

We have compared the above Statement with the Books, Vouchers and Securities at the Head Office, and with the Returns from the various Branches and Agencies, and have found the same to be correct.

Hongkong, 4th February, 1908.

W. HUTTON POTTS, A. G. WOOD, } Auditors.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XXI.—No. 533. SATURDAY, MARCH 21, 1908. (Registered as a Newspaper.) Price 6d.
New Series.

Replies to Inquiries about Stocks and Shares.

These are given each week in the INVESTORS' REVIEW on the following terms:—

One Reply to **One** Question — **One Shilling.** Any number of questions may be put and will be answered at the rate of **One Shilling** each. The questions should be numbered and a copy kept, as securities cannot be named with comments in the printed replies.

For a fee, however, of **One Guinea** per annum paid in advance, a **Key** to the previous week's replies will be sent early in the following week to Subscribers.

Deposits of "Query Money" may be made in advance, and will be acknowledged in the "Answers" column. Notice of exhaustion will also be given there.

If tempted to speculate by circularising brokers Readers should pause and ask the INVESTORS' REVIEW first; its reply will probably save them from many a loss.

Telegrams advising about new securities cost **Half-a-Crown** each, plus cost of the telegram.

Private Letters in answer to inquiries can be had if desired. The minimum charge for such letters is **Ten Shillings,** but for this three questions will be answered if desired. For every question beyond three replied to in any one letter the charge is **Half-a-Crown per question.**

Correspondents can have their lists of investments overhauled and advised upon by letter on precisely the same terms.

Also models of grouped investments will be supplied according to directions given and on the following terms, each list being distinct and never a mere repetition:—For any number of stocks up to **Five, One Guinea;** for from **Six to Ten** securities **Two Guineas,** and so on at the rate of **One Guinea** for each **Five.**

Deposits may be made for letters just as for replies given in the Paper, but letters are never volunteered.

PUBLISHERS' NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.** postage **4d.** extra. Bound Volumes **15s. 6d.,** or **16s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,

London, W.C.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Society Murder-Monger and the Socialist Pinch-Penny.

Rummagers in the graves of our ancestors who lived in the palæolithic age, the age of flint implements, tattoo or paint and garments of raw hides, have not been able to assure themselves quite that the then inhabitants of these islands were cannibals. But from a variety of indications the inference has been drawn with confidence that they were at that stage and for thousands of years later given to indulgence in human sacrifices. They slew their captives, the spoils of inter-tribal wars, if they did not also eat them; the human victim was offered up to the gods of earth and air, of forest and stream, whom these savages, our progenitors, worshipped. And a recent writer, in dealing with that far-off time and with the later, the almost modern, days preceding and contemporary with Cæsar's invasions of Britain, ventures on the opinion that the English of to-day continue to bear witness to their descent from the men who throughout so many ages slew each other in gratification of the passion for dominance, from motives of fear, spite and envy, or because they hoped to reap the harvest their "enemies" had sown and gather to swell their own flocks cattle their neighbours had bred. The writer, indeed, appears to lament that we of this twentieth century in the Christian era have in some characteristics fallen short of the heroic simplicity and manliness displayed by our forefathers of far away pagan times; but he omits to specify the points wherein we fail. This omission has set us thinking, and although we cannot be sure of putting the finger upon our lapses from ancient virtue, little effort seems required to enable the casual observer to discover some of the persisting characteristics which prove us to be the true descendants of our wild, thieving, hunting and fishing, manslaying and man-immolating ancestors.

At the opposite ends of the social scale types stand forth boldly to proclaim their undying affinity with our long forgotten, tomb-rifled dead. We behold amid what is called "society"—the gatherings of the rich and seeming rich—a compact and highly refined group of sentimentally bloodthirsty males and females, especially females, whose insistent eagerness to advertise themselves the true and only inheritors of the palæoliths is often not without a kind of pathos. They ever dream of war, coldly and methodically advocate wholesale murder, now in one direction now another, and on grounds indistinguishable from those animating the men who threw flint-tipped spears or javelins, shot flint-headed arrows, and cut and slashed or bludgeoned their foes with flint knives and stone-weighted knobkerries. A neighbouring tribe—it is the tribe of the Germans at the moment—is growing rich, these ardent patriots say; may rival us, may outstrip us; arise, therefore, and let us slay and beat down while yet there is time. The only difference we can see between these advocates of wholesale murder of one's neighbours and their forebears in coats of raw hide or paint is one of sentimental affectation. Our society murder-mongers are as callous as the most untutored savage of any age, to the sorrow, loss, pain and devastation the execution of their policy would produce; it is nothing at all to them if civilisation be obliterated, if tens and hundreds of thousands of their fellow human beings should be done to death or

maimed for life, or that miseries unthinkable should be the lot of millions of non-combatants in both countries whom the war they seek would overwhelm; but once war broke out they would overflow with maudlin solicitude for the wounded; the females among them would fussily form societies or committees to make and collect bandages, old clothes, comfort, and perhaps delicacies for these wounded or for the troops in the field, and might even go so far as to subscribe money to provide tobacco for the prisoners of war; but in all other respects they would act precisely as their ancestors, the head or scalp hunters of the age of flint. They would overwhelm their "foes" with calumny and abuse, impute to them every unnatural, possible or impossible, crime their heated fancies could evolve, and gloat over the slaughter like wolves or vultures or paint-daubed ancient Britons. They are thus flaming proof of the persistence of race in these islands of ours. "Let us kill and steal," said the ancient Briton, in his language, to the men of his tribe, "let us attack before we are attacked, and while victory is sure. Is not our tribe the greatest in the land, and shall it behold another tribe rise up to out-flaunt it in flocks and fishpools? Never! never! Come, let us slay, slay and beat down in vindication of our gods-given right to dominate." There was cowardice, fear, underlying this resolve in the mind of the savage, and there is "blue funk," craven unmanliness at the base of the identical lusts possessing the minds of our noble and most patriotic contemporaries; fear and also a vanity and conceit the greatest savage of any age never excelled.

But the same note of race, the note of cowardly and most truculently insolent supremacy, of savage indifference to every human consideration except the filling of one's own belly, the gratification of one's own lust to bully, to dominate, is sounded at what may be described as the other end of the social scale, the grounded, or gutterward, end; and last week we beheld the self-elected leaders of the party that calls itself "Socialist" because it is the level down or society-obliterating party, stand up in the House of Commons and demand that those members of the tribe who have work to do should provide work, or the pretence of work, or the pay for work whether done or not, for those who have none; no matter whether the product be worth anything or not. "It is the sacred duty of the State to provide work for all," these advocates of "equality" shout, and in doing so advertise their kinship to the ancient Briton, Pict, or Celt, who lived by stealing his next burrow neighbour's swine if he could not carry off the whole stock of the contiguous and therefore hostile tribe. In strident tones, with truculent mien, these survivals summon the quiet citizen to stand and deliver, or, rather, intimate to him that failure to surrender without discretion will lead to the passing of laws in virtue of which the man without work, no matter why, will be at liberty to snatch the loaf out of the hands of the other man who still contrives squarely to earn his bread. This is not a mere reassertion of the doctrine of ransom, of the demand that a man shall be made to pay to the last shred of his possessions for the guilt implied in his having wealth above his fellows; it goes beyond even that, and declares that a workless man shall be fed and clothed at the expense of the community, even though the consequence of his being thus dealt by might be the degradation of tens of thousands of his fellow-citizens to a like position with his own. Nor is that the worst of it; the remote goal aimed at is universal robbery, the death and burial of individualism and the reduction of a nation or community to a condition of unrelieved slavery, where the product of the labour of all should be at the disposal of the few demagogues who had shouted themselves into a pre-eminence, the pre-eminence of manufacturers of superheated rhetorical gas. Of genuine remedy for the acknowledged defects of the social structure of modern industrial society there is not a trace in these Socialist proposals. To find remedies worth trying would involve self-sacrifice, much unrequited endeavour, a wholehearted self-abandonment, and the leaders of Socialistic confraternities are not men of that type. Theirs too often is the easy way to place and power and money. Is not one of the shining leaders of our Socialists a retired, or obscured, company promoter, and have not many among them eaten in self-complacency their lives long the bread provided by the taxpayer? To attain the Socialist ideal through robbing one's neighbour is not a high ambition, but it is good savage strategy of the prehistoric age order, and therefore it is plain and practical for the prophet of the new advent, come of his dupes what may.

All these murder-mongers and wealth-annexers are of one breed, the Druid or ancient Briton breed, and select by instinct what appears to them the easiest way to comfort and perhaps wealth. Do they really care for the unemployed, or for the unemployable, those waste products of Imperial power and modern civilisation or of raw human passions, over whose condition they so stridently bemoan? We doubt it, for they certainly have never studied the underlying facts or thought out the consequences an adoption of their nostrums and formulæ would produce; above all, they proclaim the rudimentary man's indifference to the fate of those at whose expense their downtrodden and outcast stage "supers" are to be exalted. It is because these Socialist advocates are as obviously callous to the effects of success in their raids upon the public Treasury as our murder-mongers are to the products of the wars they tirelessly and brutally foment in their decadent futility that we are angry with Governments for their subservience. There was truth in the taunt, or whatever it was, of Ramsay Macdonald that the latest Bill he and his friends championed in the Commons last Friday owed its existence to what had been done in the way of sop-throwing to the Socialists by the last Government. All Governments, in knuckling down to this faction and the other, are guilty of pandering to the worst, the most primitive and the most insidious spirit of revolution, as John Burns seems to have found out. But the discovery will not, we fear, hinder him from supporting Mr. Asquith's "old-age" pensions sop, nor yet impel him to advocate the resumption of waste lands by the State with the object of providing a natural and healthy outlet for such energy as there may be among the workless. We do not blame him at all, for in all human societies that have ever existed complexities develop, involving hardship to many, and in course of time, it may be, the dissolution of the fairest seeming and strongest of empires. It must be so, and the most that statesman or reformer can do in the best of empires is to try and prevent the introduction of fresh elements of social disintegration, whereby a bad situation might be made still worse, or to mitigate the evil effects of those anomalies and injustices already existing and so intertwined with the framework of society as to be ineradicable. And, when all is said, the Socialist sham leveller and real begetter of working-class demoralisation is, like the war-monger and the priest who blesses him, among the most pernicious and primitively selfish of mankind.

The Midland Railway.

This is the youngest of our great English railway companies—little more than 40 years old as a trunk line—and has worked its way to a foremost position in spite of obstacles that many times looked insurmountable, thanks mainly to the genius and vigour of the late Sir James Alport. It now stands third in earning capacity, ranking close behind the Great Western with an income for the past year of £13,062,000. This is earned upon a length of road of about 1,995 miles, including the 45¼ miles of the Belfast and Northern Counties line bought up some years ago, but of this extensive system 263¾ miles are under the control of the Northern Counties committee and 278¾ miles represent the Cheshire and other partly-owned lines, so

that the company's own system covers a length of little more than 1,407 miles. The Midland, however, works over nearly 467 miles of foreign lines, a larger proportion than any other big company deals with, so that although its wholly-owned system is smaller by nearly 500 miles than that of the North-Western Company and by nearly 1,000 miles than that of the Great Western, it nevertheless shares in the traffic of systems aggregating a greater mileage than the North-Western and little more than 100 miles short of that of the Great Western system. That it should come third in earning power of the three greatest railways is therefore less surprising than might at first sight appear, and it has unquestionably been obliged to fight with unremitting assiduity for much of its traffic. Last year's gross income was £567,000 larger than that earned in 1906, but very little of this remained to add to the nett revenue, for working expenses, which took £8,009,000, swept away £506,000 of the increase in gross receipts, maintenance having cost £22,000 more, locomotive power £299,000 more, repairs £12,000 more and traffic expenses £115,000 more, while general charges increased by £7,000 and compensation by £3,000, the total amount disbursed for compensation alone having been £75,812.

An analysis of the income shows that the year's total receipts from passengers, parcels and mails came to about £4,023,000, this being an increase of £77,674 on the receipts for the previous year. First-class passenger traffic, however, gave only £226,267 of this total, which was £8,136 down on the comparison of years. The company has no second-class traffic, it having wisely abolished that wasteful subdivision many years ago, but the third-class receipts amounted to £2,626,000 or £69,437 more, and there was an increase of £9,630 in the season ticket receipts, which amounted to over £304,187. The company's experience is thus on all fours with that of its neighbours, showing as it does a diminishing first-class traffic and an expanding third-class. That being so, it hardly seems necessary that it should last year have added seven new composite coaches to its rolling stock out of capital, but there is perhaps justification enough for the increase of five coaches in its stock of third-class coaches. Merchandise and cattle traffic taken together yielded £4,889,732, or £168,631 more, and the increase in the company's mineral traffic was almost £312,000 at £3,553,344. In mineral traffic the company stands third amongst the three great lines, its income therefrom being exceeded only by the earnings of the North-Western and North-Eastern Companies. But, as we have stated, last year's working expenditure left little for the shareholders at the end out of the larger earnings, and an analysis of the working expenditure shows that £601,000 was spent on carriage and wagon repairs, £1,057,000 on maintenance and £2,629,000 on locomotive power, while traffic expenses took no less than £2,781,000. Heavy, however, though this last-mentioned item is, it does not represent such a high outlay per train mile as that of either the North-Western or North-Eastern Companies. But nothing of much significance can be inferred from the difference shown, and it is unnecessary to encumber this article with details. There should be less waste running of empty coaches perhaps, and many of the goods and mineral vehicles may be newer than those of the older companies, that is about all.

Coming now to the disposal of the nett revenue, we find that debenture stock interest and rents absorbed £1,109,285, including £85,092, the amount paid as rent of leased properties. This represented an increase of £9,642 on the year in rents alone and of £2,643 in debenture stock charges. General interest charges also mounted by £5,375 to £6,021, a reflection probably of the stringency of money towards the end of the year. Preference stock charges absorbed another £1,841,266, or £5,556 more, and the amount distributed on the stock was £2,078,000, or £40,586 more, the total nett revenue having been £3,052,823, or £100,246 more than that of 1906, including income from partly-owned lines and other receipts of a miscellaneous description such as £15,000 odd more from rents and transfer fees. From this analysis it is to be inferred that the charges ranking in front of the ordinary stock took away upwards of £40,000 of the enlarged nett revenue, so that the increased dividend of ¼ per cent. paid on the deferred stock—5¼ per cent. for the year against 5¼ per cent.—being taken into account only £55,139 more went in that direction at £3,919,207, but the balance forward went up by £24,270 to £105,894. Less than £26,000 was added to the ordinary capital on the year, leaving the confusing duplication out of sight. Taking into account both the growth of capital charges of all kinds and the tendency of working expenses to encroach upon the gross earnings, it will be seen that the Midland Railway is in no better position than its neighbours, although its outlay on capital account has been much reduced within the last year or two.

Coming to this capital account we find that the total nominal amount sunk in the Midland Railway system is almost £120,000,000, of which £12,502,000 represents subscriptions to other lines, but its interest in partly-owned or controlled properties extends beyond even this amount. From this aggregate, however, we have omitted nominal additions amounting to no less than £73,788,000 caused by the conversions and duplications of the various stocks, a bad practice indulged in by this company more than by any other. Had this been added in and the £4,136,000 of discounts also the total of the nominal capital would have been raised to £192,000,000. To the nett capital aggregate as it stands, however, only £690,000 was added last year, and none of that went into new works, although no less than £487,000 was distributed over lines open for traffic. The company has laid out a larger amount upon its rolling stock than any other great English railway, the total set against this asset up to December 31 last being £17,257,000 as compared with £14,224,000 laid out to the same date by the Great Western, £13,605,000 spent by the North-Eastern and only £12,059,000 by the North-Western. Many years ago the company raised £1,000,000 of capital to buy up privately-owned coal wagons running over its line, and being a new undertaking, comparatively speaking, regarded by its neighbours with jealous eyes as an interloper, it doubtless had to spend money freely in order to be in a position to capture traffic of all descriptions. Nevertheless, the amount sunk in its rolling stock is from any point of view excessive, and it still goes on spending, although only to a small extent for the capital spent thereon last year amounted to no more than £55,000. Upon docks and steamers the total expenditure has been £444,000, but that also should now be about the limit, as the new Irish routes from Heysham to Belfast and Londonderry must by this time be fully equipped. Towards its entire capital expenditure the company has received only £4,722,000 in the shape of premiums on its various issues.

The present condition of the capital account is comparatively easy, not so good as that of the Great Western, but better than that of either the North-Western or North-Eastern. At December 31 last the capital overdraft amounted to £1,208,000 against which the company held £1,734,000 in the shape of trust funds. Of this latter total £1,176,000 represented superannuation funds about which there were some unpleasant revelations not long ago, and we should like to know what the board has done in the way of making good or providing for the liquidation of the heavy deficiency then shown. Insurance funds amount to £558,000, and there is a steamers depreciation and renewal fund of £95,000. As usual the items in the balance-sheet represented by traffic accounts due to and by the company are mystifying, to say the least of it, and we can only repeat the wish that the £1,157,000 set down as accounts due to the company should be segregated as well as the £2,032,000 set

down as sundry outstanding accounts due by the company. This is a relatively heavier total floating indebtedness than any of the Midland Company's rivals display, and there must be a great many things buried in it which ought to be brought to light. Does it, for example, embrace the deficiency in the accounts of the superannuation fund? Really Mr. Lloyd George will have to look into points of this description in the interest of the working staff of our railways. The total amount paid by the company in rates and taxes was £453,623, a heavy sum, but yet £17,050 less than the charge under this head in the previous year. Its business, we may add, was worked at a cost of 61.33 per cent. of the gross receipts, the lowest proportion shown by any of our principal railway companies last year.

The Robinson Group of Mines.

The annual meetings of the companies comprising this well-known group were held in Johannesburg on February 7, and in accordance with the custom of all South African gold mining companies the reports and accounts were transmitted to shareholders after they had been submitted and adopted. There was nothing exceptional about the formal proceedings, except that one dissentient vote was recorded. It is quite unusual to hear any protest at the meetings of these or similar undertakings held in South Africa, for the simple reason that the independent proprietor is absolutely powerless to make his voice heard. He gets no opportunity of studying the report and financial position of his company until weeks after they have become mere history so far as the mine magnates are concerned. It is not easy to forget the feeble agitation against the policy of the Randfontein Estates, the parent of the group now being considered. We had no sympathy with this particular movement because it aimed at achievements impossible of realisation, but it was crushed in the most unceremonious fashion, and a similar fate must have befallen the attempt at interference had it been ten times justified. The moral is obvious, and applies to one and all. The Robinson Group has been much to the front during the past twelve months, and has provided the shareholders with more excitement than they could comfortably do with. Mr. Robinson got the credit of "busting up" the last Kaffir boomlet by launching his participating notes just when prices had been got nicely on the move, and it is eloquent of the present state of the Kaffir Circus that Randfontein Estates shares are practically at the lowest figure ever touched. This at a time when Mr. Robinson's dreams are within measurable distance of fulfilment, provided always that shareholders realise that Randfontein gold cannot reach their pockets unless they agree to part with what is at present there. The participating notes are considered by their originator to be one of the most brilliant financial schemes that ever came into or out of the head of a South African financier, and were to be confined strictly to Randfontein shareholders. To invite outsiders to come in would not have been thought of for a moment, and that is probably why those responsible had not the courtesy to send a copy of the proposals to the Press. And one of the reasons adduced for the want of success is that the scheme might not have come under the notice of the holders of bearer warrants. The next operation will doubtless be better managed. Moreover, it would have been good policy to tell the shareholders what the chairman announced at the recent meeting—namely, that if the notes were taken up a second million of money would have been provided by others on far more favourable terms. The idea of withholding a fact like that when it was known that all told the company's wants did not exceed £2,340,000!

Happily temporary arrangements have been made, and very shortly the proprietors, duly chastened, will be given an opportunity to take debentures or something similar, and if they then come up to the scratch their reward will be great indeed. Give Randfontein the necessary cash and in two years time the gold production of the group will be 100,000 ozs. a month, giving a profit of £1,500,000 (£1,200,000 of it going to the Estates Company), and the distribution would be something like this: Interest on the notes £60,000, on the other million to be subscribed £60,000, 9 per cent. on Randfontein shares £270,000, in all £390,000, leaving £810,000. Twenty-five per cent. of that or £202,500 goes to participating note holders and £607,500 to Randfontein shareholders. Bear in mind, too, that these notes were not to be permanent. In due time when money became easy—vaunting Mr. Robinson predicts a fall to 1 per cent.—debentures would have been issued having a run of 20 years and the proceeds used to redeem the certificates. In fact, the whole thing is most fascinating—to Mr. Robinson—and for the life of him he cannot understand how the shareholders let such a magnificent opportunity go by. Enormous emphasis is laid on the power of the directors to close down the mine in accordance with the resolutions passed on June 12 last, but the directors did not want to take this retrograde step, because of the disastrous results to the shareholder—those shareholders who do so little for themselves by declining to part with more of the ready. It seems that about one-half of the million of participating certificates were subscribed, and possibly the proprietors had some vague recollection of a promise by Mr. Robinson to lend the company a million. That must be the other million. So much for what was negative or unachieved. What kind of progress have the company and its subsidiaries been making unaided by shareholders' money? Without question substantial headway has been made. The four producing mines crushed uninterruptedly throughout the year and with 400 stamps milled an aggregate amount of 742,465 tons yielding 288,024 ozs. of fine gold, the total value together with sundry revenue being £1,215,915, equal to 32s. 9.04d. per ton. Total cost was £868,292 or 23s. 4.67d. per ton, and the working profit was £347,622 or 9s. 4.37d. per ton. Individually the results were as follows, and the dividends paid of 10 per cent. were the same as in the preceding year:—

—	Ore Crushed	Yield.	Income	Expenditure.
	Tons.	Ozs.	£	£
Porges Randfontein	175,465	74,391	315,185	204,681
North Randfontein	206,271	75,882	321,329	220,265
South Randfontein	181,895	69,168	291,021	221,990
Robinson Randfontein	178,834	68,584	288,380	221,356

—	Profit.	Dividend.	Payable Ore Reserves.	Average.
	£	%	Tons.	Dwts.
Porges Randfontein	111,504	10	422,556	10.1
North Randfontein	101,064	10	468,077	10.0
South Randfontein	69,030	10	545,561	8.5
Robinson Randfontein	67,023	10	369,440	8.4

Revenue per ton shows a slight falling off, but this was more than compensated by reduced working costs and a larger quantity of ore dealt with, the entire working profit showing an actual nett increase of £8,386. The decline in costs was 1s. 2.68d. Development work was steadily pursued, and at December 31 these four mines had aggregate ore reserves of 1,805,634 tons, averaging 9.3 dwts., or 39s. per ton over a width of 30 ins. Porges Randfontein had 422,556 tons, South 545,561 tons, North 468,077 tons, and Robinson 369,440 tons. In every case the reserves have been substantially increased, but the value per ton is a good deal lower.

So much for the producing subsidiaries, and here we may refer to the Langlaagte Estate, which, although not classed as one of them, is the largest producer among the Robinson companies. Operations were carried on with 200 stamps and 383,034 tons were crushed yielding 132,282 ozs. fine. Revenue under all heads was £562,811 or 29s. 4.64d. per ton, and the cost of production £336,858, equal to 17s. 7.07d. per ton, so that the working profit was 11s. 9.57d., or

£225,953. Compared with the preceding year these figures show substantial improvement, and the dividend for the year is again 20 per cent., leaving the large sum of £922,766 at the credit of profit and loss, largely represented by interests in Block "B" and Langlaagte Exploration. Ore reserves are estimated at 569,101 tons, of which 394,671 are main reef and 174,430 south reef. From January 1 last the company has a working agreement with the Block "B," having agreed to lease that property for 25 years. The Estate Company undertook to thoroughly develop the mine and to treat the ore at its works, giving Block "B" one-third of the profits from joint milling after providing for the redemption by instalments of the initial outlay incurred. The development was successfully completed at the end of last year, and the reserves stand at 514,988 tons, making well over a million for the two mines. A considerable enlargement of the crushing and cyaniding plants has been necessary to cope with the increased tonnage to be treated from the beginning of the present year.

The position and outlook of the developing mines are equally interesting. Randfontein Central may be considered the most important, the company being an amalgamation carried out in March, 1907, of three mines namely, the Block "A" Randfontein, Mynpacht Randfontein, and West Randfontein. Nominal capital is £1,105,000, of which about one-fourth is in reserve, and the usual advantages are looked for from the fusion. So far 455,634 tons of ore reserves have been opened up, and the battery of 300 stamps with cyanide works in proportion which are to be erected will treat no less than 63,000 tons per month. It is anticipated that the whole of the work as well as the development of the mine should be completed and crushing commence about the middle of next year "if the necessary funds are forthcoming." In the case of the East Randfontein, Van Hulsteyn Randfontein, Johnstone Randfontein, and Ferguson Randfontein a certain amount of work has been done, but there is no question yet of the exposure of ore reserves. In due time these three companies are to be converted into one undertaking, and the scheme of development and shaft sinking has been planned with this in view. The last company to be mentioned is Stubbs Randfontein, and the work of the year has included the sinking of two development shafts, which has exposed 74,700 tons of ore, 52,690 tons being on the Randfontein leader and 22,010 on the west reef. All the producing mines are, or will be, equipped with tube mills calculated to improve the duty by 50 per cent. and the cyanide works will be increased to the necessary extent. To meet the requirements of enlarged plants the shaft sinking and development of the mines are being pressed forward, the policy of the directors being to have sufficient payable ore in sight for at least two years' milling operations on the larger scale. During the excavations for the Randfontein Central battery an entirely new reef was discovered, and values are so encouraging that further exploitation is being carried out with a view to ascertain if the values are permanent. Not the least difficulty appears to have been experienced in the matter of native labour, and, as already stated, the intervention of the Government has led to the Randfontein company rejoining the Witwatersrand Native Labour Association from which it seceded some time ago.

Now let us glance at the position of the parent concern, the Randfontein Estates Gold Mining Company. Dividends for the year amounted to £81,437 and general revenue, consisting of interest, commission and exchange, produced £62,144, a total of £143,581. General and special expenses took £24,645, leaving a balance of £118,936 to be added to profit and loss, which now amounts to £2,465,121. At the end of the previous year the credit balance was £3,573,614, but there was a nominal reduction of £924,266 in the capital of the companies comprising the present Randfontein Central when the amalgamation took place, and in the early part of last year a number of shares were combined for the purpose of making a scrip distribution to the shareholders. There were 300,000 shares so used, and they became known as the Randfontein Estates Trust shares. Expenses of distribution and sundries took £3,103. Hence the difference in the profit balance. Shares now held amount to £4,442,958 compared with £5,274,059 a year ago, debentures remain at £975,000 and the subsidiary companies, &c., owe £428,630, but cash has been reduced from £658,139 to £293,311, and floating liabilities are up by £25,907 to £488,088. Just now Randfontein Estates shares stand at par, and the presence in the balance of share premiums to the amount of £2,255,957 must revive painful memories. But there is no question of the greatness of the enterprise, and Mr. Robinson told the shareholders at the recent meeting that when the eight subsidiaries are fully producing and the batteries are thundering out 100,000 ozs. of gold every month the shares will stand not at 25s. but at £4 or £5. Of course, a lot of money must be put up first, and it is said that the new financial scheme will be issued next week. In vulgar speech there is an awful lot of water under the pump, but before it can be fetched to the surface the pump must be well primed. But if prospects are so splendid, why pester and bully the weary shareholders for more and ever more of the needful? Mr. Robinson is so rich that he should be easily able to find all the cash himself, and load up with the paper sure of a profit that might make him a greater than John D. Rockefeller when the time came to unload.

Economic and Financial Notes.

The Indian Budget.

Coming out on a Friday in the form of a Calcutta skeleton telegram, which gives only the most meagre details, it would be waste of time and space to discuss this important compilation in our present issue. We can only summarise a bald summary, pausing, however, to express pleasure in finding the Viceroy's Finance Minister making slow steps towards the production of a budget statement unencumbered by jargon about "regular estimates" and "revised estimates." Next year perhaps Mr. Baker, or whoever it may be, will wait until April comes and give us a plain statement about the completed year and equally plain estimates for the year just beginning. As the account stands it would seem that the "revised" estimate of revenue for 1907-8 is about £972,000, the rupee converted 1s. 4d. to the £, less than the estimate of last March, and that in spite of £456,000 of additional charge brought upon the revenue by the famine there will be a saving of £432,400 in expenditure, thanks chiefly to reduced outlay on the army. So the Zakka Khels foray must have been cheap war. Even so the surplus for the year is expected to be reduced to £235,000 compared with £775,000 as originally estimated. For the coming year the revenue is estimated at £73,439,000 and the expenditure at £72,867,400, leaving an estimated surplus of £571,500. This is on the assumption that the season will be normal, which seems almost bravado in view of the state of hunger prevailing to-day over large areas of the Peninsula. That hunger, however, does not deter the budget-maker from boldly estimating for an increase of £1,435,200 from land revenue alone next year and for £800,000 more nett from the railways, opium alone being expected to give £380,000 less amongst the items mentioned in the telegram. This may be simply because it is to give £372,000 more in the expiring year. The surplus, of course, is mere small change compared to what the Government wants in the way of capital to go on with. For it means to expend under that head £12,158,000 in the coming year, of which total £11,000,000 will be borrowed. That is to say, the hoped-for revenue surplus just mentioned will be swallowed up in public works and £453,500 of savings

bank receipts will be appropriated to the same purpose together with £524,000 of "deposits, remittances, &c.," and £667,000 labelled "profits on coinage." By public loan, therefore, only £6,900,000 is to be raised, £4,900,000 of it by the railway companies, convenient intermediaries, and the balance by a rupee loan of £2,000,000 (three crores of rupees at the conventional exchange). The unfilled gap then left will be made up by a reduction of £1,246,000 in the balance of the Indian Government lying here, which includes the remainder of the London loan issued last January, and by a reduction of £1,796,000 in the cash balances of the Simla Government in that country. Of the total expenditure, £10,000,000 will go into railways and no less than £7,659,200 of that into lines open for traffic, leaving £2,207,500 to be laid out on lines under construction, and only £133,300 on new lines. How much of the sum amounting to almost £8,000,000 to be laid out on lines open for traffic represents neglected dilapidations in the past?

The Finances of the Canadian Dominion.

A pleasant and almost exhilarating display was made by Mr. Fielding, the Canadian Minister of Finance, in his annual budget statement unfolded at Ottawa on Tuesday last. The Minister spoke with confidence of the future, and was inclined to boast of the manner in which Canada had "surmounted" the recent world-wide financial stringency. No country had stood it better, he declared, and he expressed a time-limited truth, for the Canadian crisis has been postponed with commendable skill, thanks chiefly to the large amounts of new capital poured into the Dominion by the Mother Country last year and the two or three years before. In the current year, too, the expenditure on the Trans-Continental Railway line, which, Mr. Fielding intimated, is to be the only great project zealously prosecuted, is estimated at £6,000,000, and that is presumably irrespective of the large sums recently provided in this country for the Canadian Pacific and Grand Trunk Railway Companies. For all that the recent crisis was met in Canada with a skill and resource deserving no small praise. "The Government," said Mr. Fielding, "had offered the Western banks a temporary loan of £2,000,000 in order that the crops might be moved, but only £1,061,000 was taken." Was this modesty due to the paucity of the harvest or to the abundant resources possessed by the banks themselves? Whatever the answer to this question may be the Government intends this year to authorise the banks to increase their circulation by 15 per cent. on the basis of their combined reserves and paid-up capital should the next harvest involve large drafts upon their resources. The aggregate capital and reserves of the banks are put at £32,825,000 and 15 per cent. of this would mean £4,924,000 of extra paper money that the banks would be able to pay out subject to a tax at the rate of 5 per cent. levied on such excess circulation by the Government. The expedient is a lawful one, and that it should be proposed now illustrates the adroitness with which Canadian banking affairs are guided by the bank managers and the Government.

Coming back to the financial position of the Dominion, Mr. Fielding stated that he expects a surplus of £3,800,000 at the end of March, when under the recently established order the Dominion's fiscal year will end. At the same time, however, the debt has been increased by £2,400,000, but against this the Government claims that £3,555,000 has been expended, apparently out of revenue although chargeable to capital, so allowing for this the nett debt per head has been reduced by 7s. 3d. to £8 16s. That is not a heavy handicap if comparison be made with other debt-sobered countries, and if the Government was able, as Mr. Fielding alleged, to cover all ordinary expenditure and to pay away £600,000 over and above in reduction of the public debt for the period covered by the expiring budget, it is in a better position than that of any other self-governing portion of the British Empire. For the current year the revenue is estimated at £19,300,000 against an ordinary expenditure chargeable to the consolidated fund of £15,500,000, so that the surplus would be £3,800,000, against which capital charges will take away £6,600,000 including £3,550,000 disbursed on account of the Trans-Continental Railway. In consequence of these outlays the nett addition to the debt is put at £2,400,000, and the total expenditure of the Government on the Trans-Continental Railway up to the end of this year is given at £5,200,000. Regarding the coming financial year, the Finance Minister said, "the general feeling among business men was one of hopeful confidence united with caution." And we cannot be sure that this view is well-founded, for he proceeded to declare that "we are just emerging from a period of world-wide stringency. The financial systems and institutions of all countries have been severely tried, and it should be a source of gratification to us that none have stood the test better than those of Canada," repeating the boast already mentioned. But are we emerging from a period of world-wide stringency? So far as gambling goes the answer may be "yes," for money is getting cheaper on all bourses, but the industrial crisis has yet to come, and outside the gambling interests monetary stringency is not at an end or likely to be, and notwithstanding the high hopes expressed by Mr. Fielding he prudently looks for a falling off in the revenue in the early part of the coming fiscal year, but thinks that the early contraction will be made good to some extent before it closes. He none the less prudently estimates that the coming year's income may fall below £18,000,000, although he considers this amount ample for all ordinary expenditure with something over. Borrowing, therefore, if indulged in, would only be for improvement works chargeable to capital account, which is well. But yet the Government of the Dominion raised over £6,200,000 in Europe last year, £400,000 of it in Paris.

The Affairs of Cassell and Co.

In the ordinary newspaper reports we have found no news about what transpired at the meeting of this company's shareholders held on Tuesday last, but a copy of a very interesting and able speech made by Mr. Hamer at it has been sent to us, and deserves notice for more reasons than one. Mr. Hamer resigned his important position in the company at the end of September last, thus severing his connection with a firm which he had served ably, honourably, and with whole-hearted devotion for the best part of a lifetime. No bitterness, however, of the disappointed man is traceable in the speech which was framed solely in the interests of the shareholders, and, above all, in the interests of that class of shareholder which, with cruelty as it turns out, were almost forced into the company when it was formed, viz., its staff. These men had to buy shares in order to retain the goodwill of the management, and now find themselves not only deprived of income from these shares, but obliged to face the almost total loss of their savings without hope of remedy. Most, if not all, the members of the staff who became shareholders bought at high premiums, and now the £10 shares they paid £15 to £19 for are difficult to sell at £3. This is a lamentable fact, and Mr. Hamer was amply warranted in moving an amendment to the motion from the chair, asking for the appointment of a committee to examine into the company's affairs with a view to remedy. This amendment he supported in a cogent speech which seems to us to have gone astray only on one point. The speaker animadverted upon the difference between the balance-sheet valuation of copyrights which, at £174,680, showed an increase of £34,680 on the total of the previous year, and the assertion of the directors that by appropriating the profits of a portion of the reserve they had written down this figure to £140,000. The apparent discrepancy probably arises from the fact that the balance-sheet as published did not include the adjustments made, but anyhow £140,000 is a very high figure as we pointed out in dealing with the report, and Mr. Hamer was quite right in emphasising this point.

He also brought out the fact that the stock of printing materials, &c., has increased since 1904 by nearly £8,000, and the stock of type, &c., by nearly £6,000, or an increase on the two together of £13,662, and he wanted information about the position of the New York branch and the allocation of money to meet apparent losses there, the burden of his indictment being that the company has steadily gone from bad to worse under its present management, and that there seemed to be no fixed, consistent policy followed. "Money," he said "is spent recklessly one year and as recklessly withheld the next. Each year we are told that the fortunes of the business are to be restored by some new venture, which by a curious coincidence is issued shortly before the annual meeting. Last year it was the "Story-Teller" and the Threepenny Novels, on the latter of which I believe a considerable loss was made—this year it is the "Women of all Nations," the second part of which is only just out." One of the most interesting and instructive statements in the speech related to the share-holdings of the directors. Mr. Hamer recalled the fact that at last year's meeting the general manager made a great point of the directors having "substantial interests" in the company's business, and asserted that one director alone held 1,200 shares, which he bought at £17. "As a matter of fact," the speaker went on, "that director owns only 320 shares, the remainder, some 880, or over two-thirds of the total, being held in trust, having been bought by a Provident Fund for the employees of the firm. Of the other directors, two held only 50 shares each, the minimum number necessary to qualify them to draw their fees." The company's chairman has never owned more than 50 shares, he added, and it is gentlemen with stakes of this magnitude who year by year come forward to prophesy of good times to come. "The outlook for the future is full of promise," they still repeat, in spite of the fact that, as Mr. Hamer points out, the company has no available working capital, that it owes £10,000 to its bankers, and has raised £20,000 on bills of exchange. The whole display, indeed, is lamentable, and we have the deepest sympathy with the shareholders as a body, and above all with those members and ex-members of the staff who were hustled into the position of shareholders, and many of whom scraped and pinched in order to find the money to buy, who are now face to face with what looks like irreparable loss. An investigation must be made before it is too late, and if the directors are wise they will submit to it with good grace ere worse happens.

Some Banking Statistics.

Availing ourselves of the excellent and accurate tables compiled by Mr. H. W. Birks, and published by Mr. Effingham Wilson, we offer a few observations on the exhibit made by our leading joint-stock banks in the second half of 1907. On the whole, it is a remarkably good exhibit, considering what the banks were compelled to endure through the crisis in the United States. In the matter of cash in hand or in the Bank of England, for instance, it would not have been surprising if a considerable reduction in the proportion to liabilities had taken place, and it did take place in some instances, but even the highest decline compared with the second half of 1904, which was a year wholly outside the disturbing influences of the past two years, viz., 4.21 per cent. in the cash of the Union of London and Smiths Bank, did not bring the proportion to the deposit and acceptance liabilities on December 31 last below 15.36 per cent., the average for the whole 22 banks whose accounts are analysed by Mr. Birks being 11.86 per cent. Amongst the great banks, the London City and Midland actually showed a slight increase compared with 1904 at 19.81 per cent. Lloyds was also up slightly at 17.21 per cent., and Barclay's cash showed an increase of 1.16 per cent. at 15.03 per cent. The London Joint Stock, on the other hand, showed a decline of 2.63 per cent. at 13.30 per cent., but the National Provincial displays an increase of no less than 1.93 per cent. at 16.66 per cent. compared with the figures of three years before. None of the great London banks, except the London Joint Stock, had a proportion at December 31 last lower than 14 per cent., and most of them were well above 14 per cent.

And what is the position of their resources and liabilities? That question may be answered first with reference to the 10 banks publishing half-yearly balance-sheets. In this 10 the Irish National Bank is included, and their aggregate paid-up capital last December 31 was £268,000 up compared with the second half of 1904 at £18,806,000, but the increase in the reserves was £1,188,000 at a total of £13,586,000. Probably these increases in capital and reserves both have come to some extent from new share issues and the premiums thereon, and also from amalgamations. It is on this double foundation of £34,000,000 that the whole fabric of the credit of these banks has been built up, and they owed on deposit and current account at the end of the year £255,283,000, besides having incurred a contingent liability of £24,545,000 on acceptances. Compared with the date already given, deposit liabilities have increased by nearly £18,000,000 and acceptance liabilities by nearly £12,000,000, and out of these increases the augmented liability on deposit and current accounts has sprung. The investments of the banks, it is interesting to note, have also gone up, in spite of the fact that during the three years the banks have had to write down the value of their investments with rigour. The increase is only £1,125,000, and it may come from amalgamations, not from fresh purchase of stock. Even so, the fact is reassuring as showing the care with which the banks appear to husband their resources. There is, however, a decrease of nearly £500,000 in the total compared with the second half of 1906, and the decrease on that comparison in bills discounted, loans, and other securities is nearly £8,000,000. It is interesting to note that in spite of a decline of nearly £6,000,000 in the total working resources of the London and Westminster Bank last half-year as compared with the June half-year, the total working resources of all the banks was no less than £7,117,000 up. A year back, however, the increase was over £12,000,000.

Almost of more interest than the figures of the banks publishing half-yearly balance-sheets are those summarised at the end of Mr. Birks's series of tables and relating to private and joint-stock banks that publish their accounts only once a year. There are 12 of these banks embraced in the return, including seven private banks, whose figures are, although meritorious as far as they go, so incomplete as to be little value for comparative statistics. Some of the remaining five banks, however, are amongst the most important in the country, notably, the National Provincial and Lloyds, Lloyds being now the largest of all our joint-stock banks, with total resources aggregating nearly £76,000,000 as compared with the £61,000,000 of the old National Provincial. Looking back four years, we find the deposits of Lloyds up by over £10,000,000, the product chiefly of diligence in absorptions and amalgamations; but the National Provincial's liability on deposit and current accounts has risen over £4,500,000 in the same time from what may be described as natural growth. At the end of December last Lloyds Bank had a contingent liability of £4,235,000 on acceptances and foreign bills endorsed as against £2,723,000 three years before, whereas the National Provincial was under a risk of only £639,000 altogether on this account at the later date. Taking the whole figures as far as they go of the 22 banks embraced in the several tables, they show a liability on deposit and current accounts amounting to nearly £504,000,000, an increase in the paid-up capital and reserves of £3,135,000, and an increase of no less than £74,465,000 in the total working resources, which amount to the formidable aggregate of £505,158,000. Bills discounted and loans and other securities aggregate about £343,000,000, and the total resources of the banks, including buildings, an item which we wish Mr.

Birks would state separately, came to £598,277,000. The advances under all heads create the deposits, and what they fall short of doing in this way the investments complete, for investments at the end of last year aggregated nearly £95,000,000 for these 22 banks alone, and every penny of that is credit put upon the market in one shape or another.

The Latest Proposals of the Chartered Company.

Whatever we may think about the enterprise of the British South Africa Company, there is no denying that the board goes on its way with a blind courage which almost compels admiration. Their proposed issue of 1,000,000 £1 shares at par, with the option of taking 2,000,000 more also at par, one million each gulp at two subsequent dates, failed because shareholders saw nothing attractive in being asked to pay, say ⅜, for a long put and call option. Many boards would have been staggered if not completely beaten down by this failure, not so the board of the Chartered Company. Instead of lessening its demands it boldly comes forward with a scheme whereby the £3,000,000 lately proposed might be raised to £4,500,000. It forthwith offers £1,000,000 of 5½ per cent. second mortgage debentures at par, *pro rata*, this being part of a total proposed creation of £1,750,000. As the price of the existing £1,250,000 of first debentures, secured, let it be added, upon a white population of about 15,000 and a black one of, say, 500,000, is about 85½, or at most 86, this is a mere repetition of the option with that price raised and with £750,000 added to the board's capacity of issue, which addition can be at least doubled if issued on the same terms as the million now offered. For it does not abandon the idea of a further issue of 1,000,000 shares, since those who subscribe to the proposed present issue of £1,000,000 in this second mortgage debenture stock will be entitled to the following "special privileges": Each £1 of the stock will be convertible at the option of the stockholder into an ordinary share at par at any time before June 1, 1910, and the holders of such shares will also acquire the supplementary right given with the recent proposed share issue that failed, and may take up a second million of ordinary shares at par at any time before June, 1912. Doubtless, if they would care to have it, the board will allow them to buy a third share at par, but there is no prospect that the existing share capital will go to a premium between now and then unless the bulk of the capital is utilised by "out" furnishers for decorative purposes. From some points of view the new proposal is even more audacious than the one just abandoned, and we do not believe the shareholders will be attracted by it to an extent sufficient to provide the directors with the money urgently required to carry on the Rhodesian Government comedy and to meet the ever-pressing obligations upon the company's railway guarantees. But the hollowness of the project and its utter failure are so patent to the eyes of the public that it is quite unnecessary to use strong language in describing any of these lures. They have ceased to be lures, and exhibitions of oblivious persistence such as these new proposals give are calculated to excite little but derision. Therefore we expect that the new "scheme," as it is called, will share the fate of the one that had to be abandoned in the end of last week, and its failure should bring about the too long postponed crisis in the company's affairs. The nation has had altogether too much of this "new Empire."

Gold Mines Investment.

There is a growing practice among certain companies in the City and elsewhere to withhold documents relating to their affairs from the newspapers, presumably with the hope of escaping adverse criticism. This course has just been pursued by the Gold Mines Investment Company, one of the Consolidated Gold Fields curiosities brought into existence in January, 1905, when it was fatally conjectured that the depression in Kaffir shares had about run its course, and that brighter times were at hand. We need not dilate on the extent to which these pious hopes have been falsified; the poor deluded shareholders must be haunted night and day with visions of cartloads of Kaffirs tumbling off giddy heights. But the directors of the Gold Mines Investment Company, having decided to face an unpleasant position, could not have come to any harm by circulating their proposals in the hitherto customary fashion. However, they chose otherwise, and it was quite by chance that we happened to notice the scheme in the advertisement columns of one of the financial papers. After all, the state of the company's finances is not so very much worse than we knew it to be. The second annual report covering the year to June 30, 1907, was issued in July last, and showed investments of £944,995, on which the capital wastage was £495,451. Since then the investments, taken at cost price, appear to have been increased to £1,008,509, and simultaneously the depreciation has increased to £555,452, say 55 per cent. This was the position on March 11, rather more than three years after the thing was brought into existence. The directors now say that 85 per cent. of the stuff held is revenue producing to an extent sufficient to permit the distribution of a dividend. Also they look for the present income to improve, in which case dividends, if they were being paid, should also be on the up grade. The point to be decided is whether the profits should be laid aside until the deficiency has been made good or whether the capital should be cut to the present value of the holdings. There is only one answer to the question, seeing that probably the loss never could be made up and the holders of the principal part of the 250,000 issued shares have requested the directors to see about a capital reduction. The shares are of £4 each, and by cutting away 50 per cent. as proposed, the capital will be lowered from £1,000,000 to £500,000. The unissued 250,000 £4 shares are to be subdivided into 500,000 £2 shares. The meeting to consider the proposal will be held on Monday week, March 30, and it is instructive to note that if the proposed capital reduction is effected the managers, the Consolidated Gold Fields of course, will consent to material alterations in the arrangement set out in article 96A, doubtless the one which entitles them to £10,000 per annum by way of remuneration, in addition to certain other contingent amounts. It further appears that the directors are entitled to 8 per cent. of the surplus nett profits, after providing for a 5 per cent. dividend and reserve fund, and 8 per cent. of any part of the reserve that may be divided up, and doubtless these terms will also be revised.

Mr. J. Pierpont Morgan in Paris.

This eminent New York financial magician and banker seems to have let himself go in Paris to a representative of *La Financière*, to whom, that paper says, he gave an interview. He must have done, for the touches in the subjoined extracts are too lifelike to be the work of a mere journalist. This interviewer is an artist, and has the sense of humour as well as a very pretty gift of raillery. The result is too good to be lost, and therefore we give it here. Nothing more deliciously droll of its kind has come across us for a long time than the description of Mr. Morgan's indignation over the fact that the Bank of France lent gold to the Bank of England after having refused it to *him!* HIM! HIM! The interview took place in the great man's picture gallery:—

With a triumphant wave of his hand he said: "That wall is worth $225,000." He seemed quite pleased when I answered that it was not dear considering the pictures that hung on it. One would have to see the way in which he pronounces words like "Washington" or "Roosevelt," to see the ferocity of his contempt for the Government of his country. The most astonishing thing about American millionaires is their formidable ignorance of the principles of business, and their certainty that people as rich as they are must be above all criticism. His eyes flamed with anger when he talked of the refusal of the Bank of France to lend money. "It was an inimical act. I never for a moment believed the statement that the statutes of the bank would not permit it. What the bank refused to me, to ME, she did a week later for the Bank of England. Consequently the statutes of the bank will not enter into it. It was the French Government that refused my request. But do these people not remember that the United States are their best

clients, and that such an attitude is exactly the contrary of what is required to develop commercial relations between the two countries?" Mr. Morgan is incensed. He is planning some vengeance. We must be on the look-out. "What was the bank's reason for adopting this attitude?" he asked. I pretended to be profoundly ignorant, for it would have been impossible to have told him that in France American business was considered exactly at its true value—only worth the paper cheques were written upon at that time. I am afraid he was led to believe that France was not at all certain as to the American-Japanese relations, and, knowing the enormous gold reserves of the American Treasury, the Government suspected that it was a disguised War Loan, and that the most elementary neutrality prevented France furnishing money either to Japan or to the United States. "War? With Japan? Know, sir, that there will be no war with Japan." The tone in which he said this admitted of no reply. Mr. Morgan evidently "holds" not only Wall Street, Roosevelt, the Government public opinion in California in his hands, but also the Government and intentions of Japan. "Just so, just so," said I, "but . . . this demand for money . . ."

"Ridiculous," exclaimed Mr. Morgan, "we didn't require money at all; we only wanted a little metal to tranquillise the public. It was the moral effect that was required. It would have been sent back immediately. We don't require a loan. Our situation is healthy. Our business is healthy. Everything is healthy in America. We have everything we want in abundance in America." I did not like to remind him that all the gold imported at the time of the crisis was still locked up in the country, and would probably remain for some time. "The panic that frightened Europe so much was only a sweeping-out of some banks. I simply crushed all these people. I do not want rascals in banking business. I want all American banks to be on a solid foundation."

The interview was at an end. Mr. Morgan, conscious of his superiority, looked at me from under half-closed eyes, as though he was happy at having revealed to me part of contemporary history which he is making. Mr. Morgan is really a great American, as much by the enormousness of his undertakings as by the greatness of his incomprehension, and his power of bluff.

American Business Notes.

Owing, it is understood, to the redistribution of balances collected by subscribers for the New York City loans recently issued, the average figures for the New York Associated Banks last week show a reduction of £725,800 in their loans, and an almost corresponding diminution of £774,400 in their liabilities on deposits. The specie reserve has also fallen nearly £159,000, but greenbacks came to hand to the amount of about £71,000, so that there was actually an increase in the reserve average of nearly £88,000, and the surplus owing to this and to the diminution in deposit liabilities was up £106,000 to £6,133,000 against a mere £607,000 twelve months ago. The banks are therefore full of money, and should be able to help the Washington Treasury when it comes bang up against its deficit.

The outside banks and trusts show an increase in their investments and loans amounting to nearly £252,000 bringing the total up to almost £155,000,000, and their holdings of specie have increased on the average by £80,000 to £8,669,000, but greenbacks have disappeared to the amount of nearly £43,000, and the total average is now therefore only £2,075,000. Deposits, however, have risen by about £125,000.

Bank clearings for New York fell off last week by 46.4 per cent., and outside New York by 35.5 per cent. compared with the corresponding week. It does not, however, follow that this decrease accurately represents the reduction in the volume of business done; it probably means that the gamblers are in no position to utilise banking capital as they did before the crisis. None the less is it true that trade is declining throughout the Republic for the railway earnings are on an average 9 to 10 per cent. below those of a year ago. Moreover, the official estimate of import and export values for February gives a reduction of £8,813,000 in the value of the imports and an increase of only £1,628,000 in the export values.

There is little or nothing going on in finance or stock gambling, whether in New York or anywhere else. It is all demonstrative play, hardly worth watching. The machinery of the market conjuror is so simple, old-fashioned and, one might say, stale; it is not wizardry at all with original ideas and fresh tricks, but just the same old dreary round of well-worn expedients. When facts are against the groups holding inconvenient masses of paper which they are labouring to unload, they fall back on rumour, and since we last wrote a variety of wonderful tales have been set afloat upon Wall Street. Mr. Roosevelt was getting friendly to the market, and there would be abatements of attacks upon trusts and railroads. Big operators were buying and putting away stocks at current prices. Great sales of copper had been effected, and work was being resumed here, there and in hundreds of places. On the strength of yarns like these, demonstrative buying was indulged in, and day after day prices rose as if simple mankind were really sure that the end of the crisis had come and ready to once more gamble as before it broke out. Towards the middle of the week, however, this buying energy was exhausted; either that or the players for the rise thought that enough outside "gulls" had been tempted to buy on the advancing prices to enable them to get quit of some of their stuff. So they threw it out in such lumps as the market would take, and immediately prices broke as if a new panic were at hand. The depression was aggravated on Wednesday by the reduction in the rate of dividend declared by the New York Central from 6 per cent. to 5—*i.e.*, 1¼ instead of 1½ per cent. for the quarter. Then the metals report of the *Iron Age* gave the bears additional courage, and they banged away at everything baggy.

The "Soo" line, a Canadian Pacific property, has raised its dividend from 4 per cent. to 6 by giving 3 per cent. instead of 2 for the half-year, and the bears of its shares were badly caught, but of all experts in market finance none are so daring and resourceful as the men behind the Canadian Pacific, their time has not yet come.

The Illinois Central board is about to increase the company's share capital by 30 per cent. Its present capital is £21,080,000, of which £19,080,000 is in common stock, so that the proposed addition would be £6,302,400, and it is presumed that half will be in convertible bonds, half in ordinary stock, all offered at par. The head of the Armour beef and pig packing firm has been put on the board in place of Mr. Stuyvesant Fish, who has been beaten, though an honest man, or because ——.

It is a pity all American railroads do not make their working year conterminous with the calendar year, like the great Pennsylvania system. Some day, perhaps, this change will be made, but meantime, the fact that the Pennsylvania Railroad Company publishes its twelve months' results at a date differing from those of most other United Sates railroads, gives its figures a distinction they might not otherwise possess, and last year the exhibit was in several ways most suggestive. To begin with, the gross earnings of the whole system, east and west of Pittsburg and Erie—a system embracing more than 11,000 miles of railway—amounted to £65,357,000, the largest figure ever reached in the company's history, and upwards of £12,000,000 more than the gross income for 1905. We have no railway in this country or within the British Empire capable of showing any such results as this, and there are very few states on the face of the earth whose budget attains to such a figure. But these are only gross earnings, and when we take into account working expenses which came to £48,631,000 for the entire system, or £6,322,000 more than the expenditure of the preceding year, the glow to some extent disappears, for the nett product remaining is less than that for 1906, whose gross income was upwards of £6,000,000 less. In other words, the whole of the increase in gross receipts and rather more was swallowed up by additional working expenses, so that the nett income amounted to only £18,631,000 without taking into account the revenue from investments which reached almost £5,700,000 additional. There is nothing, however, that indicates weakness in this display, and the board of the company was apparently justified in maintaining the dividend on the common stock at the recently increased scale

of 7 per cent., as compared with 6½ per cent. for 1906, for the nett income available for this distribution was £6,715,000, while the 7 per cent. dividend required barely £4,400,000. The company, however, took less money from earnings in order to provide for sinking-fund payments and for other purposes. Last year, for instance, the amount thus set aside was only £1,863,000 or thereby, as compared with £3,161,000 in 1906, when the whole of the surplus revenue was thus assigned, whereas £470,500 of last year's revenue is carried to surplus.

Coming to the capital account, we find comparatively little to comment upon, at any rate in the advertised summary. Perhaps more light will be thrown on the actual state of the company's finances when the full pamphlet comes over. What, however, seems to be clear enough is the rapid increase in the company's debts as well as in its ordinary stock. At the end of last year, for instance, the funded debt of £54,200,000 was £15,889,000 more than at the end of the preceding year. Part of this debt was due to an issue of £12,000,000 three year collateral notes, and some more of it to the taking into the master company's balance-sheet of the bonded debt of the Philadelphia and Erie Railroad, amounting to almost £4,000,000, because of the absorption of that property in the Pennsylvania system. The share capital has also risen to a total of £60,300,000, there or thereabouts, and there appears to be a considerable floating debt, although nothing of a serious or threatening description. Still its total amounts to £7,558,000, and the car trust certificates alone outstanding amounted to about £14,564,000 additional on the last day of the year. Capital expenditure in the past year is not fully stated, but upon the main line between New York and Erie the outlay was nearly £4,000,000, of which £1,822,000 odd was charged to capital account, £1,106,165 debited to the income of the year, and £1,034,170 to the extraordinary expenditure fund. The outlay under capital expenditure, however, was almost exclusively restricted to the completion of work actually in hand, and perhaps this prudent caution in spending will enable the company to tide over its temporary financial obligations more easily than might have been anticipated two years ago. Up to the end of last year the amount of capital charged against the New York tunnel extension was nearly £8,000,000, but that does not embrace the sums charged off from time to time against income, which aggregated £4,600,000 a year ago, and to which another £1,400,000 has been added during the past year. There will be substantial credits, however, to the cost of this work arising from the sale of surplus real estate not permanently required, and during the past year £320,000 was received on this account alone.

A good deal is said in the report with regard to the attempted restriction of fare charging liberties in the State of Pennsylvania, but the company has been relieved by the judgment of the Supreme Court from the attempted interference. It had the best of the argument, and while the company objected to be compelled to lower its fares beyond reason, its board states in the report that the average rate per passenger received upon the entire system in the past year was less than two cents, or 1d. per mile. Seats in certain luxurious express or privileged trains are placed on a higher tariff, but the bulk of the traffic, the traffic that pays, is probably carried at lower fares than prevail in the United Kingdom. The increase in freight traffic was heavy up to December, but expenses rose faster than receipts as we have shown, and while the freight revenue showed an increase of more than 12½ per cent. for 1906, there was a material reduction in the gross earnings per ton per mile. Passenger traffic did not increase last year at the same rate as that of 1906 did over 1905, but here, also, whatever increase was secured, the additional expenses of earning the money wiped away all chance of profit from it. There was a reduction of nearly one-third in the nett earnings per passenger train mile. Partly, however, this is the product of better book-keeping, but it undoubtedly shows the present tendency of railway business, and we are not surprised that a study of the report has damped the ardour of speculators for the rise on Wall Street. Moreover, the company continues to discharge large numbers of men, and its earnings, partly because of the demoralisation existing in the iron and steel industries of Pittsburg, are displaying such decreases as may soon compel the dividend to be reduced.

Passing Events.

We gave the ordinary stock of the United Havana Railway in one of our "trusts" some time ago, and we are sorry to learn that some of our readers have bought the stock and borrowed against it on margin with their bankers. This is a method of investing we do not recommend, and our trusts were never intended to be suggestions for such transactions. As it happens there has been a severe fall in the price. Since the last report, which was encouraging, traffics have almost continually shown shrinkages. At first there was nothing very alarming in this, as it was known the principal crop, sugar, was late, but it is, we fear, beyond question that in addition the product is much below the estimates, and that traffics are not likely to improve this season. No doubt some saving will be made in working expenses, but unless there comes an unlooked for improvement in business, a reduction in the dividend for the current half-year must be expected. Even so we cannot recommend genuine holders to sell now; one bad season does not spell ruin for the railway, and Cuba does make some progress in spite of her many adversities.

Last week's revenue receipts amounted to £4,358,567, a very good figure, but it is still doubtful whether the excess over Mr. Asquith's final Budget estimate will be much or little on March 31st, for the only branch of income continuing to yield well ahead of estimates is property and income-tax which last week gave £1,830,000, making the total receipts to date £29,042,000, or £375,000 more than at the same date last year. This goes against an estimated shortcoming of £1,100,000, but in all probability the figures contain a good deal of what must be regarded as anticipations of next year's revenue owing to the more rapid collection of the tax, in which case 1908-9 will have to pay for the larger income gathered this year. All other branches of revenue are coming out either no better than or below the estimate. Customs which last week gave £643,000 are running much in accordance with the anticipation, but excise, which yielded £480,000, now shows a deficiency of about £473,000 against an estimated surplus of £250,000 for the entire year. Worst of all the estate duties, the income from which last week was £594,000, are at £17,588,000 to date, about £858,000 below last year's figure, and the estimated shortage for the whole year was only £200,000. Stamps are also declining in a small way, and threaten to fall sensibly below Mr. Asquith's anticipations, and both the Post Office and telegraph services are materially less, the one at £15,950,000, showing a deficiency to date of £920,000, against an expected surplus for the year of £430,000, and the other at £4,115,000, a deficiency of £60,000 against an expected surplus for the year of £145,000. Thus the outlook is decidedly uncertain, and induces us to refrain from attempting to forecast the results for the entire year.

Money is grievously wanted by the German Empire, and this week the Reichstadt budget committee has been trying to sum up the position. The total Imperial debt exceeds £200,000,000, and will this year require £7,250,000 for its services. It mounts, too, with great rapidity, as we indicated last week, and the Government was authorised to issue Treasury bonds to the value of £23,750,000 instead of £17,500,000, the amount up to present sanctioned. This increased credit will be required to meet charges incurred by the extraordinary allowances to officials of the civil services, and over and above the Imperial debt large

amounts of borrowed money will be required for railway projects in various parts of the German Colonial Empire. The building of 910 miles of line is contemplated in these dependencies, principally in Africa, and the estimated capital outlay on them, to be spread over six or seven years, is £7,500,000. There will be no need for German investors to complain that they can find no resting-place for their savings.

Last week's telegram from the Governor-General of India is the gloomiest thus far published. The total number of persons in receipt of State relief now exceds 1,500,000 for the whole of India, and in the United Provinces alone the number of persons on the works is now nearly 1,000,000, while 345,000 people are in receipt of gratuitous relief there. Harvesting of early spring crops has begun, but has not yet affected the numbers on relief, which are still rising. In Central India also the distress has extended, and although the general condition of the people is officially reported to be "satisfactory"—the word has a weird look—and prospects of mohwa and mungo crops good, nothing indicates early diminution in the distress. Prices, however, are said to be slightly easier again, with a marked fall in part of the Central Provinces, but the area sown with wheat is estimated to be 29 per cent. less than last year, and the crop of oil seeds will also be considerably below normal. For various reasons therefore the famine is bound to be a prolonged one, and we should really like to know something about the means employed to finance it. Is the Simla Government utilising borrowed money or not?

Words which have an air of mystery appear to have been used by Mr. Francis Oats at the adjourned meeting of the De Beers shareholders held in Kimberley last week. He condescended to refer to the animadversions made in this journal and elsewhere upon the reticence displayed about the dividend at the recent annual meeting. He declared that no idea was then in the minds of the board that the dividend would not be paid. The directors had always hoped that it would be. This is quite plain and straightforward, and where the occult comes in is in what follows. "Events," Mr. Oats proceeded to say, "had occurred between the annual meeting and the end of the year which made the directors hesitate and at last pass the dividend"—he means omit to pay it—"to serve the interests of the company and to sustain the diamond market." The shareholders, it will be observed, are not mentioned as deserving of a thought, and obviously did not come into the board's consideration, but "the diamond market and the interests of the company" is a phrase we should take to mean the necessity imposed upon the directors to maintain artificial prices for diamonds so as to prevent a sort of general liquidation of the diamond syndicates. From this point of view Mr. Oats's words are of great significance in indicating the artificiality of the whole De Beers structure. And did all the inside people get simultaneous warnings of the coming event, or were some of them left high in the air, bulls of the sky?

Continental Memoranda.

From all Continental Bourses comes a monotonous cry of want of business. The speculators are left alone by the public, and whether prices go up or down, the only result is despondency, so it would be waste of space to enter into particulars.

A report comes from Brussels that a great metal trust for Russia has been formed there by an agreement between certain Russian metal firms—the Société Générale of Paris, the Belgian Société Générale, the Union Parisienne, and Messrs. Thalmann and Co. These institutions are to form a Russian company, with a capital and a debt aggregating £15,000,000 to £16,000,000, and expect to control about 65 per cent. of the Russian smelting industry besides supplying funds to many coal and iron mines. It has not yet received the sanction of the Russian Government.

Talking of Russia reminds us that the Tsar's Finance Minister strenuously denies the intention of his Government to issue any loan in Paris this year. He declares that the budget deficiency has been brought down from £20,000,000 to £15,000,000 and asserts that this shortage will be covered by an internal loan. We hope this news is true, but experience teaches us to put little faith in assertions of the kind, for they have too often preceded the issue of a new loan.

French investors in foreign Bank shares have not found their enterprise a profitable one, and the collapse in the shares of the Russo-Chinese Bank last week caused *Le Globe* to draw attention to the fact that not a single share of any foreign bank dealt in on the Paris market is now at parity with the figure at which it was issued. It gives particulars of the shares of a dozen banks in proof, and amongst these we may note the just mentioned Russo-Chinese Bank, whose shares were put upon the market at 760 fcs. and are now quoted at 445 fcs., those of the Land Bank of Egypt introduced at 230 fcs. and now quoted at 176 fcs., and of the Credit Franco-Egyptien introduced at 125 fcs. and now quoted at 90 fcs. It is almost as bad with some of the Mexican banks, and as for the Bank of Abyssinia, whose shares were introduced at 235 fcs., there appears to be no quotation at all.

A new competitor has arisen for the Trans-Atlantic traffic, and is cutting rates, the New York and Continental line having put on three steamers to run between New York and Rotterdam, conveying goods and passengers at rates "much below" those of the pool or syndicate recently formed. No wonder therefore that the shares of the German Trans-Atlantic lines are showing weakness or that the dividend to be declared by the North German Lloyd is expected to be reduced from 5 per cent. to perhaps 4 per cent., and certainly not more than 4½ per cent. for the past year.

Much wrath has been excited on German Bourses against the Conservative and Agrarian parties of the Reichstag, who are opposing reforms in the Bourse law whereby the shackles which now fetter dealings there might be, in part at least, struck off. For three and a-half years, it is said, every member of the Stock Exchanges and of the produce markets has been energetically clamouring for reform, and now it is apparently to be denied, not on grounds of public morals or anything of that kind, but as a party move.

A discussion has arisen in the Cortes over the position of the Bank of Spain, which is rather lopsided. It has a note circulation of £53,560,000, and although there is a metallic reserve of £35,710,000, a considerable portion of it is in silver, the bulk of the Customs duties being apparently paid in that metal at a gold valuation, which probably has the effect of enhancing the weight of the duties to importers. The Bank is also hampered by credits advanced to the Government. During the Cuban War it advanced nearly £4,000,000 to the Spanish Treasury, without even entering the amount in its balance-sheet. It also holds about £8,000,000 nominal of the internal debt of the State, and altogether its position appears to call for reform.

The Portuguese debt also wants looking into, but reform there, we fear, is hardly to be expected. The burden of it is now said to amount to about £10 per head of the inhabitants, and that is more than the poverty-stricken people can afford to permanently live under.

German banks are one after the other betraying traces of the recent crisis, the Deutsche Bank alone having been able to maintain its dividend, and some of them have not only been obliged to reduce their dividend but to leave their reserve at previous figures. Even when the dividend has been maintained, therefore, the duty of insuring against future adverse contingencies has been neglected, and there will be many adverse events happening within the next few months or year or two as the failures, alluded to last week, continue to occur. Finance business is also contracting, not only on the Bourse, but in the matter of new issues. The money asked for to found new or to in-

crease the capital of old share companies has amounted to only £8,312,000 in the two first months of this year against £12,383,000 in the corresponding months of 1907, and as dividends are likewise coming down, the real time of trial cannot be said to have yet come for all institutions connected with industries in Germany and, we may add, elsewhere on the Continent.

It is announced that the German Imperial 3½ per cent. bonds maturing on April 1 are to be exchanged into new 4 per cent. bonds. It is likely also that the Treasury bonds which fall due later will be converted into a security bearing the same rate of interest. As for the so-called "unprofitable" Treasury bonds, no decision is said to have been come to about them, but it is probable that part of them will be prolonged if the holders consent. Those who wish for their money will have to get it out of the impending big Imperial loan to be issued probably in May.

Notes on Books.

American Finance. By W. R. Lawson. (Edinburgh and London: Wm. Blackwood and Sons.) Price, 6s. nett.

John Bull and his Schools. By W. R. Lawson. (Edinburgh and London: Wm. Blackwood and Sons.) Price, 5s. nett.

We are glad to see that Mr. Lawson's interesting and well-written book, "American Finance," has reached a second edition. There is no more diligent student of contemporary finance than Mr. Lawson, and he always writes clearly and vigorously. With most of his judgments in this book we more or less agree, and there are many passages in it we should like to quote. Take this one as a sample, which we find in the chapter headed "The Millionaire Moloch":—"Some nations die of creeping paralysis, while others prefer the nobler alternative of a general smash up. There is nothing paralytic about American finance, nor is there ever likely to be. But it has vast and varied possibilities of internal convulsion. Its explosive risks are double those of other nations. They threaten it from above as well as from below. Of the two the anarchists on top are much more dangerous than those at the bottom." There is a great deal of truth in that utterance, we are sorry to say, and the misery now spreading over the working classes throughout the United States is the direct product of the dishonest, the anarchic rapacity of those who have amassed more or less gigantic fortunes by the jugglery of finance. What is a fortune but a more or less extended control over human labour? We measure the millionaire's wealth in dollars, but the dollars would be worth nothing in themselves. They are valuable only by the command they give over the labour of mankind.

We feel unable to criticise Mr. Lawson's other book, "John Bull and His Schools," although it deals to some extent with the financial side of the education question. It would take us much too far out of our course, however, to enter into a discussion of Mr. Lawson's views in regard to this vexatious subject, but we may say that the book is, as might be expected, pungently written, and that some of the exhibitions of the cost of education for the people and of the results produced by the expenditure are both striking and instructive.

Production: A Study in Economics. By P. H. Castberg, of Christiania. (London: Swan Sonnenschein and Co.). Price, 10s. 6d.

We have here a large book by a Norwegian gentleman, and it is interesting just because the point of view of the writer is that of a student living amid somewhat restricted surroundings, and dealing with conditions of society that are still in no small degree primitive. Frequently, therefore, we come upon a *naiveté* of expression and illustration betraying this characteristic, and yet the book is earnest, the product of a thoughtful mind, and will bear reading. The translation appears to be carefully done, and every branch of the subject is handled with a conscientious lucidity that is attractive. As an example of the somewhat outside point of view from which the writer regards his subject, we may instance Chapter 21 on the cheque. It gives an accurate enough description of the origin, nature and capabilities of this instrument for transferring banking credits or making payments, and yet in reading it the feeling conveyed is that the writer is dealing with a form of currency with which he is not very familiar. Witness what he says under "Loans granted by a Bank may be transferred to the bank's deposits." The very heading of this paragraph betrays a certain unfamiliarity with business, because loans must always create deposits somewhere, and it seems idle to talk of "true" deposits and "fictitious" deposits, although we quite understand what the writer means. A "true deposit," he says, "will bring about an increase in the cash or reserve of the bank, the fictitious deposit made by the transfer of loans to deposits does not increase either the cash or the reserve of the bank." True enough, but a loan granted to a customer on one bank does not become a fictitious deposit in another bank when the credit thus created is transferred thereto by a cheque.

The Week in Mines.

The atmosphere in the Kaffir Circus has been a little less depressing this week, and for once in a way the principal counters together with a number of the less prominent shares finished with some improvement. It never amounted to much, but Paris seemed more favourably disposed, and when the sales from that quarter, which have recently been a source of no little disquietude, came to an end, one or two buyers made their appearance, probably Bears taking profits. A certain French trust of which we have previously spoken was selling again during the early days of the week, but to a comparatively small extent. Modders were exceptionally strong, and rose steadily to well over 6, there being some buying against options due to mature at the end of the month. Randfonteins also received attention, and were lifted a fraction over par. It is said that the new financial scheme will be out next week, and nothing is more certain than that the company must have a lot of money and soon. It has an enormous programme on hand, and the outlays must be immense. The fresh plan may appeal more forcibly to the shareholders—Mr. Robinson has no doubt on the point—and in that case Randfonteins will go better the market declares. The slight improvement in the market is, of course, very welcome, but it is entirely due to inside operations, and the public is less in evidence than ever. If the rise is carried a little further the opportunity will doubtless be taken to cut more losses. A story was put about in the middle of the week that the Transvaal Government had called a meeting of the magnates to discuss the labour question, being alive to the fact, so it was said, that the steady flow of boys to the mines was not likely to continue. Bad business all round and poor crops are supposed to have led to the present abundance of labour, and an improvement in either would soon result in a reduction of available supplies. This is the mineowners' view, and they will doubtless labour hard for the retention of the balance of their beloved Chinese. But what a powerful argument it all is for the employment of more whites.

Rhodesian Land and Finance.

The new Chartered scheme was launched last Saturday, and while providing a subject for discussion did not kindle a spark of enthusiasm. We refer to the proposal in another column, but may here just point out that £1,750,000 of 5½ per cent. second debentures are to be created, of which £1,000,000 is offered at par, convertible at the option of the holder into ordinary shares at par at any time before June 1, 1910, the shares to carry the same option rights as were given with the issue that failed. This time no minimum subscription is fixed, and presumably the directors will take what they can get, but a correspondent of the *Times* invites shareholders not to subscribe a penny piece unless the

holders of the railway debentures guaranteed by the Chartered Company agree to reduce their interest by 50 per cent. The point of the argument is, of course, that if these debentures are not subscribed the Chartered Company must default on its guarantees, and the debenture holders will get nothing. It must come to that sooner or later, and the sooner the better. It is high time this Chartered bubble was pricked. Covering by a few frightened Bears sent the shares to 13s. 3d., when details of the plan became known, but since then the market has been practically dead at 12s. 6d.-12s. 9d. The rest of the group was inexpressibly idle. After a time Tanganyikas rallied a trifle on a cable that smelting has commenced at Kansanshi in expectation of a minimum monthly production of 100 tons of copper. Zambesias were jogged up about 6d., and the Banket things, Explorations, and one or two more, after being decidedly dull, managed to rally a fraction. In the Land and Finance division Welgedachts were par again, and Gold Trusts, T. C. L., Johnnies, and Oceanas all improved 6d. or 8d. The Goerz group meetings were held on Wednesday, and shareholders of the Geldenhuis Estate will be interested to learn that the remaining life of the mine is estimated at three years. The dividend for the current year is estimated at 60 per cent. The Geduld Proprietary mines are expected to commence crushing next November, and very good grade ore was being developed in the 170,000 ton block now in course of preparation for stoping. Satisfactory progress was reported with the erection of the 50-stamp mill. Princess Estate shareholders may look for a dividend very soon.

Diamond Shares.

Dealers in this section could not complain of lack of excitement. Sensations were of almost daily occurrence, and we should not like to have to predict too closely the future course of the market. That the leading shares must eventually go lower is scarcely open to doubt, because the sale of diamonds has very nearly ceased. The crisis must be more than acute when De Beers decides to close down its best mine, the Dutoitspan. The event will not take place until April 24, some time being required to bring such a great organisation to a dead stop. The Jagersfontein mine is said to have already reduced its output by 50 per cent., all nightwork having been stopped; but what finally dashed the market's hopes was the announcement by the Premier Company that the Diamond Syndicate has refused to renew the option as arranged in the original agreement. So the Premier goes off on its own, making its own arrangements for the sale of stones, but it is carefully pointed out that there is no likelihood of the market being flooded or the stones becoming cheaper. That remains to be seen. The best price for De Beers was 11⅜, and Premiers managed to reach 5¼, but there was a speedy relapse from these figures, and the market closes dismally weak.

Australasian and West African.

There is little to be said concerning these sections. The colony cabled firm prices but no orders, and speculators on this side were not inclined to commit themselves either way. Where prices moved they went up, but there was practically nothing going on. West Australians were dull most of the time, and leading shares lost the turn, but later on a small inquiry rallied the prices of Kalgurlis, Horseshoes, and Fingalls. Mount Boppys were a good market, and New Zealands recovered trifling losses. West Africans were quiet and rather wretched.

Copper, Tin and Miscellaneous.

A great struggle between bulls and bears is going on in the Copper share market. The Yankees are playing a desperate game, and are using every means in their power to drive prices up. Paris, on the other hand, still takes a gloomy view of the outlook, and throws out Tintos on every rise. The most contradictory stories are in circulation as to the condition of affairs at the mine. Some declare that the underground subsidences in some sections are so serious, thanks to the fire last summer, that the men refuse to go down, while another report declared that the chairman had just returned from the property, and was quite pleased with everything. Subsidences had occurred, but they were nothing out of the way, and although probably involving an outlay of £100,000, the amount would be spread over several years. Fluctuations have been pretty wild, the top figure being 63¾ and the lowest 61⅞. Yesterday's dividend announcement of £2 per share with £90,000 to depreciation and £26,000 forward had only a momentary influence, being as expected. The metal improved most days, an increase in the visible supplies of 2,732 tons for the first fortnight of March being no more than expected. The American things moved about, with Yankee shares and the rest were quite good as a rule. Mount Elliotts were assisted by satisfactory development news. Tin fell away, but shares did not always follow, Pahangs being exceptionally firm. In the Miscellaneous group, Indian shares kept up, and among the American things El Oros and Esperanzas were helped by good profit statements for February. The Camp Bird return was also encouraging, but the price did not respond.

MINING NEWS.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

New Rhodesia Mines.—After duly paying the directors their fees of £1,150 this company actually produced a profit of £758 on the year to June 30, 1907, and the previously existing debt of £639 is converted into a credit of £118. This is a most remarkable state of affairs, and must have taken the directors and others completely by surprise. Everybody concerned must be mystified to this day as to how the business was accomplished. If things continue to flourish in this fashion the company will be able to afford to have its shares quoted in one of the financial dailies. Revenue on gold account was as much as £23,688, and mining, milling, development, redemption, &c., took £19,126, and depreciation £2,498. Administration and other charges were then met, and as mentioned £758 was still left. The company owns or is interested in a variety of undertakings, with two of which the Falcon (Rhodesia) Development and the North-East Siberian (Okhotsk) Exploration we deal in separate notes. From July 1, 1906, to September last the Ophir mine treated 22,048 tons for 6,739 ozs. of bullion, which realised £26,266, and as these operations exhausted all the payable ore above the third level the mill was closed down to permit the unwatering of the fourth and fifth levels and the repairing of the main shaft, &c. The question of letting the mine on tribute is now being considered. The company's share of some tailings revenue is £285, and £845 came from tributing Imani and Jackal properties. Prospects on the Jumbo mine are considered to be very good, and we suppose this is one of the most promising properties in Rhodesia, which is not saying much. Existing reserves are estimated at 80,691 tons of an average value of 16 dwts., the profit on which is "sufficient to redeem the whole of the debentures (£90,000) and leave a handsome dividend on the share capital." This company's interest in the Jumbo is £15,000 debentures and 57,502 fully-paid £1 shares, and we can but hope for the best.

Falcon (Rhodesia) Development.—The Consolidated Gold Fields of South Africa manage the affairs of this company in Rhodesia, but no brilliant success has been achieved at present. Development of the western section of the mine was resumed in January, 1907, the work undertaken being the continuation of the second level to the east with the necessary crosscutting and the opening up of a third level. Results seem to have been decidedly irregular, but the tonnage of ore exposed is considerable, amounting to at least 217,000 tons of an average value of 6.9 dwts. gold and about 2 per cent. copper. It cannot be strictly called ore in sight since the winze connections are not frequent enough, but it may be classed as "probable ore." A large expenditure to open up the mine in depth is, in the opinion of the consulting engineers, now warranted, and the directors think that this should be undertaken by a mining company which should include the adjoining "Athens" group of claims. A very wise idea, as the company possesses only £535 in cash and has had £6,500 of a £10,000 loan that has been arranged. The auditors point out that no inventory has been made of plant and stores, and nothing has been written off for depreciation.

North-East Siberian (Okhotsk) Exploration Syndicate.—It is hardly likely that many people know of the existence of this company, but it was promoted by our fresh friend, New Rhodesia Mines, the resuscitated body of our old pal Rhodesia Mines, Limited. We almost hesitate to describe what a wonderful concession the syndicate has picked up for a beggarly £12,500, the moment being unpropitious for another Siberian boom. The public has not yet recovered from the Siberian Proprietary rig.

There are something like 3,000 square miles to work on and you can take it from Mr. A. A. Merlett, who has been in charge of the exploring expedition that the district will in time become an important gold-producing centre of the world. Values obtained from prospecting are extraordinary. In fact, Mr. Merlett, in his exhaustive report, declares it unnecessary to recount the many advantages which the company possesses in owning this vast area of North-Eastern Siberia, which has proved to be of unquestionable value. The Yana River Concession is a virgin field and beyond the Government engineer no knowledge of its auriferous wealth was known until Mr. Merlett's examination. Surely so, or Rhodesian Mines would not have allowed the seven years' mining concession to go for £12,500. The further and extensive scheme of prospecting work laid out by Mr. Merlett before leaving the property is now being carried out by a thoroughly equipped staff, and the board is confident that the results of the sluicing and dredging operations will furnish much valuable data of a favourable and conclusive character, thus enabling the company to make satisfactory arrangements for acquiring further capital. Ah; yes, of course.

Lydenburg Estates.—This company adopted a policy of masterly inactivity during the year to September 30 last, but the directors are on the watch, and if the Fates are kind a time may come when the conditions will warrant active development. Meanwhile there is a "certain" enquiry for leasing farms, and the board is devoting much of its attention to improving the revenue in this way. Not only so, but every effort has been made to conserve the funds of the company, and we hope the directors will continue to keep a watchful eye on the £700 which is in the bank or in hand. The option held on the Willemsoord asbestos farm was not exercised, but the company's representative recently visited the asbestos properties and reported favourably. "The board are endeavouring to deal therewith," which sounds first rate. Income in the year to September 30 was £1,285 and the outgo £295 less, so that the debit balance can be reduced from £13,082 to £12,787.

Egypt and Sudan Mining Syndicate.—Shareholders of this company will not feel happier after perusing the report for the year ended September 30 last. It is an almost continuous record of failure, and the outlook seems far from encouraging. Upon the Berber Concession which has cost the company £13,876 all work was discontinued in April, 1907, and it is not proposed to resume operations there for the time being. In fact, the prospecting licence has expired, but the directors are trying to arrange a renewal in case circumstances should warrant the despatch of a further expedition. Operations on the Barrahue mine are being carried on jointly with the Suakin Mining Syndicate, and a considerable amount of work was accomplished within the twelve months. At times rich ore was met with, and while no large extent of ore ground has been developed, the directors are encouraged to hope that as the result of the vigorous policy of exploration which is now being pursued the mine may yet prove a profitable undertaking. The mill on the property started on June 19 last, and by September 30 had crushed 115 tons for 155 ozs. realising £516. Of this £155 was credited to the Suakin Syndicate, and £361 belonged to this company. Since September 30 the gold sales have amounted to £2,555, and the company gets £1,788. It is hoped—the shareholders must be heartily sick of the word—that the ore opened up will suffice to keep the mill regularly employed, and that the company's receipts will amount to a substantial sum. The chief asset is a large holding in the Sudan Gold Fields, with whose report we dealt in a recent issue, the book value of 51,671 fully-paid and 20,000 partly paid shares together with some smaller items being £79,137. On that the market or estimated depreciation is £54,000. In the total is included £5,202 in the Dareheib and African Syndicate, which can be considered absolutely lost since operations on the concession are not to be resumed, and altogether it is a sorry story. The profit and loss account shows a credit of £17,762, but as this is subject to the realisation of certain Sudan Gold Field shares its value can be imagined.

Nundydroog.—This well-known Indian mine, one of the famous Kolar group, has again enjoyed a very satisfactory year. Quantity of ore crushed was 84,000 tons, an increase of 2,250 compared with 1906, and tailings treated were also slightly greater at 74,964 tons. Yield from the mills was 66,696 ozs. or 15 dwts. 21 grs. per ton, and the cyanide process gave 8,260 ozs., an average of 1 dwt. 23 grs., the total production being 74,964 ozs., which realised £283,138. Included in this is £1,607, being the value of gold obtained from slags and crucibles. After deducting royalty of £14,050 and adding sundry revenue the gross income is £271,225. Expenditure came to £142,476, leaving a profit of £128,749, which compares with £114,200 in the preceding twelve months, and is the largest ever earned. Sum brought forward was £3,786 and dividends on power station shares produced £315, so that all told there is £132,850 to disburse. Dividends for the year, however, will be 2d. less than in the preceding twelve months at a total of 3s. 6d., the directors having decided to adopt the same policy as the Mysore Company in the matter of capital expenditure, and to write it off from revenue. In this connection £18,000 is set aside on account of the period under review, the total outlay on buildings, machinery, plant and mine account having been rather over £19,000. The balance carried forward is £2,295. Development operations during the year have been of a satisfactory character, and have opened up large bodies of ore reserves, and the directors and managers hold the opinion that the condition of the mine has considerably improved. Ore reserves have increased by 38,640 tons to 111,640 tons, notwithstanding the quantity extracted during the year, and in view of the fact that as greater depths are attained improvements in the value of the lodes become manifest the superintendent considers that the work of the current year will still further strengthen the position. It is proposed to give the company an entirely new set of articles so that the provisions of the latest Company Acts may be incorporated, and some of the clauses will relate to the question of the directors' fees and other remuneration. Hitherto a sum has been voted annually, but in future additional payment will be contingent on dividends. Last year the directors got £2,476 in fees and another £2,500 for themselves, managers, and staff. This will be altered to £1,500 in fees and 1½ per cent. on dividends for the directors and another 1½ per cent. for the managers, the extra amount not to exceed £2,000 in each case. The change is to come into force on account of the past year, and means that the total amount paid will be about £4,470 instead of £4,980, assuming the usual grant were voted. The staff is to get a portion of the managers' 1½ per cent., and may also be separately remunerated.

San Salvador Spanish Iron Ore.—This company had an exceptionally good time during 1907, but the directors warn the shareholders that the current period cannot turn out so well, thanks to the reaction in the iron trade. Moreover, there is a good deal of expenditure to be incurred during the next two years, and the board wisely thinks the present a good opportunity to strengthen the position. So £5,000 goes to reserve and a similar amount to special expenditure fund, making the former £8,800. This is after providing 8 per cent. on the "Pier" shares, 20 per cent. on the preference shares and 10 per cent. on the ordinary, leaving £2,481 to come into the current year against £524 twelve months ago. Depreciation allowance looks fair, and the company is well supplied with liquid resources. Debentures to the amount of £2,400 have been redeemed and cancelled, reducing the amount to £15,400 out of the original total of £25,000. The year's revenue under all heads was £77,198, and the trading profit £32,444, reduced to £25,417 by debenture interest and redemption, depreciation and income-tax. And the result would doubtless have been better still except for a six weeks' miners' strike.

Cambrian Collieries.—This company's profits for 1907 were £152,897, inclusive of £2,678 brought forward, and after providing debenture interest and preference dividend, 10 per cent. is paid on the ordinary shares, the largest amount that can be paid. The directors have in contemplation arrangements by which this limitation may be removed. At present, however, the restriction enables the directors to immensely strengthen the financial position, a sum of £18,420 being applied to write off the balance of explosion account, while £20,566 is set against expenditure in suspense, leaving it at £50,000, and £60,000 set aside for the redemption of debentures, leaving £10,136 to be carried forward. Prices of best Admiralty steam coal have receded a little, but contracts for 1908 should ensure a highly remunerative year. During the current twelve months the directors have promoted a company called the Cambrian Trust, for the purpose of acquiring certain interests in the Glamorgan Coal Company. Two directors of the Cambrian Collieries join the board of the Glamorgan Coal Company, and the directors look for benefit from the establishment of close relations. The company's finances appear to be in very good shape, and the reduction of the debenture debt is prudent policy.

United National Collieries.—A profit of £97,033 proves this Welsh coal company to have had an exceptionally prosperous year, possibly the best that will be experienced for some time. Aggregate dividends proposed or paid come to 50s. per share or 25 per cent., £9,672 is written off Consols, and £9,530 is carried forward against £5,115 brought in. The company's finances are in excellent order. Reserve and development accounts amount to £74,000 against property valued at £290,095. There is £100,000 of Consols held at 85, and while trading accounts are slightly adverse the cash balance is substantial at £52,424.

Penrikyber Navigation Colliery Company.—A profit on coal sales of £55,234 was realised during the year ended December 31 last, and a few pounds from other sources raised the income to £55,258. The regular charges, including debenture interest, take £5,552, leaving £49,706, and the dividends on the preference and ordinary shares will be 7½ per cent. and 12½ per cent. respectively. After that £12,000 is applied in reduction of capital expenditure, and the sum carried forward is raised from £39 to £3,995. Special expenditure account will now be £69,855 and there is no reserve fund.

Russian Petroleum and Liquid Fuel.—Production of crude oil for week ending March 14, 296,000 poods, equals 4,772 tons.

Mr. George F. Blacker, M.D., F.R.C.S., has been appointed a Director of the Clerical, Medical and General Life Assurance Society in the place of Sir William H. Broadbent, Bart., deceased.

London and County Banking.—Liabilities on February 29 amounted to £45,141,706 on current, deposit and other accounts, and £3,975,312 on acceptances, against which the assets were £9,383,156 in investments, £8,904,739 in bills of exchange, £20,554,833 in loans and advances to customers, £6,027,287 in cash at the Bank of England and on hand, and £3,302,143 in money at call and notice. The daily average for the month of cash in hand and at the Bank was £6,395,402.

Critical Index to New Investments.

Charing Cross, West-End and City Electricity Supply Company, Limited.

An issue of £600,000 4½ per cent. debenture stock is offered by this company at the price of 98, the proceeds of which will in the first place be applied in acquiring the £337,000 5 per cent. bonds maturing on January 15, 1909, and in paying off temporary loans secured against similar bonds amounting to £123,000. Any surplus will be used for the general purposes of the City undertaking, but no part of the money can be used for such purposes so long as any of the bonds are outstanding, unless the cash for their redemption has been deposited with the trustees. The new stock is redeemable on January 15, 1941, at par, but may be repaid earlier at the company's option at 102, and is secured by a first floating charge on the City undertaking, while the payment of principal and interest will also be enforceable against the company's assets generally. Good progress has been made by the City undertaking during the past few years, and by 1907 the nett earnings had increased to such an extent that it was not only able to provide its preference dividend in full, but to repay advances made by the West-End branch to meet previous deficits. As the present issue will only increase the indebtedness by £140,000, the company ought to be able to find the extra charge without difficulty, and the stock seems a fair investment.

City of Sao Paulo, Brazil.

An issue of £500,000 sterling 6 per cent. gold bonds, 1908, forming part of a total of £750,000, was offered by the above-named city through the London and Brazilian Bank, the balance being reserved for the conversion or repayment of the internal funded debt. The bonds are redeemable not later than January 1, 1944, by an accumulative sinking fund of 1 per cent. per annum, commencing January 1, 1910, and in addition to being secured on the general revenues of the municipality are specially guaranteed by the hypothecation of the revenue from the tax on trades and professions. Of the proceeds of this loan, £375,000 will be applied to public works and the balance to the repayment of the only outstanding debts of the municipality, consisting of £41,875 in temporary advances and £275,050 in internal funded debt. After deducting outlay on public works, the average annual surplus of revenue over expenditure during the past four years has been £31,240, while the revenue from the tax on trades and professions in 1907 amounted to £119,696, so that there should be ample margin, and as the bonds are offered at 97½ they seem cheap.

Manaos Harbour, Limited.

This company was formed in June, 1902, to carry out certain works, and to acquire a bonded warehouse at the Port of Manáos in the State of Amazonas, Brazil. Up to June 30, 1907, £721,842 had been spent on the works, which are now approaching completion, and an issue of £117,200 5 per cent. debentures was offered this week to provide funds for the repayment of temporary advances. The bonds were offered at par and are repayable at the same price on June 1, 1936, but may be redeemed at any time on or after June 1, 1926, on six months' notice. For the 13 months ended June 30, 1904, the gross receipts were £106,483, and the nett profits, after paying debenture interest, £34,737, but during the following three years the gross revenue has risen from £163,521 to £205,511, while the nett profits have been £73,396, £81,739, and £78,162 respectively. With the present issue the 5 per cent. debenture debt is brought up to £350,000, the interest on which will require £17,500. The issue, therefore, seems amply covered, and as the business is a progressive one, it should be a good investment.

Army and Navy Auxiliary Co-operative Supply, Limited.

This little company has a paid up capital of £80,000, on which it has paid dividends of 50 per cent. per annum for five consecutive years, and has also accumulated a reserve fund of over £100,000, invested outside the business. It, however, needs more money, and evidently needs it in a hurry, as the directors are offering £70,000 out of a total of £100,000 4½ per cent. 1st mortgage debentures at par, which are to be paid up in full on allotment. The bonds are redeemable at par on March 31, 1938, or at any time after five years from the date of issue at 102 on six months' notice. Preference in allotment will be given first to shareholders in the company and then to those of the Army and Navy Co-operative Society, and between them they will probably find the amount required.

United Sumatra Rubber Estates, Limited.

An estate of about 2,625 acres at Serdang, on the east coast of the Island of Sumatra, has been acquired by the Serdang Syndicate, Limited, for £30,000 in cash, and £25,000 in shares, and is transferred to this company without any profit being made on the transaction. There are 1,700 acres already under cultivation, planted with 146,659 Para rubber trees and a quantity of Rambong and coffee, and the estate was valued by one expert in May, 1906, at about £77,000, and by another in October, 1907, at £84,215. It is estimated that there should be an average profit of £5,500 per annum from coffee alone for the three years ending August, 1910, by which time the rubber will have grown to such an extent that it will take the place of the coffee. Meantime, a considerable number of the rubber trees are already being tapped, and in two years there should be over 60,000 trees from five to eight years old upon the estate. The capital of the new company is £85,000 in £1 shares, of which 10,000 are held in reserve, 25,000 go to the vendors, and 40,000 were offered for subscription. As far as can be judged, therefore, the undertaking is not handicapped from the start with a large capital unrepresented by tangible assets, and although the shares are speculative, they seem good of their class.

International A.B.C., Limited.

The promoter of this scheme for transferring a French railway guide to England and calling it by the above title, must be a very simple sort of fellow if he imagines he will draw the support of investors by the information he supplies. No indication is given as to results in the past, but a good deal is said about what will be done with the help of the Franco-British Exhibition. It is possible that a good business might be done because of that, but one or even two profitable years do not make a successful company, and we should like to know what has been done under ordinary conditions. Having paid £18,000 for the property, of which about £4,000 is for tangible assets and the balance is for goodwill and copyrights, the vendor would like to have £7,500 in cash and £11,500 in ordinary shares, while the company is to saddle itself with a further unnamed amount for all liabilities accrued and accruing up to February 29, as well as to pay preliminary expenses, estimated at £1,090. The total capital is £30,000, divided into 18,500 6 per cent. preference shares and 11,500 ordinary shares of £1 each, but only the preference shares are offered for subscription, and part of these have been underwritten for a commission of 10 per cent.

Evans and Owen.—Nett profits for the twelve months ended February 20 increased by £247 to £7,004, out of which the dividend of 7½ per cent. and a bonus of 1¼ per cent. per annum are repeated. The directors then get £408 or £83 more as their share of the divisible surplus, and £330 is carried to reserve. With this addition the reserve will stand at £17,423 against a capital outlay of £50,886 and a goodwill account of £20,000. Creditors are light at £2,003, while stocks and trade debtors have risen by £1,241 to £37,063 and cash has dropped by £450 to £5,781.

Second Scottish American Trust Company.—Nett revenue from investments for the year ended March 2 was £38,877, and with £5,871 brought forward the disposable balance after providing administration expenses was £42,770. Out of this dividends aggregating 8½ per cent. for the year are paid and £8,270 is carried forward. Investments stand in the books at £501,521, and the directors state that after deducting the temporary loans of £59,004 and providing for the dividend now declared the net value of the securities is £870,832. A valuation as at March 2 gave the total as £740,345, but even at this reduced figure the securities are equal to £180 11s. 8d. per £100 stock.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for the 7 days ended March 14, $3,666, decrease $724; aggregate from July 1, $171,752, increase $42,459.

Argentine North Eastern. — Traffic receipts for week ended February 14, £4,009, increase £730; aggregate from July 1, £100,828, decrease £4,640.

Assam Bengal.—Traffic receipts for 7 days ended February 15, Rs. 94,500, decrease Rs. 10,537; aggregate from Jan. 1, Rs. 5,51,950, decrease Rs. 1,19,308.

Bilbao River and Cantabrian.—Traffic returns for February, £8,522, decrease £1,085; aggregate from January 1, £16,228, decrease £4,563.

Buenos Ayres Central.—Gross receipts for February £9,865, decrease £3,555; aggregate from Jan. 1, £81,976, decrease £2,531.

Canadian Northern Railway.—Traffic receipts for 7 days ended March 14, $132,700, increase $9,500; total from July 1, $6,637,700, increase $1.806,700.

Egyptian Delta.—Traffic receipts for week ended February 29, £5,526, increase £199; aggregate from January 1, £251,987, increase £17,075.

Lucknow Bareilly Railway.—Traffic receipts for 7 days ended February 15, Rs. 34,741, decrease Rs. 6,579; aggregate from January 1, Rs. 2,24,902, decrease Rs. 41,179.

Midland Uruguay.—Receipts for month of February, £3,000, decrease £3,573; aggregate from July 1, £45,157, decrease £3,335.

North Western of Uruguay.—Traffic receipts for Feb., $14,400, decrease $7,277; aggregate from July 1, $154,129, decrease $12,666.

Quebec Central Railway.—Traffic receipts for the 2nd week of March, $21,647, increase $7,426; aggregate from January 1, $179,626, increase $47,435.

Quebec and Lake St. John.—Traffic receipts for Jan. $36,275, increase $431, aggregate receipts $36,275, increase $431.

Rohilkund and Kumaon Railway.—Traffic receipts for 7 days ended February 15, Rs. 19,263, increase Rs. 582; aggregate from Jan. 1, Rs. 1,33,583, decrease Rs. 23,775.

Uruguay Northern.—Gross receipts for month of Dec., £1,712, increase £3; aggregate from July 1, £11,422, increase £970.

White Pass and Yukon Railway.—Traffic receipts for week ended March 7, amounted to $4,975.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending March 14, £1,279, decrease £113; aggregate from January 1, £11,695, decrease £2,877.

Cockermouth and Keswick Railway.—Receipts for week ending March 14, £658, decrease £102; aggregate from January 1, £7,154, decrease £573.

East and West Yorkshire Union Railways.—Traffic receipts for week ended March 14, £466, decrease £10; aggregate from January 1, £4,972, increase £39.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending March 11 £590, decrease £58; aggregate from Jan. 1, £5,615, decrease £475.

Blessington and Poulaphouca.—Traffic receipts for week ending March 11, £6, decrease £1; aggregate from January 1, £59, decrease £7.

Bristol Tramways and Carriage.—Traffic receipts for week ending March 13, £4,578, increase £95; aggregate from Jan. 1, £49,876, decrease £23.

British Electric Traction.—Receipts of all the Associated Companies for the week ending March 13, £26,364; 428⅛ miles.

Burnley Corporation.—Traffic receipts for week ending March 14, £1,128, increase £48; aggregate from January 1, £12,624, increase £336.

Dublin and Blessington.—Traffic receipts for week ending March 11, £87, decrease £11; aggregate from January 1, £947, decrease £3.

Dublin and Lucan.—Traffic receipts for week ending March 13, £98, decrease £10; aggregate from Jan. 1, £963, increase £25.

The Investors' Review.

The Week's Money Market.

BANK RATE 3 PER CENT. (Reduced from 3½ per cent. on Thursday, March 19.)

Norfolk House, Friday Evening.

After a fortnight of 3½ per cent. the Bank of England has lowered its rate to 3 per cent., as most people judged it must. We hope it will not be impelled by the open market to go below 3 per cent. this summer, but the Governor and his colleagues had no choice this week. Not only has the open market been taking three months' remitted bills below 3 per cent. for some time back, but early this week took courage to work freely in three months' Bank bills at 2 13/16 per cent. From that depth the rate rose again under the pressure of continued scarcity and stiff rates in the short loan market, but only for a day or so, and 2 13/16 per cent. was the current three months rate up to the moment when the Bank rate reduction was announced. After that the bill market appeared disposed to settle towards 2¾ per cent., but with hesitation, and both yesterday and to-day a good deal of business was done at 2 11/16. June maturities, in fact, could be done almost at that figure, and full three-months' bills were quoted 2⅝-11/16 per cent. in one or two places.

Money has none the less been difficult all week, and no wonder, when the Government balances have actually increased by £306,000 on the week to a total of £19,569,000. Struggle as it might against this adverse influence, the market could not reduce its debt at the Bank by more than £788,000, and has often had to renew and borrow afresh to keep itself going. Whenever it managed to pay off the day's liabilities in whole or in part it found itself in straits, and sometimes has had to pay 4 per cent. for accommodation outside. Yesterday all the large amount due was renewed and a little more taken, mostly in loans, and to-day all due was renewed and as much again taken, chiefly in discounts. It was thus merely the Bank's duty in circumstances like these to relieve the market as much as possible by lowering its minimum rate. But the reduction will not help the open market much just yet. Balances are still scarce, and although the discount houses have lowered their published rates on deposits to 1¾ per cent. on call and 2 per cent. on notice—the banks having brought their rate down to 1½ per cent.—credit users have had to go to the Bank and pay 3½ per cent. on all they renewed and borrowed, and paid 3 and 3¼ per cent. for one night loans from the joint-stock banks. This afternoon the report went round that Treasury money was being released, but the larger supply of credits noticeable was only the consequence of the morning's borrowings at the Bank and of large purchases of bills by one of the leading joint-stock banks.

An analysis of the Bank return shows that its reserve was strengthened during the week by £788,000, made up of gold in from abroad, £328,000, and coin, £287,000, and notes, £173,000, back from circulation. It has now therefore reached the comforting total of £31,279,000, but the increase had no perceptible influence on the open market supply of banking money, and could have none while the Treasury holds at least £10,000,000 more than its normal average balances. From now on, however, the Government should be paying out so as to square up accounts before the 31st. The worst of the scarcity should therefore now be past.

Lower rates, however, are driving Continental exchanges down, and putting us in mind both that we owe gold to the Bank of France still and that the Germans have been for some time past diligently putting themselves in the position to take gold from us if they should want it. The reduction in the Reichsbank's rate has done little or nothing as yet to relieve the German monetary tension, and the open market discount rate in Berlin actually hardened during the week to 4⅜ per cent. Is it the hunt after gold or the scarcity of credit money all over the empire which has lately brought a new kind of discount business to the London market? So peculiar is this new departure as to merit description. German bills, expressed in German currency and payable in Germany, are now being discounted by several of our great English banks at ½ per cent. above Bank rate, the bills being first endorsed by a London house. But the firms that back these bills do not give the German owners thereof full equivalent value in English money for the mark. An arbitrary exchange has been arranged which gives the London intermediary a considerable margin, as in the case of loans on stocks. For example, imagine a particular bill to be drawn for 100,000 marks, the par exchange value of which would be not far short of £5,000, and when it comes here for discount the remitting German bank—and the bills are all bank bills—may only get £4,000 for it. We hardly know what to say about this novelty, but it may afford means of instruction by and by, should the credits be utilised either to withdraw our gold or to sustain hollow bank positions in Germany.

About £500,000 in raw gold is due in next Monday, and will not go far even should the Bank get it all at 77s. 9d. per oz.—the current price.

Calls on new issues payable next week amount to about £1,200,000, the heaviest being £600,000 on the Copenhagen loan due Wednesday.

At a General Court of the Governor and Company held yesterday, Mr. W. Middleton Campbell, the Governor, stated that the profit for the half-year ended February 29 last, after making provision for all contingencies, was £650,704, making the amount of rest on that day £3,676,900, and that, after providing a dividend of £4 10s. per cent., the rest would be £3,022,015. The Directors therefore proposed that a half-year's dividend of interest and profits be made on April 6 next of £4 10s. per cent., without deduction on account of income-tax.

SILVER.

In addition to a moderate inquiry for spot silver from the bazaars there has been some "bear" covering and also a little buying from the Continent. Supplies were still limited, but, owing to a belief that the United States Government purchases have come to an end for the time being, America showed more readiness to sell and sufficient metal was forthcoming to meet all requirements. Prices consequently have been fairly steady, with fluctuations confined within narrow limits, and close to-night at 25⅝d. per oz. for cash and 25¾d. per oz. for delivery two months forward, or exactly midway between the highest and

lowest points touched. Messrs. Samuel Montagu and Co. give the world's production in 1907 at about 169,000,000 ozs. or an increase of about 3,500,000 ozs. over that of the preceding year.

Applications for the Rs. 20,00,000 Council drafts on India were again very small, and amounted to no more than Rs. 5,68,000 in bills and Rs. 1,00,000 in telegraphic transfers. It is curious to note that the rate offered for the latter was 1-32d. under that for the bills and only the bills were allotted, tenders at 1s. 3 29-32d. per rupee receiving in full. Next Wednesday another Rs. 20,00,000 will be offered. The Bank of Bombay has reduced its minimum rate of discounts from 9 per cent. to 8.

The Stock Markets.

After the Bank rate was brought down on Thursday to 3 per cent., everybody in the City began to say it had made no difference. Discounts dipped and then firmed up again and became just as firm, and the reduction of bankers' deposit rates to 1½ per cent. brought no money into the Stock Exchange. People are too impatient. After the experience we have gone through during the past five months, a considerable time must elapse before the public recovers its confidence, not to say its equanimity or appetite, and there is so much rickety finance about still on all markets that unstable prices are not likely to give place to steadily advancing ones until the liquidation has gone much further. For all that a 3 per cent. Bank rate will have a healing influence in many directions, and must help multitudes of those who have been struggling with more or less dangerous embarrassments to surmount their difficulties. Time given, in other words, cheap money will heal all bruises.

As yet, however, the public is neither in the mood nor in funds to an extent that could make Stock Exchange business voluminous. We can see this from the fate which has overtaken most of the recent new issues put upon the market. Even the best of them—and they have mostly been good—have been taken up very sparingly, as is shown by the fact that underwriters of the New South Wales loan had to take 60 per cent. of it, while those who underwrote the latest Grand Trunk Pacific issue have been left with 90 per cent. of it. Few people have come for the Manchester Ship Canal issue which should be a first-class security; the Cardiff Railway loan also has not been all taken by investors, and about the only new issue of the week fully absorbed is that small one for the city of Regina. But then it is a 5 per cent. loan, and the fact that it did get sold tends to show that those who have new issues to put before the public are not yet fully alive to the temper of the investing public. It wants something more than 4 per cent. for its money, and no wonder when we consider what investments at almost vanishing rates of interest in stocks, believed to be gilt-edged, have cost their owners in worry and loss. So heavy have been the proportions of new loans left with underwriters that the insurance companies who have gone past their brokers and entered into underwriting contracts directly with the issuing agents must begin to doubt whether this abandonment of the middleman to his fate is likely to be as profitable a move as it looked.

It would be vain to hope for an abatement of the new capital demands, because of the lesson conveyed by the fate of most of those securities put upon the market last week. Money must be had by all kinds of joint-stock companies, by municipal authorities and by States, great and small, under penalty of embarrassments far greater than anything which has yet come to light; so the outpouring of new securities is likely to increase rather than diminish, now that we have got the Bank rate down to what may perhaps be described as the low summer figure for this year. The London and North-Western Railway, for instance, is about to issue £2,000,000 of its 1901 preference stock almost immediately, and will offer it to the existing proprietary at 107, which appears cheap. A new County Council loan is not far off, and will probably amount to £5,000,000, while India, according to the new Budget,

is making provision for nearly £5,000,000 of new money to be raised here for its railways, besides a rupee loan of £2,000,000 to be nominally raised in India. The Transvaal must also have the balance of its £5,000,000 loan. Then there is the City of Moscow loan of about £4,000,000 to be brought out here by Messrs. Baring Bros. and Co. in conjunction with their foreign associates, and, as we mentioned a week ago, we shall probably have to provide for another issue of Irish Land stock. These are but prominent instances of the ravening appetite for more capital everywhere threatening the Money market, and as long as the demand for capital continues on the scale these instances reveal, we cannot expect any material recovery in the prices of old securities or lively times in the speculative markets.

Into the details of the week's movements it is really not necessary to go. In a hectic and hesitating way our markets have followed the lead of New York, just as those of the Continent have done. The whole world's speculation seems to hang upon the success or failure of the Wall Street magician to bring about a revival of staggering times in the United States. This is because all European markets have found themselves much more deeply committed to North American finance than they were willing to admit before the crisis broke out in New York last October. Reading the Bourse reports from Paris, Berlin or Amsterdam, even those from Vienna, one sees that the daily temper everywhere depends upon whether the Bulls or the Bears are uppermost in the Wall Street pandemonium, and any American information tending to encourage or depress the spirits of players is eagerly repeated in all Bourse organs. It may be said that the Yankee market has to-day more influence on the movements of prices throughout Europe than ever the Kaffir Circus had at its maddest, and the stories about copper have now a much greater influence than the worn-out legends floating around the Kaffir Circus.

Trustee Securities.

Prices have not been bad in the Consol market this week; in fact, all Home Government securities show a slight improvement, but Indian things have dragged a little, partly on the famine news, and the Domestic Municipal assortment has been left alone. People are waiting for new issues in that quarter. Colonial bonds have also been dull, and New South Wales 3½ per cents. show a decline of 1½ on the imperfect success of the new issue.

Foreign Government Securities.

Apart from Russian bonds, which have been lifted, mainly on the assertion of the Finance Minister, noticed elsewhere, that there will be no foreign loan this year, scarcely anything happened in this department, business having subsided to an extraordinary degree. "Never saw such a week in my life," this and the other man of the market keep saying, and yet March is almost always a bad month, one of the worst of the year, thanks to the way in which the Exchequer dries up the resources of the banks. German and Prussian stocks have been depressed by the tangled position of German finance and the urgent need of further loan money. Japanese bonds have just kept their prices, with business very restricted. A report is current to the effect that the Japanese Government intends to pay off its internal Exchequer bonds between now and August.

Home Railway Stocks.

The Home Railway market has kept its feet with difficulty, and no wonder, seeing the way traffic returns are shrinking. The *Railway News* makes the diminution for the past week £82,446, bringing up the total decline for the eleven weeks of the half-year elapsed to £345,000. On a total of nearly £21,000,000 this may not look much, but if the decline goes on, as it will, it is bound to reduce dividends unless the railway boards are able to economise to at least an equal extent by reorganising their traffic so as to avoid unnecessary duplication of trains and competition, and by introducing many administrative reforms. There has been no heavy decline this week except in South-Eastern deferred, which is down 2, but in spite of occasional efforts to brace quotations up the market has been unable quite to hold its ground, and the failure to settle the engineers' strike is a point in favour of the bears. But debenture and preference stocks have also given way, especially the preferences of the Great Central Company and the various so-called debenture issues of the Cambrian Company, which have gone down from 5 to 7½ on the demand of the board that it should get power to issue a new prior lien security. Even North-Western debenture stock has lost ground on the week and the investment market is altogether out of heart.

Indian and Colonial Railways.

The non-success of the Chartered Company's first "scheme" has had a depressing influence upon Mashonaland and Rhodesia Railway issues, which are accordingly 2 to 4 lower with hardly anybody dealing in them. Grand Trunk secondary stocks have also given way, partly on the poor success of the new Grand Trunk Pacific issue and also on the declining traffic receipts, but the lower securities are rather up on the week for all that, and Canadian Pacific shares have also been well sustained in spite of the traffic declines that company also shows. The bear account in both instances supplies the reason for this strength. In Indian Railway securities there is no business to describe.

United States and Foreign Railway Stocks.

As described under "American Business Notes," the Yankee market began the week by a fine demonstration in favour of the bulls, and in spite of the subquent recoils the effect of this was still visible when our weekly comparison was made. Even Erie preferred shares are higher than they were a week ago, in spite of the rumours about default, and the whole list shows traces of the victory of players for the rise, Baltimore and New York Central shares also being noticeably down. The improvements are not large and mean nothing but the varying fortunes of the players. Bonds, however, are higher in a fair number of instances, but whether that is due to investment or to cheaper money we cannot yet say.

As to Foreign Railway stocks they continue to be a most unsatisfactory market, and the Argentine group is about as bad as any, principally because business there is just as mean as anywhere. All the leading stocks are again £1 or so lower and Buenos Ayres and Pacific ordinary has lost 2. Elsewhere the most noticeable change is a drop of 6 each in Antofagasta deferred on Chilian influences and in San Paulo ordinary stocks on the reports of credit disasters in Rio. United of the Havana stock has also been pressed down and gets no support from investment buying in present circumstances. The only firm corner has been that for Mexican Railway stocks, in which there has been a little revival of buying for the rise. One must play in something or adopt the winter habits of the beaver.

Banks, Breweries, &c.

No change in the Bank share list has exceeded 10s. on the week. Most of them are favourable and the declines lead to no inference whatever. That said, all is said. In Breweries very few movements have taken place, but they are usually the wrong way; in fact, had it not been for a feeble rally in Cannon Brewery preference shares and in the share issues of the St. Louis Breweries there would hardly have been a favourable mark in the entire list, business being in a state of suspense pending the fate of the Government's Licensing Bill. Dock securities have been active only for London Docks deferred, buying in which has been quite vigorous, causing it to rise 3 on the week.

Commercial, Industrial and Other Securities.

Prices tend downwards in all this part of the market, with, however, movements now and then in favour of holders. Borax Consolidated preference shares and debenture stock, for example, have gained ground a little as well as the "A" shares of the Assam Rail-

ways Company, Telegraph Works shares, some of the Nitrate shares, John Moir and Company's shares, Price's Patent Candle shares and a few others. Santa Rita Nitrate shares, however, are down ¾ and the predominating mood is in favour of the bear rather than the bull. Still debentures keep up fairly well and sometimes attract buyers, but on the whole business is scanty all through the Commercial and Industrial assortment.

Electric, Financial, Gas and Insurance, &c.

Prices have been on the whole good in the Electric assortment in spite of some slight recoil here and there, the most noticeable, so far as Domestic companies go, being ½ in Westminster Electric ordinary. Notting Hill ordinary shares, however, have risen as much and the shares and bonds of Canadian companies have been sustained, the only decline amongst them being $2 in the ordinary shares of the Mexican Light and Power Company. Business has again collapsed in Hudson's Bay shares, but not the price, and, in fact, throughout the Financial, Land and Investment assortment we find nothing of interest to report, Peruvian Corporation things being dull and nothing really active anywhere. Among Financial Trusts the changes have been adverse and Bankers' preferred has suffered a decline of 3 on the week. The stocks of the Mercantile Trust have also receded further and none have improved.

Gas stocks are firm, and the three changes which a week's business has produced in the Insurance market are improvements of 10s. each in London Assurance, Ocean Accident and Royal shares.

Fractional movements are now and then to be seen amongst Iron, Coal and Steel securities, and the first charge debenture stock of the Dunderland Company is again marked up 4½, although business is never visible. Cammell, Laird's shares are weaker and the shares of Head, Wrightson and Co. have fallen back 1¼ to less than 3. Any life the market had, however, centred in United States Steel Trust common shares, which with the other speculative securities of the company continue to be screwed up from New York, and doubtless players for the rise imagined that the resolution come to yesterday at the Pittsburg meeting of iron-masters to keep prices up will help them. It won't; unless, perhaps, if Mr. Morgan succeeds in raising that £40,000,000 he is said to be in quest of in Paris for the Pennsylvania. A few adverse movements of 5s. or so are noticeable in the Shipping market and among Tea, Coffee and Rubber securities. In the Telegraph and Telephone group National Telephone preferred stock is weaker but the deferred has recovered last week's decline.

No good has come to the London General Omnibus Company's issues by its attempt to bury its past in a confusion of interests with the Vanguard Company, for the ordinary stock was put into the official list last night at 20-30 and the last quoted price was 25½. The company's 4 per cent. debentures have receded 4 against a decline of 2½ in the debenture stock of the Road-Car Company, and the shares are likewise weaker.

Friday Evening.

Stock Exchange energies were occupied to-day with the Committee election, and there were "tickets" before the members. It is estimated that 3,900 or so out of a membership of 5,300 voted.

Prices altered little. New South Wales scrip closed ½ dis. to par. Grand Trunk Pacific scrip 1¾ dis. Home Railway stocks are limp enough, Yankee stuff soft, Trunks likewise and Canadas steady. Tintos gave way and Mine shares in general an uninviting market. Even Consols failed to buck up on cheap money, and as for Foreign stocks dealers might all have gone home. Antofagasta stocks were lower on the announcement that the directors will ask for powers to increase the capital.

It is announced that the chairmanship of the Imperial Bank of Persia, rendered vacant by the recent lamented death of Sir Lepel Griffin, has been offered to and accepted by Sir Thomas Jackson, Baronet.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS.—Fall: 2½ p.c. Ann. 1905 Acct. ¼, to 85½-6, Bank of England 2, to 276-80.

CORPORATION AND COUNTY STOCKS.—Rise: Croydon 3½ p.c. 1, to 100-2, Plymouth 3 p.c. 1, to 85-7. **Fall**: Metrop. 3½ p.c. Cons. ½, to 102½-3½.

COLONIAL AND PROVINCIAL GOVERNMENT SECURITIES.—Rise: N.S.W. 1908-9-10 ⅛, to 100⅛-1⅛, Wstrn. Australia 4½ p.c. 1, to 102-4, St. Lucia 1, to 101-3, Victoria 1882-3 Lns. Ins. Stk, 1, to 100-2. **Fall**: Cape 3½ p.c. Ins. ½, to 93-4, do. Iss. Scrip ½, to 43-4, N.S.W. 1930-50 1½, to 99½-100½, N. Zealand 3 p.c. ½, to 87½-8½, Sthrn. Nigeria 1, to 96-8.

COLONIAL AND FOREIGN CORPORATION STOCKS.—Rise: Bergen (C.) 1, to 98-100, N. York 1½, to 112-5, Wellington 4½ p.c. Dbs. 1, to 104-6, Yokohama (C) 1, to 96-8.

FOREIGN STOCKS, BONDS, &c.—Rise: Argentine 1884 ½, to 100½-1½, Brazilian 1889 ¾, to 85½-⅞, do. 1895 Ln. ½, to 94-5, do. 1903 ½, to 98-9, B. Aires (Prov.) ¼, to 60-½, Chinese Silver Ln. and 1895 Gd. Bds. both ½, to 104½-5½, do. Imp. Rly. ½, to 100½-1½, Colombian Con. ½, to 42½-3½, Honduras 1867-70 both ½, to 8-½, Russian 1859 1, to 63-6, do. Nicolas Rly. 1, to 83-6, do. Transcau. Rly. 1, to 66-9, do. Series II. ½, to 82½-3½, do. III. 1, to 79-83, do. 3½ p.c. Bds. 1, to 73-6, do. 1906 Ln. ⅝, to 93-½, San Paulo 5 p.c. Exchequr. Bds. ½, to 97½-8½, Uruguay 3½ p.c. ¼, to 68¾-9¼, do. 1896 1, to 95½ 6½. **Fall**: Japan 4 p.c. Stlg. ½, to 81⅝-2¼, Nicaraguan Rlys. 1886 1, to 61-4, Sao Paulo 1, to 88-90, German Ln. ½, to 81½-2½, do. 1, to 80-2, Prussian Cons. 3 p.c. Ste. Ln. and Coups. both 1, to 80-2.

HOME RAILWAYS.—Rise: Glasgow and S.-W. Pfd. 1, to 60-2, Barnsley ½, to 46-½, S. Estrn. Pfd. 2, to 105-7. **Fall**: Barry Ord. 1, to 166-71, do. Dfd. 1, to 74-7, Caledonian Pfd. Ord. ½, to 66-7, E. Lon. ½, to 2½-3, Gt. Nthrn. "A" ½, to 37½-8½, do. "B" 1, to 143-6, N. Staffs. 1, to 92-4.

Debenture.—Rise: Sheffield Dist. 2, to 95-8. **Fall**: Cambrian "A" 5½, to 94-9, do. "B" 5, to 90-3, do. "C" 7½, to 70-80, do. "D" 5, to 50-5, Cardiff 1, to 79-81, Gt. Nthrn. 1, to 87-9, Gt. Wstrn. 4 p.c. 1, to 118-20, do. 4½ p.c. 1, to 130-3, N.-Wstrn. 1, to 90-2, Sth.-Wstrn. 3 p.c. "A" and Cons. both 1, to 89-91, Chatham "B" 1, to 113-6, Metropolitan 3½ p.c. 1, to 91-4.

Guaranteed.—Rise: Gt. Nthrn. (Ireland) 2, to 106-11. **Fall**: Gt. Estrn. Cons. Irred. 1, to 109-12, Gt. Northrn. Prp. 1, to 112-5, N.-Wstrn. 1, to 114-6, S.-Wstrn. 1, to 113-5, Midland 1, to 70-2.

Preference.—Fall: Cambrian No. 1. 3, to 25-30, City and S. Lon. 1903 2, to 106-9, Gt. Centl. 1872 2½, to 122-6, do. 1876 4½, to 115-9, do. 1879 1½, to 115-9, do. 1881 1½, to 105-10, do. 1881 4, to 75-80, Gt- Nthrn. Prp. 1, to 110-2, do. 1898-1899 both 1, to 82-4, Lancs. and Yks. 3 p.c. 1, to 82-4, N.-Wstrn. Cons. 1, to 113-5, S.-Wstrn. 1881 1, to 112-4, do. 3½ p.c. 1, to 97-100, Brighton Cons. 1, to 130-3, Chatham 2nd 1, to 34-7, Midland 1, to 69-71.

INDIAN RAILWAYS.—Rise: S. Behar 1, to 106-9, do. Deb. 1, to 89-92, S. Punjab Ord. 1, to 126-8, Nizam's Bearer Debs. 1, to 99-102. **Fall**: E. Indian "B" ½, to 24⅜-5⅜xd., do. Def. Ann. Cap. 1, to 132-4, Scinde Punjaub "B" ½, to 24½-5½, W. of I. Portuguese Guar. 1, to 89-94.

COLONIAL RAILWAYS.—Rise: Quebec Cent. Inc. Bds. 1, to 116-8, Temiscouata 1, to 101-3. **Fall**: Canadian N. (Ont. Div.) 1, to 100-2, do. 4 p.c. Perp. ½, to 95½-6½, Grand Trunk Pac. 4 p.c. 1955 and Lake Sup. Bch. both 2, to 95-7, do. Deb. Stk. 1, to 93-5, do. £25 pd. 1½, to 24-5, Grand Trunk Guar. 4 p.c. ½, to 93½-4½, do. 2nd Pf. 1, to 92-4, Mashonaland Mt. 3, to 63-8, do. Guar. 4, to 65-9, Rhodesia 5 p.c. 3½, to 73-8, do. 4 p.c. 2½, to 57-62, Atlantic and St. Lawrence 3, to 150-3.

AMERICAN RAILROADS.—Rise: Chicago G.W. Com. ½, to 4½-5½, do. Oswald.—As a "safe" investment, no; as a speculative one, yes, if you wait a bit. The prices may go down further in the present condition of the trades concerned.

B. H.—No; we think you can gain nothing by parting with your money in the manner suggested.

Investor, Glasgow.—It has some connection with the similar concern in this country, but we have been unable to get any actual figures as to results. There is a large number of shares on offer, but we cannot recommend buying without further particulars.

Deeside.—(1) There is no reason to sell these. They are being pressed down by the general tendency of markets, and there may be no appreciable recovery for some time. If you have a profit you might take it, but we never recommend sales of the kind you mention. (2) In the present state of the industry it would be better to hold off, although the shares may be worth looking at by-and-bye.

B. W. J.—(1) It should be, looking at known facts and prospects, but it must never be forgotten that shares of this kind are in the hands of very powerful groups into whose hands the seller for the fall very frequently plays, enabling them to keep the price up in defiance of statistics, revenue and everything else. (2) It seems a pity to sell just now when things are probably at their very worst, although we fear it will be a long time before any substantial recovery can be looked for.

J. E. W. N.—No; better have nothing to do with the institution named.

E. T.—There is not much use in averaging yet, as we fear the price is more likely to drop further before any recovery can be looked for.

J. D. S.—(1) No; do not average yet. The outlook for the rest of the year is not encouraging, and the price is likely to fall further still. (2) Heavy capital expenditure and smaller traffics will not help the market; still, there may be an improvement on cheaper money; if so, sell. (3) You do not say which issues you hold. Generally, there may be a rise in this market, as the country is striving to do its best, but the strain is a severe one. Sell on any appreciable advance.

T. C.—(1) There may be some recovery as we hear there is talk of repayment of some of the internal debt. Their full value is par. (2) You might hold on; if the much discussed economies are carried into effect the position should improve. (3) The outlook is unfavourable just now, but cheaper money may help things a little, and by waiting you may be able to sell at less loss. (4) We see no reason to sell this stock, it can only go higher, of course, if money continues cheap, but the interest should be quite safe. (5) Heavy capital expenditure and poor traffics are against a recovery in this stock. It is a favourite, however, and may attract buyers. If there is any sudden advance sell. (6) We do not like to advise selling now as the price has fallen so much since we wrote on February 1, but the prospects of a recovery are not brilliant. Traffics are poor and likely to continue so for the present. (7) Nor can we say sell this; there may be a stimulus given to the receipts during this summer, but the company's financial position is feeble. (8) We cannot guess, but if such were to happen it would not be less than $10 per share. They are nothing more than a gambling counter. (9) No, they may rally and go higher. (10) By doing as you suggest you realise a certain loss now, with comparatively small chance of making it good more rapidly later on. Better sit still.

Dee Don.—(1) The directors have made a move in the right direction, and we see no objection to a small purchase. You must, however, remember that the dividends are not all income, but in part represent return of capital, so your shares should be written down regularly. (2) There are one or two promising assets among this company's holding, but the times are against it. If it can hold out there should be some recovery. (3) It never pays to buy stocks on margin and continue to hold, but we dare not advise you to sell just now in spite of bad traffics, because money is cheap and may help the market.

H. H.—Last year was a good one for the company, but the immediate prospects of the industry are not encouraging. You must remember the property is a wasting one. We do not think you should hold the shares as an investment.

NEXT WEEK'S MEETINGS.

Monday, March 23.

British Insulated and Helsby Cables.—Liverpool, 12.30 p.m.
Paquin, Limited.—Cannon Street Hotel, noon.
Peter Jones.—31, Symons Street, S.W., noon.
Seafield Rubber.—10, Lime Street, E.C., noon.
Sir William Arrol and Co.—Glasgow, 2.30 p.m.

Tuesday, March 24.

Albion (Transvaal) Gold Mines.—Salisbury House, noon.
Desford Coal.—Manchester, 12.30 p.m.
Egypt and Sudan Mining.—6, Queen Street Place, E.C., noon.
Great Western Cotton.—Bristol, 1 p.m.
Harries (T. J.) and Co.—Hotel Great Central, 3 p.m.
John Moir and Son.—9 and 10, Great Tower Street, E.C., 2 p.m.
London Road Car.—Cannon Street Hotel, noon.
National Bank of India.—Bishopsgate Street Within, E.C., noon.
North Metropolitan Electric Power Supply.—107, Finsbury Pavement, E.C., noon.
Webley and Scott.—Birmingham, noon.

Wednesday, March 25.

Achille Serre.—Great Eastern Hotel, 2 p.m.
Bon Marché.—442, Brixton Road, S.W., 3 p.m.
British Gas Light.—11, George Yard, E.C., noon.
Canada Company.—1, East India Avenue, E.C., 1.30 p.m.
English and Scottish Law Life Assurance.—12, Waterloo Place, S.W., 3 p.m.
Indemnity Mutual Marine Insurance.—Winchester House, noon.
Jay's, Limited.—Swallow Place, W.
London Assurance.—Royal Exchange, noon.
London Guarantee and Accident.—Winchester House, 11.30 a.m.
Nicholsons.—68, Paternoster Row, E.C., 11 a.m.
Nundydroog Company.—Cannon Street Hotel, 12.30 p.m.
Tredegar Dry Docks and Wharf.—Winchester House, 2.30 p.m.
United Collieries.—Glasgow, noon.

Thursday, March 26.

African Steam Ship.—17, Leadenhall Street, E.C., 1 p.m.
Bank of Australasia.—4, Threadneedle-street, E.C., 1 p.m.
British American Land.—Salisbury House, 2 p.m.
British Bank of South America.—2A, Moorgate Street, E.C., 12.30 p.m.
General and Commercial Investment Trust.—Cannon Street Hotel, noon.
Metropolitan Electric Tramways.—Salisbury House, noon.
Montevideo Waterworks.—52, Moorgate-street, E.C., noon.
Muntz's Metal.—Birmingham, noon.
North British Railway.—Edinburgh, 12.30 p.m.
Roburite Explosives.—103, Cannon Street, E.C., 2.30 p.m.
Second Scottish American Trust.—Dundee, noon.

Friday, March 27.

American Investment Trust.—Cannon Street Hotel, noon.
Clifton Angoria Copper.—Salisbury House, 10.30 a.m.
Dominion Atlantic Railway.—Threadneedle Street, E.C., noon.
Foreign, American, and General Investment.—Cannon Street Hotel, 1 p.m.
Owen Owen, Limited.—Liverpool, 10.45 a.m.
Stewart and Lloyds.—Glasgow, 12 45 p.m.
Sweet and Maxwell.—3, Chancery Lane, W.C., 2 p.m.

Books Received.

Insular Free Trade, Theory and Experience. By Russell Rea, M.P. (London: Cobden Club, Caxton House, Westminster, S.W.).

India and the Empire. A Consideration of the Tariff Problem. By M. de P. Webb, C.I.E. (London: Longmans, Green and Co., 39, Paternoster Row, E.C.). Price 3s. 6d. nett.

The Hon. J. H. Turner, the Agent-General for British Columbia, cabled to his Government asking if there was any truth in the report to the effect that the Lieutenant-Governor of the Province, the Hon. James Dunsmuir, had resigned, &c. This morning came the following reply: "Absolutely no foundation for report."

Meetings have been summoned for Tuesday, March 31, at noon, in Winchester House of the debenture stockholders of the Cordoba Central Railway Company, and of its two dependencies—the Central Northern and North-West Argentine Extension—with a view to accept and render effective the new scheme proposed by the board for the reorganisation of the capital and consolidation of its various fragments. Every person interested is familiar enough with the details of the proposed changes, and we need not repeat them here, but as far as we can judge it may be said that the proposed arrangements cannot hurt any section of the company's creditors or shareholders, and may possibly do them good.

The balance-sheet of the Banco de la Nacion Argentina to February 29 gives capital £9,375,928, the deposits (general) $3,739,393 gold and $203,404,808 paper, equivalent to £18,647,501. Discounts and advances are $2,093,796 gold and $212,801,985 paper or together £19,145,334, and reserves in cash $16,220,634 gold and $52,507,529 paper or £7,864,789. The conversion fund to-day is $21,500,000 gold in the Banco de la Nacion Argentina and $125,180,776 gold in the conversion office, equal to £29,336,155. This fund guarantees the legal currency of $577,762,622, which at the conversion law rate of 44 gold cents to the paper dollar equals £50,843,110, and the reserves are thus over 57½ per cent.

Company Reports and Balance Sheets.

**** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to ensure prompt notice in these columns.*

NORTH BRITISH RAILWAY.

In its half-year closed January 31 last this Scotch company's gross income amounted to £2,449,572 or £47,543 more than in the corresponding half of the previous year. Working expenses, however, took £53,548 more, so that there was a sensible decrease in the nett income, everything allowed for. It, in fact, came but to £1,059,950 against £1,065,955 twelve months before, working expenses having absorbed £1,389,621 or about 56.73 per cent. of the receipts. As usual, locomotive power showed the heaviest increase and took £57,254 more, and there was an increase of £10,413 in the cost of maintenance, otherwise the expenses did not mount in a way matching that of some of the company's English neighbours. Repairs, for instance, increased by only £7,313 and traffic expenses by £5,138, while there was actually a decrease of £27,122 in compensation. The total outgoings, in fact, were remarkably low in the circumstances. Out of the free income left after fixed and preference charges had been met the board squeezes a dividend at the rate of ¼ per cent. per annum on the ordinary, or, as we should call it, the deferred stock, as against ⅛ per cent. rate at the corresponding date, and has £11,190 left to carry forward against £15,259 brought in. We venture to think that half-crown thus thrown away might have been kept in the treasury, even although it does mean only £14,988. But the board may have had an eye to contingencies, for the capital account is in an uncomfortable state, although last half-year's expenditure was only £168,009, of which £55,977 went into new working stock and £93,898 into lines open for traffic. At the end of January, however, capital was overdrawn by £2,238,560, and this necessitated loans from the company's bankers to the tune of £1,061,541, the company possessing only £795,502 of trust moneys against its deficiency. Doubtless the £708,730 due on sundry outstanding accounts embraces further drafts of some sort upon borrowed capital. No wonder, therefore, that a fresh issue of preference stock had to be made before dividend day came round. With that issue taken in relief, of which, by the way, there is no mention whatever in the stereotyped, meagre report, the capital account will still be heavily overdrawn above and beyond the amount furnished by the trust moneys in hand. The total capital sunk in the undertaking to-date is £68,652,583, of which £8,213,442 has gone into new working stock. The dividends are payable on April 10.

HONGKONG AND SHANGHAI BANKING CORPORATION.

Nett profits for the half-year ended December 31 last, including $1,797,168 brought forward, came to $4,942,974, or an increase of $509,872 on the figure for the second half of 1906. Out of this $500,000 is placed to the silver reserve, which also receives $1,250,000 from the premium on the recently issued new shares, so that its total is now brought up to $13,500,000. Nothing is added out of profits to the sterling reserve, but it gets £500,000 out of the same premium money, and now amounts to $15,000,000 or £1,500,000 at the exchange of 2s. per $1. This is an amount identical with the paid-up capital. The balance left for the shareholders after the assignment to the silver reserve and payment of the directors' remuneration is $4,427,974, out of which a dividend of £2 per share is declared on the old shares and a proportionate dividend of 30s. per share on the new shares. This, at 1s. 9¾d., the rate of exchange of the day, will require £220,000 or $2,427,586, leaving $2,000,388 to be carried forward or $203,220 more than was brought in. Among the liabilities in the balance-sheet a decline of about $365,000 is shown in the note circulation of $15,711,147. Current account deposits, gold and silver together, are $21,935,000 up at $126,957,000, and fixed deposits, also gold and silver, are about $2,933,000 higher at $97,120,415, but bills payable show a decrease of $2,403,183 at $11,475,783. Outside the balance-sheet there was at its date a contingent liability on bills rediscounted amounting to $7,322,443, of which $4,923,763 has since run off. Changes in the assets are interesting and suggestive of continued prosperity. Cash is entered at $40,509,000 and $10,000,000 in coin is lodged with the Hongkong Government against the note circulation. Bullion in hand and in transit amounts to $4,132,000, and the investments in Indian Government rupee paper and in Consols, Colonial and other securities are respectively given at $2,015,392 and $6,403,912, both slightly less, no doubt, because further written down. These, however, are quite distinct from the sterling reserve fund investments amounting to £1,500,000, Consols in that connection being taken at 82 and the War Loan at 90, while £325,000 of other sterling securities are written down to rather less than £280,000, all of which is most commendable. Bills discounted, loans and credits are up $8,558,420 to $101,598,166, and bills receivable are $18,972,000 up at $118,006,643, the total of the balance-sheet being $35,359,000 higher at $299,457,000.

THE BANK OF AUSTRALASIA.

This company's half-year ended on October 14 last and the nett profit for that period, including £17,325 brought forward, shows an increase of £35,213 at £223,075. Actually the profit of the half-year, including some recoveries from old accounts, was £35,241 up at £205,750. The directors pay the usual dividend at the rate of 12 per cent. per annum and in addition a bonus of 8 per cent. per share, also customary, add £60,000 to the reserve fund against £30,000 a year ago and apply £18,000 in reduction of cost of bank premises, or £6,000 more, again giving £17,000 as a bonus of 10 per cent. on their salaries to the staff, and still have £16,075 or only £1,275 less left to carry forward. The board proposes to call an extraordinary general meeting in order to amend the present deed of settlement in many of its provisions, which are said to be quite out of date. The balance-sheet, which totals £22,444,525 or £279,599 more, shows an increase of £35,421 in the note circulation of £505,428, but deposits are down by £122,500 to £15,879,335, against which bills payable show an increase of £207,465 at £2,861,588. Of the reserve fund of £1,470,000, £500,000 is invested in Consols at 80. Specie, bullion and cash balances on the assets side show an increase of about £293,000 at £3,758,936, but short loans are less by £1,169,000 at £967,895. British Government securities amount to £927,586 or a decrease of £39,556, and Indian and Colonial Government securities and other investments figure at £778,784, while the bills receivable, advances on securities, &c., amount to £15,771,653, being an increase of £611,102 on the total for the corresponding period. The bank premises are less by nearly £30,000 at £239,572. Working expenses show an increase of £9,625 at £160,350, this total including £22,470 of Colonial and British rates and taxes.

NATIONAL BANK OF INDIA, LIMITED.

The past year was a very profitable one for this old bank, and its 81st report shows a revenue of £409,447 or £59,273 more, while expenses were only £10,129 up at £167,703. Including £122,165 or £53,100 more brought forward the disposable balance amounted to £363,909 compared with £261,665, but the directors put nothing to reserve against £25,000 a year ago, probably because that fund now equals the paid up capital. Nor do they increase the dividend beyond the 12 per cent. paid for the previous 12 months, so that after writing another £10,000 off house property and transferring an extra £2,500 at £10,000 to pension fund they find themselves still with £271,909 to deal with. Of this they propose to capitalise £200,000 by the issue of 16,000 bonus shares of £25 each, credited with £12 10s. paid up in the proportion of one share for every three held. Liabilities on current and deposit accounts are £777,302 higher at £10,583,705, bills payable have risen by £35,469 to £474,541, and acceptances with their per contra entry stand at £827,018 or £147,097 more, but loans against securities have been reduced by £370,000 to £500,000, and the adjustment account is £16,325 smaller at £463,025. On the credit side the largest movement is an advance of £606,030 to £6,421,899 in discounts and loans, &c., while Indian Government Rupee securities are £184,430 up at £483,773. An increase of £131,739 to £2,195,974 in cash on hand and at bankers is neutralised by a reduction of £210,403 to £266,589 in bullion in hand and in transit, Consols and other investments are £47,528 lower at £618,341, and bills of exchange come to £64,673 less at £3,388,920. The adjustment account is also lower at £101,710, and there is a small decrease in house property at £71,974, the aggregate of the balance sheet being £14,376,199 compared with £13,650,411.

BRITISH BANK OF SOUTH AMERICA.

In its year ended December 31 last this bank must have done a prosperous business. Gross profit came to £261,065 after deducting rebate, interest on deposits and on the 15,000 new shares up to December 31 last. This is an increase of £24,079 on the figure of the preceding year, and £7,571 more was brought forward at £35,791. The directors are therefore able to again place £50,000 to reserve over and above £60,000 added to it out of the premium of £4 per share received upon the 15,000 new shares issued, £10 on which was called up during the year. This leaves 10,000 shares still to issue. Thanks to these additions, the reserve is now £535,000. Other allocations are £5,000 to bank premises, £5,000 to pension fund, £5,000 in reduction of cost of investments, and £5,000 bonus to the staff, or £20,000 in all set aside. Then a final dividend of 12s. per share, making with the interim 20s. for the year, plus a bonus of 2s. per share, is declared on the original shares or 11 per cent. for the year, leaving £47,800 to carry forward or £12,009 more than was brought in. The bank's liabilities on current and deposit accounts are £123,041 up at £4,597,408, but in bills payable there is a decrease of £20,100 at £3,578,737. In other liabilities and credit balances, however, there is an increase of £38,292 at £1,044,173. Cash is down £54,377 at £1,836,753. Bills receivable are £533,888 higher at £4,163,059, and other assets and debit balances are down £55,025 to £4,390,881. Bank premises have been brought down to £119,847 by £5,783 written off, less expenditure. The total of the balance-sheet is £10,519,538.

DEUTSCHE BANK.

Bigger and bigger grow the figures of this bank with each recurring year. In their report for 1907 the directors state that deposits were increased last year by £4,750,000, and they warrantably took this as welcome evidence of the confidence the bank enjoys. We can only make the increase £683,000, taking the items "current accounts and deposits" together, but the directors probably refer to the fixed deposits alone, which are not stated separately in the translated balance-sheet. Taking the two together the total is now £63,220,286, and the aggregate of the balance-sheet is up £2,043,407 to £81,586,602, this, as usual, being exclusive of a contingent liability on guarantees amounting to £3,919,402 or £242,797 more than a year back. Bills payable amount to £13,176,893. On the assets side of the balance-sheet cash is about £37,000 down at £4,311,405, and Stock Exchange loans show a decrease of £3,010,000 at

£7,747,000 or thereby. Advances against collateral security have, however, increased by £1,399,000 to £23,577,000, and bills receivable and Treasury bills together show an expansion of £4,553,000 at £31,573,000. Compared with these great items the other entries on the assets side of the balance-sheet are in a manner insignificant, although debtors on current account owe the bank £7,323,000 and it has lent £3,443,000 on goods, &c. Its participation in syndicates amounting to £2,671,394 is about £404,000 higher, a remarkable fact in view of the tendency of business enterprise to subside throughout a greater part of the past year. The most impressive lesson on a balance-sheet like this, however, is a negative one, viz., the absence of evidence that the great bulk of the bank's business is directly concerned with commerce. It seems to be much more occupied with promotions and with investments tending to extend its influence as a financial intermediary and with support of the business of dependents. Thus it holds £4,112,000 in the shares of allied banks or £113,000 more than it did a year ago, and apparently these banks are all prospering, no fewer than 15 of them, besides the company called the Deutsche Treuhand-Gesellschaft or Truehanded Company, which paid 15 per cent. for 1906. None of the 15 banks the Deutsche has put money in pay less than 4 per cent. and two of them yielded as much as 9 per cent. for that year. The gross profits of the year amounted to £2,678,928, including £55,790 brought forward, and this seems to be an increase of about £177,500, but the staff has been increasing, and no doubt its pay likewise, so that the current charges, including £119,196 for rates and taxes, show an increase of about £93,000 on the year at £1,003,608. The nett profit is therefore only about £58,600 higher at £1,515,959. It is great enough, however, to enable the directors to pay a dividend of 12 per cent. Then £91,596 is added to the reserve bringing it up to £5,091,596 or 50.91 per cent. of the paid-up capital, and £45,161 goes to the directors. Furthermore £122,500 is given to the superannuation fund and as gratuities to the staff, leaving £56,702 to be carried forward, all which is very comfortable. It is interesting to note that the average discount rate of the Reichsbank was 6.03 per cent. last year or .89 per cent. more than in 1906 and that the average open market discount rate in Berlin rose from 4.04 per cent. in 1906 to 5.12 per cent. last year. For Stock Exchange loans against first-class securities the average rate received by the Deutsche Bank was 5.78 per cent. last year compared with 5.12 per cent. the year before, and the higher rate of interest increased its profits by more than £200,000, which fully compensated it for the reduction in earnings from Stock Exchange and syndicate business.

SWISS BANKVEREIN.

A brief notice of this company's report for the past year appeared in our issue of March 7. The summary in English of its 36th annual report covering 1907 has since reached us and contains much interesting information. Perhaps the most pleasant fact recorded relates to the wind-up of the Basle branch of the Swiss National Bank, a new institution which began business on June 20 last and has absorbed several other banks preparatory to becoming the official bank of the federation. The Swiss Bankverein held practically the whole capital of the Basle Bank and the liquidation has been most satisfactory, a final distribution of fcs. 1,105.70 per share having been provided for on December 28 last. As a permanent memorial of the vanished institution which for more than half a century has rendered the city of Basle valuable service, the board of the Swiss Bankverein has handed over £4,000 from the proceeds of the liquidation to the Society for the Promotion of the Common Weal, the interest on which is to be devoted to the furtherance of commercial education in the city. Like most Continental banks, the Swiss Bannverein was interested in many new issues during the past year, and apparently the results of this and other business were successful, although the gross profit of £376,537 was £11,359 down. Working expenses and taxes took £5,474 more at £117,025, while £29,913 was written off or held in reserve against bad and doubtful debts, less return of amounts previously written off. This is £15,358 more than the similar allocation a year back, but this time nothing is added to the pension fund or the reserve for syndicate engagements against respectively £8,000 and £24,000 a year ago. The bank, however, is strong, as its balance-sheet total of £14,605,000 indicates, and pays an 8 per cent. dividend as before, besides giving £28,700 to directors and managers, after the in many ways praiseworthy Continental custom, leaving £10,760 to be carried forward against £10,821 brought in. The liability on current account is £5,745,365 and on fixed deposits £1,920,626, while bills payable and acceptances classed together amount to £3,493,249. Cash and coupons, &c., stand among the assets for £385,887, and money with other banks and bankers is £640,608, while bills receivable amount to £2,786,713, loans at short date to £2,489,349, and loans on current account to £6,559,640. Permanent investments amount to about £361,000 and investments in Government and other railway securities to £843,000, while the bank's participation in syndicates rather exceeded £395,000. Premises and other property are valued at £143,800, bringing the total up to the figure named.

VICKERS, SONS AND MAXIM, LIMITED.

Year by year the profits of this great corporation continue to expand, and on the whole its finances seem to be carefully looked after, which is the more necessary because the business is of a kind that must involve great risks in many directions. The company, for instance, has now no less than £3,399,075 sunk in subsidiary undertakings, this being £1,054,417 more than the similar total at the end of 1906. And it is launching out in various directions, especially in Japan and Italy, but the principal cause of this important increase lies in the necessity the parent company was under of financing the Beardmore Company of Glasgow. Originally it was intended that the further capital required by that company should be issued by it direct, but the stringency of the money market did not allow this course to be adopted, and Vickers, Sons and Maxim had to provide the money itself. Further sums have also been advanced to the Wolseley Tool and Motor Car Company, and, of course, the branch undertakings in Japan and Italy required capital, while money invested in the Whitehead Torpedo Company had to be replaced. Thus the interests of "Vickers" in a variety of other undertakings continue to expand. In the past year, however, the profits were brought out at £768,525, and from this £150,000 has been written off against goodwill and patent rights, now brought down to the insignificant-looking figure of £100,000. To the balance of £618,525 left the sum of £218,801 brought forward from 1906 has to be added, giving a distributable total of £837,326, and from this a preference dividend has been met, the debenture interest and depreciations having been provided for before the profit was declared, while the ordinary shareholders receive in all 3s. per share or 15 per cent. for the year, of which 1s. was paid six months ago. This leaves £211,076 to be carried forward. A comparison of balance-sheet figures indicates that the mortgage debt continues to be reduced, and its total of £2,100,315 is £55,395 less than that of a year ago. The company, however, owes £210,337 more to various creditors, including deposits and bank overdrafts, the total of which is now £1,111,321. Additions to the buildings, lands, machinery plant, less depreciation, the amount of which is not mentioned, came to £121,073 last year, bringing the total of this entry up to £3,236,402. Stocks at £1,100,959 show an increase of £252,836, and cash and bills in hand come to only £97,844 against £1,103,163 a year back, but presumably the company at that time had a large amount of money waiting to be placed amongst its dependents. Book debts are down £125,185 to £1,063,550. It may be added that the goodwill has been written down by no less than £537,457 within a period of four years. The total of the balance-sheet is now £9,028,337.

SIR WILLIAM ARROL AND CO., LIMITED.

The directors of this engineering business do not overburden their report with too many details about the work they have in hand, but it is well known that they have at least one big contract in the widening of Blackfriars Bridge. In spite of that, however, trading profits in 1907 fell off by £2,467 to £36,711, but £9,748 or £1,273 more was brought forward, so that the nett decrease was only £1,194 at £46,459. Out of this an extra £474 at £6,525 is put to depreciation fund and £1,813 or £291 less goes to reserve fund in terms of the articles of association, and 15 months' dividend on the preference shares takes £8,100. The dividend on the ordinary shares is, nevertheless, maintained at 10 per cent., but the dividend equalisation fund gets nothing against £3,000 a year ago and £8,678 is left to be carried forward, which is really an increase of £617 owing to the way in which the preference dividend payments are set out in the reports. Total accumulations now amount to £67,951 or £8,338 more, but on the other hand ground and buildings are £6,174 up at £97,160 and plant, &c., has risen by £4,831 to £135,333. Stocks are valued at no more than £13,165, cash is £4,688 smaller at £1,513, and investments have been reduced by £2,320 to £32,452, but debtors owe £67,099, and current contracts, less payments on account, come to £99,070 or £34,324 more against liabilities to sundry creditors of 26,433.

LONDON ROAD CAR, LIMITED.

Nothing could better illustrate the unhappy position into which transport companies have been forced by the keen competition which has prevailed between rival undertakings, tube railways, &c., than the report of this company for the half-year ended December 31. During that period the company had on an average 270 horse and 160 motor cars running daily compared with 333 and 78 respectively a year ago, and carried 4,097,071 more passengers at 40,499,532. Unfortunately, however, there was a falling off in earnings per car mile run of over 1d. per mile in the case of the motors and ½d. per mile in the case of horse cars, a decrease which the directors ascribe in part to the unseasonable summer and in part to the growing competition of trams, 'buses, and tubes. With the larger number carried passenger earnings rose by £19,678 to £223,688, but working costs were no less than £43,244 up at £248,402, owing to the larger number of motor cars in use. The cost of keeping the cars in proper running order seems to be out of all proportion to their earning power under conditions which prevailed until near the end of the year, and apparently the directors are doubtful whether the agreement to raise fares will provide any adequate remedy. Of the increase in expenses just mentioned general repairs contributed £35,846 and road charges went up by £8,541, but an advance of £9,553 in motor fuel and lubricants under the head of maintenance was in great measure offset by reductions in the cost of forage, bedding, &c. Revenue from advertising on cars was nearly £500 better, but interest on investments dropped by £946, and the jobbing department resulted in a loss of £292 owing to the competition of the motor cab. After providing £650 for leases and buildings renewal fund and £563 for depreciation of plant the loss on the half-year's working amounted to £17,744, and although the debenture interest and a full year's dividend on the preference shares is met by withdrawing £8,858 from reserve the deficit is increased from £7,003 to £20,468, without any provision having been made for depreciation and renewal of

chassis. The substitution suspense account was debited with £27,924 for book value of horses, cars, &c., put out of service and £244 for cost of training drivers, and credited with £3,911 for horses sold, leaving a balance of £115,193. A year ago this balance was only £56,847, so that the change is proving an exceedingly costly business, and the prospects of the company being able to re-establish its financial position out of revenue are growing steadily more remote. The capital account shows an apparent credit balance of £76,215, but the directors are perfectly frank in this as in all else, and admit that this balance is subject to amounts aggregating £151,680 which have been transferred to substitution account, and that so far from there being anything in hand the company has overspent its capital by £75,465.

METROPOLITAN ELECTRIC TRAMWAYS.

For 1907 this company's gross revenue was £297,223, including £27,476, being the balance of the dividends received in 1906 from the North Metropolitan Tramways Company and reserved. This money it has now decided to spread over the period ending June, 1910, during which time the company would have continued to receive dividends from the North Metropolitan Tramways Company but for the surrender of that company's lease to the London County Council. In pursuance of this resolve only £7,850 is brought into last year's profit and loss account. Traffic receipts came to £244,200 or £64,600 more than in 1906, and after meeting all revenue charges including £10,500 for reconstruction and renewals, besides writing down preliminary expenses, &c., by £6,221, there is a surplus left of £53,365, including £3,791 brought forward, out of which the preference shares dividend is met and 4½ per cent. per annum distributed on the ordinary shares, being ½ per cent. more than a year ago and 1½ per cent. more than two years ago. £5,000 is also added to the reserve, and that leaves £5,755 or £1,964 more to be carried to the new year. The company's lines expanded from less than 30 miles at the end of 1906 to nearly 41 miles at the end of last year, and the receipts went up to an almost corresponding extent. Earnings per car mile also rose by 0.79d. and passenger by 0.03d., the total number of passengers carried being 48,242,444. Since the close of the financial year the board has issued another £173,800 of its 4½ per cent. debenture stock, and this will bring the total of its debenture debts up to £600,000, including £76,200 of stock carrying 3½ per cent. until the beginning of next year when it becomes 4½ per cent. In addition the company owes £84,000 to its bankers and £20,000 to the B.E.T. Company, representing £22,161 worth of Consols lent by it to the Metropolitan Electric Tramways Company to be deposited with the County Council. Also it owes £10,500 lent to it by the North Metropolitan Electric Power Co., so that its floating debt is in all £114,500, besides £51,694 due to sundry creditors. Capital expenditure on the undertakings and their equipment amounted to £124,568 last year, bringing the total up to £1,656,448 against which shares in the North Metropolitan Tramways Company and debentures in the Harrow Road and Paddington Company to the amount of £276,215 have been written off, leaving the nett expenditure at £1,380,233, but in addition £381,561 has been paid out on the power supply undertaking or, after certain adjustments, about £375,000, the company having increased its investment in shares against loans and advances to the North Metropolitan Electric Power Company. Preliminary expenses now stand at £54,751 and cash at £7,988. Amongst the year's earnings is £12,285 to be received from the Electric Power Supply Company as dividend on the shares held by the Tramways Company.

LANCASHIRE UNITED TRAMWAYS.

How a year-old report of this company reached our hands a week ago we cannot tell, but finding it among a heap of reports sent in for analysis, and never having had it before, we naturally concluded that the document, which was for 1906, was the latest issued, and noted the fact. Now the secretary of the company sends us the report and balance-sheet for the past year issued last month, with the remark that "a mistake has evidently occurred somewhere." It has; but as we had seen only the one copy dealt with we fear the papers for the two years got mixed somewhere else. Be that as it may, we are now able to fill the blank. Profits for the past year amounted to £12,789, which was enough to meet the prior lien debenture stock interest, with £289 left over, which together with the £317 left the year before has been written off the loss on the sale of motor omnibuses. Gross receipts were £69,347, including £2,744 "miscellaneous" and working expenses, general charges, and rents took £56,499. Receipts per car mile, though only 7.56d., are the highest as yet attained. The miles worked still stood at 74. Short distance return fares for workmen have been introduced, and helped to add over 100,000 to the number of passengers in January last compared with January, 1907. Cost of shares, &c., bought has risen by £14,000 to £707,298 during the year.

D. H. EVANS AND CO., LIMITED.

This well-known drapery business made a gross profit of £170,457 in the year ended February 19 last. Expenses of all kinds took £92,855 of this and £8,919 was absorbed in repairs, depreciation, interest on debentures, &c., so that £68,683 was left, out of which the preference and ordinary share dividends have been paid, the ordinary getting 7 per cent. as usual, and after 10 per cent. of the balance of £47,883 has been put aside to reserve as usual, £43,005 is left to be halved between the holders of the founders' and the ordinary shares, the founders' getting £11 per share out of this and the ordinary an additional 15 ½per cent., which when distributed will leave £514 to be carried forward on behalf of the founders' shares and £15,914 for the ordinary shares. The free nett profit was £4,981 greater or just about the amount of the increase in the gross trading profit. The property, leases, and goodwill have been increased by £40,674 to £389,470, and plant, less depreciation, is £2,334 up at £38,870, stock being also £13,443 higher at £119,689. Cash is £52,478, debtors owe the company £56,812, and the company owes sundry creditors £48,790. The reserve stands at £110,041.

G. BEER, LIMITED.

When this business was sold to the company in November, 1903, we could find no adequate reason for the conversion, but the vendor evidently knew his own affairs best, and chose the most favourable opportunity possible for disposing of it. Profits had risen to £54,200 in the year immediately preceding the sale, and the price asked for goodwill was based on that figure, with the result that tangible assets formed only about 40 per cent of the total capital. The performances of the company, however, since the public acquired the shares have never come up to anything like the results paraded in the prospectus, and the business seems to be dropping backwards at an even more rapid rate than it went up. Even in the first year the profits showed a shrinkage of about £9,000, and by the end of 1906 there was a further drop of about the same amount. In the twelve months ended November 30 last the decline proceeded at a still more rapid rate, and the nett profits, including a tiny sum from interest and transfer fees, dwindled to £27,923, so that in little more than four years the profits have been cut almost in half. The two managing directors' salaries and commission took £618 less at £6,763, and as French income-tax had only to be paid for one year as against three there was a reduction under this head of £1,849 at £728, but after providing for administration charges and sinking fund for redemption of leases the surplus was £5,704 down at £15,644. Adding £3,655 or £548 more brought in the directors had £19,299 to deal with against £24,455, and as preference dividend with £1,000 for income-tax will absorb £17,800 the reserve gets nothing compared with £3,000, and the sum carried forward is reduced by £2,156 to £1,499. Apparently the London branch has not proved remunerative as it has been given up, but we imagine that event took place after the accounts were closed as the property account at £389,112 is only down by £1,090, representing the difference between the expenditure for the year and the allowance for depreciation. Sundry creditors are £5,737 up at £22,276, and sundry debtors in spite of the dwindling profits have risen by no less than £16,174 to £109,886, but stocks are £5,678 smaller at £18,668 and cash comes to £5,496 or £3,945 less.

PAQUIN, LIMITED.

This business just about held its own last year, the increase in nett profits being no more than £862 at £116,001, but £28,164 or £2,316 more was brought forward, giving a total of £144,165 to be dealt with. Of this another £50,000 is applied in reduction of goodwill, making £100,000 written off that item in two years, then £8,662 is put to reserve, and £5,448 to ordinary shareholders' undivided profit account, and as the dividend of 10 per cent. on the ordinary shares is repeated the directors are entitled to £1,000 as extra remuneration, leaving £32,612 to be carried forward. A year ago £20,000 was taken from the undivided profits account to give the ordinary shareholders an additional 8 per cent., but the directors go one better than that and appropriate £25,000 to bring the bonus up to 10 per cent., making a total distribution of 20 per cent. for the year. Property and goodwill now stand at £289,276, but we imagine that a further considerable amount will have to be written off before this item can be regarded as reasonably valued. Reserves, on the other hand, owing to the present policy, come to £117,134 or £10,890 less, and of these no more than £39,356 is represented by investments. Liabilities to sundry creditors have increased by £1,485 only, and are comparatively light at £21,014 against a rise of £31,696 to £273,013 in sundry debtors and cash and bills in hand amounting to £61,423.

BRITISH INSULATED AND HELSBY CABLES, LIMITED.

This North of England business did less well last year, and its report for 1907 shows a decrease of £61,493 in the profit, which came to only £135,620. The amount brought forward, however, was £26,283 more at £36,713, and the directors are accordingly able again to place £22,000 to depreciation account and £10,000 to the reserve fund, but there is no allocation this time to the patents and goodwill account, which last year got about £27,000 from profits and £70,000 from reserve, bringing the total down to £150,000. £5,000, as usual, however, is transferred to debenture stock redemption account, and the dividend on the ordinary shares is made up to 8 per cent. for the year with a bonus of 2 per cent. added. After this £28,335 is left to carry forward or £8,378 less than was brought in. In these circumstances the bonus might well have been omitted, but the directors say that the work done in heavy cables was not so great owing to the high price of copper in the early part of the year, and that the financial stringency affected profits also in the end of the year. In the balance-sheet sundry credits and bills payable amount to £60,805 and the reserve is brought up to £100,000, while the debenture stock redemption account is raised to £30,000. Assets consist principally of the property, leasehold, freehold, plant, machinery, &c., brought up to £408,243 by a nett addition of £6,388 after allowing for the above-mentioned sum in depreciation and of stocks and work in progress, higher by £20,000 at £345,044. Then debtors owe the company £276,804 or £216,000 more than the company owes to its creditors on current account. Investments at cost have been raised by

£12,661 to £507,011, much of this presumably representing work paid for in paper, but some of these changes are probably the result of the incorporation of the Telegraph Manufacturing Company (Colonial), Limited, with this company on November 30 last, the balance-sheets being now amalgamated. Cash and bills receivable amount to £113,927 or £12,860 more.

JOSEPH TRAVERS AND SONS, LIMITED.

What can have happened to this once magnificent business, still the greatest wholesale grocery business in the kingdom? There must be something wrong outside the record of the directors' report and balance-sheet, for last year's trading profit was brought down to a very minute figure, in fact, after paying interest on debentures, bankers' loans and money on deposit, together with sundry allowances for depreciation, the amount carried to the balance-sheet as clear profit was only £1,677, the trading profit being £24,090 less than that for the year ended January 31, 1907, at £18,878. The previous year, however, showed an increase of £13,688 on the profit of the year before. How the board contrives to find the profit out of which to pay the dividends declared we do not understand, in spite of the fact that £620 of other income was available, together with £11,228 brought forward from the previous year, for we cannot see where the nett profit of £6,655 arises. However, the directors took £5,000 of this to make up the dividend on the ordinary shares to 5 per cent. for the year, which is half the dividend paid for the preceding year, and have £1,655 left to carry forward. Some of the figures in the balance-sheet are interesting as indicating no diminution in the volume of trade, at least, that is the way we feel disposed to interpret such items as stock, £453,769, an increase of £4,170; debtors, £364,323, an increase of £9,672. The only material adverse movement in the balance-sheet is a decrease of £19,447 in the company's investments now down to £22,126, including the general reserve, the lease reserve and sundry trade investments. Cash is moderate at £19,190. Debts owing by the company, however, including deposits and other accounts and bankers' loans amount to £366,815, and bills payable come to £90,634, this latter showing an increase of £38,307. The general reserve stands at £28,754, and there is a special reserve of £8,019, both figures being rather narrow. Depreciation is entered against various items amongst the assets, but we do not gather that the figures mentioned, such as £6,870 against the lease of 119, Cannon Street, have been provided in the past year. This seems to be the total provision to date, and additions costing £1,377 were made to premises and plant last year, bringing the total under that head up to £49,481 against which depreciation of £24,225 is set, but we should have liked to see how much of this depreciation came out of last year's earnings, because that would have enabled the statistical inquirer to judge more surely how the business is going.

SAN PAULO GAS CO., LIMITED.

Business continues to grow at a very satisfactory rate with this company, its income from gas rentals for the year ended December 31 showing an increase of £12,607 at £110,433, of which £15,336 or £3,597 more came from non-lighting gas. Residual products rose by £4,791 to £38,049, and with small gains in miscellaneous receipts the total revenue amounted to £152,400 against £134,608. Expenses took an extra £9,660 at £115,476, leaving the nett profits £8,132 up at £36,924, to which was added £4,100 from the previous account, making £41,024 to be dealt with. Debenture interest required £6,250 or £2,258 more, and after putting another £1,012 to redemption fund and writing £160 off investments the surplus remaining was £6,503 better at £33,603. The dividend, however, is repeated at 8 per cent., as the directors prefer to raise the amount added to reserve from £3,000 to £8,000 and to carry forward £1,503 more at £5,603. Expenditure on capital account was £19,448, making a total of £348,937, and as the growing demands for gas have necessitated further extensions of works the company is in need of funds, and it is proposed to create another 15,000 6 per cent. cumulative preference shares of £10 each. The usual valuation of the assets and liabilities in Brazil on December 31 was made at 15 7-32d. against 15⅝d. per milreis a year ago, and the resulting decrease of £413 has been charged to exchange account. The reserve now stands at £55,000, of which £23,983 is represented by investments, and in other ways the position is satisfactory. Liabilities for deposits by consumers, &c., come to £15,167, and £10,727 is due to sundry creditors; but debtors owe £21,003, stocks are valued at £46,182, and the company has £35,828 in cash and bills.

MONTE VIDEO WATER WORKS CO., LIMITED.

Notwithstanding a reduction in the tariff from April 1 last, the gross receipts for 1907 were the largest in the history of this company, and exceeded those of the previous year by £6,673 at £115,172. Working expenses rose by £2,871 to £36,077, and the nett revenue, including a larger balance of £34,834 brought forward and £689 or £520 more from miscellaneous receipts, was £5,228 better at £114,617. Debenture interest and income-tax having been met the ordinary shares again receive 7 per cent., after which an extra £5,000 at £15,000 is put to reserve, but £2,001 less at £7,999 is transferred to depreciation fund. Interest on instalments on new shares and on calls paid in advance then absorbs £605 and £649 is written off expenses of issue, leaving £35,719 or £885 more to be carried forward. Outlay on capital account, including £8,894 on the new gravitation main from Las Piedras, amounted to £24,140, making a total of £948,547, and in order to provide for this expenditure 10,000 new shares of £20 each were offered to the shareholders at par in October last and £4 per share has been called up. The various reserves, after deducting £3,021 from the depreciation fund for balance of cost of reconstructing the service reservoir, now reach a total of £130,000, of which £55,000 is apparently represented by money on short loan in London. Floating liabilities are light at £7,043, while debtors owe £16,779 and cash and bills other than the above-mentioned amount come to £36,079.

SALT UNION, LIMITED.

Although 1,000 tons less salt at 909,000 tons was delivered last year by this combination than in 1906, its profits make a much better show, amounting as they do to £127,075 or £56,971 more than for 1906. Accordingly the directors are able to declare a dividend of 1s. per share on the ordinary shares besides again placing £10,000 to reserve and giving the preference shares their 7 per cent., plus 2s. per share. When all this has been done £2,350 will remain to be carried forward. We hope this prosperity will continue and increase. The stock of salt is down nearly £25,000 to £77,526. Investments held aggregate £132,067, including £51,166 of the company's own debenture stocks bought in, and the total of its reserves is now about £119,000, including £50,000 of a depreciation reserve. Sundry debtors owe it £126,827, and it owes sundry creditors £163,241. Cash stands at £73,325.

OCEAN ACCIDENT AND GUARANTEE CORPORATION, LIMITED.

In 1907 this company gathered a revenue of £1,480,715, of which £1,435,230 came from premiums, the balance of £45,400 coming from investments after providing for depreciation, the amount of which must be considerable, notwithstanding the remarkably cosmopolitan judgment exercised in the selection made. Compensation took £703,750, including £523,000 set aside to meet claims outstanding on December 31 and working expenses and commission, &c., absorbed £541,673, leaving a credit balance of £739,689, of which £481,647 is retained against unexpired risks, or £100,000 more than was kept back for the same object at the end of 1906. The nett profit left is thus £258,043, and of this the directors have placed £44,000 to the investment reserve and general contingency account, and besides £5,000 to the staff provident fund they pay 20 per cent. in dividends—7½ per cent. interim and 12½ per cent. now—to the shareholders, together with a bonus of 5 per cent., making 25 per cent. in all for the year, and have still £168,120 left to carry forward. Beyond the paid-up capital of £172,308 the company possesses, or is holder of, funds as follows:—Capital redemption fund £8,981, and general insurance fund £1,015,647, including besides the two amounts already mentioned £101,000 of an investment and general contingency fund. An admirably detailed exhibit of the investments held accompanies the report, and shows that nearly £1,600,000 is spread over about 155 different securities. On many of them the depreciation is unfortunately severe.

DIMBULA VALLEY (CEYLON) TEA CO., LIMITED.

An increase of 79,311 lbs. to 1,168,753 lbs. in the output for 1907 and a saving of 0.40 cents per lb. in the cost were more than offset by a reduction of 0.43d. to 8.83d. in the average price realised, and nett profits were £843 less at £13,763. With £2,270 brought forward the available total amounted to £16,033 compared with £16,883, and in order not to spoil the sequence of 8 per cent. dividends on the ordinary shares which has lasted since 1901 the appropriation to reserve is again cut down by £1,000 to £1,000, leaving £2,420 or £150 more to be carried forward. During the year another £1,623 was spent on rubber cultivation on the Eladuwa estate, making a total of £10,040 to date, and after deducting £500 written off machinery the block account now stands at £183,203. The reserve fund now stands at £12,000, practically all of which has been used to finance the cultivation of rubber as investments remain at £1,539. Liabilities to sundry creditors and on bills payable have been reduced by £727 to £10,381, while sundry debtors owe £3,715 or £2,396 more, but stocks are £719 down at £8,053 and cash has dropped by £2,923 to £2,204. Coast advances remain at the high figure of £2,648, and the reserve against them is also unaltered at £520.

BOURNEMOUTH AND POOLE ELECTRICITY SUPPLY CO., LIMITED.

This company is steadily extending its system, and added the equivalent of another 23,130 lamps during 1907, while its sales of current rose by 251,037 units. The income from all sources was £4,632 up at £55,009, but expenses took £23,137 or £2,931 more, and the nett revenue, including £1,634 brought forward, increased by £1,629 to £33,506. Interest charges took £1,305 less at £6,412, owing to the repayment of the temporary loans a year ago, but on the other hand the dividend on the second preference shares had to be met, and after putting £1,424 to redemption funds and another £3,000 to depreciation reserve the ordinary shares again receive 7 per cent., leaving a reduced balance of £939 to be carried forward. Capital outlay amounted to £31,030, so that not only has the balance of the cash from the second preference shares been exhausted, but the company has again had to resort to borrowing and has raised £6,000 on its securities. The total expenditure on the property is now £421,198, and a further £5,000 at £138,686 has been invested in the Richmond (Surrey) Electric Light and Power Company, against which the total accumulations now come to £28,371. Floating liabilities have risen by £5,991 to £25,732, but debtors are only £508 up at £29,932, and cash has dropped from £25,382 to £1,285, and as £12,291 is required for dividends it looks as if further capital will be needed shortly.

TRADE AND PRODUCE.

Wheat.—Business has been quiet, trading in some quarters being only of a retail character, but prices all round have been firmer, and there is more disposition among sellers to hold out against any concessions. All Manitoba wheats have been held at full prices, and were in good demand for lower grades, but shippers' prices for best lots were prohibitive. River Plate parcels and American winter wheat were all sold in small lots at good prices. English and Continental samples have kept steady. Farmers' deliveries last week came to 29,944 qrs., averaging 31s. 3d. against 68,340 qrs., averaging 26s. 10d. in the same week of last year. Imports were heavy at 613,807 qrs., against 531,837 qrs. last year, and the quantities of wheat and flour on passage to the United Kingdom are not so high as last week, being 4,575,000 qrs., against 4,750,000, but those going to the Continent are higher, 2,765,000 against 2,705,000 qrs. American markets were rather depressed at the opening, but improved later in the week. The visible supply shows a decrease of 1,213,000 bushels on the week.

Wool.—Prices of wool at the commencement of the London sales on Tuesday fell considerably. Choice merinos and crossbreds, of which the supply seemed limited, went down 5 per cent. Inferior qualities, which were offered freely, dropped from 7½ to 10 per cent. in merinos, and from 10 to 15 per cent. in crossbreds, and up till now have remained at this level, though some dealers withdrew their parcels rather than let them go so cheaply. Bradford and other markets, in consequence, are not any more cheerful than they were. Prices are without change, and little buying is being done, there being no disposition on the part of users to increase their stocks. English wools have dropped in sympathy, and are down generally 1d. and 1½d. per lb., and beyond some activity in skin wools there is little doing in them. Huddersfield report on the manufactured trade of the week is that home business, owing to the cold weather, to the depression in industrial centres, and also to the probabilities of cheaper wools, has been dull. Orders are held back while merchants try to get concessions. Abroad Continental demand for fine and medium cloths is fairly good, but in the colonial, American, and South African branches there is less doing. The higher tariff of Australia is having a bad effect upon high-priced imports.

Cotton (from our Manchester correspondent).—The market during the past week has presented scarcely any fresh feature of moment, and business has again been on a decidedly small scale. Sellers of both yarn and cloth have met with very little encouragement. The all-round demand is disappointing, and although orders are pressed for buyers act with considerable caution. There is a general disposition to defer operating, and although stocks are gradually being cleared in our markets abroad, while this process is going on manufacturers find difficulty in keeping their looms running at full speed. American cotton has shown a tendency to decline in value, but there is no decided movement. The raw cotton markets at the present time are lifeless. There has not been much business done on the spot. The prospects for next season's growth are being discussed a little, but it is too early for reliable reports from the other side. If prices keep on the present high level, then it is only to be expected that planters will endeavour to raise a big crop. In piece goods for export there has only been a miscellaneous inquiry for all markets. China, on the whole, is better than most other outlets, but the total sales have not been at all important. Recent advices from Shanghai are fairly encouraging, but there is still some anticipation of more reasonable terms, and buying has not been on a free scale. India still continues in a bad way, and shippers seem to be much afraid to anticipate future requirements. Supplies are heavy in both Bombay and Calcutta, and until these are reduced there appears to be little prospect of renewed purchasing. The near Eastern markets have continued dull, few offers of a practicable character coming through. Not much has been heard of the South American markets. Home trade fabrics are moving off fairly well from day to day in light fancy descriptions. Both the wholesale houses, however, and also drapers are purchasing from hand to mouth. Rumours of financial difficulties have been current, and a meeting of the creditors of a grey cloth agent has been held this week. A local firm of calico printers has also met its creditors. It is an awkward time for many firms, and heavy stocks cause much inconvenience. There has not been much doing in either American or Egyptian yarns. Prices are easier when tested. Stocks tend to increase at the mills. Some of the new mills are handicapped by their financial position, and it is said certain concerns find difficulty in going on. The demand from abroad continues on a comparatively small scale. Offers from China have been too low to be put through.

Sir Jacob Behrens and Sons state that weather reports from America are very favourable, and there is no improvement in the trade outlook. Outside support is altogether lacking, and the market is entirely under the influence of professional operators. Egyptian cotton is dull, and prices are fully ⅛d. per lb. lower.

Coal.—Where manufacturing coal is concerned there is less activity on home account, but steams for export are being bought freely, one or two large Continental orders having come to hand lately. Gas coals also are being taken in large quantities, and the discussions as to new contract rates for them are at present going on. Colliery owners are endeavouring to get last year's rates maintained. Scottish shipping has improved, and was about 13,000 tons better than last week, but prices are down a little. Welsh trade shows signs of improvement, and those who know declare definitely that the slump is over, but as yet, except for heavy exports, business has been tolerably quiet. Prices remain practically unchanged.

Copper.—Under the influence of varying American cables prices have fluctuated within a pound or two each day. The market has been fairly active, some important speculative purchases taking place under the influence of better trade advices from the States and also by the prophecy of holders of refined copper that prices would be firmer in the future. Yesterday they closed at £58 12s. 6d. cash and £58 17s. 6d. three months, a drop of 12s. 6d. and 15s. respectively since Monday. Final prices: Cash, £140 5s.; three months, £138. Messrs. Henry R. Merton and Co., Limited, give the visible supply as 23,505 tons against 20,773 tons on February 29. Total supplies for the fortnight were 19,787 tons and the deliveries 17,055 tons. Stocks in England and France are 15,080 tons against 14,473 tons on February 29. The Chili charters are given as 2,900 tons.

Tin.—Monday's and Tuesday's markets were strengthened by the high prices paid in the East, where £140 10s. c.i.f. London was given, and this together with bear covering and reserved sellers knocked them up as high as £140 10s. cash and £137½ three months. Then came a drop in Eastern markets and considerable weakness and fluctuation here, but closing prices yesterday, though rallying from the worst closed at £138 15s. cash and £136 15s. three months. Closing figures: Cash, £59; three months, £59 7s. 6d.

Iron and Steel.—No improvement can be recorded in West Coast hematite trade. Makers have few orders, and it is only by producing about half the amount they did in the early autumn that they are keeping stocks down. Elsewhere things do not seem to be quite so depressing. East Coast makers are getting more contract work, and buying on export has improved. Italy, in particular, is a large buyer. Prices are better, as with no stocks on hand makers are at once able to profit by the renewed trade. Cleveland pig-iron prospects are also considered more satisfactory, though the fact that about 2s. per ton less is being given for warrants for three months than for prompt metal is not looked upon as a very good sign; neither is it that stocks in Connal's stores have increased a little after falling to the lowest level known for four years, says the *Engineer*. The manufacture trades are doing practically nothing in most instances, and quotations for iron and steel plates are down 5s. per ton.

Tea.—About 33,190 packages of Indian tea were brought forward at the auction, and met with a fairly good demand. Prices for all commoner sorts remained firm, and better grades between 8d. and 1s. frequently went higher, and were keenly competed for, as they are at present very scarce. 30,669 packages were sold on garden account, averaging 7.73d. against 9.00d. for 30,866 packages in 1907. Ceylon offerings also were moderate at 19,844 packages, and prices for medium and fine quality inclined to harden, the average for the week coming up to 7.64d., against 8.39d. in 1907. Javas had a very small sale of 834 packages, which passed without any change in prices. Confidence has been imparted to the markets, say Messrs. W. J. and H. Thompson, by the report of smaller exports to this country during the first half of the month. Shipments from India show a falling off of 1¾ million lbs., and from Ceylon of 1¼ million, so there is not likely to be a superabundance of tea on the markets during the next few months.

Sugar.—It is now admitted that the Cuban crop suffered more from the autumn drought that was expected, and it is doubted if even the minimum figure of 1,000,000 tons, adopted by the trade some months ago, will be reached. Seven factories have already finished, and weekly receipts again show a falling off. Mr. Czarnikow's circular gives it that local speculators have paid the parity of 4.24 cents in Cuba, but it is not stated for what delivery, and rumours were circulated that the Louisiana crop after all had only yielded 275,000 tons, but this so far has not been corroborated. A cable stating that the United States would require 100,000 tons of beet to arrive before August 31 caused larger covering operations here against Javas, and May moved from 10s. 8½d. to 11s. 2d. The New York market spot quotation of 96 per cent. centrifugals has been raised 6.4125 cents, but Cubas for shipment next month have been disposed of at still higher prices. Javas are now held for 424 to 427 cents, and August beet quoted 434 cents. Landings in the three ports for the week were 62,000 tons, and meltings 34,000 tons, raising stocks to 220,000 tons. The falling off in meltings passed unnoticed here, though, says Mr. Czarnikow, meltings should be watched jointly with Cuban figures.

British American Land Company.—Last year this company sold 9,520 acres of its land for £16,834, the average price being £1 15s. 4¼d. per acre, the highest ever attained. This result was due largely to the sale early in the year of over 7,000 acres of the company's timber lands in the township of Newport. Receipts for the year amounted to £16,848 in all, lifted to £22,831 by the balance of £5,983 brought forward, and after meeting the dividend on the "A" shares and paying for a small amount of Midland Railway Company's stock bought, besides meeting current charges, the total of which came to £15,015, a balance of £7,613 remains, out of which the remaining half of the dividend on the "A" shares, or 12s. 6d. per share is declared, leaving £4,115 to be carried forward against the just mentioned amount brought in. The nett profit from all sources, however, is given as £19,463, and this sum has been carried to the credit of surplus account, which showed a credit balance on December 31 last of £42,235. No further reduction in the capital of the company by redemption took place during the past year.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1907, and March 14, 1908 :—

Revenue and other Receipts.

—	Estimate for the year 1907-1908.	Total Receipts into the Exchequer from April 1, 1907, to Mar. 14, 1908.	Total Receipts into the Exchequer from April 1, 1906, to Mar. 16, 1907.
Balances, April 1:	£	£	£
Bank of England	—	5,807,721	9,334,212
Bank of Ireland	—	1,124,702	1,117,275
		6,932,423	10,451,487
Revenue.			
Customs	31,923,000	31,151,000	32,151,706
Excise	35,965,000	33,751,000	34,223,689
Estate, &c., Duties	18,697,000	17,588,000	18,445,713
Stamps	8,000,000	7,537,000	7,551,000
Land Tax	700,000	2,470,000	2,420,000
House Duty	1,900,000		
Property and Income Tax	30,500,000	29,042,000	28,667,000
Post Office	17,600,000	15,950,000	16,870,000
Telegraph Service	4,400,000	4,115,000	4,175,000
Crown Lands	500,000	470,000	480,000
Receipts from Suez Canal Shares and Sundry Loans	1,100,000	1,145,995	1,076,747
Miscellaneous	1,550,000	2,121,071	1,888,839
Revenue	152,835,000	145,341,066	147,949,694
Total, including balance		152,273,489	158,401,181
Other Receipts.			
Repayment of Advances for Bullion		1,250,000	1,200,000
Repayment of Advances for Interest on Exchequer Bonds under the Capital Expenditure (Money) Act, 1904		180,000	180,000
For Treasury Bills (nett amount)		2,500,000	—
Under Telegraph Acts, 1892 to 1907		670,000	1,205,000
Under Naval Works Acts, 1895 to 1905		400,000	2,462,000
Under Military Works Acts, 1897 to 1901		150,000	300,000
Under Public Buildings Expenses Act, 1903		231,000	165,000

Note.—The Revenue and Expenditure figures for 1907-8 have been adjusted to give effect to Section 17 (5) of the Finance Act, 1907 (7 Ed. VII., cap. 13), with respect to Local Taxation Grants, and the figures for 1906-7 have been similarly adjusted for the purpose of comparison.

Mem.—Treasury Bills outstanding on March 14, 1908 :—

Bills issued by Public Tender	£10,713,000
Bills otherwise issued	1,500,000
Total	£12,213,000

Treasury, March 17, 1908.

The board of the Ceylon Company of Pearl Fishers, Limited, has decided, on the recommendation of Professor Herdman, who is now in Ceylon as its special representative, to hold a small fishery on the Kondachi bank. Estimated number of oysters, 5,000,000; estimated value thereof, 50 rupees per 1,000. It will not be necessary to form a fishery camp. The s.s. *Violet*, with dredges, supplemented by forty divers, will be sufficient.

MINING RETURNS.

Antenior (Matabele).—Crushed 824 tons, 147 ozs.; cyanide, 300 tons, 34 ozs.

Battlefields (Rhodesia).—Crushed 1,560 tons, 917 ozs.; cyanide, 1,160 tons, 516 ozs.; slimes, 398 tons, 69 ozs.

Boston Copper.—Output, 6,500 tons sulphide, 2,100 tons porphyry, 465 tons concentrates

Brilliant Extended.—Crushed 3,290 tons, £6,876.

Camp Bird.—Crushed 6,585 tons ore, 8,090 ozs.; 497 tons concentrates.

Chinese Engineering.—Output of coal, 24,000 tons; sales, 22,000 tons; consumption, 1,575 tons.

Duff Development.—Recovered 249 ozs.

Eaglehawk Consolidated.—1,100 tons crushed, 106 ozs.; 102 ozs. from cyanide.

East Gwanda.—Crushed 7,108 tons, 1,481 ozs.; cyanide 3,000 tons, 283 ozs.; total, 2,285 ozs.: smelter—34 tons matte produced, containing 801 ozs. fine gold, and 7½ tons metallic copper.

Foldal Copper and Sulphur.—Ore produced 3,335 tons; ore sorted from tonnage already published (including 217 tons underestimated), 2,863 tons; ore shipped, 3,605 tons.

Forbes Rhodesia.—Veracity—Crushed 410 tons, 225 ozs.; cyanide 375 tons, 66 ozs. Dumbleton—Crushed 334 tons, 55 ozs.; cyanide 290 tons, 12 ozs.

Jumbo Gold.—Crushed 2,228 tons, 1,000 ozs.; concentrates, 1,216 tons, 473 ozs.; slimes, 1,032 tons, 159 ozs.; total, 1,632 ozs.; profit, £3,525.

Loddon Valley.—Treated 225 fathoms of wash, yielding £502.

Matabele Reefs.—Crushed 1,965 tons, 575 ozs.

Surprise Gold.—2,513 tons, 1,180 ozs.

Willoughby's Consolidated.—Queen's—1,346 tons, 495 ozs. Eiffel Blue — 741 tons, 791 ozs. Danga—402 tons, 147 ozs. Queen's West—499 tons, 282 ozs. Bonsor—1,708 tons, 264 ozs. North Bonsor—950 tons, 264 ozs.

DIVIDENDS ANNOUNCED.

RAILWAYS.

New York Central and Hudson River.—1½ per cent., payable April 15.

San Paulo (Brazilian).—For half-year ended Dec. 31 of 5 per cent. on the ordinary stock, being at the rate of 10 per cent. per annum, together with a bonus of 1 per cent., making 6 per cent. for half-year, placing £25,000 to income reserve, and carrying forward £268,407, subject to audit.

Wellington and Manawatu.—4 per cent. for half-year ended Feb. 28, making 7 per cent. for the year.

BANKS.

Colonial.—3 per cent. for half-year ended Dec. 31, being at the rate of 6 per cent. per annum.

National of South Africa.—At the rate of 4 per cent. per annum for 1907, carrying £16,361 forward.

MISCELLANEOUS.

American Investment Trust.—For half-year ended March 15 at the rate of 7 per cent. per annum together with a bonus of 1 per cent. for the year on the deferred stock; £20,000 is transferred from revenue to capital reserve, and £14,716 carried forward.

Anglo-Argentine Tramways.—Final on the second preference shares of 5s. per share, also on the new ordinary shares at the rate of 8 per cent. per annum, carrying forward £16,734.

Birmingham Small Arms.—Usual interim for six months ended Jan. 31: On the preference shares at the rate of 5 per cent. per annum, on the ordinary shares 5s. per share, being at the rate of 10 per cent. per annum.

Derby Tea.—Second interim of 10 per cent. on the ordinary capital for 1907.

Foreign American and General Investment Trust.—For half-year ended March 15 at the rate of 5 per cent. per annum together with a bonus of 1 per cent. for the year on the deferred stock; £17,500 is transferred from revenue to capital reserve, and £7,718 carried forward.

H. Holdron.—On the ordinary shares for six months to Feb. 29 at the rate of 12 per cent. per annum, placing to reserve account revenue £2,000, to writing off £500 from leasehold premises, and carrying forward £2,018.

Hammond's Bradford Brewery.—On the ordinary shares at the rate of 8 per cent. per annum.

Lagunas Syndicate.—Interim of 3s. per share, payable April 15.

Melbourne Tramway and Omnibus.—For quarter ending March 31 at the rate of 4½d. per share payable April 1.

R. Bell and Co.—6 per cent. (6s. per share) for the year, allowing £3,345 for depreciation of plant, carrying £3,500 to reserve and £2,619 forward.

South London Electric Supply.—4 per cent. on the full ordinary share capital for past year.

Virginia-Carolina Chemical.—Quarterly of $2 per share on the preference stock, payable April 15.

MINES.

Globe and Phœnix.—Final of 1s. 6d. per share, making 3s. 6d. per share for 1907.

Rio Tinto.—Final for year on the ordinary shares of 40s. per share, making £4 7s. 6d. per share for the year, carrying £26,000 forward.

New South Wales 3½ per cent. Stock 1930-1950. Issue of £3,000,000. The cash subscription list for above was closed on the 18th March, but holders of Debentures maturing 1st July next may lodge their Debentures for exchange up to Monday next, March 23rd.

MINOR NOTICES OF COMPANY REPORTS.

Battalgalla Estate Company.—A smaller crop of 235,550 lbs. was accompanied by an improvement of 0.78d. to 8.50d. in the price and nett profits, including £212 or £18 more brought in, rose by £337 to £2,416. Out of this £400 is allowed for depreciation against £200, and the dividend is then increased by another 1 per cent. to 8, leaving £217 to be carried out. Block account is unaltered at £16,052, and the company, as may be guessed, does not bother itself about a reserve fund, but machinery has now been written down to £3,600. Coast advances have risen by £263 to £945 and constitute the principal asset against £744 due to the general agents, as cash in hand amounts to no more than £113. The final dividend now declared will take £750, so that the position financially seems none too satisfactory.

C. and W. Walker.—Nett profits for the year ended January 31, after charging an undisclosed sum for depreciation, were £9,051 and £5,319 was brought forward. Preference dividend having been paid, the ordinary shares receive 10 per cent. and £2,000 is added to reserve, leaving £6,170 to be carried out. Reserve is now £27,000 against leaseholds £11,907, fixed and loose plant, &c., £41,116, and goodwill £10,000. Stocks stand at £15,433, contracts in hand, less £13,608, received on account, at £27,100, and £21,571 is due from sundry debtors. Sundry creditors amount to £18,636, and in spite of an overdraft of £2,368 at the bank, cash is trifling at £113, but the company holds investments valued at £10,035.

Canada Company.—No trace of reaction is to be found in this company's record for 1907. It sold or leased 6,252 acres, which was more than the area parted with in 1906 and only 411 acres less than that disposed of in 1905, while the average price of $13.56 per acre showed a gain of 25½ per cent. on the 1894 calculation, or a higher average improvement than either of the two preceding years gave. The company has still about 62,534 acres to sell, and its revenue for the past year from all sources amounted to about £6,000 less than in the previous year at £25,007, a smaller extent of leased land having been converted into freehold. The directors distribute in all 36s. per share on the £1 nominal shares, the said share having been reduced from £32 10s. by successive repayments out of profits to this nominal amount.

Canadian Land and Ranche Company.—Last year's operations increased the debit balance of revenue account to £31,501. Receipts from deferred payments of land sales amounting to £18,613 were applied in reduction of cash deposit certificates to that amount, purchased at a profit of £543 to the company. Loss of live stock amounted to about £14,000, but this has been reduced by a profit on sales of live stock to £9,929, which sum has been added to the amount already standing to the debit of nett revenue. No surplus lands were sold last year, but the board has offers of purchase under consideration.

Curtis's and Harvey, Limited.—Gross profit for the year £35,171, from this debenture interest takes £19,253, directors' fees £1,000, pensions £1,857, depreciation £2,000, and £9,747, with £8,396 brought in, together £18,143, is available. £2,000 is added to reserve, making £15,000, and £1,000 to accident reserve, bringing it up to £3,000. A dividend of 2 per cent. is paid, and £5,483 carried forward. Property, land, tools, patents, &c., amount to £617,245. Debtors at £104,108 exceed creditors by £57,826. Stock is valued at £246,154, while cash and bills receivable amount to £21,805. The board are to be congratulated on their optimistic forecast of the future prospects.

Direct Spanish Telegraph Co., Limited.—A small increase of £304 is shown in gross receipts at £31,471, while a small saving in general expenses increases the balance of revenue account by £405 to £13,077. After providing for debenture services and preference dividend, £6,698 is available, out of which an ordinary dividend of 4 per cent. is paid and £3,905 is transferred to reserve. Traffic and other debit balances are £1,129 down at £10,095, while credit balances have risen £4,844 to £10,284, but cash is £3,423 up at £7,421. The sum of £10,000 has been applied out of reserve towards expenditure on Marseilles-Barcelona cable, leaving the fund with the present contribution £48,361.

Folkestone Electricity Supply Company.—This company owns three undertakings at Folkestone, Hythe, and Sandgate, and during the year ended December 31 earned a nett profit of £12,872. With £306 brought forward, the disposable total was £13,188, and after providing for debenture interest, preference dividend, &c., the ordinary shares get 5½ per cent. for the year. £3,081 is written off for depreciation and £350 added to reserve, leaving £333 to be carried forward. Capital account is overdrawn by £3,591, but against this the reserve and depreciation funds now amount to £10,350, and except that cash is trifling at £87, the position is fairly good.

Friends Provident Institution.—Another satisfactoiy year has been enjoyed by this quiet old company. Its premium income amounted to £180,070 or nearly £5,000 up, and it sold sundry annuities for £21,392, interest and dividend received, less income-tax, were £127,083. Working expenses were again on a low basis, and are set out in careful detail. Long life seems to be enjoyed by the members of this institution, for the average death age was 67 for policyholders and 78 for annuitants. At the quinquennial valuation the directors found that in view of the low prices of securities on the "20th of 11th month last," as the report quaintly puts it, it was desirable to write down the investments held by £14,783. Accordingly £40,000 was set aside for investment reserve funds. The total funds at the end of the year were £3,308,760, an increase of £44,706.

Hadfield's Steel Foundry Company.—Profits for the year ended December 31 were £66,170, and with £20,365 brought in made a total of £86,535 available for distribution. Out of this two dividends aggregating 3s. per share are paid, together with a bonus of 6d. per share, and £20,535 is carried forward. The balance-sheet affords a minimum of information regarding the position, the entries on the assets side being only three in number. Freehold buildings, tools, &c., are valued at £597,283, stocks and work in progress at £201,757, and sundry debtors, Consols, investments, and cash come to £264,576. On the other hand, the reserves seem good at £124,000, in addition to the special fund of £195,000 accumulated out of premiums on share issues, and creditors are comparatively light at £86,580.

Howard and Wyndham, Limited.—This theatre company earned £22,229 nett in the year ended February 29 last, and after meeting directors' fees and other incidental expenses, has £19,111 left, out of which the directors pay 10 per cent. with a bonus of 5 per cent. on the ordinary shares, besides assigning £6,500 to a pantomime production suspense account, and have £2,045 left to carry forward against £834 brought in. The Theatre Royal, Glasgow, was redecorated and equipped anew last year at a cost of £5,333, of which £2,000 was charged to to last year's account and £2,733 to this year's. A windfall of profit amounting to £2,500 came in the shape of forfeited deposits made by people who contemplated the purchase of this undertaking.

Jays, Limited.—Nett profits for the year show a small increase of £608 at £38,573, and with £2,974 or £1,609 more brought in, the gross revenue is £2,206 up, and £39,386 is available after paying income-tax and directors' fees. The ordinary shares again get 8½ per cent., £5,000 is similarly written off property account, and £5,173 is carried forward. Stocks are £7,823 higher at £91,746. With debtors for £74,833 against creditors £5,849, trade balances are slightly higher in the company's favour, but cash is still smaller than last year by £2,294 at £2,134.

Langham Hotel Company.—Gross receipts for the year ended December 31 amounted to £83,069, of which working expenses, and provisions, &c., consumed tobk £64,069, and debenture interest absorbed £6,800. Adding £15,833 brought in the available surplus amounted to £28,033, and after transferring £1,600 to reserve the shareholders receive 10 per cent. for the year and £17,813 is carried forward.

Legal and General Life Assurance Society.—In its seventy-first report this company again shows an increase in its strength. New business yielded £122,675 in nett premiums, and the total income amounted to £612,213, an increase of £52,207 over the previous twelvemonth. Claims on the life and general funds were £238,572, and the total amount of policies in force at the end of the year was £21,970,041, including bonus additions. During the year the funds have increased by £429,954 to £5,867,503. Working expenses absorbed about 13 per cent. of the premium income. Altogether the position of the company looks sound and healthy.

Limmer Asphalte Paving Company.—Profits for the year ended December 31, including £2,997 brought forward, were £14,669, and after providing for all charges and writing off £1,403 for depreciation £8,047 was left. Out of this a dividend of 10 per cent. is paid, absorbing with the bonus to directors £5,505, and £2,542 is carried forward. Property, &c., in England and France is valued at £43,814, while the company has a reserve of £25,000. Debtors amount to £25,848 against current liabilities of £4,975, stocks stand at £13,756 and cash comes to £5,134.

London Assurance.—In its life department this company received a total revenue of £260,075, including about £85,000 from interest and dividends, less income-tax. After meeting the claims under both series, profit and non-profit, and meeting all current expenses, which were, as usual, quite moderate, the funds of the two departments were increased by £70,184 to a total of £2,311,110. The fire and accident business yielded a premium of £657,293, against which claims, expenses and commissions swept away about £503,000, leaving £106,530 to be carried to the credit of profit and loss, and the premium income of £303,221 earned by the marine department left £18,279 as profit after all charges had been covered. Including £5,421 from the life account, the entire distributable profits come to £130,266, or to £127,228 after allowing for £3,038 put down in the profit and loss account as life expenses. The dividend paid to shareholders absorbed £89,655, being 20 per cent. on the paid-up capital of £448,275, and the balance carried forward was raised by £1,362 to £146,416. The dividend is payable in two portions of 25s. each, the first on April 1 and the second on October 1 next.

London Guarantee and Accident Co., Limited.—The main fact about this company's business in the past year is the payment of a dividend of 45 per cent. upon the share capital of £50,000, representing 25,000 shares of £2 paid. We should judge the year to have been a prosperous one in many respects, and the nett premium income was £449,438, against which claims, reserve for claims and provision for liability on notices of accidents came to £219,264. After meeting current charges of various descriptions, including £119,231 for branch and agency commission, together with reserves against agency balances and policy stamps, £15,609 for advertising, printing and stationery, £35,878 paid as rent, salaries, directors' fees, &c., &c., and other minor outgoings, the balance carried to the general revenue account was £67,579. It amounted to £[illegible] at the beginning of the year, and after providing £176,614 against current liabilities and setting aside £50,000 against depreciation in investments, besides paying an interim dividend.

the balance caried forward is £42,155, out of which the final dividend of 8s. per share plus a bonus of 4s. is to be paid.

Marine and General Mutual Life Assurance Society.—In its fifty-sixth report this company showed an increase of £3,912 in its premium income with a total of £134,178. Working expenses and commission though slightly less in amount were £23,116, or about 17 per cent. of this sum. Interest and dividends were higher by £4,135 at £59,800, and the total funds of the society amounted to £1,563,129, an advance of £82,629.

Metropolitan Life Assurance Society.—During the year ending December 31 this old-established company added about £6,000 in new premiums to its income from 193 new policies. Claims arose under 162 policies, but this was considerably below the average expected. A reserve fund has been started with £15,000, and the investment reserve fund increased to £50,000, which the directors state is ample to cover the depreciation on investments. Working expenses are very moderate at about 7 per cent. of the premium income, thanks partly to the policy of paying on commission. The society's total funds now amount to £2,208,588, an increase of £33,791.

Muntz's Metal Co., Limited.—A company that habitually values its stock of copper at £44 per ton and of spelter at £16 per ton is not likely to fall into financial difficulties. In 1907 the profit of £4,813, making with £1,003 brought forward £5,817 for the year, enabled the directors to pay the preference dividend with £1,287 left to carry forward. The balance-sheet shows £41,764 due to sundry creditors and £66,377 borrowed from the company's bankers, or a total floating debt of £108,141. Cash amounts to £43,441, sundry debtors owe the company £49,566, its lands, buildings, machinery, &c., buildings and machinery valued by Messrs. Bramwell and Harris, aggregate about £154,000. Stock is put in by the same valuers at £53,117.

National Provident Institution.—This company has just completed another quinquennial period with the issue of the report for its 72nd meeting. During the five years there has been some shrinkage in the valuation of the securities held, but after writing down the funds show an increase in value for the past year of £94,521, and the total is handsome at £6,523,342. Valuing the liabilities on the usual tables and on a 3 per cent. basis the directors state the surplus to be £834,406, after reserving the whole of the loading for future expenses and profits. Of this sum £806,978 will be divided as bonus, giving the same rate as declared at the three previous quinquennial periods. For the past year nearly £30,000 was received as new premium income and £18,105 as purchase money for new annuities amounting to £1,379. Claims have amounted to only 65 per cent. of "expectations." Working expenses, which are given in detail, and commissions paid are under 10 per cent. of the income. Generally the position is good and shows increase in the proper place.

Newbury's.—Including £2,757 brought forward, the nett profits for the twelve months ended February 19 were £19,092, out of which dividends and a bonus aggregating 12½ per cent. are paid and £2,000 is put to reserve, leaving £3,847 to be carried forward. Buildings, &c., stand at £88,569, against which the reserve now totals £30,000, but £28,945 was written off this fund in 1901 to extinguish the item of goodwill, and the position is therefore even better than it looks. Sundry creditors amount to £4,946 against £2,594 to come in from sundry debtors, but stocks are valued at £47,024 and cash is £8,851.

Nicholsons.—Nett profits for the year ended February 12 fell off slightly, owing, the directors say, to outlay on additional premises and the rebuilding of the premises in Paternoster-row. After providing for directors' fees and depreciation, and setting aside £310 towards extinction of the item of premises and goodwill, the available balance, including £812 brought in, was £11,565. Out of this the ordinary shares receive 7 per cent., giving the directors an additional £668, and £1,500 is transferred to reserve, leaving £997 to be carried out. Expenditure on premises and goodwill come to £137,935 out of a capital of £140,000 and fixtures are valued at £8,718, while the total reserve will now amount to no more than £8,000. In order, therefore, to carry its moderate stock of £15,866 the company has to rely very largely on credit, and in addition to £10,472 due to sundry creditors it has borrowed £5,035 from its bankers. Debtors owe £1,837 only, and cash at £3,135 is considerably under the sum required to pay the final dividends on the preference and ordinary shares.

Portmore Tea Company of Ceylon.—An increase of 14,065 lbs. to 236,441 lbs. in the crop for 1907 was accompanied by a drop of 0.83d. to 8.90d. in the average price obtained, and gross receipts from all sources were £216 lower at £8,877. Expenses were heavier and nett profits showed a decline of £492 at £3,749, but £302 or £241 more was brought in, and the directors once more pay a dividend of 10 per cent., although this means that the sum carried forward has to be cut down to £52. Block account remains at £40,000, and there are no reserves, while the company continues to drag on a hand-to-mouth sort of existence. Stocks are valued at £2,160 or £447 more, but the proceeds of these are practically swallowed up by the dividend, and against floating liabilities of £824 the cash in hand is only £720.

Priest, Marians, and Co., Limited.—After deducting all expenses, directors' fees, depreciation, and interest, the nett profits amount to £11,350. Preference dividends paid, the ordinary get 7½ per cent., and £856 is carried out against £824 brought in. Reserve gets no contribution, remaining at £13,500, while goodwill, trade marks, &c., figure for £93,611. Trade balances, however, are favourable, debtors and bills receivable amounting to £25,990 against £8,230 floating liabilities. Cash stands at £3,804.

Richard Dickeson and Co., Limited.—This firm of wholesale grocers shows a nett profit of £22,636 for 1907, making £35,940 distributable when the balance of £13,304 has been added. Of this, £3,500 is added to reserve, making it £13,500, and the ordinary shares get a dividend of 6 per cent. and a bonus of 2 per cent., leaving £14,035 to be carried forward. The directors could have paid more, they say, but prefer to add to the reserve and to carry forward, which is wise, for the company owes £207,906 to trade and sundry creditors, against which it has stock £130,015 and nett book debts of £149,562.

Seafield Rubber Company.—During the year ended December 31 £7,193 was spent on the estates, and other charges took £299, making a total outlay of £7,492, against which £362 came in from various sources. The planted area was increased by 302 acres, making a total of 1,528 acres with 261,751 trees, and it is proposed to plant a further 472 acres in the current year. Floating liabilities amount to £4,552 against cash and other assets of £3,993, but a call of 1s. 6d. per share on 48,000 shares is payable on June 1, and will give the company ample funds to go on with.

Swan and Edgar, Limited.—A diminution of £3,151 is shown in profit on trading at £36,633, and after deducting fees, interest and depreciation £21,450 is available including £1,785 brought in. Preference and ordinary shares both get 15 per cent. for the year. £4,000 against £7,000 is added to reserve and £2,450 is carried forward. The financial arrangements seem somewhat costly. Cash is about £1,000 higher at £59,722 and loan and deposits amount to £82,214, so that interest paid and lost is a considerable item. Trade balances are again the wrong side, £28,098 being owed against £21,945 due, and reserve, now £52,000, is sunk in business.

Traction and Power Securities Co., Limited.—This Westinghouse auxiliary earned a nett revenue of £19,584 in 1907, making with £3,242 brought forward £22,827 in all. Of this £3,000 was applied to make good depreciation on the company's quoted securities and £15,000 transferred to the investment reserve, leaving £4,827 to be carried forward. The investment reserve fund is now £65,000, and the company owes £23,000 borrowed against security. Its unquoted investments cost it £853,154, and its quoted securities at prices of December 31 last make £10,159 in addition. Besides this it has lent £78,837 against security and sundry debtors owe it £1,334, while its free cash is £2,881 and its cash deposited in guarantee of contract makes £1,700 more. A sum of £100,000 is to be advanced by the company to the Clyde Valley Electrical Power Company, and it has met all the calls made on that company's shares, reducing the liability thereon to £15,048.

United Horse Shoe and Nail Co., Limited.—With a gross income of £2,593 for the half-year to December 31 an improvement of £79 and a balance of £813 described as ordinary profit, a further loss of £354, after allowances are made for debenture interest and depreciation at the meagre rate of 5 per cent., is added to the existing debit of £3,053. Against this is the curious entry of £5,363 undistributed profits on preference and ordinary shares. Plant suspense account also figures as an asset of £9,569. Trade balances have gone against the company to the extent of £1,846 on debtors and bills receivable £9,235. Stocks are £1,987 up at £17,727, but cash is £3,194 down at £1,790. Patents, trade marks, and goodwill £79,766 is a terrible proportion of capital £131,419.

W. T. Glover and Co., Limited.—Trading account shows a credit balance of £31,995 and with £9,956 from last year, after deducting the directors' remuneration, £41,951 is available. £4,000 goes to the trustees of the second mortgage debentures, £7,500 to first mortgage debenture redemption, and the 3½ years' arrears on the preference shares are paid off, leaving £5,576 to go forward. Property stands at £204,080, having been written down £9,377. Debtors at £52,090 exceed creditors by £40,827. Reserves total £34,850 against investments £59,606. Stock is £74,836, and cash and loans £63,027. The position seems healthy and progress is being made towards dividends on the ordinary shares.

Yorkshire Electric Power Company.—As with other undertakings of a similar nature a period of business-building has to be passed through before the self-supporting stage is reached. The tenth half-yearly report of this company heralds the turning point in its history in announcing a profit of £837 as against a loss of £403 for the preceding and £1,221 for the corresponding half-year. After deducting £975 for mortgage interest or £167 more than was required for the first half of 1907, revenue account shows a debit of £139. The increase in power contracted for the last six months amounted to 40 per cent. of the total supplied.

Zafra and Huelva Railway.—Excessive rains adversely affected this company's earnings during the last quarter of 1907, and the increase for the whole year was only £8,726 at £144,668. Most of the extra revenue came from iron ores, which are carried at a low rate, so that considerably more work was necessary to secure this increase, and expenses rose by £10,296 to £78,936. After providing for all charges, the surplus in favour of the bondholders was £4,812 smaller at £52,686, of which four-fifths is absorbed by the payment of a dividend of 8s. per bond compared with 8s. 7d. for the previous year, and £10,566 is applied in redemption of bonds. During the year £27,460 nominal of bonds were purchased for £11,700 and cancelled, leaving £4,012,081 outstanding.

COMPANY MEETINGS.

CALEDONIAN RAILWAY COMPANY.

Sir James King, Bart., the chairman, presided at the meeting of the Caledonian Company, which was held in Glasgow on Tuesday, 17th inst. There was a good attendance of shareholders.

The Chairman said: I presume that you will take the report of the directors as read. (Applause.) Turning to the accounts, I need not detain you with any comment on the first four tables. Table No. 5, expenditure on capital account, shows that the estimate has been slightly exceeded, the figures being £229,895 against £214,000. The capital expenditure for the current half-year is estimated at £205,000. I hoped a smaller sum might have sufficed, but I can give you the assurance that the whole is required for work in progress, or necessary for the satisfactory working of the company. £15,000 is required to provide our share of the cost of carriages which are being built for the West Coast service, and £30,000 is wanted in connection with the equipment of Grangemouth Dock, the revenue from which has been expanding in a very satisfactory manner during the past half-year. The balance falls to be expended on the Buchanan Street goods shed, the Eglinton Street widening, the electrical signalling at the Central Station, and the Aberdeen engine sheds, which are absolutely necessary to preserve our locomotives from the weather. You will, I think, be pleased to notice that, unlike the large sums shown in our accounts some years ago, the whole estimated expenditure in subsequent half-years is only £361,000. Table No. 9, revenue—receipts and expenditure. The credit side shows a decreased revenue of £18,168 from minerals and £511 from merchandise, but, on the other hand, there are increases of £14,207 from coaching, £3,091 from live stock, £4,310 from rents and £9,958 from Forth and Clyde navigation receipts, which include Grangemouth harbour. The total increase of revenue for the half-year amounts to £12,842.

INCREASED PASSENGER RATES.

Passengers of both classes are up 27,540 in numbers and £7,394 in money, the receipts per passenger being just a shade higher. Season tickets are up 6,090 in number and £1,669 in money, but the receipts per ticket have fallen from 32s. 1d. to 30s. 6d. The passenger fares, as you are no doubt aware, have been slightly raised lately as regards week-end tickets, and in some instances the price of ordinary tickets has been slightly advanced. Great care has been taken in making these advances to pay due regard to the rights of the travelling public, and I do not think that any of the increases can be considered oppressive, or that in making them the directors have exceeded what it was their manifest duty to do in the interests of their shareholders, in order, in some degree, to meet the very marked increase in working expenses. The full effect of these alterations in passenger rates cannot be judged of until they have been longer in operation, but as far as can be seen at present they are satisfactory. (Applause.) Tonnage has decreased in both minerals and merchandise—317,551 tons in the former and 22,002 tons in the latter. The expenditure side of the account shows the large increase of £78,292, of which the locomotive department is responsible for £65,783. Fuel cost £53,405 more, the average rate per ton paid for coal being 2s. 9½d. more than a year ago; the difference in the quantity of coal consumed is very small, a decrease of 2,147 tons. This enormous increase in the price of fuel more than accounts for the reduction of dividend, and has turned what would otherwise have been a moderately good half-year into a very bad one. The extra cost of coal amounted to £53,405, whereas £46,165 of this sum would have enabled us to pay a dividend of 3½ per cent., as we did a year ago. Repairs and renewals of locomotives are also up £8,437, materials of all kinds having largely increased in cost. On the other hand, repairs and renewals of wagons are down £1,067. In traffic charges there is an increase of £2,849 in coal, gas and water. There has, however, been a saving of £2,159 in printing, stationery, &c., the total increase in traffic charges coming out at £5,823. General charges show a net decrease of £1,509. Compensation is up £947, owing to the amount paid under the Workmen's Compensation Acts having risen from £3,710 to £5,539. To some extent this increase is due to the additional liability imposed on employers by the recent Workmen's Compensation Act. In each half-year, however, many fatal accidents to the railway servants result from avoidable causes. The most careful precautions have been taken to ensure the safety of our men, but familiarity with danger seems to lead to rashness and carelessness, with results which the directors deplore, but are helpless to prevent. £7,339 less remuneration has been received for working other lines, while rates and taxes are up £3,024, and Forth and Clyde navigation working expenses £4,414, the total increase in expenditure coming out at £78,292. The percentage of expenditure on receipts is 58.85 as against 55.29, or 3.56 higher; but the coaching receipts per train mile exceed those of a year ago by more than 1½d., whilst merchandise and mineral receipts per mile are a trifle over 2d. better. Turning last of all to the net revenue account, £1,695 less has been received in dividends on shares held in other companies, and the amount of interest paid on temporary loans has been increased by £13,692; the company had more money on loan than at the corresponding period, and the very high rate of interest payable, whilst the financial crisis in the United States lasted, imposed a heavy additional charge. There are, however, special credits, amounting to £17,030, and consisting of provisions made out of revenue for contingent claims, which have proved to be in excess of the amounts required, and they are, therefore, properly taken as revenue credits. The result is that the balance available for dividend amounts to £650,667, a decrease of £59,163. After providing for the preference dividends there remains £284,499, which is sufficient to pay a dividend at the rate of 3 per cent. per annum on the ordinary stock, carrying forward £7,509 to next half-year.

SCOPE OF WORKING AGREEMENT.

In addressing you a year ago I referred to the improved relations between us and our rivals, the North British and Glasgow and South-Western Companies, and I indicated that the time had come for some practical outcome of those friendly relations. At our last half-yearly meeting I was in a position to inform you that negotiations had taken place with the North British Company, and that we were hopeful of adjusting an agreement beneficial to both companies. Since then unremitting efforts have been used to bring about such an agreement, and you learned from the official announcement at the close of the year that an agreement had been concluded. The main object in these negotiations has been the discouragement and discontinuance of all competition between the companies—(applause)—but unfortunately we have not been able to realise this ideal in all its completeness. It may appear to you that no obstacle whatever should have stood in the way of a cessation of all competition between the companies, but at an early stage of our negotiations it was obvious that our efforts to effect so complete an agreement could not succeed. We found there were insuperable difficulties in embracing in any agreement through Caledonian and North British competitive traffic, where the interests of other companies were affected, and any such arrangement would have involved the inclusion of those other companies in our negotiations, with a consequent postponement of practical results. In the end we found it advisable to confine our negotiations to the competitive traffic of the two companies, excluding competitive traffic in which third companies were interested. Accordingly we have not been able to include the important English traffic of the companies in our arrangements, and to that extent we have not attained that measure of completeness which we would have desired. There were certain other competitive traffics which, although wholly confined to the two companies, it was thought advisable at present to exclude from the general scheme of our agreement; but provision has been made for such traffics being brought under the operation of the agreement when, in view of the companies, the circumstances are suitable. Notwithstanding these limitations, the agreement between the companies includes a large and important portion of their respective traffics, and we anticipate a substantial advantage from its operation. As you are doubtless desirous to learn the general nature of the agreement I may mention that the governing principle is the pooling of the competitive traffic of the companies dealt with by the agreement, inclusive of every description of traffic, as well as the traffic of joint and worked railways and railways over which the companies exercise running powers. We were convinced that, apart from application to Parliament, the principle of pooling was the most effective means of effecting savings in the management of our railways, removing as it does all inducements to maintain an unnecessary and wasteful competition. In order to afford time for realising fully the benefits of the agreement, we have fixed on a period of 20 years for its duration. There are other competitive traffics of the companies which, although no third company is interested in them, have not, for various reasons, been included in the pool; but in the case of such traffics the agreement provides for the complete cessation of all competition between the companies and for equivalent payments being made in respect of loss to either company on the one hand or gain on the other.

COMMITTEE OF DIRECTORS APPOINTED.

In order that this arrangement may be carried out to the full in spirit and intention, a committee, consisting of directors of the two companies, has been appointed to secure the due and faithful observance of the agreement, and to enforce compliance with its terms. To strengthen the new agreement and confirm amicable relations we have arranged to extend the Peace or New Lines Agreement of 1891, which would have expired in 1916, to run concurrently, and for the same period, with the new agreement, and, further, not to exercise any fresh running powers or facilities over the lines of each other, or compete with each other for the acquisition of other railways. I have referred to this agreement from the point of view of the companies, but I ought to state that in our negotiations we have not been unmindful of the interests of traders and the public using our railways. It has been our desire and intention that all our arrangements should be perfectly consistent with the continuance of adequate facilities for the conduct of passenger and goods traffic and the accommodation of the public. While it may be that certain privileges which have been conferred on traders and the public, arising out of the undue rivalry between the companies, and involving the companies in great and unnecessary expense, may require to be modified in accordance with our agreement, yet all reasonable and proper facilities previously enjoyed by the traders and the public will be undisturbed. In concluding my remarks on this subject, I think it necessary, in order that there may be no misconception or disappointment as to the results in the future, to point out that an agreement such as this, involving a great multiplicity of changes in the administration and working of the traffic, necessarily requires time to become fully effective, and it is therefore at this early stage somewhat premature to measure results, and it will probably be a considerable time before a marked improvement in the position of the companies, due to

the operation of the agreement, becomes apparent, but you may rely that the directors will spare no pains in their efforts to carry out the agreement to the satisfaction of all concerned. (Applause.)

THE CONCILIATION BOARD.

It will still be fresh in your recollection that last autumn the country was threatened with a general strike of railway men unless the boards of the various companies consented to treat with their employees through the officials of the Amalgamated Society of Railway Servants. As the boards were always ready to meet their men and listen to what they had to say, they were all (with the exception of one board, that of the North-Eastern Company, which had for some time past recognised the society's officials) agreed that to yield to this demand would be mischievous in its effect, and might tend to the railway staff being kept in a continual state of unrest and discontent. The agitation went on, however, the public becoming more and more alarmed every day that a general railway strike would take place, until at last the Government thought it their duty to intervene through the Board of Trade, in order to allay the public apprehension, and, if possible, avert the danger of the paralysis of trade which would have been the result. The President of the Board of Trade accordingly invited representatives of the railway companies to meet him and discuss the situation. Whilst not sharing the apprehensions of some people, or in any way doubting the loyalty of the great majority of the Caledonian staff, with which the relations of the board and officials were, and still are, excellent, your directors, in common with those of other companies, thought it right to accede to Mr. Lloyd George's request. Accordingly, representatives of the railway companies, of whom your deputy-chairman was one, conferred with the President of the Board of Trade last November, and an agreement was in the end come to, and all danger of a strike averted, for the next seven years at any rate. At the same time the railway companies preserved their independence of the direct interference of the Amalgamated Society's officials. The new arrangement provides for the election of sectional conciliation boards and a central conciliation board, on which the directors and men will be represented. Any question on which the directors do not see their way to meet the wishes of the men concerned, if the men do not acquiesce in the directors' decision, will be referred to these boards. If the difference of opinion between the men and the directors fails to be adjusted by the conciliation boards, the point of difference can then, on the motion of either side, be referred for final settlement to an arbitrator, to be appointed by the mutual concurrence of both sides, or failing such concurrence, by the Speaker of the House of Commons, and (in Scotland) the president of the Court of Session, or either of them. The chairmen of the great English railway companies have at their recent half-yearly meetings all expressed their satisfaction on the whole with the agreement, and I think I may follow their example. The settlement is in the main a fair one, making for peace, and securing a rest of seven years from agitation. While it vindicates the position taken up by the railways in their refusal to treat with the officials of the Amalgamated Society, it provides a means by which the representatives of the men and the companies can meet, in a formal and official manner, for the discussion of points of difference as to conditions of service, &c., and I sincerely hope that the existing amicable relations between the directors and men of the Caledonian Company will be materially strengthened by the setting up of the conciliation boards.

CLYDE COAST TRAFFIC.

You may have observed that in addressing you I have not referred to our relations with the Glasgow and South-Western Company. These have been throughout cordial and friendly. Satisfactory arrangements were made between us for a moderate reduction of the steamboat service during the winter season, and their success has led to negotiations now in progress in reference to the summer sailings. But such arrangements are of no permanent value—the withdrawal of a steamer by each company, or the omission from the time-table of one or two trains goes a very short way in curing over-competition, and I believe the most satisfactory arrangement, alike in the interest of shareholders and the public, would be found in a fusion of the interests of the three companies, so far as coast traffic is concerned. (Applause.)

Sir Charles Bine Renshaw, Bart., seconded the adoption of the report.

SHAREHOLDERS' ASSOCIATION CRITICISM.

Mr. Andrew Macdonald said he was sure he only expressed the great satisfaction of the meeting at seeing the chairman present. (Applause.) Some attempt, Mr. Macdonald continued, had undoubtedly been made at economy, and they were glad to hear from time to time of further steps which were to be taken in the same direction. He need not say that in that policy they should have the fullest support of the Shareholders' Association, which he had the honour to represent. Turning to the balance-sheet one or two items appeared to demand some explanation, particularly the increase of wages and especially salaries under almost every head, despite the fact that their train mileage had been very considerably reduced. They had a reduction of over 100,000 miles, equal to the work of, say, ten locomotives, yet the wages for working these had increased by £800. The increased revenue of 1.65d. per passenger mile was satisfactory, and pointed to what further economies in handling this traffic might be effected in the future; but equally disappointing, on the other hand, was the decrease of 1.88d. from goods traffic. In that they found no evidence of the saving which was promised from the introduction of those larger wagons, the expense of which for that reason had been debited meantime to capital. He thought their attention should be specially drawn to the decreasing rate per ton received from goods, especially minerals. The sum represented by that steady decrease in rate per ton from year to year was a very large one—he believed considerably over £100,000 compared with what was received only ten years ago. As they were aware, the power of railways to raise certain of what were known as exceptional rates had recently been established by the Railway Commissioners. A great many of their rates were of that exceptional nature, and he would urge in the interests of their proprietors that an immediate review of these be made with a view to their increase where practicable. It was an extraordinary anomaly that they should have to pay an enormous increase in the price of coal in order to carry the coal itself. If ever there was a tax which was recommended and approved of by the industrial community generally it was the coal tax—(applause)—but the directors would have been prudent, if, when the Government were foolish enough to abandon the coal tax, they had raised the rates for carrying coal. Coming to the question of steamboat traffic and the heavy loss which the proprietors were suffering from competition connected with it, the service was admitted by public and shareholders alike to be most excessive. It is not businesslike, and should not be tolerated, and his association took a very serious view of its continuance as at present conducted, and was not prepared to give its support to the board unless drastic steps were taken to put it on a proper footing before the next coast season. (Applause.) The question of demurrage had often been raised at these meetings. Amendment had been promised, but nothing had been done. He did not think it would be easy to speak too strongly on that question. They had a well-authenticated case of two of the company's wagons remaining at the service of a prominent trader and being used as a store by him for no less than 18 months without demurrage being charged or paid. (A Voice—"Shame!") It was quite apparent from the accounts that the work got out of their goods rolling stock was ridiculously small. He suggested that the average duty got per wagon or truck did not exceed seven full days' running per half-year. In goods rolling-stock they had, he estimated, roughly £4,500,000 of capital locked up. Four per cent. interest on that represented £180,000 per annum, and if at any given time half of that working stock was being detained by traders free of charge it meant that the shareholders were unnecessarily out of pocket to the tune of £90,000 per annum. Dear coal was a big item, but it was from time to time inevitably so, but in demurrage they had a constant and very large item against shareholders, no part of which need legally be borne by them. If these larger issues which he had indicated were satisfactorily dealt with by the time they next met he and those associated with him would be well pleased. They could see no valid reason why their settlement should be any longer delayed.

Mr. G. F. Gordon, Blundellsands, Liverpool, said that instead of an ordinary goods train of 50 wagons it was not uncommon to see miserable trains of 25 wagons, and even not so many as 20 wagons, and thought a great amount might be done to increase the train load. They had to haul private traders' wagons empty over practically the same distance that they had to haul them loaded, and he would like to hear whether in the board's opinion they received sufficient remuneration for traffic dealt with in private owners' wagons.

THE CHAIRMAN'S REPLY.

The Chairman, replying to the last-mentioned criticism, said they thought in the case of traders' wagons they scarcely got sufficient compensation for what they did, but unfortunately that was not a matter very easy of revision, at least at the present time. In reference to the remarks of Mr. Macdonald, to which they had listened with great attention, there were several points he might refer to, but in their entirety they would be considered and dealt with in the board and in the very friendly spirit with which they were offered. (Applause.) Mr. Macdonald referred to the expectation that the large wagons would reduce the cost of carrying, and so it did to a considerable extent; but they found more and more by the expansion of the Fife coal working and the competition they met with there that the runs of their mineral trains were shorter and therefore they cost more per ton to carry. With reference to the increase in the wages fund, that was a point which they had been dealing with as far as possible, but they were not done with it. They had just had returns made in every department showing the increase that had taken place within the last ten, five and three years, and it would be a subject on which they hoped when they had thoroughly made their inquiries they would be able to effect considerable economy. The charge of demurrage was perhaps the most difficult question they had to deal with. No money was paid more grudgingly than demurrage. Traders willingly paid for the carriage of their goods, but they always grudged demurrage; they always tried to shift the blame on to the railway company and to excuse themselves. As he had several times said to them before, they could have no satisfactory action in regard to this matter as long as the competition between the several companies existed. (Applause.) That had been existing up till the beginning of this year. They had the matter very carefully before their general managers and solicitors at the present time, and were just as anxious to get it put on a satisfactory and effective footing as Mr. Macdonald and his committee were to see it done. In dealing with demurrage, of course, they were anxious to carry the Glasgow and South-Western with them too, and they would very shortly have a joint meeting of all the three companies to consider the matter in all its bearings. As regards the steamboats, it was right that he should say if the shareholders supposed they

were losing money by running them that it was a mistake. They were paying and more than paying themselves. It was certainly the case that there were far more steamers sailing on the Clyde than were necessary to carry the passengers, and it was on that very account that he thought it was not by taking off a steamer or a train, but by combined and harmonious action for the benefit of all, that they would be able largely to curtail the number of steamers and to serve the public just as well. (Applause.) As regards the cost of coal and the rates paid for it, they were all aware they made a very strong appeal and had a meeting with the Coalmasters' Association in the hope that they might recognise the fairness of giving to them a very small portion of the large profit which they were deriving from the coal that the railways were carrying for them. They appealed in vain, and they found, as they knew when they raised the question before, that there were legal difficulties in the way. They were watching very carefully the result of the action of the English companies to have reduced the ton which they carried. Formerly they carried 20½ cwts. for the ton. They were now only carrying the nett ton, and had also put a small addition to the rate charged for carriage. The coalmasters, he believed, were paying under protest, and the matter was about ready to come into Court, and they hoped there would be a result there which might embolden them to go forward and obtain a fair rate from their traders from the carriage of coal. There was no doubt they had a decision which had given them some encouragement, but it was a decision under circumstances that were not on all fours with the circumstances of the Scottish traders, and therefore, while encouraged so far by that, they could not take action upon it. But, in regard to the high price of coal, there was a very important Bill before Parliament which threatened to make their position even worse. If the Eight-Hours Bill passed, the price of coal, already much too high—almost exactly double what it was a few years ago—would be raised 1s. 6d. or 2s. a ton higher, and not only would the railways suffer, but every industry in the country would be handicapped. (Applause.) A deputation of the chairmen and directors of the railways and representatives of the shipping interest met with the Home Secretary last week, and impressed very strongly upon him the injury that would result from the passing of the Bill. But the most effective opposition to that unjust and most injurious Bill would be if every shareholder in the kingdom would address his representative in Parliament and urge on him the duty of doing what he could to prevent the Bill from passing into law. (Applause.)

The formal resolution regarding the payment of dividend was then adopted.

The Chairman said the next business was the motion which Mr. Mayberry had given notice of, but probably after what had passed and the arrangements made Mr. Mayberry might not think it necessary to press it.

Mr. Mayberry moved his resolution, which was:—"The shareholders of the Caledonian Railway Company, realising that, in view of the keen competitive trading prevailing between the Scotch railway companies, the serious difficulties under the present circumstances in obviating same, the large sums of money incurred and likely to be incurred to carry on the present war of trade, are of the opinion that no substantial saving is likely to be effected except by a well-arranged working agreement to be loyally adhered to, or, better still, by some form of amalgamation, which latter is believed to be the true solution and remedy for the present large expenditure, and resolve to impress on the directors accordingly to proceed forthwith in this direction."

It was seconded by Provost Ross, Pittenweem, but after another appeal by the chairman Mr. Mayberry consented to its withdrawal.

A "Wharncliffe" meeting was subsequently held, when approval was given to the Provisional Order of the Glasgow and South-Western Railway Company for the extension of time sought for the completion of certain joint undertakings, &c.

MAZAWATTEE TEA.

The twelfth ordinary general meeting of the Mazawattee Tea Company, Limited, was held, on Monday, at the Cannon Street Hotel, E.C., Mr. John Lane Densham (the chairman) presiding.

The Secretary (Mr. William T. Rest) read the notice convening the meeting and the report of the auditors.

The Chairman: Ladies and Gentlemen,—It is the wish of some of my co-directors to say a few words to you individually, and as they may take up some little of the time of the meeting, I will content myself by impressing upon you the almost impossible state of things that has existed in the tea trade—I might truthfully say, in the whole grocery trade—during the year we have under review. The very high prices for all commodities have not been followed by a corresponding advance in the retail prices—in fact, the aim and end of some large companies seem to be to depreciate the palate of the public in all commodities that they sell. The grocers have had a hard time of it during 1907, and if any shareholders here present are interested in the grocery and retail tea trade, they will bear me out that not only has it been the worst year in their memory, but also that things have been so bad that it is impossible they can remain like it for any length of time.

Mr. Harry Rose: Ladies and Gentlemen,—In rising to second the adoption of the report, I feel that I should like to say a few words to you as to the conclusions I have come to with regard to all that has taken place in this company during the last few years. You will have read in the report just sent you the following paragraph:—"The directors wish to emphasise the fact that the very serious losses and trouble that have accrued to this company have not been, as is sometimes suggested, owing to the initiation of a scheme of retail shops by the late board of directors, but the reckless manner in which the scheme was carried out, without any regard to the interests of the shareholders of the company or to the honourable business relationship which had previously existed between the company and its agents. The directors have had many opportunities of discussing, with their agents and representative grocers throughout the kingdom, the scheme as originally initiated, and the general opinion expressed has been that, if that scheme had been properly adhered to, little or no offence would have been given to the company's retail customers." The paragraph I have just read shows the result of the investigations and experience of the directors during a long period of time. No doubt you will wish to hear what effect this further knowledge has had on the question of whether some proceedings should be taken against the late board. The mention of the late board brings me to a point which concerns the individuals of which it was composed, and some questions which were put at our previous meeting as to members other than the late managing directors, and particularly Mr. Benjamin Densham, in reference to whom some questions were asked at our last annual meeting by Mr. Howard. As representative of the company during the years 1904-5, when such havoc was being wrought to our wholesale trading by the new board, I was in close touch with a very large number of the company's agents and the trade generally throughout the country, and I can assure you I realised from time to time how things were going on in London, and I had the gravest misgivings about results. There was, however, one great factor which tended to give me and also many other business men confidence in the future of the company. It was the knowledge that Mr. Benjamin Densham, who had been associated with the business for nearly 40 years, who had been managing director for five years and director for one year, was chairman, and I, with others, felt that no great harm could accrue to the business while he was at the head of affairs to look after them. I have heard all that Mr. John Lane Densham, our present chairman, has told you at the last two meetings with regard to the late managing directors' actions while they were in office, and I can confirm every word he has uttered on that subject. I would like to confirm what has already been told you. Not one atom of responsibility rests upon our present chairman, Mr. John Lane Densham.
